While having a common basis in co-operative workplaces, different forms of anarchism see them work in different ways. Under mutualism, workers organise themselves into syndicates and share in its gains and losses. This means that in *"the labour-managed firm there is no profit, only income to be divided among members. Without employees the labour-managed firm does not have a wage bill, and labour costs are not counted among the expenses to the subtracted from profit, as they are in the capitalist firm."* The *"labour-managed firm does not hire labour. It is a collective of workers that hires capital and necessary materials."* [Christopher Eaton Gunn, **Workers' Self-Management in the United States**, pp. 41–2] In this way, Proudhon and his followers argued, exploitation would end and workers would receive the full-product of their labour. This, it should be noted, does not mean that workers consume all the proceeds of sales in personal consumption (i.e., no investment). It means that labour **controls** what to do with the sales income, i.e., how much to invest and how much to allocate to consumption:

> *"If Labour appropriated the whole product, that would include appropriating the liabilities for the property used up in the production process in addition to appropriating the produced outputs. Present Labour would have to pay input suppliers (e.g., past labour) to satisfy those liabilities."* [Ellerman, **Op. Cit.**, p. 24]

So under mutualism, surpluses (profits) would be either equally divided between all members of the co-operative or divided unequally on the basis of the type of work done, with the percentages allotted to each type being decided by democratic vote, on the principle of one worker, one vote. Worker co-operatives of this type do have the virtue of preventing the exploitation and oppression of labour by capital, since workers are not hired for wages but, in effect, become partners in the firm. This means that the workers control both the product of their labour (so that the value-added that they produce is not appropriated by a privileged elite) and the work process itself (and so they no longer sell their liberty to others). However, such a limited form of co-operation is rejected by most anarchists. Non-mutualist anarchists argue that this, at best, is but a step in the right direction and the ultimate aim is distribution according to need.

Production for use rather than profit/money is the key concept that distinguishes collectivist and communist forms of anarchism from the competitive mutualism advocated by Proudhon. This is for two reasons. First, because of the harmful effects of markets we indicated in section I.1.3 could make co-operatives become, in effect, "collective capitalists" and compete against each other in the market as ferociously as actual capitalists. As Kropotkin put it, while co-operation had *"at its origin ... an essentially mutual aid character"*, it *"is often described as 'joint-stock individualism'"* and *"such as it is now, it undoubtedly tends to breed a co-operative egotism, not only towards the community at large, but also among the co-operators themselves."* [**Mutual Aid**, p. 214] While he was discussing co-operatives under capitalism, his worries are equally applicable to a mutualist system of competing syndicates. This would also lead to a situation where market forces ensured that the workers involved made irrational decisions (from both a social and individual point of view) in order to survive in the market. For mutualists, this *"irrationality of rationality"* is the price to be paid to ensure workers receive the full product of their labour and, moreover, any attempt to overcome this problem holds numerous dangers to freedom. Other social anarchists disagree. They think co-operation between workplaces can increase, not reduce, freedom. Second, as discussed in section I.1.4, distribution according to work does not take into account the different needs of the workers (nor non-workers like the ill, the young and the old). As such, mutualism does not produce what most anarchists would consider a decent society, one where people co-operate to make a decent life for all.

What about entry into a syndicate? In the words of Cole, guilds (syndicates) are *"open associations which any man [or woman] may join"* but *"this does not mean, of course, that any person will be able to claim admission, as an absolute right, into the guild of his choice."* This means that there may be training requirements (for example) and obviously *"a man [or woman] clearly cannot get into a Guild unless it needs fresh recruits for its work. [The worker] will have free choice, but only of the available openings."* [**Op. Cit.**, p. 75] As David Ellerman notes, it is important to remember that *"the labour market would not exist"* in a self-managed economy as labour would *"always be the residual claimant."* This means that capital would not be hiring labour as under capitalism, rather workers would be seeking out associations to join. *"There would be a job market in the sense of people looking for firms they could join,"* Ellerman continues, *"but it would not be a labour market in the sense of the selling of labour in the employment contract."* [**Op. Cit.**, p. 91]

All schools of social anarchism, therefore, are based on the use rights resting in the specific syndicate while ownership would be socialised rather than limited to the syndicate's workers. This would ensure free access to the means of production as new members of a syndicate would have the same rights and power as existing members. If this were not the case, then the new members would be the wage slaves of existing ones and it is **precisely** to avoid this that anar-

chists argue for socialisation (see section I.3.3). With socialisation, free access is guaranteed and so all workers are in the same position so ensuring self-management and no return to workplace hierarchy.

Obviously, as in any society, an individual may not be able to pursue the work they are most interested in (although given the nature of an anarchist society they would have the free time to pursue it as a hobby). However, we can imagine that an anarchist society would take an interest in ensuring a fair distribution of work and so would try to arrange work sharing if a given work placement is popular (see section I.4.13 on the question of who will do unpleasant work, and for more on work allocation generally, in an anarchist society).

Of course there may be the danger of a syndicate or guild trying to restrict entry from an ulterior motive, as such the exploitation of monopoly power vis-à-vis other groups in society. However, in an anarchist society individuals would be free to form their own syndicates and this would ensure that such activity is self-defeating. In addition, in a non-individualist anarchist system, syndicates would be part of a confederation (see section I.3.4). It is a responsibility of the inter-syndicate congresses to assure that membership and employment in the syndicates is not restricted in any anti-social way. If an individual or group of individuals felt that they had been unfairly excluded from a syndicate then an investigation into the case would be organised at the congress. In this way any attempts to restrict entry would be reduced (assuming they occurred to begin with). And, of course, individuals are free to form new syndicates or leave the confederation if they so desire.

With the question of entry into syndicates comes the question of whether there would be enough places for those seeking to work (what could be termed "unemployment"). Ultimately, there are always an objective number of places available in a workplace: there is little point having people join a syndicate if there are no machines or materials for them to work on! Would a self-managed economy ensure that there are enough places available for those who seek them?

Perhaps unsurprisingly, neo-classical economics says no and equally unsurprisingly this conclusion is based not on empirical evidence of real co-operatives but rather on an abstract model developed in 1958. The model is based on deducing the implications of assuming that a labour-managed (*"'Illyrian"*) firm will seek to maximise net income per worker rather than, in a capitalist firm, maximising net profit. This results in various perverse results compared to a capitalist firm. This makes a co-operative-based economy extremely unstable and inefficient, as well as leading to co-operatives firing workers when prices rise as this maximises income per (remaining) worker. Thus a co-operative system ends in *"producing less output and using less labour than its capitalist counterpart."* [Benjamin Ward, *"The Firm in Illyria: Market Syndicalism"*, pp. 566–589, **The American Economic Review**, Vol. 48, No. 4, p. 580]

Of course, it would be churlish to note that, unlike the theory, actual capitalism is marked by extensive unemployment (as noted in section C.1.5, this is not surprising as it is required to secure bosses' power over their wage slaves). It would be equally churlish to note that, to quote one Yugoslav economist, this is *"a theory whose predictions have absolutely nothing to do with the observed facts."* [Branko Horvat, *"The Theory of the Worker-Managed Firm Revisited"*, pp. 9–25, **Journal of Comparative Economics**, vol. 10, no. 1, p. 9] As David Ellerman summarises:

> *"It might be noted parenthetically that there is a whole academic literature on what is called the 'Illyrian firm' ... The main peculiarity of this model is that it assumes the firm would expel members when that would increase the net income of the surviving*

> *members. The resulting short-run perversities have endeared the model to capitalist economists. Yet the Illyrian model had been an academic toy in the grand tradition of much of modern economics. The predicted short-run behaviour has not been observed in Yugoslavia or elsewhere, and worker-managed firms such as the Mondragon co-operatives take membership as a short-run fixed factor ... Hence we will continue to treat the Illyrian model with its much-deserved neglect."* [**Op. Cit.**, p. 150]

The experience of self-managed collectives during the Spanish Revolution also confirms this, with collectives sharing work equitably in order to avoid laying people off during the harsh economic conditions caused by the Civil War (for example, one collective *"adopted a three-day workweek, dividing available work among all those who had worked at the plant — thereby avoiding unemployment — and continued to pay everyone his or her basic salary"* [Martha A. Ackelsberg, **Free Women of Spain**, p. 101]).

We need, therefore, to *"appeal to empirical reality and common sense"* when evaluating the claim of neo-classical economics on the issue of co-operatives. The *"empirical evidence supports"* the argument that this model is flawed. There *"has been no tendency for workers to lay off co-workers when times are good, neither in Mondragon nor in Yugoslavia. Even in bad times, layoffs are rare."* Unsurprisingly, *"in the short run, a worker-managed firm responds in the same fashion as a capitalist firm"* and workers are added to the collective to meet increases in demand. [David Schweickart, **Against Capitalism**, p. 91, p. 92 and p. 93] A conclusion shared by economist Geoffrey M. Hodgson:

> *"Much of the evidence we do have about the behaviour of real-world worker co-operatives is that they respond to changes in market prices in a similar manner to the capitalist firm ... Accordingly, the basic assumptions in the model are questioned by the evidence."* [**Economics and Utopia**, pp. 223–4]

So, as Branko Horvat observes, in spite of the neo-classical analysis producing specific predictions the *"mere fact that nothing of the kind has ever been observed in real-world economies leaves them undisturbed."* At most they would say that a *"self-managed firm may not behave as the theory predicts, but this is because it behaves irrationally. If something is wrong, it is not the theory but the reality."* Interestingly, though, if you assume that capitalist firms *"maximise the rate of profit, profit per unit invested"* rather than total profit then neo-classical theory *"generates equally absurd results."* That is why the distinction between short and long runs was invented, so that in the short run the amount of capital is fixed. If this is applied to a co-operative, so that *"in the short run, the work force is fixed"* then the alleged problems with labour-managed workplaces disappear. Needless to say, a real co-operative acts on the assumption that the work force is fixed and as *"the workers are no longer hired"* this means that the worker-managers *"do not fire their colleagues when business is slack; they reduce work time or work for inventories. When the demand temporarily increases, they work overtime or contract outside work."* [**Op. Cit.**, pp. 11–13]

In summary, the neo-classical theory of the labour-managed firm has as much relation to a real co-operative as neo-classical economics generally does to capitalism. Significantly, "Austrian" economists generally accept the neo-classical theory of co-operatives (in part, undoubtedly, as it confirms their dislike of all forms of socialism). Even one as sympathetic to self-management as David L. Prychitko accepts it, simply criticising because it *"reduces the firm to a short-run objective*

function" and *"as long as market **entry** is allowed, the labour-managed market sheds any possible instability problem."* [**Markets, Planning and Democracy**, p. 81] While correct, this criticism totally misses the point. Yes, in the long run other co-operatives would be set up and this would increase supply of goods, increase employment and so forth, yet this should not blind us to the limitations of the assumptions which drives the neo-classical theory.

To sum up, syndicates are voluntary associations of workers who manage their workplace and their own work. Within the syndicate, the decisions which affect how the workplace develops and changes are in the hands of those who work there. In addition, it means that each section of the workforce manages its own activity and sections and that all workers placed in administration tasks (i.e. *"management"*) are subject to election and recall by those who are affected by their decisions. The workers' self-management is discussed in the next section.

Finally, two things. First, as noted in section G.1.3 a few individualist anarchists, although not all, were not opposed to (non-exploitative) wage labour and so did not place co-operatives at the centre of their ideas. This position is very much a minority in the anarchist tradition as it is not consistent with libertarian principles nor likely to end the exploitation of labour (see section G.4.1), so making most anarchists think such individualism is inconsistent anarchism (see section G.4.2). Secondly, it is important to note that individuals who do not wish to join syndicates will be able to work for themselves. There is no *"forced collectivisation"* under **any** form of libertarian socialism, because coercing people is incompatible with the basic principles of anarchism. Those who wish to be self-employed will have free access to the productive assets they need, provided that they neither attempt to monopolise more of those assets than they and their families can use by themselves nor attempt to employ others for wages (see section I.3.7).

I.3.2 What is workers' self-management?

Quite simply, workers' self-management (sometimes called *"workers' control"*) means that all workers affected by a decision have an equal voice in making it, on the principle of "one worker, one vote." Thus *"revolution has launched us on the path of industrial democracy."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 63] That is, workers *"ought to be the real managers of industries."* [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 157] This is essential to ensure *"a society of equals, who will not be compelled to sell their hands and their brains to those who choose to employ them .. . but who will be able to apply their knowledge and capacities to production, in an organism so constructed as to combine all the efforts for procuring the greatest possible well-being for all, while full, free scope will be left for every individual initiative."* [Kropotkin, **Kropotkin: Selections from his Writings**, pp. 113–4] As Chomsky put it:

> *"Compassion, solidarity, friendship are also human needs. They are driving needs, no less than the desire to increase one's share of commodities or to improve working conditions. Beyond this, I do not doubt that it is a fundamental human need to take an active part in the democratic control of social institutions. If this is so, then the demand for industrial democracy should become a central goal of any revitalised left with a working-class base."* [**Radical Priorities**, p. 191]

As noted earlier, however, we need to be careful when using the term *"workers' control,"* as others use it and give it an entirely different meaning from the one intended by anarchists. Like the

terms *"anarchist"* and *"libertarian,"* it has been co-opted by others to describe less than libertarian schemes.

The first to do so were the Leninists, starting with Lenin, who have used the term "workers' control" to describe a situation were workers have a limited supervision over either the capitalists or the appointed managers of the so-called workers' state. These do not equate to what anarchists aim for and, moreover, such limited experiments have not lasted long (see section H.3.14). More recently, "workers' control" have been used by capitalists to describe schemes in which workers' have more say in how their workplaces are run while maintaining wage slavery (i.e. capitalist ownership, power and ultimate control). So, in the hands of capitalists, "workers' control" is now referred to by such terms as "participation", "co-determination", "consensus", "empowerment", "Japanese-style management," etc. *"For those whose function it is solve the new problems of boredom and alienation in the workplace in advanced industrial capitalism, workers' control is seen as a hopeful solution"*, Sam Dolgoff noted, *"a solution in which workers are given a modicum of influence, a strictly limited area of decision-making power, a voice at best secondary in the control of conditions of the workplace. Workers' control, in a limited form sanctioned by the capitalists, is held to be the answer to the growing non-economic demands of the workers."* [**The Anarchist Collectives**, p. 81]

The new managerial fad of "quality circles" — meetings where workers are encouraged to contribute their ideas on how to improve the company's product and increase the efficiency with which it is made — is an example of "workers' control" as conceived by capitalists. However, when it comes to questions such as what products to make, where to make them, and (especially) how revenues from sales should be divided, capitalists and managers do not ask for or listen to workers' "input." So much for "democratisation," "empowerment," and "participation"! In reality, capitalistic "workers control" is merely an another insidious attempt to make workers more willing and "co-operative" partners in their own exploitation. Needless to say, such schemes are phoney as they never place **real** power in the hands of workers. In the end, the owners and their managers have the final say (and so hierarchy remains) and, of course, profits are still extracted from the workforce.

Hence anarchists prefer the term ***workers' self-management***, a concept which refers to the exercise of workers' power through collectivisation and federation. It means *"a transition from private to collective ownership"* which, in turn, *"call[s] for new relationships among the members of the working community."* [Abel Paz, **The Spanish Civil War**, p. 55] Self-management in this sense *"is not a new form of mediation between the workers and their capitalist bosses, but instead refers to the very process by which the workers themselves* ***overthrow*** *their managers and take on their own management and the management of production in their own workplace. Self-management means the organisation of all workers ... into a workers' council or factory committee (or agricultural syndicate), which makes all the decisions formerly made by the owners and managers."* [Dolgoff, **Op. Cit.**, p. 81] Self-management means the end of hierarchy and authoritarian social relationships in workplace and their replacement by free agreement, collective decision-making, direct democracy, social equality and libertarian social relationships.

As anarchists use the term, workers' self-management means collective worker ownership, control and direction of all aspects of production, distribution and investment. This is achieved through participatory-democratic workers' assemblies, councils and federations, in both agriculture and industry. These bodies would perform all the functions formerly reserved for capitalist owners, managers, executives and financiers where these activities actually relate to productive

activity rather than the needs to maximise minority profits and power (in which case they would disappear along with hierarchical management). These workplace assemblies will be complemented by people's financial institutions or federations of syndicates which perform all functions formerly reserved for capitalist owners, executives, and financiers in terms of allocating investment funds or resources.

Workers' self-management is based around general meetings of the whole workforce, held regularly in every industrial or agricultural syndicate. These are the source of and final authority over decisions affecting policy within the workplace as well as relations with other syndicates. These meeting elect workplace councils whose job is to implement the decisions of these assemblies and to make the day to day administration decisions that will crop up. These councils are directly accountable to the workforce and its members subject to re-election and instant recall. It is also likely that membership of these councils will be rotated between all members of the syndicate to ensure that no one monopolises an administrative position. In addition, smaller councils and assemblies would be organised for divisions, units and work teams as circumstances dictate.

In this way, workers would manage their own collective affairs together, as free and equal individuals. They would associate together to co-operate without subjecting themselves to an authority over themselves. Their collective decisions would remain under their control and power. This means that self-management creates *"an organisation so constituted that by affording everyone the fullest enjoyment of his [or her] liberty, it does not permit anyone to rise above the others nor dominate them in any way but through the natural influence of the intellectual and moral qualities which he [or she] possesses,* ***without this influence ever being imposed as a right and without leaning upon any political institution whatever.*** *"* [**The Political Philosophy of Bakunin**, p. 271] Only by convincing your fellow associates of the soundness of your ideas can those ideas become the agreed plan of the syndicate. No one is in a position to impose their ideas simply because of the post they hold or the work they do.

Most anarchists think that it is likely that purely administrative tasks and decisions would be delegated to elected individuals in this way, freeing workers and assemblies to concentrate on important activities and decisions rather than being bogged down in trivial details. As Bakunin put it:

> *"Is not administrative work just as necessary to production as is manual labour — if not more so? Of course, production would be badly crippled, if not altogether suspended, without efficient and intelligent management. But from the standpoint of elementary justice and even efficiency, the management of production need not be exclusively monopolised by one or several individuals. And managers are not at all entitled to more pay. The co-operative workers associations have demonstrated that the workers themselves, choosing administrators from their own ranks, receiving the same pay, can efficiency control and operate industry. The monopoly of administration, far from promoting the efficiency of production, on the contrary only enhances the power and privileges of the owners and their managers."* [**Bakunin on Anarchism**, p. 424]

What is important is that what is considered as important or trivial, policy or administration rests with the people affected by the decisions and subject to their continual approval. Anarchists do not make a fetish of direct democracy and recognise that there is more important things in life than meetings and voting! While workers' assemblies play the key role in self-management, it is

not the focal point of **all** decisions. Rather it is the place where all the important policy decisions are made, administrative decisions are ratified or rejected and what counts as a major decision determined. Needless to say, what is considered as important issues will be decided upon by the workers themselves in their assemblies.

Unsurprisingly, anarchists argue that, as well as being more free, workers self-management is more efficient and productive than the hierarchical capitalist firm (efficiency here means accomplishing goals without wasting valued assets). Capitalist firms fail to tap humanity's vast reservoir of practical knowledge, indeed they block it as any application of that knowledge is used to enrich the owners rather than those who generate and use it. Thus the hierarchical firm disenfranchises employees and reduces them to the level of order-takers with an obvious loss of information, knowledge and insight (as discussed in section I.1.1). With self-management, that vast source of knowledge and creativity can be expressed. Thus, self-management and worker ownership *"should also reap other rewards through the greater motivation and productivity of the workers."* [David Ellerman, **The Democratic Worker-Owned Firm**, p. 139]

This explains why some firms try to simulate workers' control (by profit-sharing or "participation" schemes). For, as market socialist David Schweickart notes, *"the empirical evidence is overwhelming"* and supports those who argue for workers' participation. The *"evidence is strong that both worker participation in management and profit sharing tend to enhance productivity and that worker-run enterprises often are more productive than their capitalist counterparts."* [**Against Capitalism**, p. 100] In fact, 94% of 226 studies into this issue showed a positive impact, with 60% being statistically significant, and so the empirical evidence is *"generally supportive of a positive link between profit sharing and productivity."* This applies to co-operatives as well. [Martin L. Weitzman and Douglas L. Kruse, *"Profit Sharing and Productivity"*, pp. 95–140, **Paying for Productivity**, Alan S. Blinder (ed.), p. 137, p. 139 and pp. 131–2] Another study concludes that the *"available evidence is strongly suggestive that for employee ownership ... to have a strong impact on performance, it needs to be accompanied by provisions for worker participation in decision making."* In addition, *"narrow differences in wages and status"*, as anarchists have long argued, *"increase productivity"*. [David I. Levine and Laura D'Andrea Tyson, *"Participation, Productivity, and the Firm's Environment"*, pp. 183–237, **Op. Cit.**, p. 210 and p. 211]

This should be unsurprising, for as Geoffrey M. Hodgson notes, the neo-classical model of co-operatives *"wrongly assume[s] that social relations and technology are separable ... Yet we have much evidence . .. to support the contention that participation and co-operation can increase technological efficiency. Production involves people — their ideas and aspirations — and not simply machines operating under the laws of physics. It seems that, in their search for pretty diagrams and tractable mathematical models, mainstream economists often forget this."* [**Economics and Utopia**, p. 223]

Therefore anarchists have strong evidence to support Herbert Read's comment that libertarian socialism would *"provide a standard of living far higher than that realised under any previous form of social organisation."* [**Anarchy and Order**, p. 49] It confirms Cole's comment that the *"key to real efficiency is self-government; and any system that is not based upon self-government is not only servile, but also inefficient. Just as the labour of the wage-slave is better than the labour of the chattel-slave, so ... will the labour of the free man [and woman] be better than either."* [**Self-Government in Industry**, p. 157] Yet it is important to remember, as important as this evidence is, real social change comes not from "efficiency" concerns but from ideals and principles. While anarchists are confident that workers' self-management will be more efficient and productive than capitalism,

this is a welcome side-effect of the deeper goal of increasing freedom. The evidence confirms that freedom is the best solution for social problems but if, for example, slavery or wage-labour proved to be more productive than free, associated, labour it does not make them more desirable!

A self-managed workplace, like a self-managed society in general, does not mean that specialised knowledge (where it is meaningful) will be neglected or not taken into account. Quite the opposite. Specialists (i.e. workers who are interested in a given area of work and gain an extensive understanding of it) are part of the assembly of the workplace, just like other workers. They can and have to be listened to, like anyone else, and their expert advice included in the decision making process. Anarchists do not reject the idea of expertise nor the rational authority associated with it. As we indicated in section B.1, anarchists recognise the difference between being ***an*** authority (i.e. having knowledge of a given subject) and being ***in*** authority (i.e. having power over someone else). as discussed in section H.4, we reject the latter and respect the former.

Such specialisation does not imply the end of self-management, but rather the opposite. *"The greatest intelligence,"* Bakunin argued, *"would not be equal to a comprehension of the whole. Thence results, for science as well as industry, the necessity of the division and association of labour."* [**God and the State**, p. 33] Thus specialised knowledge is part of the associated workers and not placed above them in positions of power. The other workers in a syndicate can compliment the knowledge of the specialists with the knowledge of the work process they have gained by working and so enrich the decision. Knowledge is distributed throughout society and only a society of free individuals associated as equals and managing their own activity can ensure that it is applied effectively (part of the inefficiency of capitalism results from the barriers to knowledge and information flow created by its hierarchical workplace).

A workplace assembly is perfectly able to listen to an engineer, for example, who suggests various ways of reaching various goals (i.e. if you want X, you would have to do A or B. If you do A, then C, D and E is required. If B is decided upon, then F, G, H and I are entailed). But it is the assembly, **not** the engineer, that decides what goals and methods to be implemented. As Cornelius Castoriadis put it: *"We are not saying: people will have to decide **what** to do, and then technicians will tell them **how** to do it. We say: after listening to technicians, people will decide what to do **and** how to do it. For the **how** is not neutral — and the **what** is not disembodied. What and how are neither **identical**, nor **external** to each other. A 'neutral' technique is, of course, an illusion. A conveyor belt is linked to a type of product **and** a type of producer — and vice versa."* [**Social and Political Writings**, vol. 3, p. 265]

However, we must stress that while an anarchist society would "inherit" a diverse level of expertise and specialisation from class society, it would not take this as unchangeable. Anarchists argue for ***"all-round"*** (or integral) education as a means of ensuring that everyone has a basic knowledge or understanding of science, engineering and other specialised tasks. As Bakunin argued, *"in the interests of both labour and science ... there should no longer be either workers or scholars but only human beings."* Education must *"prepare every child of each sex for the life of thought as well as for the life of labour."* [**The Basic Bakunin**, p. 116 and p. 119] This does not imply the end of all specialisation (individuals will, of course, express their individuality and know more about certain subjects than others) but it does imply the end of the artificial specialisation developed under capitalism which tries to deskill and disempower the wage worker by concentrating knowledge into hands of management.

And, just to state the obvious, self-management does not imply that the mass of workers decide on the application of specialised tasks. Self-management implies the autonomy of those who

do the work as well as collective decision making on collective issues. For example, in a self-managed hospital the cleaning staff would not have a say in the doctors' treatment of patients just as the doctors would not tell the cleaners how to do their work (of course, it is likely that an anarchist society will **not** have people whose work is simply to clean and nothing else, we just use this as an example people will understand). All members of a syndicate would have a say in what happens in the workplace as it affects them collectively, but individual workers and groups of workers would manage their own activity within that collective.

Needless to say, self-management abolishes the division of labour inherent in capitalism between order takers and order givers. It integrates (to use Kropotkin's words) brain work and manual work by ensuring that those who do the work also manage it and that a workplace is managed by those who use it. Such an integration of labour will, undoubtedly, have a massive impact in terms of productivity, innovation and efficiency. As Kropotkin argued, the capitalist firm has a negative impact on those subject to its hierarchical and alienating structures:

> *"The worker whose task has been specialised by the permanent division of labour has lost the intellectual interest in his [or her] labour, and it is especially so in the great industries; he has lost his inventive powers. Formerly, he [or she] invented very much ... But since the great factory has been enthroned, the worker, depressed by the monotony of his [or her] work, invents no more."* [**Fields, Factories and Workshops Tomorrow**, p. 171]

Must all the skills, experience and intelligence that very one has be swept away or crushed by hierarchy? Or could it not become a new fertile source of progress under a better organisation of production? Self-management would ensure that the independence, initiative and inventiveness of workers (which disappears under wage slavery) comes to the fore and is applied. Combined with the principles of *"all-round"* (or integral) education (see section J.5.13) who can deny that working people could transform the current economic system to ensure *"well-being for all"*? And we must stress that by *"well-being"* we mean well-being in terms of meaningful, productive activity in humane surroundings and using appropriate technology, in terms of goods of utility and beauty to help create strong, healthy bodies and in terms of surroundings which are inspiring to live in and ecologically integrated.

Little wonder Kropotkin argued that self-management and the *"erasing [of] the present distinction between the brain workers and manual worker"* would see *"social benefits"* arising from *"the concordance of interest and harmony so much wanted in our times of social struggles"* and *"the fullness of life which would result for each separate individual, if he [or she] were enabled to enjoy the use of both ... mental and bodily powers."* This is in addition to the *"increase of wealth which would result from having ... educated and well-trained producers."* [**Op. Cit.**, p. 180]

Let us not forget that today workers **do** manage their own working time to a considerable extent. The capitalist may buy a hour of a workers' time but they have to ensure that the worker follows their orders during that time. Workers resist this imposition and this results in considerable shop-floor conflict. Frederick Taylor, for example, introduced his system of *"scientific management"* in part to try and stop workers managing their own working activity. As David Noble notes, workers *"paced themselves for many reason: to keep time for themselves, to avoid exhaustion, to exercise authority over their work, to avoid killing so-called gravy piece-rate jobs by overproducing and risking a pay cut, to stretch out available work for fear of layoffs, to exercise their creativity,*

and, last but not least, to express their solidarity and their hostility to management." These were *"[c]oupled with collective co-operation with their fellows on the floor"* and *"labour-prescribed norms of behaviour"* to achieve *"shop floor control over production."* [**Forces of Production**, p. 33] This is why *working to rule"* is such an efficient weapon in the class struggle (see section H.4.4) In other words, workers naturally tend towards self-management anyway and it is this natural movement towards liberty during work hours which is combated by bosses (who wins, of course, depends on objective and subjective pressures which swing the balance of power towards labour or capital).

Self-management will built upon this already existing unofficial workers control over production and, of course, our knowledge of the working process which actually doing it creates. The conflict over who controls the shop floor — either those who do the work or those who give the orders — not only shows that self-management is **possible** but also show how it can come about as it brings to the fore the awkward fact that while the bosses need us, we do not need them!

I.3.3 What does socialisation mean?

A key aspect of anarchism is the socialisation of the means of life. This means that the land, housing, workplaces and so forth become common property, usable by all who need them. Thus Emma Goldman's summary:

> *"That each and every individual is and ought to be free to own himself and to enjoy the full fruit of his labour; that man is absolved from all allegiance to the kings of authority and capital; that he has, by the very fact of his being, free access to the land and all means of production, and entire liberty of disposing of the fruits of his efforts; that each and every individual has the unquestionable right of free and voluntary association with other equally sovereign individuals for economic, political, social, and other purposes, and that to achieve this end man must emancipate himself from the sacredness of property, the respect for man-made law, the fear of the Church, the cowardice of public opinion, the stupid arrogance of national, racial, religious, and sex superiority, and from the narrow puritanical conception of human life."* [**A Documentary History of the American Years**, vol. 2, pp. 450–1]

This is required because private ownership of collectively used "property" (such as workplaces and land) results in a situation where the many have to sell their labour (i.e., liberty) to the few who own it. This creates hierarchical and authoritarian social relationships as well as economic classes. For anarchists, society cannot be divided into *"a possessing and a non-possessing"* class system as this is *"a condition of social injustice"* as well as making the state *"indispensable to the possessing minority for the protection of its privileges."* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 11] In other words, *"as long as land and capital are unappropriated, the workers are free, and that, when these have a master, the workers also are slaves."* [Charlotte M. Wilson, **Anarchist Essays**, p. 21]

While there is a tendency by state socialists and the right to equate socialisation with nationalisation, there are key differences which the different names signify. Nationalisation, in practice and usually in theory, means that the means of life become state property. This means that rather than those who need and use a specific part of the co-operative commonwealth deciding what

to do with it, the government does. As we discussed in section B.3.5 this would just be state capitalism, with the state replacing the current capitalist and landlords.

As Emma Goldman argued, there is a clear difference between socialisation and nationalisation. *"The first requirement of Communism,"* she argued, *"is the socialisation of the land and of the machinery of production and distribution. Socialised land and machinery belong to the people, to be settled upon and used by individuals and groups according to their needs."* Nationalisation, on the other hand, means that a resource *"belongs to the state; that is, the government has control of it and may dispose of it according to its wishes and views."* She stressed that *"when a thing is socialised, every individual has free access to it and may use it without interference from anyone."* When the state owned property, *"[s]uch a state of affairs may be called state capitalism, but it would be fantastic to consider it in any sense communistic."* [**Red Emma Speaks**, pp. 406–7]

Socialisation aims at replacing property rights by use rights. The key to understanding socialisation is to remember that it is about **free access**. In other words, that every one has the same rights to the means of life as everyone else, that no one is exploited or oppressed by those who own the means of life. In the words of Herbert Read:

> *"The essential principle of anarchism is that mankind has reached a stage of development at which it is possible to abolish the old relationship of master-man (capitalist-proletarian) and substitute a relationship of egalitarian co-operation. This principle is based, not only on ethical ground, but also on economic grounds."* [**Anarchy and Order**, p. 92]

This implies two things. Firstly, that the means of life are common property, without an owning class. Secondly, there is free association between equals within any association and so industrial democracy (or self-management).

This has been an anarchist position as long as anarchism has been called anarchism. Thus we find Proudhon arguing in 1840 that *"the land is indispensable to our existence"* and *"consequently a common thing, consequently insusceptible of appropriation"* and that *"all accumulated capital being social property, no one can be its exclusive proprietor."* This means *"the farmer does not appropriate the field which he sows"* and *"all capital ... being the result of collective labour"* is *"collective property."* Without this there is inequality and a restriction of freedom as *"the working-man holds his labour by the condescension and necessities of the master and proprietor."* The *"civilised labourer who bakes a loaf that he may eat a slice of bread . .. is not free. His employer ... is his enemy."* In fact, *"neither a commercial, nor an industrial, nor an agricultural association can be conceived of in the absence of equality."* The aim was a society of *"possessors without masters"* rather than wage-labourers and tenants *"controlled by proprietors."* Within any economic association there would be democracy, with *"leaders, instructors, superintendents"* and so forth being *"chosen from the labourers by the labourers themselves, and must fulfil the conditions of eligibility. It is the same with all public functions, whether of administration or instruction."* [**What is Property?**, p. 107, p. 130, p. 153, p. 128, p. 142, p. 227, p. 167 and p. 137]

This meant *"democratically organised workers associations"* and *"[u]nder the law of association, transmission of wealth does not apply to the instruments of labour, so cannot become a cause of inequality."* [Proudhon, **No Gods, No Masters**, vol. 1., p. 62] Thus workplaces *"are the common and undivided property of all those who take part therein"* rather than *"companies of stockholders who plunder the bodies and souls of the wage workers."* This meant free access, with *"every individual employed in the association"* having *"an undivided share in the property of the company"*

and has *"a right to fill any position"* as *"all positions are elective, and the by-laws subject to the approval of the members."* Each member *"shall participate in the gains and in the losses of the company, in proportion to his [or her] services."* [Proudhon, **General Idea of the Revolution**, p. 219 and p. 222] Proudhon's idea of free credit from a People's Bank, it should be noted, is another example of free access, of socialisation. Needless to say, anarchists like Bakunin and Kropotkin based their arguments for socialisation on this vision of self-managed workplaces and free access to the means of life. For Bakunin, for example, *"the land, the instruments of work and all other capital may become the collective property of the whole of society and be utilised only by the workers, on other words, by the agricultural and industrial associations."* [**Michael Bakunin: Selected Writings**, p. 174]

So the means of production are socialised in the mutualism, collectivism and communism and all rest on the same principle of equal access. So when someone joins an existing workers association they become full members of the co-operative, with the same rights and duties as existing members. In other words, they participate in the decisions on a basis of one person, one vote. How the products of that association are distributed vary in different types of anarchism, but the associations that create them are rooted in the free association of equals. In contrast, a capitalist society places the owner in the dominant position and new members of the workforce are employees and so subordinate members of an organisation which they have no say in (see section B.1).

Socialisation would mean that workplaces would become *"little republics of workingmen."* [Proudhon, quoted by Dorothy W. Douglas, *"Proudhon: A Prophet of 1848: Part II"*, pp. 35–59, **The American Journal of Sociology**, Vol. 35, No. 1, p. 45] As economist David Ellerman explains, the democratic workplace *"is a social community, a community of work rather than a community residence. It is a republic, or **res publica** of the workplace. The ultimate governance rights are assigned as personal rights ... to the people who work in the firm ... This analysis shows how a firm can be socialised and yet remain 'private' in the sense of not being government-owned."* As noted in section I.3.1, this means the end of the labour market as there would be free access to workplaces and so workers would not be wage-labourers employed by bosses. Instead, there would be a people seeking associations to join and associations seeking new associates to work with. *"Instead of abolishing the employment relation,"* Ellerman argues, *"state socialism nationalised it ... Only the democratic firm — where the workers are jointly self-employed – is a genuine alternatives to private or public employment."* [**The Democratic Worker-Owned Firm**, p. 76 and p. 209]

So libertarian socialism is based on decentralised decision making within the framework of socially-owned but independently-run and worker-self-managed syndicates. The importance of socialisation should not be downplayed. This is because the self-management of work is not sufficient in and of itself to ensure an anarchist society. Under feudalism, the peasants managed their own labour but such a regime was hardly libertarian for, at a minimum, the peasants paid the landlord rent. An industrial equivalent can be imagined, where workers hire workplaces and land from capitalists and landlords. As left-wing economist Geoffrey M. Hodgson suggests:

> *"Assume that the workers are self-employed but do not own all the means of production. In this case there still may be powerful owners of factories, offices and machines ... the owners of the means of production would still receive an income, emanating from that ownership. In bargaining with these owners, the workers would be required to concede*

> *the claim of these owners to an income, as they would be unable to produce without making use of the means of production owned by others. Hence the workers would still be deprived of … 'surplus value'. Profits would still derive from ownership of the means of production."* [**Economics and Utopia**, p. 168]

This would not be (libertarian) socialism (as workers would still be exploited) nor would it be capitalism (as there is no wage labour as such, although there would be a proletariat). Thus genuine anarchism requires socialisation of the means of life, which ensures free access (no usury). In other words, self-management (while an essential part of anarchism) is not sufficient to make a society anarchistic. Without socialism (free access to the means of life) it would be yet another class system and rooted in exploitation. To eliminate all exploitation, social anarchists propose that productive assets such as workplaces and land be owned by society as a whole and run by syndicates and self-employed individuals. Thus Kropotkin: *"Free workers, on free land, with free machinery, and freely using all the powers given to man by science."* [**Act for Yourselves**, p. 102]

This vision of socialisation, of free access, also applies to housing. Proudhon, for example, suggested that payments of rent in housing under capitalism would be *"carried over to the account of the purchase of the property"* and once paid for the house *"shall pass under the control of the town administration … in the name of all the tenants, and shall guarantee them all a domicile, in perpetuity, at the cost of the building."* Rented farm land would be the same and would, once paid for, *"revert immediately to the town, which shall take the place of the former proprietor."* Provision *"shall be made for the supervision of the towns, for the installation of cultivators, and for the fixing of the boundaries of possessions."* [**General Idea of the Revolution**, p. 194 and p. 199] Kropotkin had a similar end in mind, namely *"the abolition of rent"*, but by different means, namely by *"the expropriation of houses"* during a social revolution. This would be *"the communalising of houses and the right of each family to a decent dwelling."* [**The Conquest of Bread**, p. 91 and p. 95]

It is important to note here that while anarchists tend to stress communes (see section I.5) this does **not** imply communal living in the sense of one-big family. As Kropotkin, for example, was at pains to stress such continual communal living is *"repugnant to millions of human beings. The most reserved man [and woman] certainly feels the necessity of meeting his [or her] fellows for the pursue of common work … But it is not so for the hours of leisure, reserved for rest and intimacy."* Communal living in the sense of a human bee-hive *"can please some, and even all at a certain period of their life, but the great mass prefers family life (family life of the future, be it understood). They prefer isolated apartments."* A community living together under one roof *"would be hateful, were it the general rule. Isolation, alternating with time spent in society, is the normal desire of human nature."* [**Op. Cit.**, pp. 123–4] Thus the aim is *"Communism, but not the monastic or barrack-room Communism formerly advocated [by state socialists], but the free Communism which places the products reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his [or her] own home."* [**The Place of Anarchism in the Evolution of Socialist Thought**, p. 7] Needless to say, each household, like each workplace, would be under the control of its users and socialisation exists to ensure that remains the case (i.e., that people cannot become tenants/subjects of landlords).

See section I.6 for a discussion of how socialisation and free access could work.

Beyond this basic vision of self-management and socialisation, the schools of anarchism vary. Mutualism eliminates wage labour and unites workers with the means of production they use. Such a system is socialist as it is based on self-management and workers' control/ownership

of the means of production. However, other social anarchists argue that such a system is little more than "petit-bourgeois co-operativism" in which the worker-owners of the co-operatives compete in the marketplace with other co-operatives for customers, profits, raw materials, etc. — a situation that could result in many of the same problems that arise under capitalism or even a return to capitalism (see section I.1.3). Some Mutualists recognise this danger. Proudhon, as discussed in section I.3.5, advocated an agro-industrial federation to combat the effects of market forces in generating inequality and wage labour. In addition, supporters of mutualism can point to the fact that existing co-operatives rarely fire their members and are far more egalitarian in nature than corresponding capitalist firms. This they argue will ensure that mutualism will remain socialist, with easy credit available to those who are made unemployed to start their own co-operatives again.

In contrast, within anarcho-collectivism and anarcho-communism society as a whole owns the means of life, which allows for the elimination of both competition for survival and the tendency for workers to develop a proprietary interest the enterprises in which they work. As Kropotkin argued, *"[t]here is no reason why the factory ... should not belong to the community ... It is evident that now, under the capitalist system, the factory is the curse of the village, as it comes to overwork children and to make paupers of its male inhabitants; and it is quite natural that it should be opposed by all means by the workers ... But under a more rational social organisation, the factory would find no such obstacles; it would be a boon to the village."* Needless to say, such a workplace would be based on workers' self-management, as *"the workers ... ought to be the real managers of industries."* [**Fields, Factories and Workshops Tomorrow**, p. 152 and p. 157] This *"socially organised industrial production"* (to use Kropotkin's term) would ensure a decent standard of living without the problems associated with a market, even a non-capitalist one.

In other words, the economy is communalised, with land and the means of production being turned into common "property". The community determines the social and ecological framework for production while the workforce makes the day-to-day decisions about what to produce and how to do it. This is because a system based purely on workplace assemblies effectively disenfranchises those individuals who do not work but live with the effects of production (e.g., ecological disruption). In Murray Bookchin's words, the aim would be to advance *"a holistic approach to an ecologically oriented economy"* with key policy decisions *"made by citizens in face-to-face assemblies — as **citizens**, not simply as workers, farmers, or professionals ... As citizens, they would function in such assemblies by their highest level — their **human** level — rather than as socially ghettoised beings. They would express their general human interests, not their particular status interests."* These communalised economies would join with others *"into a regional confederal system. Land, factories, and workshops would be controlled by the popular assemblies of free communities, not by a nation-state or by worker-producers who might very well develop a proprietary interest in them."* [**Remaking Society**, p. 194]

An important difference between workplace and community assemblies is that the former can be narrow in focus while the latter can give a hearing to solutions that bring out the common ground of people as people rather than as workers in a specific workplace or industry. This would be in the context of communal participation, through face-to-face voting of the whole community in local neighbourhood and confederal assemblies, which will be linked together through voluntary federations. It does **not** mean that the state owns the means of production, as under Marxism-Leninism or social democracy, because there is no state under libertarian socialism (for more on community assemblies, see section I.5).

This means that when a workplace is communalised workers' self-management is placed within the broader context of the community, becoming an aspect of community control. This does not mean that workers' do not control what they do or how they do it. Rather, it means that the framework within which they make their decisions is determined by the community. For example, the local community may decide that production should maximise recycling and minimise pollution, and workers informed of this decision make investment and production decisions accordingly. In addition, consumer groups and co-operatives may be given a voice in the confederal congresses of syndicates or even in the individual workplaces (although it would be up to local communities to decide whether this would be practical or not). In these ways, consumers could have a say in the administration of production and the type and quality of the product, adding their voice and interests in the creation as well as the consumption of a product.

Given the general principle of social ownership and the absence of a state, there is considerable leeway regarding the specific forms that collectivisation might take — for example, in regard to methods of distribution, the use or non-use of money, etc. — as can be seen by the different systems worked out in various areas of Spain during the Revolution of 1936–39. Nevertheless, freedom is undermined when some communities are poor while others are wealthy. Therefore the method of surplus distribution must insure that all communities have an adequate share of pooled revenues and resources held at higher levels of confederation as well as guaranteed minimum levels of public services and provisions to meet basic human needs. That is why anarchists have supported the need for syndicates and communities to federate (see next section)

Finally, one key area of disagreement between anarchist schools is how far socialisation should go. Mutualists think that it should only include the means of production while communist-anarchists argue that socialisation, to be consistent, must embrace what is produced as well as what produced it. Collectivist-anarchists tend to agree with mutualists on this, although many think that, over time, the economy would evolve into communism as the legacies of capitalism and scarcity are overcome. Proudhon spoke for the mutualists:

> *"This, then, is the first point settled: property in product, if we grant so much, does not carry with it property in the means of production; that seems to me to need no further demonstration ... all ... are proprietors of their products — not one is proprietor of the means of production. The right to product is exclusive — **jus in re**; the right to means is common — **jus ad rem**."* [**What is Property?**, pp. 120–1]

For libertarian communists, socialisation should be extended to the products of labour as well. This means that as well as having free access to the means of production, people would also have free access to the goods and services produced by them. Again, this does not imply people having to share the possessions they use. Rather it means that instead of having to buy the goods in question they are distributed freely, according to need. To maintain socialisation of the means of product but not in goods means basing society *"on two absolutely opposed principles, two principles that contradict one another continually."* [Kropotkin, **The Conquest of Bread**, p. 163] The need is to go beyond the abolition of wage labour into the abolition of money (the wages system). This is because any attempt at measuring a person's contribution to society will be flawed and, more importantly, people *"differ from one another by the amount of their **needs**. There is the young unmarried woman and the mother of a family of five or six children. For the employer of our days there is no consideration of the needs of"* each and *"the labour cheque ... acts in the same way."* [Kropotkin, **Act For Yourselves**, pp. 108–9]

Regardless of precisely which mode of distribution specific individuals, workplaces, communes or areas picks, socialisation would be underlying all. Free access to the means of production will ensure free individuals, including the freedom to experiment with different anarchistic economic systems.

I.3.4 What relations would exist between individual syndicates?

Just as individuals associate together to work on and overcome common problems, so would syndicates. Few, if any, workplaces are totally independent of others. They require raw materials as inputs and consumers for their products. Therefore there will be links between different syndicates. These links are twofold: firstly, free agreements between individual syndicates; secondly, confederations of syndicates (within branches of industry and regionally).

Combined with this desire for free co-operation is a desire to end centralised systems. The opposition to centralisation is often framed in a distinctly false manner. This can be seen when Alex Nove, a leading market socialist, argued that *"there are horizontal links (market), there are vertical links (hierarchy). What other dimension is there?"* [**The Economics of Feasible Socialism**, p. 226] In other words, to oppose central planning means to embrace the market. This is not true: horizontal links need not be market based any more than vertical links need be hierarchical. An anarchist society must be based essentially on horizontal links between individuals and associations, freely co-operating together as they (not a central body) sees fit. This co-operation will be source of many links in an anarchist economy. When a group of individuals or associations meet together and discuss common interests and make common decisions they will be bound by their own decisions. This is radically different from a central body giving out orders because those affected will determine the content of these decisions. In other words, instead of decisions being handed down from the top, they will be created from the bottom up.

Let us consider free agreement. Anarchists recognise the importance of letting people organise their own lives. This means that they reject central planning and instead urge direct links between workers' associations. In the words of Kropotkin, *"[f]ree workers would require a free organisation, and this cannot have any other basis than free agreement and free co-operation, without sacrificing the autonomy of the individual."* Those directly involved in production (and in consumption) know their needs far better than any bureaucrat. Thus voluntary agreement is the basis of a free economy, such agreements being *"entered by free consent, as a free choice between different courses equally open to each of the agreeing parties."* [**Anarchism**, p. 52 and p. 69] Without the concentration of wealth and power associated with capitalism, free agreement will become real and no longer a mask for hierarchy.

The anarchist economy *"starts from below, not from above. Like an organism, this free society grows into being from the simple unit up to the complex structure. The need for ... the individual struggle for life"* is *"sufficient to set the whole complex social machinery in motion. Society is the result of the individual struggle for existence; it is not, as many suppose, opposed to it."* So anarchists think that *"[i]n the same way that each free individual has associated with his brothers [and sisters!] to produce ... all that was necessary for life, driven by no other force than his [or her] desire for the full enjoyment of life, so each institution is free and self-contained, and co-operates and enters into agreements with others because by so doing it extends its own possibilities."* This suggests a decentralised economy — even more decentralised than capitalism (which is decentralised only

in capitalist mythology, as shown by big business and transnational corporations, for example) — one *"growing ever more closely bound together and interwoven by free and mutual agreements."* [George Barrett, **The Anarchist Revolution**, p. 18]

An anarchist economy would be based on spontaneous order as workers practised mutual aid and free association. For communist anarchists, this would take the form of *"free exchange without the medium of money and without profit, on the basis of requirement and the supply at hand."* [Alexander Berkman, **What is Anarchism?**, p. 217] *"Anarchists"*, summarised Rocker, *"desire a federation of free communities which shall be bound to one another by their common economic and social interest and shall arrange their affairs by mutual agreement and free contract."* [**Anarcho-Syndicalism**, p. 1] An example of one such agreement would be orders for products and services:

> *"This factory of ours is, then, to the fullest extent consistent with the character of its service, a self-governing unit, managing its own productive operations, and free to experiment to the heart's content in new methods, to develop new styles and products... This autonomy of the factory is the safeguard... against the dead level of mediocrity, the more than adequate substitute for the variety which the competitive motive was once supposed to stimulate, the guarantee of liveliness, and of individual work and workmanship."* [G.D.H. Cole, **Guild Socialism Restated**, p. 59]

This means that free agreement will ensure that customers would be able to choose their own suppliers, meaning that production units would know whether they were producing what their customers wanted, when they wanted it (i.e., whether they were meeting individual and social needs). If they were not, customers would go elsewhere, to other production units within the same branch of production. We should stress that in addition to this negative check (i.e. "exit" by consumers) it is likely, via consumer groups and co-operatives as well as communes, that workplaces will be subject to positive checks on what they produced. Consumer groups, by formulating and communicating needs to producer groups, will have a key role in ensuring the quality of production and goods and that it satisfies their needs (see section I.4.7 for more details of this).

These direct horizontal links between syndicates are essential to ensure that goods are produced which meet the needs of those who requested them. Without specific syndicates requesting specific goods at specific times to meet specific requirements, an economy will not meet people's needs. A central plan, for example, which states that 1 million tonnes of steel or 25 million shirts need to be produced in a year says nothing about what specifically needs to be produced and when, which depends on how it will be used and the needs of those using it. As Malatesta argued, *"it would be an absurd waste of energy to produce blindly for all possible needs, rather than calculating the actual needs and organising to satisfy them with as little effort as possible ... the solution lies in accord between people and in the agreements ... that will come about"* between them. [**At the Café**, pp. 62–3] Hence the pressing need for the classic anarchist ideas on free association, free agreement and mutual aid! These direct links between producer and consumer can communicate the information required to produce the right thing at the right time! As Kropotkin argued (based on his firsthand experience of state capitalism in Russia under Lenin):

> *"production and exchange represent an undertaking so complicated that the plans of the state socialists ... would prove to be absolutely ineffective as soon as they were applied*

> *to life. No government would be able to organise production if the workers themselves through their unions did not do it in each branch of industry; for in all production there arise daily thousands of difficulties which no government can solve or foresee. It is certainly impossible to foresee everything. Only the efforts of thousands of intelligences working on the problems can co-operate in the development of a new social system and find the best solutions for the thousands of local needs."* [**Anarchism**, pp. 76–77]

This brings us to the second form of relationships between syndicates, namely confederations of syndicates in the same industry or geographical area. It should be noted that inter-workplace federations are not limited to collectivist, syndicalist and communist anarchists. The idea of federations of syndicates goes back to Proudhon's agro-industrial federation, first raised during the 1848 revolution and named as such in his 1863 book, **The Principle of Federation**. The French mutualist suggested an *"agro-industrial federation"* as the structural support organisation for his system of self-managed co-operatives. These confederations of syndicates, are necessary to aid communication between workplaces. No syndicate exists in isolation, and so there is a real need for a means by which syndicates can meet together to discuss common interests and act on them. Thus confederations are complementary to free agreement and also reflect anarchist ideas of free association and decentralised organisation as well as concern for practical needs:

> *"Anarchists are strenuously opposed to the authoritarian, centralist spirit ... So they picture a future social life in the basis of federalism, from the individual to the municipality, to the commune, to the region, to the nation, to the international, on the basis of solidarity and free agreement. And it is natural that this ideal should be reflected also in the organisation of production, giving preference as far as possible, to a decentralised sort of organisation; but this does not take the form of an absolute rule to be applied in every instance. A libertarian order would be in itself ... rule out the possibility of imposing such a unilateral solution."* [Luigi Fabbri, *"Anarchy and 'Scientific Communism"*, pp. 13–49, **The Poverty of Statism**, Albert Meltzer (ed.), p. 23]

A confederation of syndicates (called a *"guild"* by some libertarian socialists, or *"industrial union"* by others) works on two levels: within an industry and across industries. The basic operating principle of these confederations is the same as that of the syndicate itself — voluntary co-operation between equals in order to meet common needs. In other words, each syndicate in the confederation is linked by horizontal agreements with the others, and none owe any obligations to a separate entity above the group (see section A.2.11 for more on the nature of anarchist confederation). As Herbert Read summarised:

> *"The general principle is clear: each industry forms itself into a federation of self-governing collectives; the control of each industry is wholly in the hands of the workers in that industry, and these collectives administer the whole economic life of the country."* [**Anarchy and Order**, p. 49]

Kropotkin's comments on federalism between communes indicate this (a syndicate can be considered as a producers' commune). *"The Commune of tomorrow,"* he argued *"will know that it cannot admit any higher authority; above it there can only be the interests of the Federation, freely accepted by itself as well as other communes."* So federalism need not conflict with autonomy, as

each member would have extensive freedom of action within its boundaries and so each *"Commune will be absolutely free to adopt all the institutions it wishes and to make all the reforms and revolutions it finds necessary."* [**Words of a Rebel**, p. 83] Moreover, these federations would be diverse and functional. Economic federation would a produce a complex inter-networking between associations and federations:

> *"Our needs are in fact so various, and they emerge with such rapidity, that soon a single federation will not be sufficient to satisfy them all. The Commune will then feel the need to contract other alliances, to enter into other federations. Belonging to one group for the acquisition of food supplies, it will have to join a second group to obtain other goods, such as metals, and then a third and a fourth group for textiles and works of art."* [**Op. Cit.**, p. 87]

Therefore, a confederation of syndicates would be adaptive to its members needs. As Tom Brown argued, the *"syndicalist mode of organisation is extremely elastic, therein is its chief strength, and the regional confederations can be formed, modified, added to or reformed according to local conditions and changing circumstances."* [**Syndicalism**, p. 58]

As would be imagined, these confederations are voluntary associations and *"[j]ust as factory autonomy is vital in order to keep the Guild system alive and vigorous, the existence of varying democratic types of factories in independence of the National Guilds may also be a means of valuable experiment and fruitful initiative of individual minds. In insistently refusing to carry their theory to its last 'logical' conclusion, the Guildsmen [and anarchists] are true to their love of freedom and varied social enterprise."* [G.D.H. Cole, **Op. Cit.**, p. 65] This, it must be stressed does not mean centralised control from the top:

> *"But when we say that ownership of the tools of production, including the factory itself, should revert to the corporation [i.e. confederation] we do not mean that the workers in the individual workshops will be ruled by any kind of industrial government having power to do what it pleases with the tools of production. No, the workers in the various factories have not the slightest intention of handing over their hard-won control ... to a superior power ... What they will do is ... to guarantee reciprocal use of their tools of production and accord their fellow workers in other factories the right to share their facilities, receiving in exchange the same right to share the facilities of the fellow workers with whom they have contracted the pact of solidarity."* [James Guillaume, *"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, pp. 363–364]

So collectivist and communist anarchism, like mutualism, is rooted in self-management in the workplace. This implies the ability of workers to pick the kinds of productive tasks they want to do. It would not be the case of workplaces simply being allocated tasks by some central body and expected to fulfil them (a task which, ignoring the real issues of bureaucracy and freedom, would be difficult to implement in any large and complex economy). Rather, workplaces would have the power to select tasks submitted to them by other associations (economic and communal) and control how the work required to achieve them was done. In this type of economic system, workers' assemblies and councils would be the focal point, formulating policies for their individual workplaces and deliberating on industry-wide or economy-wide issues through general

meetings of the whole workforce in which everyone would participate in decision making. Voting in the councils would be direct, whereas in larger confederal bodies, voting would be carried out by temporary, unpaid, mandated, and instantly recallable delegates, who would resume their status as ordinary workers as soon as their mandate had been carried out.

Mandated here means that the delegates from workers' assemblies and councils to meetings of higher confederal bodies would be instructed, at every level of confederation, by the workers who elected them on how to deal with any issue. They would be delegates, not representatives, and so would attend any confederal meeting with specific instructions on how to vote on a particular issue. **Recallable** means that if they do not vote according to that mandate they will be replaced and the results of the vote nullified. The delegates, in other words, would be given imperative mandates (binding instructions) that committed them to a framework of policies within which they would have to act, and they could be recalled and their decisions revoked at any time for failing to carry out the mandates they were given (this support for mandated delegates has existed in anarchist theory since at least 1848, when Proudhon argued that it was *"a consequence of universal suffrage"* to ensure that *"the people ... do not ... abjure their sovereignty."* [**No Gods, No Masters**, vol. 1, p. 63]). Because of this right of mandating and recalling their delegates, the workers' assemblies at the base would be the source of, and final "authority" (so to speak) over, policy for all higher levels of confederal co-ordination of the economy. Delegates will be ordinary workers rather than paid full-time representatives or union leaders, and they will return to their usual jobs as soon as the mandate for which they have been elected has been carried out. In this way, decision-making power remains with the workers' councils and does not become concentrated at the top of a bureaucratic hierarchy in an elite class of professional administrators or union leaders. What these confederations could do is discussed in the next section.

In summary, a free society *"is freely organised, from the bottom to top, staring from individuals that unite in associations which slowly grow bit by bit into ever more complex federations of associations"*. [Malatesta, **At the Cafe**, p. 65]

I.3.5 What would confederations of syndicates do?

Voluntary confederation among syndicates is considered necessary by social anarchists for numerous reasons but mostly in order to decide on the policies governing relations between syndicates and to co-ordinate their activities. This could vary from agreeing technical standards, to producing guidelines and policies on specific issues, to agreeing major investment decisions or prioritising certain large-scale economic projects or areas of research. In addition, they would be the means by which disputes could be solved and any tendencies back towards capitalism or some other class society identified and acted upon.

This can be seen from Proudhon, who was the first to suggest the need for such federations. *"All my economic ideas developed over the last twenty-five years,"* he stated, *"can be defined in three words:* ***Agro-industrial federation****"* This was required because *"[h]owever impeccable in its basic logic the federal principle may be ... it will not survive if economic factors tend persistently to dissolve it. In other words, political right requires to be buttressed by economic right"*. A free society could not survive if *"capital and commerce"* existed, as it would be *"divided into two classes — one of landlords, capitalists, and entrepreneurs, the other of wage-earning proletarians, one rich,*

the other poor." Thus *"in an economic context, confederation may be intended to provide reciprocal security in commerce and industry ... The purpose of such specific federal arrangements is to protect the citizens ... from capitalist and financial exploitation, both from within and from the outside; in their aggregate they form ... an* ***agro-industrial federation****"* [**The Principle of Federation**, p. 74, p. 67 and p. 70]

While capitalism results in *"interest on capital"* and *"wage-labour or economic servitude, in short inequality of condition"*, the *"agro-industrial federation ... will tend to foster increasing equality ... through mutualism in credit and insurance ... guaranteeing the right to work and to education, and an organisation of work which allows each labourer to become a skilled worker and an artist, each wage-earner to become his own master."* The *"industrial federation"* will apply *"on the largest scale"* the *"principles of mutualism"* and *"economic solidarity"*. As *"industries are sisters"*, they *"are parts of the same body"* and *"one cannot suffer without the others sharing in its suffering. They should therefore federate ... in order to guarantee the conditions of common prosperity, upon which no one has an exclusive claim."* Thus mutualism sees *"all industries guaranteeing one another mutually"* as well as *"organising all public services in an economical fashion and in hands other than the state's."* [**Op. Cit.**, p. 70, p. 71, p. 72 and p. 70]

Later anarchists took up, built upon and clarified these ideas of economic federation. There are two basic kinds of confederation: an industrial one (i.e., a federation of all workplaces of a certain type) and a regional one (i.e. a federation of all syndicates within a given economic area). Thus there would be a federation for each industry and a federation of all syndicates in a geographical area. Both would operate at different levels, meaning there would be confederations for both industrial and inter-industrial associations at the local and regional levels and beyond. The basic aim of this inter-industry and cross-industry networking is to ensure that the relevant information is spread across the various parts of the economy so that each can effectively co-ordinate its plans with the others in a way which minimises ecological and social harm. Thus there would be a railway workers confederation to manage the rail network but the local, regional and national depots and stations would send a delegate to meet regularly with the other syndicates in the same geographical area to discuss general economic issues.

However, it is essential to remember that each syndicate within the confederation is autonomous. The confederations seek to co-ordinate activities of joint interest (in particular investment decisions for new plant and the rationalisation of existing plant in light of reduced demand). They do not determine what work a syndicate does or how they do it:

> *"With the factory thus largely conducting its own concerns, the duties of the larger Guild organisations [i.e. confederations] would be mainly those of co-ordination, or regulation, and of representing the Guild in its external relations. They would, where it was necessary, co-ordinate the production of various factories, so as to make supply coincide with demand... they would organise research ... This large Guild organisation... must be based directly on the various factories included in the Guild."* [Cole, **Guild Socialism Restated**, pp. 59–60]

So it is important to note that the lowest units of confederation — the workers' assemblies — will control the higher levels, through their power to elect mandated and recallable delegates to meetings of higher confederal units. It would be fair to make the assumption that the "higher" up the federation a decision is made, the more general it will be. Due to the complexity of life it

would be difficult for federations which cover wide areas to plan large-scale projects in any detail and so would be, in practice, more forums for agreeing guidelines and priorities than planning actual specific projects or economies. As Russian anarcho-syndicalist G.P. Maximov put it, the aim *"was to co-ordinate all activity, all local interest, to create a centre but not a centre of decrees and ordinances but a centre of regulation, of guidance — and only through such a centre to organise the industrial life of the country."* [quoted by M. Brinton, **For Workers' Power**, p. 330]

So this is a decentralised system, as the workers' assemblies and councils at the base having the final say on **all** policy decisions, being able to revoke policies made by those with delegated decision-making power and to recall those who made them:

> *"When it comes to the material and technical method of production, anarchists have no preconceived solutions or absolute prescriptions, and bow to what experience and conditions in a free society recommend and prescribe. What matters is that, whatever the type of production adopted, it should be the free choice of the producers themselves, and cannot possibly be imposed, any more than any form is possible of exploitations of another's labour... Anarchists do not* ***a priori*** *exclude any practical solution and likewise concede that there may be a number of different solutions at different times."* [Luigi Fabbri, *"Anarchy and 'Scientific' Communism"*, pp. 13–49, **The Poverty of Statism**, Albert Meltzer (ed.), p. 22]

Confederations would exist for specific reasons. Mutualists, as can be seen from Proudhon, are aware of the dangers associated with even a self-managed, socialistic market and create support structures to defend workers' self-management. Moreover, it is likely that industrial syndicates would be linked to mutual banks (a credit syndicate). Such syndicates would exist to provide interest-free credit for self-management, new syndicate expansion and so on. And if the experience of capitalism is anything to go by, mutual banks will also reduce the business cycle as *"[c]ountries like Japan and Germany that are usually classifies as bank-centred — because banks provide more outside finance than markets, and because more firms have long-term relationships with their banks — show greater growth in and stability of investment over time than the market-centred ones, like the US and Britain ... Further, studies comparing German and Japanese firms with tight bank ties to those without them also show that firms with bank ties exhibit greater stability in investment over the business cycle."* [Doug Henwood, **Wall Street**, pp. 174–5]

One argument against co-operatives is that they do not allow the diversification of risk (all the worker's eggs are on one basket). Ignoring the obvious point that most workers today do not have shares and are dependent on their job to survive, this objection can be addressed by means of *"the* ***horizontal association*** *or grouping of enterprises to pool their business risk. The Mondragon co-operatives are associated together in a number of regional groups that pool their profits in varying degrees. Instead of a worker diversifying his or her capital in six companies, six companies partially pool their profits in a group or federation and accomplish the same risk-reduction purpose without transferable equity capital."* Thus *"risk-pooling in federations of co-operatives"* ensure that *"transferable equity capital is not necessary to obtain risk diversification in the flow of annual worker income."* [David Ellerman, **The Democratic Worker-Owned Firm**, p. 104] Moreover, as the example of many isolated co-operatives under capitalism have shown, support networks are essential for co-operatives to survive. It is no co-incidence that the Mondragon co-operative complex in the Basque region of Spain has a credit union and mutual support networks

between its co-operatives and is by far the most successful co-operative system in the world. The *"agro-industrial federation"* exists precisely for these reasons.

Under collectivist and communist anarchism, the federations would have addition tasks. There are two key roles. Firstly, the sharing and co-ordination of information produced by the syndicates and, secondly, determining the response to the changes in production and consumption indicated by this information.

Confederations (negotiated-co-ordination bodies) would be responsible for clearly defined branches of production, and in general, production units would operate in only one branch of production. These confederations would have direct links to other confederations and the relevant communal confederations, which supply the syndicates with guidelines for decision making (see section I.4.4) and ensure that common problems can be highlighted and discussed. These confederations exist to ensure that information is spread between workplaces and to ensure that the industry responds to changes in social demand. In other words, these confederations exist to co-ordinate major new investment decisions (i.e. if demand exceeds supply) and to determine how to respond if there is excess capacity (i.e. if supply exceeds demand).

It should be pointed out that these confederated investment decisions will exist along with the investments associated with the creation of new syndicates, plus internal syndicate investment decisions. We are not suggesting that **every** investment decision is to be made by the confederations. (This would be particularly impossible for **new** industries, for which a confederation would not exist!) Therefore, in addition to co-ordinated production units, an anarchist society would see numerous small-scale, local activities which would ensure creativity, diversity, and flexibility. Only after these activities had spread across society would confederal co-ordination become necessary. So while production will be based on autonomous networking, the investment response to consumer actions would, to some degree, be co-ordinated by a confederation of syndicates in that branch of production. By such means, the confederation can ensure that resources are not wasted by individual syndicates over-producing goods or over-investing in response to changes in production. By communicating across workplaces, people can overcome the barriers to co-ordinating their plans which one finds in market systems (see section C.7.2) and so avoid the economic and social disruptions associated with them.

Thus, major investment decisions would be made at congresses and plenums of the industry's syndicates, by a process of horizontal, negotiated co-ordination. Major investment decisions are co-ordinated at an appropriate level, with each unit in the confederation being autonomous, deciding what to do with its own productive capacity in order to meet social demand. Thus we have self-governing production units co-ordinated by confederations (horizontal negotiation), which ensures local initiative (a vital source of flexibility, creativity, and diversity) and a rational response to changes in social demand. As links between syndicates are non-hierarchical, each syndicate remains self-governing. This ensures decentralisation of power and direct control, initiative, and experimentation by those involved in doing the work.

It should be noted that during the Spanish Revolution successfully federated in different ways. Gaston Leval noted that these forms of confederation did not harm the libertarian nature of self-management:

> *"Everything was controlled by the syndicates. But it must not therefore be assumed that everything was decided by a few higher bureaucratic committees without consulting the rank and file members of the union. Here libertarian democracy was practised. As in*

> *the C.N.T. there was a reciprocal double structure; from the grass roots at the base ... upwards, and in the other direction a reciprocal influence from the federation of these same local units at all levels downwards, from the source back to the source."* [**The Anarchist Collectives**, p. 105]

The exact nature of any confederal responsibilities will vary, although we *"prefer decentralised management; but ultimately, in practical and technical problems, we defer to free experience."* [Luigi Fabbri, **Op. Cit.**, p. 24] The specific form of organisation will obviously vary as required from industry to industry, area to area, but the underlying ideas of self-management and free association will be the same. Moreover, the *"essential thing ... is that its [the confederation or guild] function should be kept down to the minimum possible for each industry."* [Cole, **Op. Cit.**, p. 61]

Another important role for inter-syndicate federations is to even-out inequalities. After all, each area will not be identical in terms of natural resources, quality of land, situation, accessibility, and so on. Simply put, social anarchists *"believe that because of natural differences in fertility, health and location of the soil it would be impossible to ensure that every individual enjoyed equal working conditions."* Under such circumstances, it would be *"impossible to achieve a state of equality from the beginning"* and so *"justice and equity are, for natural reasons, impossible to achieve ... and that freedom would thus also be unachievable."* [Malatesta, **The Anarchist Revolution**, p. 16 and p. 21]

This was recognised by Proudhon, who saw the need for economic federation due to differences in raw materials, quality of land and so on, and as such argued that a portion of income from agricultural produce be paid into a central fund which would be used to make equalisation payments to compensate farmers with less favourably situated or less fertile land. As he put it, economic rent *"in agriculture has no other cause than the inequality in the quality of land ... if anyone has a claim on account of this inequality ... [it is] the other land workers who hold inferior land. That is why in our scheme for liquidation [of capitalism] we stipulated that every variety of cultivation should pay a proportional contribution, destined to accomplish a balancing of returns among farm workers and an assurance of products."* In addition, *"all the towns of the Republic shall come to an understanding for equalising among them the quality of tracts of land, as well as accidents of culture."* [**General Idea of the Revolution**, p. 209 and p. 200]

By federating together, workers can ensure that *"the earth will ... be an economic domain available to everyone, the riches of which will be enjoyed by all human beings."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 93] Local deficiencies of raw materials, in the quality of land, and, therefore, supplies would be compensated from outside, by the socialisation of production and consumption. This would allow all of humanity to share and benefit from economic activity, so ensuring that well-being for all is possible.

Federation would eliminate the possibility of rich and poor collectives and syndicates coexisting side by side. As Kropotkin argued, *"[c]ommon possession of the necessities for production implies the common enjoyment of the fruits of common production ... when everybody, contributing for the common well-being to the full extent of his [or her] capacities, shall enjoy also from the common stock of society to the fullest possible extent of his [or her] needs."* [**Anarchism**, p. 59] Hence we find the CNT arguing in its 1936 resolution on libertarian communism that *"[a]s far as the interchange of produce between communes is concerned, the communal councils are to liase with the regional federations of communes and with the confederal council of production and distribution, applying for whatever they may need and [giving] any available surplus stocks."* [quoted

by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 107] This clearly followed Kropotkin's comments that the *"socialising of production, consumption, and exchange"* would be based on workplaces *"belong[ing] to federated Communes."* [**The Conquest of Bread**, p. 136]

The legacy of capitalism, with its rich and poor areas, its rich and poor workplaces, will be a problem any revolution will face. The inequalities produced by centuries of class society will take time to change. This is one of the tasks of the confederation, to ensure the socialisation of both production and consumption so that people are not penalised for the accidents of history and that each commune can develop itself to an adequate level. In the words of the CNT during the Spanish Revolution:

> *"Many arguments are used against the idea of socialisation; one of these — the most delightful — says that by socialising an industry we simply take it over and run it with the consequence that we have flourishing industries where the workers are privileged, and unfortunate industries where the workers get less benefits but have to work harder than workers elsewhere ... There are differences between the workers in prosperous industries and those which barely survive... Such anomalies, which we don't deny exist, are attributed to the attempts at socialisation. We firmly assert that the opposite is true; such anomalies are the logical result of the absence of socialisation.*
>
> *"The socialisation which we propose will resolve these problems which are used to attack it. Were Catalan industry socialised, everything would be organically linked — industry, agriculture, and the trade union organisations, in accordance with the council for the economy. They would become normalised, the working day would become more equal or what comes to the same thing, the differences between workers of different activities would end ...*
>
> *"Socialisation is — and let its detractors hear it — the genuine authentic organisation of the economy. Undoubtedly the economy has to be organised; but not according to the old methods, which are precisely those which we are destroying, but in accordance with new norms which will make our people become an example to the world proletariat."* [**Solidaridad Obrera**, 30 April 1937, p. l2]

Workers' self-management does not automatically mean that all forms of economic domination and exploitation would be eliminated. After all, in a market economy firms can accrue super-profits simply because of their size or control over a specific technology or resource. Hence Proudhon's suggestion that *"advocates of mutualism"* would *"regulate the market"* to ensure *"an honest breakdown of cost prices"*, fix *"after amicable discussion of a **maximum** and **minimum** profit margin"* and *"the organising of regulating societies."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 70] It seems likely that the agro-industrial federation would be the body which ensures that. Similarly, the federation would be the means by which to air, and deal with, suggestions that syndicates are monopolising their resources, i.e., treating them as private property rather than socialised possessions. Thus the federation would unite workers *"to guarantee the mutual use of the tools of production"* which are, *"by a reciprocal contract"*, the *"collective property of the whole."* [James Guillaume, *"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, p. 376]

The inter-industry confederations help ensure that when the members of a syndicate change work to another syndicate in another (or the same) branch of industry, they have the same rights

as the members of their new syndicate. In other words, by being part of the confederation, a worker ensures that s/he has the same rights and an equal say in whatever workplace is joined. This is essential to ensure that a co-operative society remains co-operative, as the system is based on the principle of *"one person, one vote"* by all those involved the work process. If specific syndicates **are** restricting access and so producing wage-labour, monopolising resources and so charging monopoly prices, the federation would be forum to publicly shame such syndicates and organise boycotts of them. Such anti-social activity is unlikely to be tolerated by a free people seeking to protect that freedom.

However, it could again be argued that these confederations are still centralised and that workers would still be following orders coming from above. This is incorrect, for any decisions concerning an industry or plant are under the direct control of those involved. For example, the steel industry confederation may decide to rationalise itself at one of its congresses. Murray Bookchin sketches the response to this situation as follows:

> *"[L]et us suppose that a board of highly qualified technicians is established [by this congress] to propose changes in the steel industry. This board ... advances proposals to rationalise the industry by closing down some plants and expanding the operation of others ... Is this a 'centralised' body or not? The answer is both yes and no. Yes, only in the sense that the board is dealing with problems that concern the country as a whole; no, because it can make no decision that **must** be executed for the country as a whole. The board's plan must be examined by all the workers in the plants [that are affected] ... The board itself has no power to enforce 'decisions'; it merely makes recommendations. Additionally, its personnel are controlled by the plant in which they work and the locality in which they live ... they would have no decision-making powers. The adoption, modification or rejection of their plans would rest entirely with ... [those] involved."* [**Post Scarcity Anarchism**, p. 180]

Therefore, confederations would not be in positions of power over the individual syndicates. No attempt is made to determine which plants produce which steel for which customers in which manner. Thus, the confederations of syndicates ensure a decentralised, spontaneous economic order without the negative side-effects of capitalism (namely power concentrations within firms and in the market, periodic crises, etc.).

As one can imagine, an essential feature of these confederations will be the collection and processing of information in order to determine how an industry is developing. This does not imply bureaucracy or centralised control at the top. Taking the issue of centralisation first, the confederation is run by delegate assemblies, meaning that any officers elected at a congress only implement the decisions made by the delegates of the relevant syndicates. It is in the congresses and plenums of the confederation that new investment decisions, for example, are made. The key point to remember is that the confederation exists purely to co-ordinate joint activity and share information, it does not take an interest in how a workplace is run or what orders from consumers it fills. (Of course, if a given workplace introduces policies which other syndicates disapprove of, it can be expelled). As the delegates to these congresses and plenums are mandated and their decisions subject to rejection and modification by each productive unit, the confederation is not centralised.

As far as bureaucracy goes, the collecting and processing of information does necessitate an administrative staff to do the work. However, this problem affects capitalist firms as well; and

since syndicates are based on bottom-up decision making, its clear that, unlike a centralised capitalist corporation, administration would be smaller. In fact, it is likely that a fixed administration staff for the confederation would not exist in the first place! At the regular congresses, a particular syndicate may be selected to do the confederation's information processing, with this job being rotated regularly around different syndicates. In this way, a specific administrative body and equipment can be avoided and the task of collating information placed directly in the hands of ordinary workers. Further, it prevents the development of a bureaucratic elite by ensuring that **all** participants are versed in information-processing procedures.

Lastly, what information would be collected? That depends on the context. Individual syndicates would record inputs and outputs, producing summary sheets of information. For example, total energy input, in kilowatts and by type, raw material inputs, labour hours spent, orders received, orders accepted, output, and so forth. This information can be processed into energy use and labour time per product (for example), in order to give an idea of how efficient production is and how it is changing over time. For confederations, the output of individual syndicates can be aggregated and local and other averages can be calculated. In addition, changes in demand can be identified by this aggregation process and used to identify when investment will be needed or plants closed down. In this way the chronic slumps and booms of capitalism can be avoided without creating a system which is even more centralised than capitalism.

I.3.6 What about competition between syndicates?

This is a common question, particularly from defenders of capitalism. They argue that syndicates will not co-operate together unless forced to do so, and will compete against each other for raw materials, skilled workers, and so on. The result of this process, it is claimed, will be rich and poor syndicates, inequality within society and within the workplace, and (possibly) a class of unemployed workers from unsuccessful syndicates who are hired by successful ones. In other words, they argue that libertarian socialism will need to become authoritarian to prevent competition, and that if it does not do so it will become capitalist very quickly.

For individualist anarchists and mutualists, competition is not viewed as a problem. They think that competition, based around co-operatives and mutual banks, would minimise economic inequality, as the new economic structure based around free credit and co-operation would eliminate non-labour (i.e. unearned) income such as profit, interest and rent and give workers enough bargaining power to eliminate exploitation. For these anarchists it is a case of capitalism perverting competition and so are not against competition itself. Other anarchists think that whatever gains might accrue from competition (assuming there are, in fact, any) would be more than offset by its negative effects, which are outlined in section I.1.3. It is to these anarchists that the question is usually asked.

Before continuing, we would like to point out that individuals trying to improve their lot in life is not against anarchist principles. How could it be? *"Selfish is not a crime,"* John Most and Emma Goldman noted, *"it only becomes a crime when conditions are such as to give an individual the opportunity to satisfy his selfishness to the detriment of others. In an anarchistic society everyone will seek to satisfy his ego"* but in order to do so he *"will extend his aid to those who will aid him, and then selfishness will no more be a curse but a blessing."* [*"Talking about Anarchy"*, **Black Flag**,

no. 228, p. 28] Thus anarchists see co-operation and mutual aid as an expression of "self-interest", in that working with people as equals is in our joint benefit. In the words of John O'Neill:

> *"[F]or it is the institutions themselves that define what counts as one's interests. In particular, the market encourages egoism, not primarily because it encourages an individual to be 'self-interested' — it would be unrealistic not to expect individuals to act for the greater part in a 'self-interested' manner — but rather because it defines an individual's interests in a particularly narrow fashion, most notably in terms of possession of certain material goods. In consequence, where market mechanism enter a particular sphere of life, the pursuit of goods outside this narrow range of market goods is institutionally defined as an act of altruism."* [**The Market**, p. 158]

As such, anarchists would suggest that we should not confuse competition with self-interest and that a co-operative society would tend to promote institutions and customs which would ensure that people recognised that co-operation between equals maximises individual freedom and self-interest far more than individualistic pursuit to material wealth at the expense of all other goals. Ultimately, what use would it be to gain the world and loose what makes life worth living?

Of course, such a society would not be based on exactly equal shares of everything. Rather, it would mean equal opportunity and free, or equal, access to resources (for example, that only ill people use medical resources is unproblematic for egalitarians!). So a society with unequal distributions of resources is not automatically a non-anarchist one. What **is** against anarchist principles is centralised power, oppression, and exploitation, all of which flow from large inequalities of income and private property. This is the source of anarchist concern about equality — concern that is not based on some sort of *"politics of envy."* Anarchists oppose inequality because it soon leads to the few oppressing the many (a relationship which distorts the individuality and liberty of all involved as well as the health and very lives of the oppressed).

Anarchists desire to create a society in which such relationships are impossible, believing that the most effective way to do this is by empowering all, by creating an egoistic concern for liberty and equality among the oppressed, and by developing social organisations which encourage self-management. As for individuals' trying to improve their lot, anarchists maintain that co-operation is the best means to do so, **not** competition. And there is substantial evidence to support this claim (see, for example, Alfie Kohn's **No Contest: The Case Against Competition** and Robert Axelrod's **The Evolution of Co-operation** present abundant evidence that co-operation is in our long term interests and provides better results than short term competition). This suggests that, as Kropotkin argued, mutual aid, not mutual struggle, will be in an individual's self-interest and so competition in a free, sane society would be minimised and reduced to sports and other individual pastimes. As Stirner argued, co-operation is just as egoistic as competition (a fact sometimes lost on many due to the obvious ethical superiority of co-operation):

> *"But should competition some day disappear, because concerted effort will have been acknowledged as more beneficial than isolation, then will not every single individual inside the associations be equally egoistic and out for his own interests?"* [**No Gods, No Masters**, vol. 1, p. 22]

Now to the "competition" objection, which we'll begin to answer by noting that it ignores a few key points.

Firstly, the assumption that a libertarian society would "become capitalist" in the absence of a **state** is obviously false. If competition did occur between collectives and did lead to massive wealth inequalities, then the newly rich would have to create a state to protect their private property against the dispossessed. So inequality, not equality, leads to the creation of states. It is no co-incidence that the anarchic communities that existed for millennia were also egalitarian.

Secondly, as noted in section A.2.5, anarchists do not consider *"equal"* to mean *"identical."* Therefore, to claim that wage differences mean the end of anarchism makes sense only if one thinks that *"equality"* means everyone getting **exactly** equal shares. As anarchists do not hold such an idea, wage differences in an otherwise anarchistically organised syndicate do not indicate a lack of equality. How the syndicate is **run** is of far more importance, because the most pernicious type of inequality from the anarchist standpoint is inequality of **power,** i.e. unequal influence on political and economic decision making.

Under capitalism, wealth inequality translates into such an inequality of power, and vice versa, because wealth can buy private property (and state protection of it), which gives owners authority over that property and those hired to produce with it; but under libertarian socialism, minor or even moderate differences in income among otherwise equal workers would not lead to this kind of power inequality, because self-management and socialisation severs the link between wealth and power. Moreover, when labour becomes free in a society of rebels (and, surely, an anarchist society could be nothing but) few would tolerate relatively minor income inequalities becoming a source of power.

Thirdly, anarchists do not pretend that an anarchist society will be perfect. Hence there may be periods, particularly just after capitalism has been replaced by self-management, when differences in skill, etc., leads to some people exploiting their position and getting more wages, better hours and conditions, and so forth. This problem existed in the industrial collectives in the Spanish Revolution. As Kropotkin pointed out, *"[b]ut, when all is said and done, some inequalities, some inevitable injustice, undoubtedly will remain. There are individuals in our societies whom no great crisis can lift out of the deep mire of egoism in which they are sunk. The question, however, is not whether there will be injustices or no, but rather how to limit the number of them."* [**The Conquest of Bread**, p. 94]

In other words, these problems will exist, but there are a number of things that anarchists can do to minimise their impact. There will be a *"gestation period"* before the birth of an anarchist society, in which social struggle, new forms of education and child-rearing, and other methods of consciousness-raising increase the number of anarchists and decrease the number of authoritarians.

The most important element in this gestation period is social struggle. Such self-activity will have a major impact on those involved in it (see section J.2). By direct action and solidarity, those involved develop bounds of friendship and support with others, develop new forms of ethics and new ideas and ideal. This radicalisation process will help to ensure that any differences in education and skill do not develop into differences in power in an anarchist society by making people less likely to exploit their advantages nor, more importantly, for others to tolerate them doing so!

In addition, education within the anarchist movement should aim, among other things, to give its members familiarity with technological skills so that they are not dependent on "experts" and can thus increase the pool of skilled workers who will be happy working in conditions of liberty and equality. This will ensure that differentials between workers can be minimised. In the

long run, however, popularisation of non-authoritarian methods of child-rearing and education (see section J.6) are particularly important because, as we suggested in section B.1.5, secondary drives such as greed and the desire the exercise power over others are products of authoritarian upbringing based on punishments and fear. Only if the prevalence of such drives is reduced among the general population can we be sure that an anarchist revolution will not degenerate into some new form of domination and exploitation.

However, there are other reasons why economic inequality — say, in differences of income levels or working conditions, which may arise from competition for "better" workers — would be far less severe under any form of anarchist society than it is under capitalism.

Firstly, the syndicates would be democratically managed. This would result in much smaller wage differentials, because there is no board of wealthy directors setting wage levels for their own gain. So without hierarchies in the workplace no one would be in a position to monopolise the work of others and grow rich as a result:

> *"Poverty is the symptom: slavery the disease. The extremes of riches and destitution follow inevitably upon the extremes of license and bondage. The many are not enslaved because they are poor, they are poor because they are enslaved. Yet Socialists have all too often fixed their eyes upon the material misery of the poor without realising that it rests upon the spiritual degradation of the slave."* [G.D.H. Cole, **Self-Government in Industry**, p. 41]

Empirical evidence supports anarchist claims as co-operatives have a far more egalitarian wage structure than capitalist firms. This can be seen from the experience of the Mondragon co-operatives, where the wage difference between the highest paid and lowest paid worker was 4 to 1. This was only increased when they had to compete with large capitalist companies, and even then the new ratio of 9 to 1 is **far** smaller than those in capitalist companies (in America the ratio is 200 to 1 and beyond!). Thus, even under capitalism, *"[t]here is evidence that the methods of distribution chosen by worker-controlled or self-managed firms are more egalitarian than distribution according to market precepts."* [Christopher Eaton Gunn, **Workers' Self-Management in the United States**, p. 45] Given that market precepts fail to take into account power differences, this is unsurprising. Thus we can predict that a fully self-managed economy would be just, if not, more egalitarian as differences in power would be eliminated, as would unemployment (James K. Galbraith, in his book **Created Unequal**, has presented extensive evidence that unemployment increases inequality, as would be expected).

It is a common myth that managers, executives and so on are paid so highly because of their unique abilities. Actually, they are so highly paid because they are bureaucrats in command of large hierarchical institutions. It is the hierarchical nature of the capitalist firm that ensures inequality, **not** exceptional skills. Even enthusiastic supporters of capitalism provide evidence to support this claim. In the 1940s Peter Drucker, a supporter of capitalism, brushed away the claim that corporate organisation brings managers with exceptional ability to the top when he noted that *"[n]o institution can possibly survive if it needs geniuses or supermen to manage it. It must be organised in such a way as to be able to get along under a leadership of average human beings."* For Drucker, *"the things that really count are not the individual members but the relations of command and responsibility among them."* [**Concept of the Corporation**, p. 35 and p. 34] Little has changed, beyond the power of PR to personalise the bureaucratic structures of corporations.

Secondly, having no means of unearned income (such as rent, interest and intellectual property rights), anarchism will reduce income differentials substantially.

Thirdly, management positions would be rotated, ensuring that everyone gets experience of the work, thus reducing the artificial scarcity created by the division of labour. Also, education would be extensive, ensuring that engineers, doctors, and other skilled workers would do the work because they **enjoyed** doing it and not for financial reward.

Fourthly, we should like to point out that people work for many reasons, not just for high wages. Feelings of solidarity, empathy, friendship with their fellow workers would also help reduce competition between syndicates.

Of course, the "competition" objection assumes that syndicates and members of syndicates will place financial considerations above all else. This is not the case, and few individuals are the economic robots assumed in capitalist dogma. Indeed, the evidence from co-operatives refutes such claims (ignoring, for the moment, the vast evidence of our own senses and experiences with real people rather than the insane *"economic man"* of capitalist economic ideology). As noted in section I.3.1 neo-classical economic theory, deducing from its basic assumptions, argues that members of co-operatives will aim to maximise profit per worker and so, perversely, fire their members during good times. Reality contradicts these claims. In other words, the underlying assumption that people are economic robots cannot be maintained — there is extensive evidence pointing to the fact that different forms of social organisation produce different considerations which motivate people accordingly.

So, while recognising that competition could exist, anarchists think there are plenty of reasons not to worry about massive economic inequality being created, which in turn would re-create the state. The apologists for capitalism who put forward this argument forget that the pursuit of self-interest is universal, meaning that everyone would be interested in maximising his or her liberty, and so would be unlikely to allow inequalities to develop which threatened that liberty. It would be in the interests of communes and syndicates which to share with others instead of charging high prices for them as they may find themselves boycotted by others, and so denied the advantages of social co-operation. Moreover, they may be subject to such activities themselves and so it would wise for them to remember to *"treat others as you would like them to treat you under similar circumstances."* As anarchism will never come about unless people desire it and start to organise their own lives, it is clear that an anarchist society would be inhabited by individuals who followed that ethical principle.

So it is doubtful that people inspired by anarchist ideas would start to charge each other high prices, particularly since the syndicates and community assemblies are likely to vote for a wide basis of surplus distribution, precisely to avoid this problem and to ensure that production will be for use rather than profit. In addition, as other communities and syndicates would likely boycott any syndicate or commune that was acting in non-co-operative ways, it is likely that social pressure would soon result in those willing to exploit others rethinking their position. Co-operation does not imply a willingness to tolerate those who desire to take advantage of you. In other words, neither mutual aid nor anarchist theory implies people are naive indiscriminate altruists but rather people who, while willing to work with others co-operatively, will act to stop others taking advantage of them. Mutual aid, in other words is based on reciprocal relationships. If someone or a syndicate does not co-operate but rather seeks to take advantage of others, then the others are well within their rights to boycott them and otherwise protest against them. A free society is based on **all** people pursuing their self-interest, not just the few. This suggests that

anarchists reject the assumption that those who lose by competition should be altruistic and let competition ruin their lives.

Moreover, given the experience of the neo-liberal period from the 1980s onwards (with rising inequality marked by falling growth, lower wage growth, rising unemployment and increased economic instability) the impact of increased competition and inequality harms the vast majority. It is doubtful that people aware of these tendencies (and that, as we argued in section F.3, *"free exchange"* in an unequal society tends to **increase**, not decrease, inequality) would create such a regime.

Unsurprisingly, examples of anarchism in action show that there is working together to reduce the dangers of isolation and competition. One thing to remember is that anarchy will not be created "overnight" and so potential problems will be worked out over time. Underlying all these kinds of objections is the assumption that co-operation will **not** be more beneficial to all involved than competition. However, in terms of quality of life, co-operation will soon be seen to be the better system, even by the most highly paid workers. There is far more to life than the size of one's pay packet, and anarchism exists in order to ensure that life is far more than the weekly grind of boring work and the few hours of hectic consumption in which people attempt to fill the "spiritual hole" created by a way of life which places profits above people.

I.3.7 What about people who do not want to join a syndicate?

In this case, they are free to work alone, by their own labour. Anarchists have no desire to force people to join a syndicate. Emma Goldman spoke for all anarchists when she stated that *"[w]e believe in every person living his own life in his own way and not in coercing others to follow any one's dictation."* [**A Documentary History of the American Years**, vol. 2, p. 324]

Therefore, the decision to join a syndicate will be a free one, with the potential for living outside it guaranteed for non-exploitative and non-oppressive individuals and groups. Malatesta stressed this when he argued that in an anarchist revolution *"what has to be destroyed at once ... is **capitalistic property,** that is, the fact that a few control the natural wealth and the instruments of production and can thus oblige others to work for them"* but one must have a *"right and the possibility to live in a different regime, collectivist, mutualist, individualist — as one wishes, always on the condition that there is no oppression or exploitation of others."* [**Errico Malatesta: Life and Ideas**, p. 102] In other words, different forms of social life will be experimented with, depending on what people desire.

Of course some people ask how anarchists can reconcile individual freedom with expropriation of capital. All we can say is that these critics subscribe to the idea that one should not interfere with the "individual freedom" of those in positions of authority to oppress others, and that this premise turns the concept of individual freedom on its head, making oppression a "right" and the denial of freedom a form of it!

However, it is a valid question to ask if anarchism would result in self-employed people being forced into syndicates as the result of a popular movement. The answer is no. This is because the destruction of title deeds would not harm the independent worker, whose real title is possession and the work done. What anarchists want to eliminate is not possession but capitalist ***property***. Thus such workers *"may prefer to work alone in his own small shop"* rather than join an association

or a federation. [James Guillaume, *"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, p. 362]

This means that independent producers will still exist within an anarchist society, and some workplaces — perhaps whole areas — will not be part of a confederation. This is natural in a free society, for different people have different ideas and ideals. Nor does such independent producers imply a contradiction with libertarian socialism, for *"[w]hat we concerned with is the destruction of the titles of proprietors who exploit the labour of others and, above all, of expropriating them in fact in order to put ... all the means of production at the disposal of those who do the work."* [Malatesta, **Op. Cit.**, p. 103] Such freedom to work independently or associate as desired does **not** imply any support for private property (as discussed in section I.6.2). Thus any individual in a libertarian socialist economy *"always has the liberty to isolate himself and work alone, without being considered a bad citizen or a suspect."* [Proudhon, quoted by K. Steven Vincent, **Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 145]

In summary, in a free society people need not join syndicates nor does a co-operative need to confederate with others. Given we have discussed the issue of freedom of economic arrangements at length in section G.2.1 we will leave this discussion here.

I.3.8 Do anarchists seek *"small autonomous communities, devoted to small scale production"*?

No. The idea that anarchism aims for small, self-sufficient, communes is a Leninist slander. They misrepresent anarchist ideas on this matter, suggesting that anarchists seriously want society based on *"small autonomous communities, devoted to small scale production."* In particular, they point to Kropotkin, arguing that he *"looked backwards for change"* and *"witnessed such communities among Siberian peasants and watchmakers in the Swiss mountains."* [Pat Stack, *"Anarchy in the UK?"*, **Socialist Review**, no. 246] Another Leninist, Donny Gluckstein, makes a similar assertion about Proudhon wanting a federation of *"tiny economic units"*. [**The Paris Commune**, p. 75]

While it may be better to cover this issue in section H.2, we discuss it here simply because it relates directly to what an anarchist society could look like and so it allows us to that more fully.

So what do anarchists make of the assertion that we aim for *"small autonomous communities, devoted to small scale production"*? Simply put, we think it is nonsense (as would be quickly obvious from reading anarchist theory). Indeed, it is hard to know where this particular anarchist "vision" comes from. As Luigi Fabbri noted, in his reply to an identical assertion by the leading Bolshevik Nikolai Bukharin, *"[i]t would be interesting to learn in what anarchist book, pamphlet or programme such an 'ideal' is set out, or even such a hard and fast rule!"* [*"Anarchy and 'Scientific' Communism"*, pp. 13–49, **The Poverty of Statism**, Albert Meltzer (ed.), p. 21]

If we look at, say, Proudhon, we soon see no such argument for *"small scale"* production. For Proudhon, *"[l]arge industry ... come to us by big monopoly and big property: it is necessary in the future to make them rise from the [workers] association."* [quoted by K. Steven Vincent, **Proudhon and the Rise of French Republican Socialism**, p. 156] In fact, The Frenchman **explicitly** rejected the position Stack inflicts on him by arguing that it *"would be to retrograde"* and *"impossible"* to wish *"the division of labour, with machinery and manufactures, to be abandoned, and each family to return to the system of primitive indivision, — that is, to* ***each one by himself, each one***

***for himself**, in the most literal meaning of the words."* [**System of Economic Contradictions**, p. 206] As historian K. Steven Vincent correctly summarises:

> *"On this issue, it is necessary to emphasise that, contrary to the general image given in the secondary literature, Proudhon was not hostile to large industry. Clearly, he objected to many aspects of what these large enterprises had introduced into society. For example, Proudhon strenuously opposed the degrading character of ... work which required an individual to repeat one minor function continuously. But he was not opposed in principle to large-scale production. What he desired was to humanise such production, to socialise it so that the worker would not be the mere appendage to a machine. Such a humanisation of large industries would result, according to Proudhon, from the introduction of strong workers' associations. These associations would enable the workers to determine jointly by election how the enterprise was to be directed and operated on a day-to-day basis."* [**Op. Cit.**, p. 156]

Moreover, Proudhon did not see an anarchist society as one of isolated communities or workplaces. Like other anarchists, as we discussed in section I.3.4, Proudhon saw a free society's productive activity centred around federations of syndicates.

This vision of a federation of workplaces can also be found in Bakunin's writings: *"The future organisation of society must proceed from the bottom up only, through free association or federations of the workers, into their associations to begin with, then into communes, regions, nations and, finally, into a great international and universal federation."* [**No Gods, No Masters**, vol. 1, p. 176] Like Proudhon, Bakunin also explicitly rejected the idea of seeking small-scale production, arguing that *"if [the workers] tried to divide among themselves the capital that exists, they would ... reduce to a large decree its productive power."* Therefore the need was for *"the collective property of capital"* to ensure *"the emancipation **of labour and of the workers.**"* [**The Basic Bakunin**, p. 91] Bakunin, again like Proudhon, considered that *"[i]ntelligent free labour will necessarily be associated labour"* as under capitalism the worker *"works for others"* and her labour is *"bereft of liberty, leisure and intelligence."* Under anarchism, *"the free productive associations"* would become *"their own masters and the owners of the necessary capital"* and *"amalgamate among themselves"* and *"sooner or later"* will *"expand beyond national frontiers"* and *"form one vast economic federation."* [**Michael Bakunin: Selected Writings**, pp. 81–3]

Nor can such a vision be attributed to Kropotkin. While, of course, supporting decentralisation of power and decision making as did Proudhon and Bakunin, he did not reject the necessity of federations to co-ordinate activity. As he put it, the *"commune of tomorrow will know that it cannot admit any higher authority; above it there can only be the interests of the Federation, freely accepted by itself as well as the other communes"*/ For anarchists the commune *"no longer means a territorial agglomeration; it is rather a generic name, a synonym for the grouping of equals which knows neither frontiers nor walls ... Each group in the Commune will necessarily be drawn towards similar groups in other communes; they will come together and the links that federate them will be as solid as those that attach them to their fellow citizens."* [**Words of a Rebel**, p. 83 and p. 88] Nor did he reject industry or machinery, stating he *"understood the poetry of machinery"* and that while in *"our present factories, machinery work is killing for the worker"* this was *"a matter of bad organisation, and has nothing to do with the machine itself."* [**Memiors of a Revolutionist**, p. 111]

Kropotkin's vision was one of federations of decentralised communities in which production would be based on the *"scattering of industries over the country — so as to bring the factory amidst the fields ... agriculture ... combined with industry ... to produce a combination of industrial with agricultural work."* He considered this as *"surely the next step to be made, as soon as a reorganisation of our present conditions is possible"* and *"is imposed by the very necessity of* ***producing for the producers themselves.****"* [**Fields, Factories and Workshops Tomorrow**, pp. 157–8] He based this vision on a detailed analysis of current economic statistics and trends.

Kropotkin did not see such an anarchist economy as being based around the small community, taking the basic unit of a free society as one *"large enough to dispose of a certain variety of natural resources — it may be a nation, or rather a region — produces and itself consumes most of its own agricultural and manufactured produce."* Such a region would *"find the best means of combining agriculture with manufacture — the work in the field with a decentralised industry."* Moreover, he recognised that the *"geographical distribution of industries in a given country depends ... to a great extent upon a complexus of natural conditions; it is obvious that there are spots which are best suited for the development of certain industries ... The[se] industries always find some advantages in being grouped, to some extent, according to the natural features of separate regions."* [**Op. Cit.**, p. 26, p. 27 and pp. 154–5]

Kropotkin stressed that agriculture *"cannot develop without the aid of machinery and the use of a perfect machinery cannot be generalised without industrial surroundings ... The village smith would not do."* He supported the integration of agriculture and industry, with *"the factory and workshop at the gates of your fields and gardens"* in which a *"variety of agricultural, industrial and intellectual pursuits are combined in each community"* to ensure *"the greatest sum total of well-being."* He thought that *"large establishments"* would still exist, but these would be *"better placed at certain spots indicated by Nature."* He stressed that it *"would be a great mistake to imagine industry ought to return to its hand-work stage in order to be combined with agriculture. Whenever a saving of human labour can be obtained by means of a machine, the machine is welcome and will be resorted to; and there is hardly one single branch of industry into which machinery work could not be introduced with great advantage, at least at some of the stages of the manufacture."* [**Op. Cit.**, p. 156, p. 197, p. 18, pp. 154–5 and pp. 151–2]

Clearly Kropotkin was **not** opposed to large-scale industry for *"if we analyse the modern industries, we soon discover that for some of them the co-operation of hundred, even thousands, of workers gathered at the same spot is really necessary. The great iron works and mining enterprises decidedly belong to that category; oceanic steamers cannot be built in village factories."* However, he stressed that this objective necessity was not the case in many other industries and centralised production existed in these purely to allow capitalists *"to hold command of the market"* and *"to suit the temporary interests of the few — by no means those of the nation."* Kropotkin made a clear division between economic tendencies which existed to aid the capitalist to dominate the market and enhance their profits and power and those which indicated a different kind of future. Once we consider the *"moral and physical advantages which man would derive from dividing his work between field and the workshop"* we must automatically evaluate the structure of modern industry with the criteria of what is best for the worker (and society and the environment) rather than what was best for capitalist profits and power. [**Op. Cit.**, p. 153, p. 147 and p. 153]

Clearly, Leninist summaries of Kropotkin's ideas on this subject are nonsense. Rather than seeing "small-scale" production as the basis of his vision of a free society, he saw production as being geared around the economic unit of a nation or region: *"Each region will become its own*

producer and its own consumer of manufactured goods ... [and] its own producer and consumer of agricultural produce." Industry would come to the village *"not in its present shape of a capitalist factory"* but *"in the shape of a socially organised industrial production, with the full aid of machinery and technical knowledge."* [**Op. Cit.**, p. 40 and p. 151]

Industry would be decentralised and integrated with agriculture and based around communes, but these communes would be part of a federation and so production would be based around meeting the needs of these federations. A system of rational decentralisation would be the basis of Kropotkin's communist-anarchism, with productive activity and a free society's workplaces geared to the appropriate level. For those forms of industry which would be best organised on a large-scale would continue to be so organised, but for those whose current (i.e., capitalist) structure had no objective need to be centralised would be broken up to allow the transformation of work for the benefit of both workers and society. Thus we would see a system of workplaces geared to local and district needs complementing larger factories which would meet regional and wider needs.

Anarchism rejects the idea of small-scale production and isolated communes and, as we discussed in section H.2.3, it does **not** look backwards for its ideal. The same applies to other forms of libertarian socialism with, for example, G.D.H. Cole arguing that we *"cannot go back to 'town economy', a general regime of handicraft and master-craftmanship, tiny-scale production. We can neither pull up our railways, fill our mines, and dismantle our factories nor conduct our large-scale enterprises under a system developed to fit the needs of a local market and a narrowly-restricted production."* The aim is *"to reintroduce into industry the communal spirit, by re-fashioning industrialism in such a way as to set the communal motives free to co-operate."* [**Guild Socialism Reststed**, pp. 45–6 and p. 46]

The obvious implication of Leninist comments arguments against anarchist ideas on industrial transformation after a revolution is that they think that a socialist society will basically be the same as capitalism, using the technology, industry and industrial structure developed under class society without change (as noted in section H.3.12, Lenin did suggest that was the case). Needless to say, capitalist industry, as Kropotkin was aware, has not developed neutrally nor purely because of technical needs. Rather it has been distorted by the twin requirements to maintain capitalist profits and power. One of the first tasks of a social revolution will be to transform the industrial structure, not keep it as it is. You cannot use capitalist means for socialist ends. So while we will "inherent" an industrial structure from capitalism it would be the greatest possible error to leave it unchanged and an even worse one to accelerate the processes by which capitalists maintain and increase their power (i.e. centralisation and concentration) in the name of "socialism."

We are sorry to have laboured this point, but this issue is one which arises with depressing frequency in Marxist accounts of anarchism. It is best that we indicate that those who make the claim that anarchists seek *"small scale"* production geared for *"small autonomous communities"* simply show their ignorance. In actually, anarchists see production as being geared to whatever makes most social, economic and ecological sense. Some production and workplaces will be geared to the local commune, some will be geared to the district federation, some to the regional federation, and so on. It is for this reason anarchists support the federation of workers' associations as the means of combining local autonomy with the needs for co-ordination and joint activity. To claim otherwise is simply to misrepresent anarchist theory.

Finally, it must be psychologically significant that Leninists continually go on about anarchists advocating "small" and "tiny" workplaces. Apparently size **does** matter and Leninists think their productive units are much, much bigger than anarchist ones. As has been proven, anarchists advocate **appropriately sized** workplaces and are not hung-up about their size. Why Leninists are could be a fruitful area of research…

I.4 How could an anarchist economy function?

This is an important question facing all opponents of a given system — what will you replace it with? We can say, of course, that it is pointless to make blueprints of how a future anarchist society will work as the future will be created by everyone, not just the few anarchists and libertarian socialists who write books and FAQs. This is very true, we cannot predict what a free society will actually be like or develop and we have no intention to do so here. However, this reply (whatever its other merits) ignores a key point, people need to have some idea of what anarchism aims for before they decide to spend their lives trying to create it.

So, how would an anarchist system function? That depends on the economic ideas people have. A mutualist economy will function differently than a communist one, for example, but they will have similar features. As Rudolf Rocker put it:

> *"Common to all Anarchists is the desire to free society of all political and social coercive institutions which stand in the way of development of a free humanity. In this sense Mutualism, Collectivism and Communism are not to be regarded as closed systems permitting no further development, but merely as economic assumptions as to the means of safeguarding a free community. There will even probably be in society of the future different forms of economic co-operation operating side by side, since any social progress must be associated with that free experiment and practical testing out for which in a society of free communities there will be afforded every opportunity."* [**Anarcho-Syndicalism**, p. 9]

So given the common ideals and aims of anarchists, it is unsurprising that the economic systems we suggest has common features such as workers' self-management, federation, free agreement and so on (as discussed in last section). For all anarchists, *"[t]he task for a modern industrial society is to achieve what is now technically realisable, namely, a society which is really based on free voluntary participation of people who produce and create, live their lives freely within institutions they control, and with limited hierarchical structures, possibly none at all."* [Noam Chomsky, quoted by Albert and Hahnel, **Looking Forward**, p. 62]

This achieved by means of *"voluntary association that will organise labour, and be the manufacturer and distributor of necessary commodities"* and this ***"is to make what is useful. The individual is to make what is beautiful."*** [Oscar Wilde, **The Soul of Man Under Socialism**, p. 1183] For example, the machine *"will supersede hand-work in the manufacture of plain goods. But at the same time, hand-work very probably will extend its domain in the artistic finishing of many things which are made entirely in the factory."* [Peter Kropotkin, **Fields, Factories and Workplaces Tomorrow**, p. 152] Murray Bookchin, decades later, argued for the same idea: *"the machine will remove the toil from the productive process, leaving its artistic completion to man."* [**Post-Scarcity Anarchism**, p. 134]

The aim would be to maximise the time available for individuals to express and development their individuality, including in production. As Stirner put it, the *"organisation of labour touches only such labours as others can do for us... the rest remain egoistic, because no one can in your stead elaborate your musical compositions, carry out your projects of painting, etc.; nobody can replace Raphael's labours. The latter are labours of a unique person, which only he is competent to achieve."* Criticising the authoritarian socialists of his time, Stirner went on to ask *"for whom is time to be gained [by association]? For what does man require more time than is necessary to refresh his wearied powers of labour? Here Communism is silent."* He then answers his own question by arguing it is gained for the individual *"[t]o take comfort in himself as unique, after he has done his part as man!"* [Max Stirner, **The Ego and Its Own**, p. 268 and p. 269] Which is exactly what libertarian communists argue:

> *"[We] recognise that man [sic!] has other needs besides food, and as the strength of Anarchy lies precisely in that it understands **all** human faculties and **all** passions, and ignores none, we shall ... contrive to satisfy all his intellectual and artistic needs ... the man [or woman] who will have done the four or five hours of ... work that are necessary for his existence, will have before him five or six hours which his will seek to employ according to tastes ...*
>
> *"He will discharge his task in the field, the factory, and so on, which he owes to society as his contribution to the general production. And he will employ the second half of his day, his week, or his year, to satisfy his artistic or scientific needs, or his hobbies."* [Kropotkin, **Conquest of Bread**, pp. 110–1]

Thus, while **authoritarian** Communism ignores the unique individual (and that was the only kind of Communism existing when Stirner wrote his classic book) **libertarian** communists agree with Stirner and are not silent. Like him, they consider the whole point of organising labour is to provide the means of providing the individual with the time and resources required to express their individuality. In other words, to pursue *"labours of a unique person."* Thus all anarchists base their arguments for a free society on how it will benefit actual individuals, rather than abstracts or amorphous collectives (such as "society"). Hence chapter 9 of **The Conquest of Bread**, *"The Need for Luxury"* and, for that matter, chapter 10, *"Agreeable Work."*

In other words, anarchists desire to organise voluntary workers associations which will try to ensure a minimisation of mindless labour in order to maximise the time available for creative activity both inside and outside "work." This is to be achieved by free co-operation between equals, which is seen as being based on self-interest. After all, while capitalist ideology may proclaim that competition is an expression of self-interest it, in fact, results in the majority of people sacrificing themselves for the benefits of the few who own and control society. The time you sell to a boss in return for them ordering you about and keeping the product of your labour is time you never get back. Anarchists aim to end a system which crushes individuality and create one in which solidarity and co-operation allow us time to enjoy life and to gain the benefits of our labour ourselves. Mutual Aid, in other words, results in a better life than mutual struggle and so *"the **association for struggle** will be a much more effective support for civilisation, progress, and evolution than is the **struggle for existence** with its savage daily competitions."* [Luigi Geallani, **The End of Anarchism**, p. 26]

In the place of the rat race of capitalism, economic activity in an anarchist society would be one of the means to humanise and individualise ourselves and society, to move from **surviving** to **living.** Productive activity should become a means of self-expression, of joy, of art, rather than something we have to do to survive. Ultimately, "work" should become more akin to play or a hobby than the current alienated activity. The priorities of life should be towards individual self-fulfilment and humanising society rather than *"running society as an adjunct to the market,"* to use Polanyi's expression, and turning ourselves into commodities on the labour market. Thus anarchists agree with John Stuart Mill:

> *"I confess I am not charmed with an ideal of life held out by those who think that the normal state of human beings is that of struggling to get on; that the trampling, crushing, elbowing, and treading on each other's heels, which form the existing type of social life, are the most desirable lot of human kind, or anything but the disagreeable symptoms of one of the phases of industrial progress."* [**Collected Works**, vol. III, p. 754]

The aim of anarchism is far more than the end of inequality. Hence Proudhon's comment that socialism's *"underlying dogma"* is that the *"objective of socialism is the emancipation of the proletariat and the eradication of poverty."* This emancipation would be achieved by ending *"wage slavery"* via *"democratically organised workers' associations."* [**No Gods, No Masters**, vol. 1, p. 57 and p. 62] Or, to use Kropotkin's expression, *"well-being for all"* — physical, mental, emotional and ethical! Indeed, by concentrating on just poverty and ignoring the emancipation of the proletariat, the real aims of socialism are obscured:

> *"The 'right to well-being' means the possibility of living like human beings, and of bringing up children to be members of a society better than ours, whilst the 'right to work' only means the right to be a wage-slave, a drudge, ruled over and exploited by the middle class of the future. The right to well-being is the Social Revolution, the right to work means nothing but the Treadmill of Commercialism. It is high time for the worker to assert his right to the common inheritance, and to enter into possession of it."* [Kropotkin, **Op. Cit.**, p. 44]

So, while refusing to define exactly how an anarchist system will work, we will explore the implications of how the anarchist principles and ideals outlined above could be put into practice. Bear in mind that this is just a possible framework for a system which has few historical examples to draw upon. This means that we can only indicate the general outlines of what an anarchist society could be like. Those seeking blue-prints and exactness should look elsewhere. In all likelihood, the framework we present will be modified and changed (even ignored) in light of the real experiences and problems people will face when creating a new society.

We should point out that there may be a tendency for some to compare this framework with the **theory** of capitalism (i.e. perfectly functioning "free" markets or quasi-perfect ones) as opposed to its reality. A perfectly working capitalist system only exists in text books and in the heads of ideologues who take the theory as reality. No system is perfect, particularly capitalism, and to compare "perfect" text-book capitalism with any real system is a pointless task. As we discussed in depth in section C, capitalist economics does not even describe the reality of capitalism so why think it would enlighten discussion of post-capitalist systems? What hope does it have of

understanding post-capitalist systems which reject its proprietary despotism and inequalities? As anarchists aim for a qualitative change in our economic relationships, we can safely say that its economic dynamics will reflect the specific forms it will develop rather than those produced by a class-ridden hierarchical system like capitalism and the a-historic individualistic abstractions invented to defend it!

So any attempt to apply the notions developed from theorising about (or, more correctly, justifying and rationalising) capitalism to anarchism will fail to capture the dynamics of a non-capitalist system. John Crump stressed this point in his discussion of Japanese anarchism between the World Wars:

> *"When considering the feasibility of the social system advocated by the pure anarchists, we need to be clear about the criteria against which it should be measured. It would, for example, be unreasonable to demand that it be assessed against such yardsticks of a capitalist economy as annual rate of growth, balance of trade and so forth ... evaluating anarchist communism by means of the criteria which have been devised to measure capitalism's performance does not make sense ... capitalism would be ... baffled if it were demanded that it assess its operations against the performance indicators to which pure anarchists attached most importance, such as personal liberty, communal solidarity and the individual's unconditional right to free consumption. Faced with such demands, capitalism would either admit that these were not yardsticks against which it could sensibly measure itself or it would have to resort to the type of grotesque ideological subterfuges which it often employs, such as identifying human liberty with the market and therefore with wage slavery ... The pure anarchists' confidence in the alternative society they advocated derived not from an expectation that it would* ***quantitatively*** *outperform capitalism in terms of GNP, productivity or similar capitalist criteria. On the contrary, their enthusiasm for anarchist communism flowed from their understanding that it would be* ***qualitatively*** *different from capitalism. Of course, this is not to say that the pure anarchists were indifferent to questions of production and distribution ... they certainly believed that anarchist communism would provide economic well-being for all. But neither were they prepared to give priority to narrowly conceived economic expansion, to neglect individual liberty and communal solidarity, as capitalism regularly does."* [**Hatta Shuzo and Pure Anarchism in Interwar Japan**, pp. 191–3]

Finally, anarchists are well aware that transforming how an economy works does not happen overnight. As discussed in section I.2.2, we have long rejected the idea of instantaneous social transformation and argued that revolution will take time to develop and change the legacy of centuries of class and hierarchical society. This transformation and the resulting changes in people and surroundings can only be achieved by the full participation of all in overcoming the (many) problems a free society will face and the new ways of relating to each other liberation implies. A free people will find their own practical solutions to their problems, for *"there will be all sorts of practical difficulties to overcome, but the [libertarian socialist] system is simplicity itself compared with the monster of centralised State control, which sets such an inhuman distance between the worker and the administrator that there is room for a thousand difficulties to intervene."* [Herbert Read, **Anarchy and Order**, p. 49] Thus, for anarchists, the *"enthusiasm generated by the*

revolution, the energies liberated, and the inventiveness stimulated by it must be given full freedom and scope to find creative channels." [Alexander Berkman, **What is Anarchism?**, p. 223] As such, the ideas within this section of our FAQ are merely suggestions, possibilities.

I.4.1 What is the point of economic activity in anarchy?

The basic point of economic activity is an anarchist society is to ensure, to use Kropotkin's expression, ***"well-being for all"***. Rather than toil to make the rich richer, people in a free society would work together to *"ensure to society as a whole its life and further development."* Such an economy would be based upon *"giving society the greatest amount of useful products with the least waste of human energy"*, to meet *"the needs of mankind"*. [**The Conquest of Bread**, p. 43, p. 144 and p. 175] Needless to say, today we must also add: with the least disruption of nature.

In terms of needs, it should be stressed that these are not limited to just material goods (important as they may be, particularly to those currently living in poverty). Needs also extend to having meaningful work which you control, pleasant and ecologically viable surroundings, the ability to express oneself freely within and outwith work, and a host of other things associated with the quality of life rather than merely survival. Anarchism seeks to transform economic activity rather than merely liberate it by self-management (important as that is).

Therefore, for anarchists, *"[r]eal wealth consists of things of utility and beauty, in things that help create strong, beautiful bodies and surroundings inspiring to live in."* Anarchism's *"goal is the freest possible expression of all the latent powers of the individual"* and this *"is only possible in a state of society where man [sec!] is free to choose the mode of work, the conditions of work, and the freedom to work. One whom making a table, the building of a house, or the tilling of the soil is what the painting is to the artist and the discovery to the scientist — the result of inspiration, of intense longing, and deep interest in work as a creative force."* [Emma Goldman, **Red Emma Speaks**, p. 67 and p. 68]

So the point of economic activity in an anarchist society is to produce as and when required and not, as under capitalism, to organise production for the sake of production in order to make profits for the few. Production, to use Kropotkin's words, is to become *"the mere servant of consumption; it must mould itself on the wants of the consumer, not dictate to him [or her] conditions."* [**Act For Yourselves**, p. 57] This should **not** be taken to imply that anarchism seeks production for the sake of production in order to meet all the needs of all. Far from it, as such a regime would, to quote Malatesta, involve *"employing **all** of one's strength in producing things, because taken literally, this would mean working until one is exhausted, which would mean that by maximising the satisfaction of human needs we destroy humanity."* In other words, a free society would take into account the wants of the producers (and the planet we live on) when meeting the wants of consumers. Thus, there would be a balance sought. *"What we would like,"* continued Malatesta, *"is for everybody to live in the best possible way: so that everybody with a minimum amount of effort will obtain maximum satisfaction."* [**At the Café**, p. 61]

So while the basic aim of economic activity in an anarchist society is, obviously, producing wealth — i.e., satisfying individual needs — without enriching capitalists or other parasites in the process, it is far more than that. Yes, an anarchist society will aim to create society in which everyone will have a standard of living suitable for a fully human life. Yes, it will aim to eliminate poverty, inequality, individual want and social waste and squalor, but it aims for far more than

that. It aims to create free individuals who express their individuality within and outwith "work." After all, what is the most important thing that comes out of a workplace? Pro-capitalists may say profits, others the finished commodity or good. In fact, the most important thing that comes out of a workplace is the **worker.** What happens to us in the workplace will have an impact on all aspects of our life and so cannot be ignored.

To value "efficiency" above all else, as capitalism says it does (it, in fact, values **profits** above all else and hinders developments like workers' control which increase efficiency but harm power and profits), is to deny our own humanity and individuality. Without an appreciation for grace and beauty there is no pleasure in creating things and no pleasure in having them. Our lives are made drearier rather than richer by "progress." How can a person take pride in their work when skill and care are considered luxuries (if not harmful to "efficiency" and, under capitalism, the profits and power of the capitalist and manager)? We are not machines. We have a need for craftspersonship and anarchism recognises this and takes it into account in its vision of a free society. This means that, in an anarchist society, economic activity is the process by which we produce what is useful but, in addition, is also beautiful (to use Oscar Wilde's words) in a way that empowers the individual. We anarchists charge capitalism with wasting human energy and time due to its irrational nature and workings, energy that could be spent creating what is beautiful (both in terms of individualities and products of labour). Under capitalism we are *"toiling to live, that we may live to toil."* [William Morris, **Useful Work Versus Useless Toil**, p. 37]

In addition, we must stress that the aim of economic activity within an anarchist society is **not** to create equality of outcome — i.e. everyone getting exactly the same goods. As we noted in section A.2.5, such a "vision" of "equality" attributed to socialists by pro-capitalists indicates more the poverty of imagination and ethics of the critics of socialism than a true account of socialist ideas. Anarchists, like other genuine socialists, support **social** equality in order to maximise freedom, including the freedom to choose between options to satisfy ones needs. To treat people equally, as equals, means to respect their desires and interests, to acknowledge their right to equal liberty. To make people consume the same as everyone else does not respect the equality of all to develop ones abilities as one sees fit. Socialism means equality of opportunity to satisfy desires and interests, not the imposition of an abstract minimum (or maximum) on unique individuals. To treat unique individuals equally means to acknowledge that uniqueness, not to deny it.

Thus the **real** aim of economic activity within an anarchy is to ensure *"that every human being should have the material and moral means to develop his humanity."* [Michael Bakunin, **The Political Philosophy of Bakunin**, p. 295] And you cannot develop your humanity if you cannot express yourself freely. Needless to say, to treat unique people "equally" (i.e. identically) is simply evil. You cannot, say, have a 70 year old woman do the same work in order to receive the same income as a 20 year old man. No, anarchists do not subscribe to such "equality," which is a product of the *"ethics of mathematics"* of capitalism and **not** of anarchist ideals. Such a scheme is alien to a free society. The equality anarchists desire is a social equality, based on control over the decisions that affect you. The aim of anarchist economic activity, therefore, is to provide the goods required for *"equal freedom for all, an equality of conditions such as to allow everyone to do as they wish."* [Errico Malatesta, **Errico Malatesta: His Life and Ideas**, p. 49] Thus anarchists *"demand not natural but social equality of individuals as the condition for justice and the foundations of morality."* [Bakunin, **Op. Cit.**, p. 249]

Under capitalism, instead of humans controlling production, production controls them. Anarchists want to change this and desire to create an economic network which will allow the

maximisation of an individual's free time in order for them to express and develop their individuality (while creating what is beautiful). So instead of aiming just to produce because the economy will collapse if we did not, anarchists want to ensure that we produce what is useful in a manner which liberates the individual and empowers them in all aspects of their lives.

This desire means that anarchists reject the capitalist definition of "efficiency." Anarchists would agree with Albert and Hahnel when they argue that *"since people are conscious agents whose characteristics and therefore preferences develop over time, to access long-term efficiency we must access the impact of economic institutions on people's development."* Capitalism, as we have explained before, is highly inefficient in this light due to the effects of hierarchy and the resulting marginalisation and disempowerment of the majority of society. As Albert and Hahnel go on to note, *"self-management, solidarity, and variety are all legitimate valuative criteria for judging economic institutions ... Asking whether particular institutions help people attain self-management, variety, and solidarity is sensible."* [**The Political Economy of Participatory Economics**, p. 9]

In other words, anarchists think that any economic activity in a free society is to do useful things in such a way that gives those doing it as much pleasure as possible. The point of such activity is to express the individuality of those doing it, and for that to happen they must control the work process itself. Only by self-management can work become a means of empowering the individual and developing his or her powers.

In a nutshell, to use the words of William Morris, useful work will replace useless toil in an anarchist society.

I.4.2 Why do anarchists desire to abolish work?

Anarchists desire to see humanity liberate itself from work. This may come as a shock for many people and will do much to "prove" that anarchism is essentially utopian. However, we think that such an abolition is not only necessary, it is possible. This is because work as we know it today is one of the major dangers to freedom we face.

If by freedom we mean self-government, then it is clear that being subjected to hierarchy in the workplace subverts our abilities to think and judge for ourselves. Like any skill, critical analysis and independent thought have to be practised continually in order to remain at their full potential. So a workplace environment with power structures undermines these abilities. This was recognised by Adam Smith who argued that the *"understandings of the greater part of men are necessarily formed by their ordinary employments."* That being so, *"the man whose life is spent in performing a few simple operations, of which the effects too are, perhaps, always the same, or nearly the same, has no occasion to extend his understanding ... and generally becomes as stupid and ignorant as it is possible for a human creature to be ... But in every improved and civilised society this is the state into which the labouring poor, that is the great body of the people, must necessarily fall, unless government takes pains to prevent it."* [quoted by Noam Chomsky, **Year 501**, p. 18]

Smith's argument (usually ignored by those who claim to follow his ideas) is backed up by extensive evidence. Different types of authority structures and different technologies have different effects on those who work within them. Carole Pateman notes that the evidence suggests that *"[o]nly certain work situations were found to be conducive to the development of the psychological characteristics"* suitable for freedom, such as *"the feelings of personal confidence and efficacy that underlay the sense of political efficacy."* [**Participation and Democratic Theory**, p. 51] She

quotes one expert who argues that within capitalist companies based upon a highly rationalised work environment and extensive division of labour, the worker has no control over the pace or technique of his work, no room to exercise skill or leadership and so they *"have practically no opportunity to solve problems and contribute their own ideas."* The worker, according to a psychological study, is *"resigned to his lot ... more dependent than independent ... he lacks confidence in himself ... he is humble ... the most prevalent feeling states ... seem to be fear and anxiety."* [quoted by Pateman, **Op. Cit.**, p. 51 and p. 52]

The evidence Pateman summarises shows that an individual's *"attitudes will depend to a large degree on the authority structure of his [or her] work environment"*, with workplaces which are more autocratic and with a higher division of labour being worse for an individual's sense of self-esteem, feelings of self-worth and autonomy. In workplaces where *"the worker has a high degree of personal control over his [or her] work ... and a very large degree of freedom from external control"* or is based on the *"collective responsibility of a crew of employees"* who *"had control over the pace and method of getting the work done, and the work crews were largely internally self-disciplining"* a different social character is seen. [Pateman, **Op. Cit.**, pp. 52–3] This was characterised by *"a strong sense of individualism and autonomy, and a solid acceptance of citizenship in the large society"* and *"a highly developed feeling of self-esteem and a sense of self-worth and is therefore ready to participate in the social and political institutions of the community."* Thus the *"nature of a man's work affects his social character and personality"* and that an *"industrial environment tends to breed a distinct social type."* [R. Blauner, quoted by Pateman, **Op. Cit.**, p. 52]

Thus, to quote Bob Black (who notes that Smith's comments against the division of labour are his *"critique of work"*), the capitalist workplace turns us into *"stultified submissives"* and places us *"under the sort of surveillance that ensures servility."* For this reason anarchists desire, to use Bob Black's phrase, *"the abolition of work."* [**The Abolition of Work and other essays**, p. 26, p. 22 and p. 19]

Work, in this context, does not mean any form of productive activity. Far from it. Work (in the sense of doing necessary things or productive activity) will always be with us. There is no getting away from it; crops need to be grown, schools built, homes fixed, and so on. No, work in this context means any form of labour in which the worker does not control his or her own activity. In other words, **wage labour** in all its many forms.

A society based upon hierarchical relations in production will result in a society within which the typical worker uses few of their abilities, exercise little or no control over their work because they are governed by a boss during working hours. This has been proved to lower the individual's self-esteem and feelings of self-worth, as would be expected in any social relationship that denied self-government. Capitalism is marked by an extreme division of labour, particularly between mental and physical labour. It reduces the worker to a mere machine operator, following the orders of his or her boss. Therefore, a libertarian that does not support economic liberty (i.e. self-management) is no libertarian at all.

Capitalism bases its rationale for itself on consumption and this results in a viewpoint which minimises the importance of the time we spend in productive activity. Anarchists consider that it is essential for individual's to use and develop their unique attributes and capacities in all walks of life, to maximise their powers. Therefore, the idea that "work" should be ignored in favour of consumption is totally mad. Productive activity is an important way of developing our inner-powers and express ourselves; in other words, be creative. Capitalism's emphasis on consumption shows the poverty of that system. As Alexander Berkman argued:

> *"We do not live by bread alone. True, existence is not possible without opportunity to satisfy our physical needs. But the gratification of these by no means constitutes all of life. Our present system of disinheriting millions, made the belly the centre of the universe, so to speak. But in a sensible society ... [t]he feelings of human sympathy, of justice and right would have a chance to develop, to be satisfied, to broaden and grow."* [**What is Anarchism?**, pp. 152–3]

Therefore, capitalism is based on a constant process of alienated consumption, as workers try to find the happiness associated within productive, creative, self-managed activity in a place it does not exist – on the shop shelves. This can partly explain the rise of both mindless consumerism and the continuation of religions, as individuals try to find meaning for their lives and happiness, a meaning and happiness frustrated in wage labour and other hierarchies.

Capitalism's impoverishment of the individual's spirit is hardly surprising. As William Godwin argued, *"[t]he spirit of oppression, the spirit of servility, and the spirit of fraud, these are the immediate growth of the established administration of property. They are alike hostile to intellectual and moral improvement."* [**The Anarchist Reader**, p. 131] Any system based on hierarchical relationships in work will result in a deadening of the individual and in a willingness to defer to economic masters. Which is why Anarchists desire to change this and create a society based upon freedom in all aspects of life. Hence anarchists desire to abolish work, simply because it restricts the liberty and distorts the individuality of those who have to do it. To quote Emma Goldman:

> *"Anarchism aims to strip labour of its deadening, dulling aspect, of its gloom and compulsion. It aims to make work an instrument of joy, of strength, of colour, of real harmony, so that the poorest sort of a man should find in work both recreation and hope."* [**Anarchism and Other Essays**, p. 61]

Anarchists do not think that by getting rid of work we will not have to produce necessary goods. Far from it. An anarchist society *"doesn't mean we have to stop doing things. It does mean creating a new way of life based on play; in other words, a ludic revolution ... a collective adventure in generalised joy and freely interdependent exuberance. Play isn't passive."* The aim is *"to abolish work and replace it, insofar as it serves useful purposes, with a multitude of new kinds of free activities. To abolish work requires going at it from two directions, quantitative and qualitative."* In terms of the first, *"we need to cut down massively the amount of working being done"* (luckily, *"most work is useless or worse and we should simply get rid of it"*). For the second, *"we have to take what useful work remains and transform it into a pleasing variety of game-like and craft-like pastimes, indistinguishable from other pleasurable pastimes, except that the happen to yield useful end-products."* [Bob Black, **Op. Cit.**, p. 17 and p. 28]

This means that in an anarchist society every effort would be made to reduce boring, unpleasant activity to a minimum and ensure that whatever productive activity is required to be done is as pleasant as possible and based upon voluntary labour. However, it is important to remember Cornelius Castoriadis point: *"Socialist society will be able to reduce the length of the working day, and will have to do so, but this will not be the fundamental preoccupation. Its first task will be to ... transform the very nature of work. The problem is not to leave more and more 'free' time to individuals — which might well be* ***empty*** *time — so that they may fill it at will with 'poetry' or the carving*

of wood. The problem is to make all time a time of liberty and to allow concrete freedom to find expression in creative activity." Essentially, the *"problem is to put poetry into work."* [**Political and Social Writings**, vol. 2, p. 107]

This is why anarchists desire to abolish "work" (i.e., productive activity not under control of the people doing it), to ensure that whatever productive economic activity is required to be done is managed by those who do it. In this way it can be liberated, transformed, and so become a means of self-realisation and not a form of self-negation. In other words, anarchists want to abolish work because *"[l]ife, the art of living, has become a dull formula, flat and inert."* [Berkman, **Op. Cit.**, p. 166] Anarchists want to bring the spontaneity and joy of life back into productive activity and save humanity from the dead hand of capital. Anarchists consider economic activity as an expression of the human spirit, an expression of the innate human need to express ourselves and to create. Capitalism distorts these needs and makes economic activity a deadening experience by the division of labour and hierarchy. We think that *"industry is not an end in itself, but should only be a means to ensure to man his material subsistence and to make accessible to him the blessings of a higher intellectual culture. Where industry is everything and man is nothing begins the realm of a ruthless economic despotism whose workings are no less disastrous than those of any political despotism. The two mutually augment one another, and they are fed from the same source."* [Rudolph Rocker, **Anarcho-Syndicalism**, p. 2]

One last point on the abolition of work. May 1st — International Workers' Day — was, as we discussed in section A.5.2, created to commemorate the Chicago Anarchist Martyrs. Anarchists then, as now, think that it should be celebrated by strike action and mass demonstrations. In other words, for anarchists, International Workers' Day should be a non-work day! That sums up the anarchist position to work nicely — that the celebration of workers' day should be based on the rejection of work.

The collection of articles in **Why Work? Arguments for the Leisure Society** (edited by Vernon Richards) is a useful starting place for libertarian socialist perspectives on work.

I.4.3 How do anarchists intend to abolish work?

Basically by workers' self-management of production and common ownership of the means of production. It is hardly in the interests of those who do the actual "work" to have bad working conditions, boring, repetitive labour, and so on. Therefore, a key aspect of the liberation from work is to create a self-managed society, *"a society in which everyone has equal means to develop and that all are or can be at the same time intellectual and manual workers, and the only differences remaining between men [and women] are those which stem from the natural diversity of aptitudes, and that all jobs, all functions, give an equal right to the enjoyment of social possibilities."* [Errico Malatesta, **Anarchy**, p. 42]

Essential to this task is decentralisation and the use of appropriate technology. Decentralisation is important to ensure that those who do work can determine how to liberate it. A decentralised system will ensure that ordinary people can identify areas for technological innovation and so understand the need to get rid of certain kinds of work. Unless ordinary people understand and control the introduction of technology, then they will never be fully aware of the benefits of technology and resist advances which may be in their best interests to introduce. This is the full meaning of appropriate technology, namely the use of technology which those most affected feel

to be best in a given situation. Such technology may or may not be technologically "advanced" but it will be of the kind which ordinary people can understand and, most importantly, control.

The potential for rational use of technology can be seen from capitalism. Under capitalism, technology is used to increase profits, to expand the economy, not to liberate **all** individuals from useless toil (it does, of course, liberate a few from such "activity"). As economist Juliet B. Schor points out, productivity *"measures the goods and services that result from each hour worked. When productivity rises, a worker can either produce the current output in less time, or remain at work the same number of hours and produce more."* With rising productivity, we are presented with the possibility of more free time. For example, since 1948 the level of productivity of the American worker *"has more than doubled. In other words, we could now produce our 1948 standard of living ... . in less than half the time it took that year. We could actually have chosen the four-hour day. Or a working year of six months."* [**The Overworked American**, p. 2]

And, remember, these figures include production in many areas of the economy that would not exist in a free society — state and capitalist bureaucracy, weapons production for the military, property defence, the finance sector, and so on. As Alexander Berkman argued, millions are *"engaged in trade, ... advertisers, and various other middlemen of the present system"* along with the armed forces and *"the great numbers employed in unnecessary and harmful occupations, such as building warships, the manufacture of ammunition and other military equipment"* would be *"released for useful work by a revolution."* [**What is Anarchism**, pp. 224–5] So the working week will be reduced simply because more people will be available for doing essential work. Moreover, goods will be built to last and so much production will become sensible and not governed by an insane desire to maximise profits at the expense of everything else. In addition, this is not taking into account the impact of a more just distribution of consumption in terms of living standards and production, meaning that a standard of living produced by working half the time would be far higher than that implied by Schor's 1948 baseline (not to mention the advances in technology since then either!). In short, do not take the 1948 date as implying a literal return to that period!

Moreover, a lower working week would see productivity rising. *"Thus,"* as one economist summarises, *"when the hours of labour were reduced, the better-rested workers were often able to produce as much or more in the shorter hours than they had previously in longer hours."* Yet *"competition between employers would make it unlikely that a working day of optimal length would be established"* under capitalism. In addition, *"more disposable time might better contribute to people's well-being — that is, to things such as trust, health, learning, family life, self-reliance and citizenship"*. While this may reduce such conventional economic measures as GDP, the fact is that such measures are flawed. After all, *"an increase in GDP could represent a diminution of free time accompanied by an increased output of goods and services whose sole utility was either facilitating labour-market participation or repairing some of the social damage that resulted from the stress of overwork or neglect of non-market activity."* [Tom Walker, *"Why Economists dislike a Lump of Labor"*, pp. 279–91, **Review of Social Economy**, vol. 65, No. 3, p. 286, pp. 287–8 and p. 288]

All this suggests the level of production for useful goods with a four-hour working day would be much higher than the 1948 level or, of course, the working day could be made even shorter. As such, we can easily combine a decent standard of living with a significant reduction of the necessary working time required to produce it. Once we realise that much work under capitalism exists to manage aspects of the profit system or are produced as a result of that system and the damage it does, we can see how a self-managed society can give us more time for ourselves in

addition to producing useful goods (rather than working long and hard to produce surplus value for the few).

However, anarchists do not see it as simply a case of reducing the hours of work will keeping the remaining work as it. That would be silly. We aim to transform what useful productive activity is left. When self-management becomes universal we will see the end of division of labour as mental and physical work becomes unified and those who do the work also manage it. This will allow *"the free exercise of **all** the faculties of man"* both inside and outside "work." [Peter Kropotkin, **The Conquest of Bread**, p. 148] The aim of such a development would be to turn productive activity, as far as possible, into an enjoyable experience. In the words of Murray Bookchin it is the **quality** and **nature** of the work process that counts:

> *"If workers' councils and workers' management of production do not transform the work into a joyful activity, free time into a marvellous experience, and the workplace into a community, then they remain merely formal structures, in fact, **class** structures. They perpetuate the limitations of the proletariat as a product of bourgeois social conditions. Indeed, no movement that raises the demand for workers' councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place."* [**Post-Scarcity Anarchism**, p. 88]

Work will become, primarily, the expression of a person's pleasure in what they are doing and become like an art — an expression of their creativity and individuality. Work as an art will become expressed in the workplace as well as the work process, with workplaces transformed and integrated into the local community and environment (see section I.4.15). This will obviously apply to work conducted in the home as well, otherwise the *"revolution, intoxicated with the beautiful words, Liberty, Equality, Solidarity, would not be a revolution if it maintained slavery at home. Half [of] humanity subjected to the slavery of the hearth would still have to rebel against the other half."* [Kropotkin, **Op. Cit.**, p. 128]

In other words, anarchists desire *"to combine the best part (in fact, the only good part) of work — the production of use-values — with the best of play ... its freedom and its fun, its voluntariness and its intrinsic gratification"*. In short, the transformation of production (creating *"what seems needful"*") into ***"productive play***". [Bob Black,* "Smokestack Lightning"*, Friendly Fire, p. 48 and p. 49]***

Workers' self-management of production (see section I.3.2) would be the means of achieving this. Only those subject to a specific mode of working can be in a position to transform it and their workplace into something fit for free individuals to create in. Only those who know a workplace which would only exist in a hierarchical system like capitalism can be in a position to decommission it safely and quickly. The very basis of free association will ensure the abolition of work, as individuals will apply for "work" they enjoy doing and so would be interested in reducing "work" they did not want to do to a minimum. Therefore, an anarchist society would abolish work by ensuring that those who do it actually control it. *"Personal initiative will be encouraged and every tendency to uniformity and centralisation combated."* [Kropotkin, quoted by Martin Buber, **Paths in Utopia**, p. 42]

All this does not imply that anarchists think that individuals will not seek to "specialise" in one form of productive activity rather than another. Far from it, people in a free society will pick activities which interest them as the main focal point of their means of self-expression (after

all, not everyone enjoys the same games and pastimes so why expect the same of productive play?). *"It is evident,"* noted Kropotkin, *"that all men and women cannot equally enjoy the pursuit of scientific work. The variety of inclinations is such that some will find more pleasure in science, some others in art, and others again in some of the numberless branches of the production of wealth."* This "division of work" is commonplace in humanity this natural desire to do what interests you and what you are good at will be encouraged in an anarchist society. As Kropotkin argued, anarchists *"fully recognise the necessity of specialisation of knowledge, but we maintain that specialisation must follow general education, and that general education must be given in science and handicraft alike. To the division of society into brain workers and manual workers we oppose the combination of both kinds of activities ... we advocate the* ***education integrale*** *[integral education], or complete education, which means the disappearance of that pernicious division."* Anarchists are, needless to say, aware that training and study are required to qualify you to so some tasks and a free society would ensure that individuals would achieve the necessary recognised levels before undertaking them (by means of, say, professional bodies who organise a certification process). Kropotkin was aware, however, that both individuals and society would benefit from a diversity of activities and a strong general knowledge: *"But whatever the occupations preferred by everyone, everyone will be the more useful in his [or her] branch if he [or she] is in possession of a serious scientific knowledge. And, whosoever he might be ... he would be the gainer if he spent a part of his life in the workshop or the farm (the workshop* ***and*** *the farm), if he were in contact with humanity in its daily work, and had the satisfaction of knowing that he himself discharges his duties as an unprivileged producer of wealth."* [**Fields, Factories and Workshops Tomorrow**, p. 186, p. 172 and p. 186]

However, while specialisation would continue, the permanent division of individuals into manual or brain workers would be eliminated. Individuals will manage all aspects of the "work" required (for example, engineers will also take part in self-managing their workplaces), a variety of activities would be encouraged and the strict division of labour of capitalism will be abolished. In other words, anarchists want to replace the division of labour by the division of work. We must stress that we are not playing with words here. John Crump presents a good summary of the ideas of the Japanese anarchist Hatta Shuzo on this difference:

> *"[We must] recognise the distinction which Hatta made between the 'division of labour' ... and the 'division of work' ... while Hatta believed that the division of labour ... was the cause of class divisions and exploitation, he did not see anything sinister in the division of work ... On the contrary, Hatta believed that the division of work was a benign and unavoidable feature of any productive process: 'it goes without saying that within society, whatever the kind of production, there has to be a division of work.' ... [For] the dangers [of division of labour] to which Hatta [like other anarchists like Proudhon and Kropotkin] drew attention did not arise from a situation where, at any one time, different people were engaged in different productive activities ... What did spell danger, however, was when, either individually or collectively, people permanently divided along occupational lines ... and gave rise to the disastrous consequences . ... [of] the degrading of labour to a mechanical function; the lack of responsibility for, understanding of, or interest in other branches of production; and the need for a superior administrative organ to co-ordinate the various branches of production."* [**Hatta Shuzo and Pure Anarchism in Interwar Japan**, pp. 146–7]

As Kropotkin argued:

> *"while a **temporary** division of functions remains the surest guarantee of success in each separate undertaking, the **permanent** division is doomed to disappear, and to be substituted by a variety of pursuits — intellectual, industrial, and agricultural — corresponding to the different capacities of the individual, as well as to the variety of capacities within every human aggregate."* [**Op. Cit.**, p. 26]

As an aside, supporters of capitalism argue that **integrated** labour must be more inefficient than **divided** labour as capitalist firms have not introduced it. This is false for numerous reasons.

Firstly, we have to put out the inhuman logic of the assertion. After all, few would argue in favour of slavery if it were, in fact, **more** productive than wage labour but such is the logical conclusion of this argument. If someone did argue that the only reason slavery was not the dominant mode of labour simply because it was inefficient we would consider them as less than human. Simply put, it is a sick ideology which happily sacrifices individuals for the sake of slightly more products. Sadly, that is what many defenders of capitalism do, ultimately, argue for.

Secondly, capitalist firms are not neutral structures but rather a system of hierarchies, with entrenched interests and needs. Managers will only introduce a work technique that maintains their power (and so their profits). As we argue in section J.5.12, while experiments in workers' participation see a rise in efficiency and productivity, managers stop them simply because they recognise that workers' control undercuts their power by empowering workers who then can fight for a greater slice of the value they produce (not to mention come to the conclusion that while the boss needs them to work, they don't need to boss to manage them!). So the lack of integrated labour under capitalism simply means that it does not empower management nor secure their profits and power, **not** that it is less efficient.

Thirdly, the attempts by managers and bosses to introduce "flexibility" by eliminating unions suggests that integration **is** more efficient. After all, one of the major complains directed towards union contracts are that they explicitly documented what workers could and could not do (for example, union members would refuse to do work which was outside their agreed job descriptions). This is usually classed as an example of the evil of regulations. However, if we look at it from the viewpoint of contract and division of labour, it exposes the inefficiency and inflexibility of both as a means of co-operation. After all, what is this refusal actually mean? It means that the worker refuses to do work that is not specified in his or her contract! Their job description indicates what they have been contracted to do and anything else has not been agreed upon in advance. The contract specifies a clear, specified and agreed division of labour in a workplace between worker and boss.

While being a wonderful example of a well-designed contract, managers discovered that they could not operate their workplaces because of them. Rather, they needed a general "do what you are told" contract (which of course is hardly an example of contract reducing authority) and such a contract **integrates** numerous work tasks into one. The managers diatribe against union contracts suggests that production needs some form of integrated labour to actually work (as well as showing the hypocrisy of the labour contract under capitalism as labour "flexibility" simply means labour "commodification" — a machine does not question what its used for, the ideal under capitalism is a similar unquestioning nature for labour). The union job description indicates that production needs the integration of labour while demanding a division of work. As Cornelius Castoriadis argued:

> *"Modern production has destroyed many traditional professional qualifications. It has created automatic or semi-automatic machines. It has thereby itself demolished its own traditional framework for the industrial division of labour. It has given birth to a universal worker who is capable, after a relatively short apprenticeship, of using most machines. Once one gets beyond its class aspects, the 'posting' of workers to particular jobs in a big modern factory corresponds less and less to a genuine division of* ***labour*** *and more and more to a simple division of tasks. Workers are not allocated to given areas of the productive process and then riveted to them because their 'occupational skills' invariably correspond to the 'skills required' by management. They are placed there ... just because a particular vacancy happened to exist."* [**Political and Economic Writings**, vol. 2, p. 117]

By replacing the division of labour with the division of work, a free society will ensure that productive activity can be transformed into an enjoyable task (or series of tasks). By integrating labour, all the capacities of the producer can be expressed so eliminating a major source of alienation and unhappiness in society. *"The main subject of social economy,"* argued Kropotkin, is *"the* ***economy*** *of energy required for the satisfaction of* ***human needs.****"* These needs obviously expressed both the needs of the producers for empowering and interesting work and their need for a healthy and balanced environment. Thus Kropotkin discussed the *"advantages"* which could be *"derive[d] from a combination of industrial pursuits with intensive agriculture, and of brain work with manual work."* The *"greatest sum total of well-being can be obtained when a variety of agricultural, industrial and intellectual pursuits are combined in each community; and that man [and woman] shows his best when he is in a position to apply his usually-varied capacities to several pursuits in the farm, the workshop, the factory, the study or the studio, instead of being riveted for life to one of these pursuits only."* [**Op. Cit.**, pp. 17–8] This means that *"[u]nder socialism, factories would have no reason to accept the artificially rigid division of labour now prevailing. There will be every reason to encourage a rotation of workers* ***between shops and departments*** *and between production and office areas."* The *"residues of capitalism's division of labour gradually will have to be eliminated"* as *"socialist society cannot survive unless it demolishes this division."* [Castoriadis, **Op. Cit.**, p. 117]

Anarchists think that a decentralised social system will allow "work" to be abolished and economic activity humanised and made a means to an end (namely producing useful things and liberated individuals). This would be achieved by, as Rudolf Rocker puts it, the *"alliance of free groups of men and women based on co-operative labour and a planned administration of things in the interest of the community."* However, as things are produced by people, it could be suggested that this implies a *"planned administration of people"* (although few who suggest this danger apply it to capitalist firms which are like mini-centrally planned states). This objection is false simply because anarchism aims *"to reconstruct the economic life of the peoples from the ground up and build it up anew in the spirit of Socialism"* and, moreover, *"only the producers themselves are fitted for this task, since they are the only value-creating element in society out of which a new future can arise."* Such a reconstructed economic life would be based on anarchist principles, that is *"based on the principles of federalism, a free combination from below upwards, putting the right of self-determination of every member above everything else and recognising only the organic agreement of all on the basis of like interests and common convictions."* [**Anarcho-Syndicalism**, p. 72, p. 62 and p. 60]

In other words, those who produce also administer and so govern themselves in free association (and it should be pointed out that any group of individuals in association will make "plans" and "plan", the important question is who does the planning and who does the work. Only in anarchy are both functions united into the same people). The *"planned administration of things"* would be done by the producers **themselves,** in their independent groupings. This would likely take the form (as we indicated in section I.3) of confederations of syndicates who communicate information between themselves and respond to changes in the production and distribution of products by increasing or decreasing the required means of production in a co-operative (i.e. *"planned"*) fashion. No "central planning" or "central planners" governing the economy, just workers co-operating together as equals (as Kropotkin argued, free socialism *"must result from thousands of separate local actions, all directed towards the same aim. It cannot be dictated by a central body: it must result from the numberless local needs and wants."* [**Act for Yourselves**, p. 54]).

Now, any form of association requires agreement. Therefore, even a society based on the communist-anarchist maxim *"from each according to their ability, to each according to their need"* will need to make agreements in order to ensure co-operative ventures succeed. In other words, members of a co-operative commonwealth would have to make and keep to their agreements between themselves. This means that the members of a syndicate would agree joint starting and finishing times, require notice if individuals want to change "jobs" and so on within and between syndicates. Any joint effort requires some degree of co-operation and agreement. Moreover, between syndicates, an agreement would be reached (in all likelihood) that determined the minimum working hours required by all members of society able to work. As Kropotkin argued, an communist anarchist society would be based upon the such a minimum-hour *"contract"* between its members:

> *"We undertake to give you the use of our houses, stores, streets, means of transport, schools, museums, etc., on condition that, from twenty to forty-five or fifty years of age, you consecrate four or five hours a day to some work recognised as necessary to existence. Choose yourself the producing group which you wish to join, or organise a new group, provided that it will undertake to produce necessaries. And as for the remainder of your time, combine together with whomsoever you like, for recreation, art, or science, according to the bent of your taste ... Twelve or fifteen hundred hours of work a year ... is all we ask of you. For that amount of work we guarantee to you the free use of all that these groups produce, or will produce."* [**The Conquest of Bread**, pp. 153–4]

With such work *"necessary to existence"* being recognised by individuals and expressed by demand for labour from productive syndicates. It is, of course, up to the individual to decide which work he or she desires to perform from the positions available in the various associations in existence. A union card could be the means by which work hours would be recorded and access to the common wealth of society ensured. And, of course, individuals and groups are free to work alone and exchange the produce of their labour with others, including the confederated syndicates, if they so desired. An anarchist society will be as flexible as possible.

Therefore, we can imagine a social anarchist society being based on two basic arrangements — firstly, an agreed minimum working week of, say, 16 hours, in a syndicate of your choice, plus any amount of hours doing "work" which you feel like doing — for example, art, scientific experimentation, DIY, playing music, composing, gardening and so on. How that minimum working

week was actually organised would vary between workplace and commune, with work times, flexi-time, job rotation and so on determined by each syndicate (for example, one syndicate may work 8 hours a day for 2 days, another 4 hours a day for 4 days, one may use flexi-time, another more rigid starting and stopping times). Needless to say, in response to consumption patterns, syndicates will have to expand or reduce production and will have to attract volunteers to do the necessary work as would syndicates whose work was considered dangerous or unwanted. In such circumstances, volunteers could arrange doing a few hours of such activity for more free time or it could be agreed that one hour of such unwanted positions equals more hours in a more desired one (see section I.4.13 for more on this). Needless to say, the aim of technological progress would be to eliminate unpleasant and unwanted tasks and to reduce the basic working week more and more until the very concept of necessary "work" and free time enjoyments is abolished. Anarchists are convinced that the decentralisation of power within a free society would unleash a wealth of innovation and ensure that unpleasant tasks are minimised and fairly shared while required productive activity is made as pleasant and enjoyable as possible.

It could be said that this sort of agreement is a restriction of liberty because it is "man-made" (as opposed to the "natural law" of "supply and demand"). This is a common defence of the non-capitalist market by individualist anarchists against anarcho-communism, for example. However, while in theory individualist-anarchists can claim that in their vision of society, they don't care when, where, or how a person earns a living, as long as they are not invasive about it the fact is that any economy is based on interactions between individuals. The law of "supply and demand" easily, and often, makes a mockery of the ideas that individuals can work as long as they like — usually they end up working as long as required by market forces (i.e. the actions of other individuals, but turned into a force outwith their control, see section I.1.3). This means that individuals do not work as long as they like, but as long as they have to in order to survive. Knowing that "market forces" is the cause of long hours of work hardly makes them any nicer.

And it seems strange to the communist-anarchist that certain free agreements made between equals can be considered authoritarian while others are not. The individualist-anarchist argument that social co-operation to reduce labour is "authoritarian" while agreements between individuals on the market are not seems illogical to social anarchists. They cannot see how it is better for individuals to be pressured into working longer than they desire by "invisible hands" than to come to an arrangement with others to manage their own affairs to maximise their free time.

Therefore, free agreement between free and equal individuals is considered the key to abolishing work, based upon decentralisation of power and the use of appropriate technology.

I.4.4 What economic decision making criteria could be used in anarchy?

Firstly, it should be noted that anarchists do not have any set idea about the answer to this question. Most anarchists are communists, desiring to see the end of money, but that does not mean they want to impose communism onto people. Far from it, communism can only be truly libertarian if it is organised from the bottom up. So, anarchists would agree with Kropotkin that it is a case of not *"determining in advance what form of distribution the producers should accept in their different groups — whether the communist solution, or labour checks, or equal salaries, or any*

other method" while considering a given solution best in their opinion. [**Anarchism**, p. 166] Free experimentation is a key aspect of anarchism.

While certain anarchists have certain preferences on the social system they want to live in and so argue for that, they are aware that objective circumstances and social desires will determine what is introduced during a revolution (for example, while Kropotkin was a communist-anarchist and considered it essential that a revolution proceed towards communism as quickly as possible, he was aware that it was unlikely it would be introduced fully immediately — see section I.2.2 for details). However, we will outline some possible means of economic decision making criteria as this question is an important one and so we will indicate what possible solutions exist in different forms of anarchism.

In a mutualist or collectivist system, the answer is easy. Prices will exist and be used as a means of making decisions (although, as Malatesta suggested, such non-communist anarchies would *"seek a way to ensure that money truly represents the useful work performed by its possessors"* rather than, as today, *"the means for living on the labour of others"* [**Errico Malatesta: His Life and Ideas**, p. 101 and p. 100]). Mutualism will be more market orientated than collectivism, with collectivism being based on confederations of collectives to respond to changes in demand (i.e. to determine investment decisions and ensure that supply is kept in line with demand). Mutualism, with its system of market based distribution around a network of co-operatives and mutual banks, does not really need a further discussion as its basic operations are the same as in any non-capitalist market system. Collectivism and communism will have to be discussed in more detail. However, all systems are based on workers' self-management and so the individuals directly affected make the decisions concerning what to produce, when to do it, and how to do it. In this way workers retain control of the product of their labour. It is the social context of these decisions and what criteria workers use to make their decisions that differ between anarchist schools of thought.

Although collectivism promotes the greatest autonomy for worker associations, it should not be confused with a market economy as advocated by supporters of mutualism or Individualist anarchism. The goods produced by the collectivised factories and workshops are exchanged not according to highest price that can be wrung from consumers, but according to their actual production costs. The determination of these honest prices would be made by a *"Bank of Exchange"* in each community (obviously an idea borrowed from Proudhon). These Banks would represent the various producer confederations and consumer/citizen groups in the community and would seek to negotiate these "honest" prices (which would, in all likelihood, include "hidden" costs like pollution). These agreements would be subject to ratification by the assemblies of those involved.

As James Guillaume put it *"the value of the commodities having been established in advance by a contractual agreement between the regional co-operative federations and the various communes, who will also furnish statistics to the Banks of Exchange. The Bank of Exchange will remit to the producers negotiable vouchers representing the value of their products; these vouchers will be accepted throughout the territory included in the federation of communes."* These vouchers would be related to hours worked, for example, and when used as a guide for investment decisions could be supplemented with cost-benefit analysis of the kind possibly used in a communist-anarchist society (see below). Although this scheme bears a strong resemblance to Proudhonian *"People's Banks,"* it should be noted that the Banks of Exchange, along with a *"Communal Statistical Commission,"* are intended to have a planning function as well to ensure that supply meets demand. This does not imply a Stalinist-like command economy, but simple book keeping for *"each Bank*

of Exchange makes sure in advance that these products are in demand [in order to risk] nothing by immediately issuing payment vouchers to the producers." [*"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, p. 366 and p. 367] The workers syndicates would still determine what orders to produce and each commune would be free to choose its suppliers.

As will be discussed in more depth later (see section I.4.8) information about consumption patterns will be recorded and used by workers to inform their production and investment decisions. In addition, we can imagine that production syndicates would encourage communes as well as consumer groups and co-operatives to participate in making these decisions. This would ensure that produced goods reflect consumer needs. Moreover, as conditions permit, the exchange functions of the communal "banks" would (in all likelihood) be gradually replaced by the distribution of goods in accordance with the needs of the consumers. In other words, most supporters of collectivist anarchism see it as a temporary measure before anarcho-communism could develop.

Communist anarchism would be similar to collectivism, i.e. a system of confederations of collectives, communes and distribution centres (Communal stores). However, in an anarcho-communist system, prices are not used. How will economic decision making be done? One possible solution is as follows:

> *"As to decisions involving choices of a general nature, such as what forms of energy to use, which of two or more materials to employ to produce a particular good, whether to build a new factory, there is a . .. technique ... that could be [used] ... 'cost-benefit analysis' . .. [I]n socialism a points scheme for attributing relative importance to the various relevant considerations could be used ... The points attributed to these considerations would be subjective, in the sense that this would depend on a deliberate social decision rather than some objective standard, but this is the case even under capitalism when a monetary value has to be attributed to some such 'cost' or 'benefit' .. . In the sense that one of the aims of socialism is precisely to rescue humankind from the capitalist fixation with production time/money, cost-benefit analyses, as a means of taking into account other factors, could therefore be said to be more appropriate for use in socialism than under capitalism. Using points systems to attribute relative importance in this way ... [is] simply to employ a technique to facilitate decision-making in particular concrete cases."* [Adam Buick and John Crump, **State Capitalism: The Wages System Under New Management**, pp. 138–139]

This points system would be the means by which producers and consumers would be able to determine whether the use of a particular good is efficient or not. Unlike prices, this cost-benefit analysis system would ensure that production and consumption reflects social and ecological costs, awareness and priorities. Moreover, this analysis would be a **guide** to decision making and not a replacement of human decision making and evaluation. As Lewis Mumford argued:

> *"it is plain that in the decision as to whether to build a bridge or a tunnel there is a human question that should outweigh the question of cheapness or mechanical feasibility: namely the number of lives that will be lost in the actual building or the advisability of condemning a certain number of men [and women] to spend their entire working days underground supervising tunnel traffic ... Similarly the social choice between silk and rayon is not one that can be made simply on the different costs of production, or the*

> *difference in quality between the fibres themselves: there also remains, to be integrated in the decision, the question as to difference in working-pleasure between tending silk-worms and assisting in rayon production. What the product contributes to the labourer is just as important as what the worker contributes to the product. A well-managed society might alter the process of motor car assemblage, at some loss of speed and cheapness, in order to produce a more interesting routine for the worker: similarly, it would either go to the expense of equipping dry-process cement making plants with dust removers — or replace the product itself with a less noxious substitute. When none of these alternatives was available, it would drastically reduce the demand itself to the lowest possible level."* [**The Future of Technics and Civilisation**, pp. 160–1]

Obviously, today, we would include ecological issues as well as human ones. Any decision making process which disregards the quality of work or the effect on the human and natural environment is a deranged one. However, this is how capitalism operates, with the market rewarding capitalists and managers who introduce de-humanising and ecologically harmful practices. Indeed, so biased against labour and the environment is capitalism that many economists and pro-capitalists argue that reducing "efficiency" by such social concerns (as expressed by the passing laws related to labour rights and environmental protection) is actually **harmful** to an economy, which is a total reversal of common sense and human feelings (after all, surely the economy should satisfy human needs and not sacrifice those needs to the economy?). The argument is that consumption would suffer as resources (human and material) would be diverted from more "efficient" productive activities and so reduce, over all, our economic well-being. What this argument ignores is that consumption does not exist in isolation from the rest of the economy. What we want to consume is conditioned, in part, by the sort of person we are and that is influenced by the kind of work we do, the kinds of social relationships we have, whether we are happy with our work and life, and so on. If our work is alienating and of low quality, then so will our consumption decisions. If our work is subject to hierarchical control and servile in nature then we cannot expect our consumption decisions to be totally rational — indeed they may become an attempt to find happiness via shopping, a self-defeating activity as consumption cannot solve a problem created in production. Thus rampant consumerism may be the result of capitalist "efficiency" and so the objection against socially aware production is question begging.

Of course, as well as absolute scarcity, prices under capitalism also reflect relative scarcity (while in the long term, market prices tend towards their production price plus a mark-up based on the degree of monopoly in a market, in the short term prices can change as a result of changes in supply and demand). How a communist society could take into account such short term changes and communicate them through out the economy is discussed in section I.4.5. Moreover, it is likely that they will factor in the desirability of the work performed to indicate the potential waste in human time involved in production (see section I.4.13 for a discussion of how this could be done). The logic behind this is simple, a resource which people **like** to produce will be a better use of the scare resource of an individual's time than one people hate producing. Another key factor in making sensible decisions would be the relative scarcity of a good. After all, it would make little sense when making a decision to use a good which is in short supply over one which is much more abundant. Thus, while the cost-benefit points system would show absolute costs (number of hours work required, energy use, pollution, etc.) this would be complemented

by information about how scare a specific good is and the desirability of the work required to produce it.

Therefore, a communist-anarchist society would be based around a network of syndicates who communicate information between each other. Instead of the price being communicated between workplaces as in capitalism, actual physical data will be sent (the cost). This data is a summary of these (negative) use values of the good (for example resources, labour time and energy used to produce it, pollution details) as well as relative scarcity. With this information a cost-benefit analysis will be conducted to determine which good will be best to use in a given situation based upon mutually agreed common values. These will be used to inform the decision on which goods to use, with how well goods meet the requirements of production (the positive use-value) being compared to their impact in terms of labour, resource use, pollution and so forth (the negative use-values) along with their relative availability.

The data for a given workplace could be compared to the industry as a whole (as confederations of syndicates would gather and produce such information — see section I.3.5) in order to determine whether a specific workplace will efficiently produce the required goods (this system has the additional advantage of indicating which workplaces require investment to bring them in line, or improve upon, the industrial average in terms of working conditions, hours worked and so on). In addition, common rules of thumb would possibly be agreed, such as agreements not to use scarce materials unless there is no alternative (either ones that use a lot of labour, energy and time to produce or those whose demand is currently exceeding supply capacity).

Similarly, when ordering goods, the syndicate, commune or individual involved will have to inform the syndicate why it is required in order to allow the syndicate to determine if they desire to produce the good and to enable them to prioritise the orders they receive. In this way, resource use can be guided by social considerations and "unreasonable" requests ignored (for example, if an individual states they "need" a ship-builders syndicate to build a ship for their personal use, the ship-builders may not "need" to build it and instead build ships for communal use, freely available for all to use in turn — see section I.4.6). However, in almost all cases of individual consumption, no such information will be needed as communal stores would order consumer goods in bulk as they do now. Hence the economy would be a vast network of co-operating individuals and workplaces and the dispersed knowledge which exists within any society can be put to good effect (**better** effect than under capitalism because it does not hide social and ecological costs in the way market prices do and co-operation will eliminate the business cycle and its resulting social problems).

Therefore, production units in a social anarchist society, by virtue of their autonomy within association, are aware of what is socially useful for them to produce and, by virtue of their links with communes, also aware of the social (human and ecological) cost of the resources they need to produce it. They can combine this knowledge, reflecting overall social priorities, with their local knowledge of the detailed circumstances of their workplaces and communities to decide how they can best use their productive capacity. In this way the division of knowledge within society can be used by the syndicates effectively as well as overcoming the restrictions within knowledge communication imposed by the price mechanism (see section I.1.2) and workplaces hierarchies within capitalism (see section I.1.1).

Moreover, production units, by their association within confederations ensure that there is effective communication between them. This results in a process of negotiated co-ordination between equals (i.e. horizontal links and agreements) for major investment decisions, thus bring-

ing together supply and demand and allowing the plans of the various units to be co-ordinated. By this process of co-operation, production units can reduce duplicating effort and so reduce the waste associated with over-investment (and so the irrationalities of booms and slumps associated with the price mechanism, which does not provide sufficient information to allow workplaces to efficiently co-ordinate their plans).

When evaluating production methods we need to take into account as many social and ecological costs as possible and these have to be evaluated. Which costs will be taken into account, of course, be decided by those involved, as will how important they are relative to each other (i.e. how they are weighted). What factors to take into account and how to weigh them in the decision making process will be evaluated and reviewed regularly so to ensure that it reflects real costs and social concerns. As communist-anarchists consider it important to encourage all to participate in the decisions that affect their lives, it would be the role of communal confederations to determine the relative points value of given inputs and outputs. In this way, **all** individuals in a community determine how their society develops, so ensuring that economic activity is responsible to social needs and takes into account the desires of everyone affected by production. In this way consumption and production can be harmonised with the needs of individuals as members of society and the environment they live in. The industrial confederations would seek to ensure that this information is recorded and communicated and (perhaps) formulating industry-wide averages to aid decision-making by allowing syndicates and communes to compare specific goods points to the typical value.

So which factors are to be used to inform decision-making would be agreed and the information communicated between workplaces and communes so that consumers of goods can evaluate their costs in terms of ecological impact, use of resources and human labour. Any agreed values for the Cost-Benefit analysis for inputs can be incorporated in the information associated with the outputs. As such, a communist society would seek to base decisions on more than one criteria, whether it is profits or (say) labour. The reasons for this should be obvious, as one criteria rarely allows sensible decisions. Of course, to some degree people already do this under capitalism but market forces and inequality limit this ability (people will tend to buy cheaper products if they need to make ends meet) while both the price mechanism and the self-interest of companies ensure information about costs are hidden (for example, few companies publically acknowledge their externalities and most spend vast sums on advertising to greenwash their products).

In order to process the information on costs communicated in a libertarian communist economy accounting tools can be created (such as a spreadsheet or computer programme). These could take the decided factors as inputs and returns a cost benefit analysis of the choices available. So while these algorithmic procedures and guidelines can, and indeed should be, able to be calculated by hand, it is likely that computers will be extensively used to take input data and process it into a suitable format. Indeed, many capitalist companies have software which records raw material inputs and finished product into databases and spreadsheets. Such software could be the basis of a libertarian communist decision making algorithm. Of course, currently such data is submerged beneath money and does not take into account externalities and the nature of the work involved (as would be the case in an anarchist society). However, this does not limit their potential or deny that communist use of such software can be used to inform decisions.

Therefore, the claim that communism cannot evaluate different production methods due to lack of prices is inaccurate. Indeed, a look at the actual capitalist market — marked as it is by differences in bargaining and market power, externalities and wage labour — soon shows that

the claims that prices accurately reflect costs is simply not accurate. However, it may be such that objective circumstances preclude the immediate introduction of libertarian communism (as discussed in section I.2.2, many communist anarchists consider this likely). As such, there could be a transitional period in which elements of mutualism, collectivism and communism co-exist within a specific economy. It can easily be seen how a mutualist economy (the usual initial product of a social revolution) could evolve into a collectivist and then communist one. The market generated prices could initially be complemented by the non-market information decided upon (for objective costs and the scarcity index) and, overtime, replaced by this data as the main decision making criteria by syndicates and communes.

One final point on this subject. What methods are used, which criteria picked, which information is communicated and how it is processed, will be the decision of a free people. This section was merely a suggestion of one possibility of how a libertarian communist economy could make informed decisions about production. It is not meant as a blue-print nor is it set-in-stone.

I.4.5 What about *"supply and demand"*?

Anarchists do not ignore the facts of life, namely that at a given moment there is so much a certain good produced and so much of it is desired to be consumed or used. Neither do we deny that different individuals have different interests and tastes. However, this is not what is usually meant by *"supply and demand."* Often in general economic debate, this formula is given a certain mythical quality which ignores its underlying realities as well as some unwholesome implications of the theory (for example, as discussed in section C.1.5 the market can very efficiently create famines by exporting food to areas where there is demand for it). At the very least, the *"the law of supply and demand"* is not the "most efficient" means of distribution in an unequal society as decisions are skewed in favour of the rich.

As far as *"supply and demand"* in terms of allocating scare resources is concerned, anarchists are well aware of the need to create and distribute necessary goods to those who require them. The question is, in an anarchist society, how do you know that valuable labour and materials are not being wasted? How do people judge which tools are most appropriate? How do they decide among different materials if they all meet the technical specifications? How important are some goods than others? How important is cellophane compared to vacuum-cleaner bags and so which one should be produced?

It is answers like this that the supporters of the market claim that their system answers. For individualist and mutualist anarchists, their non-capitalist market would indicate such information by differences between market price and cost price and individuals and co-operatives would react accordingly. For communist and collectivist anarchists, who reject even non-capitalist markets, the answer is less simple. As discussed in section I.1.3, these anarchists argue that although the market does answer such questions it does so in irrational and dehumanising ways (while this is particularly the case under capitalism, it cannot be assumed this will disappear in a post-capitalist market). The question is: can collectivist and communist anarchism answer such questions? Yes, they reply.

So collectivist and communist anarchists reject the market. This rejection often implies, to some, central planning. As the market socialist David Schweickart puts it, *"[i]f profit considerations do not dictate resource usage and production techniques, then central direction must do so.*

If profit is not the goal of a productive organisation, then physical output (use values) must be." [**Against Capitalism**, p. 86] However, Schweickart is wrong. Horizontal links need not be market based and co-operation between individuals and groups need not be hierarchical. What is implied in this comment is that there is just two ways to relate to others — either by prostitution (purely by cash) or by hierarchy (the way of the state, the army or capitalist workplace). But people relate to each other in other ways, such as friendship, love, solidarity, mutual aid and so on. Thus you can help or associate with others without having to be ordered to do so or by being paid cash to do so — we do so all the time. You can work together because by so doing you benefit yourself and the other person. This is the **real** communist way, that of mutual aid and free agreement.

So Schweickart is ignoring the vast majority of relations in any society. For example, love/attraction is a horizontal link between two autonomous individuals and profit considerations do not enter into the relationship. Thus anarchists argue that Schweickart's argument is flawed as it fails to recognise that resource usage and production techniques can be organised in terms of human need and free agreement between economic actors, without profits or central command. This system does not mean that we all have to love each other (an impossible wish). Rather, it means that we recognise that by voluntarily co-operating as equals we ensure that we remain free individuals and that we can gain the advantages of sharing resources and work (for example, a reduced working day and week, self-managed work in safe and hygienic working conditions and a free selection of the product of a whole society). In other words, a self-interest which exceeds the narrow and impoverished egotism of capitalist society.

Thus free agreement and horizontal links are not limited to market transactions — they develop for numerous reasons and anarchists recognise this. As George Barrett argued:

> *"Let us imagine now that the great revolt of the workers has taken place, that their direct action has made them masters of the situation. It is not easy to see that some man in a street that grew hungry would soon draw a list of the loaves that were needed, and take it to the bakery where the strikers were in possession? Is there any difficulty in supposing that the necessary amount would then be baked according to this list? By this time the bakers would know what carts and delivery vans were needed to send the bread out to the people, and if they let the carters and vanmen know of this, would these not do their utmost to supply the vehicles ... If ... [the bakers needed] more benches [to make bread] ... the carpenters would supply them [and so on] ... So the endless continuity goes on — a well-balanced interdependence of parts guaranteed, because **need** is the motive force behind it all .. . In the same way that each free individual has associated with his brothers [and sisters] to produce bread, machinery, and all that is necessary for life, driven by no other force than his desire for the full enjoyment of life, so each institution is free and self-contained, and co-operates and enters into agreements with other because by so doing it extends its own possibilities. There is no centralised State exploiting or dictating, but the complete structure is supported because each part is dependent on the whole ... It will be a society responsive to the wants of the people; it will supply their everyday needs as quickly as it will respond to their highest aspirations. Its changing forms will be the passing expressions of humanity."* [**The Anarchist Revolution**, pp. 17–19]

To make productive decisions we need to know what others need and information in order to evaluate the alternative options available to us to satisfy that need. Therefore, it is a question of distributing information between producers and consumers, information which the market often hides (or actively blocks) or distorts due to inequalities in resources (i.e. need does not count in the market, *"effective demand"* does and this skews the market in favour of the wealthy). This information network has partly been discussed in the last section where a method of comparison between different materials, techniques and resources based upon use value was discussed. In addition, the need to indicate the current fluctuations in stocks, production and consumption has also to be factored in when making decisions.

To indicate the relative changes in scarcity of a given good it will be necessary to calculate what could be termed its *"scarcity index."* This would inform potential users of this good whether its demand is outstripping its supply so that they may effectively adjust their decisions in light of the decisions of others. This index could be, for example, a percentage figure which indicates the relation of orders placed for a good to the amount actually produced. For example, a good which has a demand higher than its supply would have an index value of 101% or higher. This value would inform potential users to start looking for substitutes for it or to economise on its use. Such a scarcity figure would exist for each syndicate as well as (possibly) a generalised figure for the industry as a whole on a regional, "national", etc. level.

In this way, a specific good could be seen to be in high demand and so only those producers who **really** required it would place orders for it (so ensuring effective use of resources). Needless to say, stock levels and other basic book-keeping techniques would be utilised in order to ensure a suitable buffer level of a specific good existed. This may result in some excess supply of goods being produced and used as stock to handle unexpected changes in the aggregate demand for a good. Such a buffer system would work on an individual workplace level and at a communal level. Syndicates would obviously have their inventories, stores of raw materials and finished goods "on the shelf" which can be used to meet unexpected increases in demand. Communal stores, hospitals and so on would have their stores of supplies in case of unexpected disruptions in supply.

This is a common practice even in capitalism, with differences between actual demand and expected demand being absorbed by unintended stock changes. Firms today also have spare capacity in order to meet such upsurges in demand. Such policies of maintaining stocks and spare capacity will continue to the case under anarchism. It is assumed that syndicates and their confederations will wish to adjust capacity if they are aware of the need to do so. Hence, price changes in response to changes in demand would not be necessary to provide the information that such adjustments are required. This is because a *"change in demand first becomes apparent as a change in the quantity being sold at existing prices [or being consumed in a moneyless system] and is therefore reflected in changes in stocks or orders. Such changes are perfectly good indicators or signals that an imbalance between demand and current output has developed. If a change in demand for its products proved to be permanent, a production unit would find its stocks being run down and its order book lengthening, or its stocks increasing and orders falling ... Price changes in response to changes in demand are therefore not necessary for the purpose of providing information about the need to adjust capacity."* [Pat Devine, **Democracy and Economic Planning**, p. 242]

So syndicates, communes and their confederations will create buffer stocks of goods to handle unforeseen changes in demand and supply. This sort of inventory has also been used by capitalist countries like the USA to prevent changes in market conditions for agricultural prod-

ucts and other strategic raw materials producing wild spot-price movements and inflation. Post-Keynesian economist Paul Davidson argued that the stability of commodity prices this produced *"was an essential aspect of the unprecedented prosperous economic growth of the world's economy"* between 1945 and 1972. US President Nixon dismantled these buffer zone programmes, resulting in *"violent commodity price fluctuations"* which had serious negative economic effects. [**Controversies in Post-Keynesian Economics**, p. 114 and p. 115] Again, an anarchist society is likely to utilise this sort of buffer system to iron out short-term changes in supply and demand. By reducing short-term fluctuations of the supply of commodities, bad investment decisions would be reduced as syndicates would not be mislead, as is the case under capitalism, by market prices being too high or too low at the time when the decisions where being made (as discussed in section I.1.5 such disequilibrium prices convey misinformation which causes very substantial economic distortions).

This, combined with cost-benefit analysis described in section I.4.4, would allow information about changes within a moneyless economy to rapidly spread throughout the whole system and influence all decision makers without the great majority knowing anything about the original causes of these changes. This would allow a syndicate to ascertain which good used up least resources and therefore left the most over for other uses (i.e., relative costs or scarcity) as well as giving them information on what resources were used to create it (i.e., the absolute costs involved) The relevant information is communicated to all involved, without having to be ordered by an "all-knowing" central body as in a Leninist centrally planned economy. As argued in section I.1.2, anarchists have long realised that no centralised body could possibly be able to possess all the information dispersed throughout the economy to organise production and if such a body attempted to do so, the resulting bureaucracy would effectively reduce and impoverish the amount of information available to decision makers and so cause shortages and inefficiencies.

To get an idea how this system could work, let us take the example of a change in the copper industry. Let us assume that a source of copper unexpectedly fails or that the demand for copper increases. What would happen?

First, the initial difference would be a diminishing of stocks of copper which each syndicate maintains to take into account unexpected changes in requests. This would help buffer out short lived, changes in supply or requests. Second, naturally, there is an increase in demand for copper for those syndicates which are producing it. This immediately increases the **scarcity index** of those firms and their product. For example, the index may rise from 95% (indicating a slight overproduction in respect to current demand) to 115% (indicating that the demand for copper has risen in respect to the current level of production). This change in the **scarcity index** (combined with difficulties in finding copper producing syndicates which will accept their orders) enters into the decision making algorithms of other syndicates. This, in turn, results in changes in their plans. For example, the syndicates can seek out other suppliers who have a lower scarcity index or substitutes for copper may be used as they have become a more efficient resource to use.

In this way, requests for copper products fall and soon only reflect those requests that really need copper (i.e., do not have realistic substitutes available for it). This would result in the demand falling with respect to the current supply (as indicated by requests from other syndicates and to maintain buffer stock levels). Thus a general message has been sent across the economy that copper has become (relatively) scare and syndicate plans have changed in light of this information. No central planner made these decisions nor was money required to facilitate them.

We have a decentralised, non-market system based on the free exchange of products between self-governing associations.

Looking at the wider picture, the question of how to response to this change in supply/requests for copper presents itself. The copper syndicate federation and cross-industry syndicate federations have regular meetings and the question of the changes in the copper situation present themselves and they must consider how to response to these changes. Part of this is to determine whether this change is likely to be short term or long term. A short term change (say caused by a mine accident, for example) would not need new investments to be planned. However, long term changes (say the new requests are due to a new product being created by another syndicate or an existing mine becoming exhausted) may need co-ordinated investment (we can expect syndicates to make their own plans in light of changes, for example, by investing in new machinery to produce copper more efficiently or to increase production). If the expected changes of these plans approximately equal the predicted long term changes, then the federation need not act. However, if they do then investment in new copper mines or large scale new investment across the industry may be required. The federation would propose such plans.

Needless to say, the future can be guessed, it cannot be accurately predicted. Thus there may be over-investment in certain industries as expected changes do not materialise. However, unlike capitalism, this would not result in an economic crisis (with over-investment within capitalism, workplaces close due to lack of profits, regardless of social need). All that would happen is that some of the goods produced would not be used, some labour and resources would be wasted and the syndicates would rationalise production, close down relatively inefficient plant and concentrate production in the more efficient ones. The sweeping economic crises of capitalism would be a thing of the past.

In summary, each syndicate receives its own orders and supplies and sends its own produce out to specific consumers. Similarly, communal distribution centres would order required goods from syndicates it determines. In this way consumers can change to syndicates which respond to their needs and so production units are aware of what it is socially useful for them to produce as well as the social cost of the resources they need to produce it. In this way a network of horizontal relations spread across society, with co-ordination achieved by equality of association and not the hierarchy of the corporate structure.

While anarchists are aware of the *"isolation paradox"* (see section B.6) this does not mean that they think the commune should make decisions **for** people on what they were to consume. That would be a prison. No, all anarchists agree that is up to the individual to determine their own needs and for the collectives they join to determine social requirements like parks, infrastructure improvements and so on. However, social anarchists think that it would be beneficial to discuss the framework around which these decisions would be made. This would mean, for example, that communes would agree to produce eco-friendly products, reduce waste and generally make decisions enriched by social interaction. Individuals would still decide which sort goods they desire, based on what the collectives produce but these goods would be based on a socially agreed agenda. In this way waste, pollution and other *"externalities"* of atomised consumption could be reduced. For example, while it is rational for individuals to drive a car to work, collectively this results in massive **irrationality** (for example, traffic jams, pollution, illness, unpleasant social infrastructures). A sane society would discuss the problems associated with car use and would agree to produce a fully integrated public transport network which would reduce pollution, stress, illness, and so on.

Therefore, while anarchists recognise individual tastes and desires, they are also aware of the social impact of them and so try to create a social environment where individuals can enrich their personal decisions with the input of other people's ideas.

On a related subject, it is obvious that different syndicates would produce slightly different goods, so ensuring that people have a choice. It is doubtful that the current waste implied in multiple products from different companies (sometimes the same multi-national corporation!) all doing the same job would be continued in an anarchist society. However, production will be *"variations on a theme"* in order to ensure consumer choice and to allow the producers to know what features consumers prefer. It would be impossible to sit down beforehand and make a list of what features a good should have — that assumes perfect knowledge and that technology is fairly constant. Both these assumptions are of limited use in real life. Therefore, co-operatives would produce goods with different features and production would change to meet the demand these differences suggest (for example, factory A produces a new CD player, and consumption patterns indicate that this is popular and so the rest of the factories convert). This is in addition to R&D experiments and test populations. In this way consumer choice would be maintained, and enhanced as people would be able to influence the decisions of the syndicates as producers (in some cases) and through syndicate/commune dialogue.

Finally, it would be churlish, but essential, to note that capitalism only equates supply and demand in the fantasy world of neo-classical economics. Any **real** capitalist economy, as we discussed in section I.1.5 is marked by uncertainty and a tendency to over-produce in the response to the higher profits caused by previously under-producing goods, with resulting periods of crisis in which falling effective demand sees a corresponding fall in supply. Not to the mention the awkward fact that real needs (demand) are not met simply because people are too poor to pay for the goods (i.e., no effective demand). As such, to suggest that only non-market systems have a problem ensuring demand and supply meet is mistaken.

To conclude, anarchists do not ignore *"supply and demand."* Instead, they recognise the limitations of the capitalist version of this truism and point out that capitalism is based on **effective** demand which has no necessary basis with efficient use of resources. Instead of the market, social anarchists advocate a system based on horizontal links between producers which effectively communicates information across society about the relative changes in supply and demand which reflect actual needs of society and not bank balances. The investment response to changes in supply and demand will be discussed in section I.4.8 while section I.4.13 will discuss the allocation of work tasks.

I.4.6 Surely anarchist-communism would just lead to demand exceeding supply?

While non-communist forms of anarchism relate consumption to work done, so automatically relating demand to production, this is not the case in communist-anarchism. In that system, distribution is according to need, not deed. Given this, it is a common objection that libertarian communism would lead to people wasting resources by taking more than they need.

Kropotkin, for example, stated that *"free communism ... places the product reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home."* [**The Place of Anarchism in the Evolution of Socialist Thought**, p. 7] But, some

argue, what if an individual says they "need" a luxury house or a personal yacht? Simply put, workers may not "need" to produce it. As Tom Brown put it, *"such things are the product of social labour ... Under syndicalism ... it is improbable that any greedy, selfish person would be able to kid a shipyard full of workers to build him a ship all for his own hoggish self. There would be steam luxury yachts, but they would be enjoyed in common."* [**Syndicalism**, p. 51]

Therefore, communist-anarchists are not blind to the fact that free access to products is based upon the actual work of real individuals — "society" provides nothing, individuals working together do. This is reflected in the classic statement of communism: *"From each according to their ability, to each according to their needs."* This must be considered as a whole as those producing have needs and those receiving have abilities. The needs of both consumer **and** producer have to be taken into account, and this suggests that those producing have to feel the need to do so. This means that if no syndicate or individual desires to produce a specific order then this order can be classed as an "unreasonable" demand — "unreasonable" in this context meaning that no one freely agrees to produce it. Of course, individuals may agree to barter services in order to get what they want produced if they **really** want something but such acts in no way undermines a communist society.

This also applies to the demand for goods which are scare and, as a result, require substantial labour and resources to produce. In such circumstances, the producers (either as a specific syndicate or in their confederations) would refuse to supply such a "need" or communes and their confederations would suggest that this would be waste of resources. Ultimately, a free society would seek to avoid the irrationalities of capitalism where the drive for profits results in production for the sake of production and consumption for the sake of consumption and the many work longer and harder to meet the demands of a (wealthy) few. A free people would evaluate the pros and cons of any activity before doing it. As Malatesta put it:

> *"[A] communist society ... is not, obviously, about an absolute right to satisfy **all** of one's needs, because needs are infinite ... so their satisfaction is always limited by productive capacity; nor would it be useful or just that the community in order to satisfy excessive needs, otherwise called caprices, of a few individuals, should undertake work, out of proportion to the utility being produced ... What we would like is for everybody to live in the best possible way: so that everybody with a minimum amount of effort will obtain maximum satisfaction."* [**At the Café**, pp. 60–1]

Communist-anarchists recognise that production, like consumption, must be based on freedom. However, it has been argued that free access would lead to waste as people take more than they would if they had to pay for it. This objection is not as serious as it first appears. There are plenty of examples within current society to indicate that free access will not lead to abuses. Let us take a few examples. In public libraries people are free to sit and read books all day but few, if any, actually do so. Neither do people always take the maximum number of books out at a time. No, they use the library as they need to and feel no need to maximise their use of the institution. Some people never use the library, although it is free. In the case of water supplies, it is clear that people do not leave taps on all day because water is often supplied freely or for a fixed charge. Similarly with pavements, people do not walk everywhere because to do so is free. In such cases individuals use the resource as and when they need to. Equally, vegetarians do not start eating meat when they visit their friend's parties just because the buffet is free.

We can expect similar results as other resources become freely available. In effect, this argument makes as much sense as arguing that individuals will travel to stops **beyond** their destination if public transport is based on a fixed charge! Obviously only an idiot would travel further than required in order to get "value for money." However, for many the world seems to be made up of such fools. Perhaps it would be advisable for such critics to hand out political leaflets in the street. Even though the leaflets are free, crowds rarely form around the person handing them out demanding as many copies of the leaflet as possible. Rather, those interested in what the leaflets have to say take them, the rest ignore them. If free access automatically resulted in people taking more than they need then critics of free communism would be puzzled by the lack of demand for what they were handing out!

Part of the problem is that capitalist economics has invented a fictional type of person, **Homo Economicus,** whose wants are limitless: an individual who always wants more and so whose needs could only satisfied if resources were limitless too. Needless to say, such an individual has never existed. In reality, wants are not limitless — people have diverse tastes and rarely want everything available nor want more of a good than that which satisfies their need.

Communist Anarchists also argue that we cannot judge people's buying habits under capitalism with their actions in a free society. After all, advertising does not exist to meet people's needs but rather to create needs by making people insecure about themselves. Simply put, advertising does not amplify existing needs or sell the goods and services that people already want. Advertising would not need to stoop to the level of manipulative adverts that create false personalities for products and provide solutions for problems that the advertisers themselves create if this were the case. Crude it may be, but advertising is based on the creation of insecurities, preying on fears and obscuring rational thought. In an alienated society in which people are subject to hierarchical controls, feelings of insecurity and lack of control and influence would be natural. It is these fears that advertising multiples — if you cannot have real freedom, then at least you can buy something new. Advertising is the key means of making people unhappy with what they have and who they are. It is naive to claim that advertising has no effect on the psyche of the receiver or that the market merely responds to the populace and makes no attempt to shape their thoughts. If advertising did not work, firms would not spend so much money on it! Advertising creates insecurities about such matter-of-course things and so generates irrational urges to buy which would not exist in a libertarian communist society.

However, there is a deeper point to be made here about consumerism. Capitalism is based on hierarchy, not liberty. This leads to a weakening of individuality as well as a lose of self-identity and sense of community. Both these senses are a deep human need and consumerism is often a means by which people overcome their alienation from their selves and others (religion, ideology and drugs are other means of escape). Therefore the consumption within capitalism reflects **its** values, not some abstract "human nature." As such, because a firm or industry is making a profit satisfying "needs" within capitalism, it does not follow that people in a free society would have similar wants (i.e., "demand" often does not exist independently of the surrounding society). As Bob Black argues:

> *"what we want, what we are capable of wanting is relative to the forms of social organisation. People 'want' fast food because they have to hurry back to work, because processed supermarket food doesn't taste much better anyway, because the nuclear family (for the dwindling minority who have even that to go home to) is too small and too*

> *stressed to sustain much festivity in cooking and eating — and so forth. It is only people who can't get what they want who resign themselves to want more of what they can get. Since we cannot be friends and lovers, we wail for more candy."* [**Friendly Fire"**, p. 57]

Therefore, most anarchists think that consumerism is a product of a hierarchical society within which people are alienated from themselves and the means by which they can make themselves **really** happy (i.e. meaningful relationships, liberty, self-managed productive activity, and so on). Consumerism is a means of filling the spiritual hole capitalism creates within us by denying our freedom and violating equality. This means that capitalism produces individuals who define themselves by what they have, not who they are. This leads to consumption for the sake of consumption, as people try to make themselves happy by consuming more commodities. But, as Erich Fromm pointed out, this cannot work for long and only leads to even more insecurity (and so even more consumption):

> *"**If I am what I have and if what I have is lost, who then am I?** Nobody but a defeated, deflated, pathetic testimony to a wrong way of living. Because I **can** lose what I have, I am necessarily constantly worried that I **shall** lose what I have."* [**To Have Or To Be**, p. 111]

Such insecurity easily makes consumerism seem a "natural" way of life and so make communism seem impossible. However, rampant consumerism is far more a product of lack of meaningful freedom within an alienated society than a "natural law" of human existence. In a society that encouraged and protected individuality by non-hierarchical social relationships and organisations, individuals would have a strong sense of self and so be less inclined to mindlessly consume. As Fromm put it: *"If **I am what I am** and not what I have, nobody can deprive me of or threaten my security and my sense of identity. My centre is within myself."* [**Op. Cit.**, p. 112] Such self-centred individuals do not have to consume endlessly to build a sense of security or happiness within themselves.

In other words, the well-developed individuality that an anarchist society would develop would have less need to consume than the average person in a capitalist one. This is not to suggest that life will be bare and without luxuries in an anarchist society, far from it. A society based on the free expression of individuality could be nothing but rich in wealth and diverse in goods and experiences. What we are arguing here is that an anarchist-communist society would not have to fear rampant consumerism making demand outstrip supply constantly and always precisely because freedom will result in a non-alienated society of well developed individuals.

It should not be forgotten that communism has two conditions, distribution according to need **and** production according to ability. If the latter condition is not met, if someone does not contribute to the goods available in the libertarian communist society, then the former condition is not likely to be tolerated and they would be asked to leave so reducing demand for goods. The freedom to associate means being free **not** to associate. Thus a free communist society would see goods being supplied as well as demanded. As Malatesta argued:

> *"Basic to the anarchist system, before communism or any other forms of social conviviality is the principle of the free compact; the rule of integral communism — 'from*

> *each according to his [or her] ability, to each according to his [or her] need' — applies only to those who accept it, including naturally the conditions which make it practicable."* [quoted by Camillo Berneri, *"The Problem of Work"*, pp. 59–82, **Why Work?**, Vernon Richards (ed.), p. 74]

So, as Malatesta suggested, it should be noted that communist-anarchists are well aware that it is likely that free access to all goods and services cannot be done immediately (see section H.2.5 for details). As Alexander Berkman summarised, *"when the social revolution attains the stage where it can produce sufficient for all, then is adopted the Anarchist principle of 'to each according to his [or her] needs' ... But until it is reached, the system of equal sharing . .. is imperative as the only just method. It goes without saying, of course, that special consideration must be given to the sick and the old, to children, and to women during and after pregnancy."* [**What is Anarchism?**, p. 216] Another possibility was suggested by James Guillaume who argued that as long as a product was *"in short supply it will to a certain extent have to be rationed. And the easiest way to do this would be to **sell** these scare products"* but as production grows then *"it will not be necessary to ration consumption. The practice of selling, which was adopted as a sort of deterrent to immoderate consumption, will be abolished"* and goods *"will be distribute[d] ... in accordance with the needs of the consumers."* [*"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, p. 368] Other possibilities may include communes deciding that certain scare goods are only available to those who do the unpleasant work (such as collecting the rubbish) or that people have equal access but the actual goods are shared and used for short periods of time (as is currently the case with public libraries). As Situationist Ken Knabb suggests after usefully discussing *"just some of the possibilities"*: *"Experimenting with different methods, people will find out for themselves what forms of ownership, exchange and reckoning are necessary."* [**Public Secrets**, p. 73]

Whether or not full communism **can** be introduced instantly is a moot point amongst collectivist and communist anarchists, although most would like to see society develop towards a communist goal eventually. Of course, for people used to capitalism this may sound totally utopian. Possibly it is. However, as Oscar Wilde said, a map of the world without Utopia on it is not worth having. One thing is sure, if the developments we have outlined above fail to appear and attempts at communism fail due to waste and demand exceeding supply then a free society would make the necessary decisions and introduce some means of limiting supply (such as, for example, labour notes, equal wages, and so on). Rest assured, though, *"the difficulty will be solved and obstacles in the shape of making necessary changes in the detailed working of the system of production and its relation to consumption, will vanish before the ingenuity of the myriad minds vitally concerned in overcoming them."* [Charlotte M. Wilson, **Anarchist Essays**, p. 21]

I.4.7 What will stop producers ignoring consumers?

It is often claimed that without a market producers would ignore the needs of consumers. Without the threat (and fear) of unemployment and destitution and the promise of higher profits, producers would turn out shoddy goods. The holders of this argument point to the example of the Soviet Union which was notorious for terrible goods and a lack of consumer commodities.

Capitalism, in comparison to the old Soviet block, does, to some degree, make the producers accountable to the consumers. If the producer ignores the desires of the consumer then they will loose business to those who do not and be forced, perhaps, out of business (large companies,

of course, due to their resources can hold out far longer than smaller ones). Thus we have the carrot (profits) and the stick (fear of poverty) – although, of course, the carrot can be used as a stick against the consumer (no profit, no sale, no matter how much the consumer may need it). Ignoring the obvious objection to this analogy (namely we are human beings, **not** donkeys!) it does have contain an important point. What will ensure that consumer needs are meet in an anarchist society?

In an Individualist or Mutualist anarchist system, as it is based on a market, producers would be subject to market forces and so have to meet consumers needs. Collectivist-anarchism meets consumer needs in a similar way, as producers would be accountable to consumers by the process of buying and selling between co-operatives. As James Guillaume put it, the workers associations would *"deposit their unconsumed commodities in the facilities provided by the [communal] Bank of Exchange ... The Bank of Exchange would remit to the producers negotiable* ***vouchers*** *representing the value of their products"* (this value *"having been established in advance by a contractual agreement between the regional co-operative federations and the various communes"*). [*"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, pp. 366] If the goods are not in demand then the producer associations would not be able to sell the product of their labour to the Bank of Exchange (or directly to other syndicates or communes) and so they would adjust their output accordingly. Of course, there are problems with these systems due to their basis in the market (as discussed in section I.1.3), although these problems were recognised by Proudhon who argued for an agro-industrial federation to protect self-management from the negative effects of market forces (as noted in section I.3.5).

While mutualist and collectivist anarchists can argue that producers would respond to consumer needs otherwise they would not get an income, communist-anarchists (as they seek a moneyless society) cannot argue their system would reward producers in this way. So what mechanism exists to ensure that *"the wants of all"* are, in fact, met? How does anarcho-communism ensure that production becomes *"the mere servant of consumption"* and *"mould itself on the wants of the consumer, not dictate to him conditions"*? [Peter Kropotkin, **Act for Yourselves**, p. 57] Libertarian communists argue that in a **free** communist society consumers' needs would be met. This is because of the decentralised and federal nature of such a society.

So what is the mechanism which makes producers accountable to consumers in a libertarian communist society? Firstly, communes would practice their power of ***"exit"*** in the distributive network. If a syndicate was producing sub-standard goods or refusing to change their output in the face of changing consumer needs, then the communal stores would turn to those syndicates which **were** producing the goods desired. The original syndicates would then be producing for their own stocks, a pointless task and one few, if any, would do. After all, people generally desire their work to have meaning, to be useful. To just work, producing something no-one wanted would be such a demoralising task that few, if any, sane people would do it (under capitalism people put up with spirit destroying work as some income is better than none, such an "incentive" would not exist in a free society).

As can be seen, ***"exit"*** would still exist in libertarian communism. However, it could be argued that unresponsive or inefficient syndicates would still exist, exploiting the rest of society by producing rubbish (or goods which are of less than average quality) and consuming the products of other people's labour, confident that without the fear of poverty and unemployment they can continue to do this indefinitely. Without the market, it is argued, some form of bureaucracy would be required (or develop) which would have the power to punish such syndicates. Thus

the state would continue in "libertarian" communism, with the "higher" bodies using coercion against the lower ones to ensure they meet consumer needs or produced enough.

While, at first glance, this appears to be a possible problem on closer inspection it is flawed. This is because anarchism is based not only on ***"exit"*** but also ***"voice"***. Unlike capitalism, libertarian communism is based on association and communication. Each syndicate and commune is in free agreement and confederation with all the others. Thus, is a specific syndicate was producing bad goods or not pulling its weight, then those in contact with them would soon realise this. First, those unhappy with a syndicate's work would appeal to them directly to get their act together. If this did not work, then they would notify their disapproval by refusing to associate with them in the future (i.e. they would use their power of ***"exit"*** as well as refusing to provide the syndicate with any goods **it** requires). They would also let society as a whole know (via the media) as well as contacting consumer groups and co-operatives and the relevant producer and communal confederations which they and the other syndicate are members of, who would, in turn, inform their members of the problems (the relevant confederations could include local and regional communal confederations, the general cross-industry confederation, its own industrial/communal confederation and the confederation of the syndicate not pulling its weight). In today's society, a similar process of "word of mouth" warnings and recommendations goes on, along with consumer groups and media. Our suggestions here are an extension of this common practice (that this process exists suggests that the price mechanism does not, in fact, provide consumers with all the relevant information they need to make decisions, but this is an aside).

If the syndicate in question, after a certain number of complaints had been lodged against it, still did not change its ways, then it would suffer non-violent direct action. This would involve the boycotting of the syndicate and (perhaps) its local commune (such as denying it products and investment), so resulting in the syndicate being excluded from the benefits of association. The syndicate would face the fact that no one else wanted to associate with it and suffer a drop in the goods coming its way, including consumption products for its members. In effect, a similar process would occur to that of a firm under capitalism that looses its customers and so its income. However, we doubt that a free society would subject any person to the evils of destitution or starvation (as capitalism does). Rather, a bare minimum of goods required for survival would still be available.

In the unlikely event this general boycott did not result in a change of heart, then two options are left available. These are either the break-up of the syndicate and the finding of its members new work places or the giving/selling of the syndicate to its current users (i.e. to exclude them from the society they obviously do not want to be part off). The decision of which option to go for would depend on the importance of the workplace in question and the desires of the syndicates' members. If the syndicate refused to disband, then option two would be the most logical choice (unless the syndicate controlled a scare resource). The second option would, perhaps, be best as this would drive home the benefits of association as the expelled syndicate would have to survive on its own, subject to survival by selling the product of its labour and would soon return to the fold.

Kropotkin argued in these terms over 100 years ago:

> *"When a railway company, federated with other companies, fails to fulfil its engagements, when its trains are late and goods lie neglected at the stations, the other companies threaten to cancel the contract, and that threat usually suffices.*

> *"It is generally believed ... that commerce only keeps to its engagements from fear of lawsuits. Nothing of the sort; nine times in ten the trader who has not kept his word will not appear before a judge ... the sole fact of having driven a creditor to bring a lawsuit suffices for the vast majority of merchants to refuse for good to have any dealings with a man who has compelled one of them to go to law.*
>
> *"This being so, why should means that are used today among ... traders in the trade, and railway companies in the organisation of transport, not be made use of in a society based on voluntary work?"* [**The Conquest of Bread**, p. 153]

Thus, to ensure producer accountability of production to consumption, no bureaucratic body is required in libertarian communism (or any other form of anarchism). Rather, communication and direct action by those affected by unresponsive producers would be an effective and efficient means of ensuring the accountability of production to consumption.

I.4.8 What about investment decisions?

Obviously, a given society needs to take into account changes in consumption and so invest in new means of production. An anarchist society is no different. As Guild Socialist G.D.H Cole points out, *"it is essential at all times, and in accordance with considerations which vary from time to time, for a community to preserve a balance between production for ultimate use and production for use in further production. And this balance is a matter which ought to be determined by and on behalf of the whole community."* [**Guild Socialism Restated**, p. 144]

How this balance is determined varies according to the school of anarchist thought considered. All agree, however, that such an important task should be under effective community control.

The mutualists see the solution to the problems of investment as creating a system of mutual banks, which reduce interest rates to zero. This would be achieved *"[b]y the organisation of credit, on the principle of reciprocity or mutualism ... In such an organisation credit is raised to the dignity of a social function, managed by the community; and, as society never speculates upon its members, it will lend its credit ... at the actual cost of transaction."* [Charles A. Dana, **Proudhon and his *"Bank of the People"***, p. 36] Loans would be allocated to projects which the mutual banks considered likely to succeed and repay the original loan. In this way, the increase in the money supply implied by these acts of credit providing does not generate inflation for money is not created wantonly but rather is aimed at projects which are considered likely to increase the supply of goods and services in the economy (see section G.3.6). Another key source of investment would be internal funds (i.e., retained savings) as is the case with co-operatives today:* "Worker-managers finance their new investments partly out of internal funds and partly from external loans ... Entrepreneurial activity of worker-managers ... generates profits and losses, i.e., higher or lower income per worker." *[Branko Horvat,* "The Theory of the Worker-Managed Firm Revisited"*, pp. 9–25, Journal of Comparative Economics, vol. 10, no. 1, p. 21] As discussed in section I.1.1, eliminating the stock market will not harm investment (almost all investment funds are from other sources) and will remove an important negative influence in economic activity.**

Collectivist and communist anarchists recognise that credit is based on human activity, which is represented as money. As Cole pointed out, the *"understanding of this point [on investment]*

depends on a clear appreciation of the fact that all real additions to capital take the form of directing a part of the productive power of labour and using certain materials not for the manufacture of products and the rendering of services incidental to such manufacture for purposes of purposes of further production." [**Op. Cit.**, p. 143] So collectivist and communist anarchists agree with their Mutualist cousins when they state that *"[a]ll credit presupposes labour, and, if labour were to cease, credit would be impossible"* and that the *"legitimate source of credit"* was *"the labouring classes"* who *"ought to control it"* and for *"whose benefit [it should] be used"*. [Dana, **Op. Cit.**, p. 35]

Therefore, in collectivism, investment funds would exist for syndicates, communes and their in community (*"People's"*) banks. These would be used to store depreciation funds and as well as other funds agreed to by the syndicates for investment projects (for example, confederations of syndicates may agree to allocate a certain percentage of their labour notes to a common account in order to have the necessary funds available for major investment projects). Similarly, individual syndicates and communes would also create a store of funds for their own investment projects. Moreover, the confederations of syndicates to which these *"People's Banks"* would be linked would also have a defined role in investment decisions to ensure that production meets demand by being the forum which decides which investment plans should be given funding (this, we stress, is hardly "central planning" as capitalist firms also plan future investments to meet expected demand). In this, collectivist anarchism is like mutualism and so we would also expect interest-free credit being arranged to facilitate investment.

In a communist-anarchist society, things would be slightly different as this would not have the labour notes used in mutualism and collectivism. This means that the productive syndicates would agree that a certain part of their total output and activity will be directed to investment projects. In effect, each syndicate is able to draw upon the resources approved of by the cooperative commonwealth in the form of an agreed claim on the labour power of society (investment *"is essentially an allocation of material and labour, and fundamentally, an allocation of human productive power."* [Cole, **Op. Cit.**, pp. 144–5]). In this way, mutual aid ensures a suitable pool of resources for the future from which all benefit.

It should be remembered that savings are not required before credit can be issued. Under capitalism, for example, banks regularly issue credit in excess of their actual reserves of cash (if they did not then, one, they would not be very good capitalists and, two, the economy would grind to a halt). Nor does the interest rate reflect a preference for future goods (as discussed in section C.2.6 interest rates reflect market power, the degree of monopoly in the credit industry, the social and class position of individuals and a host of other factors). Moreover, a developed economy replaces a process in time with a process in space. In peasant and tribal societies, individuals usually did have to spend time and energy making their own tools (the hunter had to stop hunting in order to create a new improved bow or spear). However, with a reasonably developed division of work then different people produce the tools others use and can do so at the same time as the others produce. If workers producing investment goods had to wait until sufficient savings had been gathered before starting work then it is doubtful that any developed economy could function. Thus the notion that "investment" needs saving is somewhat inappropriate, as different workplaces produce consumption goods and others produce investment goods. The issue becomes one of ensuring that enough people and resources go towards both activities.

How would this work? Obviously investment decisions have implications for society as a whole. The implementation of these decisions require the use of **existing** capacity and so must be the responsibility of the appropriate level of the confederation in question. Investment decisions

taken at levels above the production unit become effective in the form of demand for the current output of the syndicates which have the capacity to produce the goods required. This would require each syndicate to *"prepare a budget, showing its estimate of requirements both of goods or services for immediate use, and of extensions and improvements."* [Cole, **Op. Cit.**, p. 145] These budgets and investment projects would be discussed at the appropriate level of the confederation (in this, communist-anarchism would be similar to collectivist anarchism).

The confederation of syndicates/communes would be the ideal forum to discuss (communicate) the various investment plans required — and to allocate scarce resources between different ends. This would involve, possibly, dividing investment into two groups — necessary and optional – and using statistical techniques to consider the impact of an investment decision (for example, the use of input-output tables could be used to see if a given investment decision in, say, the steel industry would require investment in energy production). In this way social needs **and** social costs would be taken into account and ensure that investment decisions are not taken in isolation from one another, so causing bottle-necks and insufficient production due to lack of inputs from other industries.

Necessary investments are those which have been agreed upon by the appropriate confederation. It means that resources and productive capacity are prioritised towards them, as indicated in the agreed investment project. It will not be required to determine precisely **which** syndicates will provide the necessary goods for a given investment project, just that it has priority over other requests. Under capitalism, when a bank gives a company credit, it rarely asks exactly which companies will be contracted with when the money is spent but, rather, it gives the company the power to command the labour of other workers by supplying them with credit/money. Similarly in an anarcho-communist society, except that the other workers have agreed to supply their labour for the project in question by designating it a ***"necessary investment"***. This means when a request arrives at a syndicate for a ***"necessary investment"*** a syndicate must try and meet it (i.e. it must place the request into its production schedule before *"optional"* requests, assuming that it has the capacity to meet it). A list of necessary investment projects, including what they require and if they have been ordered, will be available to all syndicates to ensure such a request is a real one.

Optional investment is simply investment projects which have not been agreed to by a confederation. This means that when a syndicate or commune places orders with a syndicate they may not be met or take longer to arrive. The project may go ahead, but it depends on whether the syndicate or commune can find workers willing to do that work. This would be applicable for small scale investment decisions or those which other communes/syndicates do not think of as essential.

This we have two inter-related investment strategies. A communist-anarchist society would prioritise certain forms of investment by the use of ***"necessary"*** and ***"optional"*** investment projects. This socialisation of investment will allow a free society to ensure that social needs are meet while maintaining a decentralised and dynamic economy. Major projects to meet social needs will be organised effectively, but with diversity for minor projects. The tasks of ensuring investment production, making orders for specific goods and so forth, would be as decentralised as other aspects of a free economy and so anarchism *"proposes ... [t]hat usufruct of instruments of production — land included — should be free to all workers, or groups of workers"*, that *"workers should group themselves, and arrange their work as their reason and inclination prompt"* and

that *"the necessary connections between the various industries ... should be managed on the same voluntary principle."* [Charlotte M. Wilson, **Anarchist Essays**, p. 21]

As for when investment is needed, it is clear that this will be based on the changes in demand for goods in both collectivist and communist anarchism. As Guilliaume put it: *"By means of statistics gathered from all the communes in a region, it will be possible to scientifically balance production and consumption. In line with these statistics, it will also be possible to add more help in industries where production is insufficient and reduce the number of men where there is a surplus of production."* [*"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, p. 370] Obviously, investment in branches of production with a high demand would be essential and this would be easily seen from the statistics generated by the collectives and communes. Tom Brown made this obvious point:

> *"Goods, as now, will be produced in greater variety, for workers like producing different kinds, and new models, of goods. Now if some goods are unpopular, they will be left on the shelves ... Of other goods more popular, the shops will be emptied. Surely it is obvious that the [shop] assistant will decrease his order of the unpopular line and increase his order of the popular."* [**Syndicalism**, p. 55]

As a rule of thumb, syndicates that produce investment goods would be inclined to supply other syndicates who are experiencing excess demand before others, all other things being equal. Because of such guidelines and communication between producers, investment would go to those industries that actually required them. In other words, customer choice (as indicated by individuals choosing between the output of different syndicates) would generate information that is relevant to investment decisions.

As production would be decentralised as far as it is sensible and rational to do so, each locality/region would be able to understand its own requirements and apply them as it sees fit. This means that large-scale planning would not be conducted (assuming that it could work in practice, of course) simply because it would not be needed. This, combined with an extensive communications network, would ensure that investment not only did not duplicate unused plant within the economy but that investments take into account the specific problems and opportunities each locality has. Of course, collectives would experiment with new lines and technology as well as existing lines and so invest in new technologies and products. As occurs under capitalism, extensive consumer testing would occur before dedicating major investment decisions to new products.

In addition, investment decisions would also require information which showed the different outcomes of different options. By this we simply mean an analysis of how different investment projects relate to each other in terms of inputs and outputs, compared to the existing techniques. This would be in the form of cost-benefit analysis (as outlined in section I.4.4) and would show when it would make economic, social and ecological sense to switch industrial techniques to more efficient and/or more empowering and/or more ecologically sound methods. Such an evaluation would indicate levels of inputs and compare them to the likely outputs. For example, if a new production technique reduced the number of hours worked in total (comparing the hours worked to produce the machinery with that reduced in using it) as well as reducing waste products for a similar output, then such a technique would be implemented.

Similarly with communities. A commune will obviously have to decide upon and plan civic investment (e.g. new parks, housing and so forth). They will also have the deciding say in

industrial developments in their area as it would be unfair for syndicate to just decide to build a cement factory next to a housing co-operative if they did not want it. There is a case for arguing that the local commune will decide on investment decisions for syndicates in its area (for example, a syndicate may produce X plans which will be discussed in the local commune and one plan finalised from the debate). Regional decisions (for example, a new hospital) could be decided at the appropriate level, with information fed from the health syndicate and consumer co-operatives. The actual location for investment decisions will be worked out by those involved. However, local syndicates must be the focal point for developing new products and investment plans in order to encourage innovation.

Therefore, under anarchism no capital market is required to determine whether investment is required and what form it would take. The work that apologists for capitalism claim currently is done by the stock market can be replaced by co-operation and communication between workplaces in a decentralised, confederated network. The relative needs of different consumers of a product can be evaluated by the producers and an informed decision reached on where it would best be used. Without private property, housing, schools, hospitals, workplaces and so on will no longer be cramped into the smallest space possible. Instead, they will be built within a "green" environment. This means that human constructions will be placed within a natural setting and no longer stand apart from nature. In this way human life can be enriched and the evils of cramping as many humans and things into a small a space as is "economical" can be overcome.

Only by taking investment decisions away from "experts" and placing it in the hands of ordinary people will current generations be able to invest according to their, and future generations', benefit. It is hardly in our best interests to have a system whose aim is to make the wealthy even wealthier and on whose whims are dependent the lives of millions of people.

I.4.9 Should technological advance be seen as anti-anarchistic?

Not necessarily. This is because technology can allow us to "do more with less," technological progress can improve standards of living for all people, and technologies can be used to increase personal freedom: medical technology, for instance, can free people from the scourges of pain, illness, and a "naturally" short life span; technology can be used to free labour from mundane chores associated with production; advanced communications technology can enhance our ability to freely associate. The list is endless. So the vast majority of anarchists agree with Kropotkin's comment that the *"development of [the industrial] technique at last gives man [sic!] the opportunity to free himself from slavish toil."* [**Ethics**, p. 2]

For example, increased productivity under capitalism usually leads to further exploitation and domination, displaced workers, economic crisis, etc. However, it does not have to so in an anarchist world. By way of example, consider a commune in which 5 people desire to be bakers (or 5 people are needed to work the communal bakery) and 20 hours of production per person, per week is spent on baking bread. Now, what happens if the introduction of automation, **as desired, planned and organised by the workers themselves**, reduces the amount of labour required for bread production to 15 person-hours per week? Clearly, no one stands to lose — even if someone's work is "displaced" that person will continue to receive the same access to the means of life as before – and they might even gain. This last is due to the fact that 5 person-hours

have been freed up from the task of bread production, and those person-hours may now be used elsewhere or converted to leisure, either way increasing each person's standard of living.

Obviously, this happy outcome derives not only from the technology used, but also (and critically) from its use in an equitable economic and social system: in the end, there is no reason why the use of technology cannot be used to empower people and increase their freedom!

Of course technology can be used for oppressive ends. Human knowledge, like all things, can be used to increase freedom or to decrease it, to promote inequality or reduce it, to aid the worker or to subjugate them, and so on. Technology, as we argued in section D.10, cannot be considered in isolation from the society it is created and used in. Most anarchists are aware that, to quote expert David Noble, *"Capital invested in machines that would re-enforce the system of domination [within the capitalist workplace], and this decision to invest, which might in the long run render the chosen technology economical, was not itself an economical decision but a political one, with cultural sanction."* [**Progress Without People**, p. 6] In a hierarchical society, technology will be introduced that serves the interests of the powerful and helps marginalise and disempower the majority (*"technology is political,"* to use Noble's expression). It does not evolve in isolation from human beings and the social relationships and power structures between them.

It is for these reasons that anarchists have held a wide range of opinions concerning the relationship between human knowledge and anarchism. Some, such as Peter Kropotkin, were themselves scientists and saw great potential for the use of advanced technology to expand human freedom. Others have held technology at arm's length, concerned about its oppressive uses, and a few have rejected science and technology completely. All of these are, of course, possible anarchist positions. But most anarchists support Kropotkin's viewpoint, but with a healthy dose of practical Luddism when viewing how technology is (ab)used in capitalism (*"The worker will only respect machinery **in the day** when it becomes his friend, shortening his work, rather than as **today,** his enemy, taking away jobs, killing workers."* [Emile Pouget quoted by David Noble, **Op. Cit.**, p. 15]). Vernon Richards stated the obvious:

> *"We maintain that the term 'productivity' has meaning, or is socially important, only when all production serves a public need ...*
>
> *"Productivity has meaning if it results both in a raising of living standards and an increase of leisure for all.*
>
> *"'Productivity' in the society we live in, because it is not a means to a social end, but is the means whereby industrialists hope to make greater profits for themselves and their shareholders, should be resolutely resisted by the working people, for it brings them neither greater leisure nor liberation from wage-slavery. Indeed for many it means unemployment ...*
>
> *"The attempts by managers and the technocrats to streamline industry are resisted intuitively by most work people even if they haven't two political ideas in their heads to knock together, not because they are resistant to change **per se** but because they cannot see that 'change' will do them any good. And of course they are right! Such an attitude is nevertheless a negative one, and the task of anarchist propagandists should be to make them aware of this and point to the only alternative, which, in broad terms, is that the producers of wealth must control it for the benefit of all."* [**Why Work?**, Vernon Richards (ed.), p. 206]

This means that in an anarchist society, technology would have to be transformed and/or developed which empowered those who used it, so reducing any oppressive aspects associated with it. As Kropotkin argued, we are (potentially) in a good position, because *"[f]or the first time in the history of civilisation, mankind has reached a point where the means of satisfying its needs are in excess of the needs themselves. To impose, therefore, as hitherto been done, the curse of misery and degradation upon vast divisions of mankind, in order to secure well-being and further development for the few, is needed no more: well-being can be secured for all, without placing on anyone the burden of oppressive, degrading toil and humanity can at last build its entire social life on the basis of justice."* [**Op. Cit.**, p. 2] The question is, for most anarchists, how can we humanise and modify this technology and make it socially and individually liberatory, rather than destroying it (where applicable, of course, certain forms of technology and industry will be eliminated due to their inherently destructive nature).

For Kropotkin, like most anarchists, the way to humanise technology and industry was for *"the workers [to] lay hands on factories, houses and banks"* and so *"present production would be completely revolutionised by this simple fact."* This would be the start of a process which would **integrate** industry and agriculture, as it was *"essential that work-shops, foundries and factories develop within the reach of the fields."* [**The Conquest of Bread**, p. 190] Such a process would obviously involve the transformation of both the structure and technology of capitalism rather than its simple and unthinking application. As discussed in section A.3.9, while a few anarchists do seek to eliminate all forms of technology, most would agree with Bakunin when he argued that *"to destroy ... all the instruments of labour ... would be to condemn all humanity — which is infinity too numerous today to exist ... on the simple gifts of nature ... — to ... death by starvation."* His solution to the question of technology was, like Kropotkin's, to place it at the service of those who use it, to create *"the intimate and complete union of capital and labour"* so that it would *"not ... remain concentrated in the hands of a separate, exploiting class."* Only this could *"smash the tyranny of capital."* [**The Basic Bakunin**, pp. 90–1] So most anarchists seek to transform rather then eliminate technology and to do that we need to be in possession of the means of production before we can decide what to keep, what to change and what to throw away as inhuman. In other words, it is not enough to get rid of the boss, although this is a necessary first step!

Anarchists of all types recognise the importance of critically evaluating technology, industry and so on. The first step of any revolution will be the seizing of the means of production. The second **immediate** step will be the start of their radical transformation by those who use them and are affected by them (i.e. communities, those who use the products they produce and so on). Few, if any, anarchists seek to maintain the current industrial set-up or apply, unchanged, capitalist technology. We doubt that many of the workers who use that technology and work in industry will leave either unchanged. Rather, they will seek to liberate the technology they use from the influences of capitalism, just as they liberated themselves.

This will, of course, involve the shutting down (perhaps instantly or over a period of time) of many branches of industry and the abandonment of such technology which cannot be transformed into something more suitable for use by free individuals. And, of course, many workplaces will be transformed to produce new goods required to meet the needs of the revolutionary people or close due to necessity as a social revolution will disrupt the market for their goods — such as producers of luxury export goods or suppliers of repressive equipment for state security forces. Altogether, a social revolution implies the transformation of technology and industry, just as it implies the transformation of society.

This process of transforming work can be seen from the Spanish Revolution. Immediately after taking over the means of production, the Spanish workers started to transform it. They eliminated unsafe and unhygienic working conditions and workplaces and created new workplaces based on safe and hygienic working conditions. Working practices were transformed as those who did the work (and so understood it) managed it. Many workplaces were transformed to create products required by the war effort (such as weapons, ammunition, tanks and so on) and to produce consumer goods to meet the needs of the local population as the normal sources of such goods, as Kropotkin predicted, were unavailable due to economic disruption and isolation. Needless to say, these were only the beginnings of the process but they clearly point the way any libertarian social revolution would progress, namely the total transformation of work, industry and technology. Technological change would develop along new lines, ones which will take into account human and ecological needs rather the power and profits of a minority.

Explicit in anarchism is the believe that capitalist and statist methods cannot be used for socialist and libertarian ends. In our struggle for workers' and community self-management is the awareness that workplaces are not merely sites of production — they are also sites of **re**production, the reproduction of certain social relationships based on specific relations of authority between those who give orders and those who take them. The battle to democratise the workplace, to place the collective initiative of the direct producers at the centre of any productive activity, is clearly a battle to transform the workplace, the nature of work and, by necessity, technology as well. As Kropotkin argued:

> *"revolution is more than a mere change of the prevailing political system. It implies the awakening of human intelligence, the increasing of the inventive spirit tenfold, a hundredfold; it is the dawn of a new science ... It is a revolution in the minds of men, as deep, and deeper still, than in their institutions ... the sole fact of having laid hands on middle-class property will imply the necessity of completely re-organising the whole of economic life in the workplaces, the dockyards, the factories."* [**Op. Cit.**, p. 192]

And some think that industry and technology will remain unchanged by such a process and that workers will continue doing the same sort of work, in the same way, using the same methods!

For Kropotkin *"all production has taken a wrong direction, as it is not carried on with a view to securing well-being for all"* under capitalism. [**Op. Cit.**, p. 101] Well-being for all obviously includes those who do the producing and so covers the structure of industry and the technological processes used. Similarly, well-being also includes a person's environment and surroundings and so technology and industry must be evaluated on an ecological basis. Technological progress in an anarchist society, needless to say, will have to take into account these factors as well as others people think are relevant, otherwise the ideal of *"well-being for all"* is rejected (see section I.4.15 for a discussion of what the workplace of the future could look like).

So, technology always partakes of and expresses the basic values of the social system in which it is embedded. If you have a system (capitalism) that alienates everything, it will naturally produce alienated forms of technology and it will orient those technologies so as to reinforce itself. Capitalists will select technology which re-enforces their power and profits and skew technological change in that direction rather than in those which empower individuals and make the workplace more egalitarian.

All this suggests that technological progress is not neutral but dependent on who makes the decisions. As David Noble argues, *"[t]echnological determinism, the view that machines make his-*

tory rather than people, is not correct ... If social changes now upon us seem necessary, it is because they follow not from any disembodied technological logic, but form a social logic." Technology conforms to *"the interests of power"* but as *"technological process is a social process"* then *"it is, like all social processes, marked by conflict and struggle, and the outcome, therefore, is always ultimately indeterminate."* Viewing technological development *"as a social process rather than as an autonomous, transcendent, and deterministic force can be liberating ... because it opens up a realm of freedom too long denied. It restores people once again to their proper role as subjects of the story, rather than mere pawns of technology ... And technological development itself, now seen as a social construct, becomes a new variable rather than a first cause, consisting of a range of possibilities and promising a multiplicity of futures."* [**Forces of Production**, pp. 324–5]

This does not mean that we have to reject all technology and industry because it has been shaped by, or developed within, class society. Certain technologies are, of course, so insanely dangerous that they will no doubt be brought to a prompt halt in any sane society. Similarly, certain forms of technology and industrial process will be impossible to transform as they are inherently designed for oppressive ends. Many other industries which produce absurd, obsolete or superfluous commodities will, of course, cease automatically with the disappearance of their commercial or social rationales. But many technologies, however they may presently be misused, have few if any inherent drawbacks. They could be easily adapted to other uses. When people free themselves from domination, they will have no trouble rejecting those technologies that are harmful while adapting others to beneficial uses.

Change society and the technology introduced and utilised will likewise change. By viewing technological progress as a new variable, dependent on those who make the decisions and the type of society they live in, allows us to see that technological development is not inherently anti-anarchist. A non-oppressive, non-exploitative, ecological society will develop non-oppressive, non-exploitative, ecological technology just as capitalism has developed technology which facilitates exploitation, oppression and environmental destruction. Thus an anarchist questions technology: The best technology? Best for whom? Best for what? Best according to what criteria, what visions, according to whose criteria and whose visions?

Needless to say, different communities and different regions would choose different priorities and different lifestyles. As the CNT's Zaragoza resolution on libertarian communism made clear, *"those communes which reject industrialisation ... may agree upon a different model of co-existence."* Using the example of *"naturists and nudists,"* it argued that they *"will be entitled to an autonomous administration released from the general commitments"* agreed by the communes and their federations and *"their delegates to congresses of the ... Confederation of Autonomous Libertarian Communes will be empowered to enter into economic contacts with other agricultural and industrial Communes."* [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 106]

For most anarchists, though, technological advancement is important in a free society in order to maximise the free time available for everyone and replace mindless toil with meaningful work. The means of doing so is the use of **appropriate** technology (and **not** the worship of technology as such). Only by critically evaluating technology and introducing such forms which empower, are understandable and are controllable by individuals and communities as well as minimising ecological distribution can this be achieved. Only this critical approach to technology can do justice to the power of the human mind and reflect the creative powers which developed the

technology in the first place. Unquestioning acceptance of technological progress is just as bad as being unquestioningly anti-technology.

I.4.10 What would be the advantage of a wide basis of surplus distribution?

We noted earlier (in section I.3.1) that competition between syndicates could lead to *"co-operative egotism"* (to use Kropotkin's term) and that to eliminate this problem, the basis of collectivisation needs to be widened so that production is based on need and, as a result, surpluses are distributed society-wide. The advantage of a wide surplus distribution is that it allows all to have a decent life and stop market forces making people work harder and longer to survive in the economy (see section I.1.3). The consolidation of syndicates that would otherwise compete will, it is hoped, lead to a more efficient allocation of resources and technical improvements so allowing the transformation of work and reduction of the time we need to spend in production. We will back up this claim with illustrations from the Spanish Revolution as well as from today's system.

Collectivisation in Catalonia embraced not only major industries like municipal transportation and utilities, but smaller establishments as well: small factories, artisan workshops, service and repair shops, etc. Augustin Souchy describes the process as follows:

> *"The artisans and small workshop owners, together with their employees and apprentices, often joined the union of their trade. By consolidating their efforts and pooling their resources on a fraternal basis, the shops were able to undertake very big projects and provide services on a much wider scale ... The collectivisation of the hairdressing shops provides an excellent example of how the transition of a small-scale manufacturing and service industry from capitalism to socialism was achieved ...*
>
> *"Before July 19th, 1936 [the date of the Revolution], there were 1,100 hairdressing parlours in Barcelona, most of them owned by poor wretches living from hand to mouth. The shops were often dirty and ill-maintained. The 5,000 hairdressing assistants were among the most poorly paid workers ... Both owners and assistants therefore voluntarily decided to socialise all their shops.*
>
> *"How was this done? All the shops simply joined the union. At a general meeting they decided to shut down all the unprofitable shops. The 1,100 shops were reduced to 235 establishments, a saving of 135,000 pesetas per month in rent, lighting, and taxes. The remaining 235 shops were modernised and elegantly outfitted. From the money saved, wages were increased by 40%. Everyone having the right to work and everyone received the same wages. The former owners were not adversely affected by socialisation. They were employed at a steady income. All worked together under equal conditions and equal pay. The distinction between employers and employees was obliterated and they were transformed into a working community of equals — socialism from the bottom up."*
> [**The Anarchist Collectives**, Sam Dolgoff (ed.), pp. 93–94]

The collectives, as well as improving working conditions, also ensured access to other goods and services which market forces had previously denied working class people. Across Republican Spain collectives in towns and villages organised health care. For example, in the village of

Magdalena de Pulpis housing *"was free and completely socialised, as was medical care ... Medicines, supplies, transfer to hospitals in Barcelona or Castellon, surgery, services of specialists — all was paid for by the collective."* This was also done for education, with collectives forming and running schools, colleges and universities. For example, Regional Peasant Federation of Levant saw each collective organise *"one or two free schools for the children"* and *"almost wiped out illiteracy"* (over 70% of rural Spain was literate before the Civil War). It also organised a *"University of Moncada"* which *"gave courses in animal husbandry, poultry raising. animal breeding, agriculture, tree science, etc."* [Gaston Leval, **Op. Cit.**, p. 156 and p. 125]

These examples, social anarchists argue, show that co-operation ensures that resources are efficiently allocated and waste is minimised by cutting down needless competition. It also ensures that necessary goods and services which meet vital areas for human well-being and development are available for all rather than the few. Rather than reduce choice, such co-operation increased it by making such things available to all (and as consumers have choices in which syndicate to consume from as well as having direct communication between consumer co-operatives and productive units, there is little danger that rationalisation in production will hurt the interests of the consumer).

Another way in which wide distribution of surplus can be advantageous is in Research and Development (R&D). By creating a fund for research and development which is independent of the fortunes of individual syndicates, society as a whole can be improved by access to useful new technologies and processes. Therefore, in a libertarian socialist society, people (both within the workplace and in communities) are likely to decide to allocate significant amounts of resources for basic research from the available social output. This is because the results of this research would be freely available to all and so would aid everyone in the long term. In addition, because workers directly control their workplace and the local community effectively "owns" it, all affected would have an interest in exploring research which would reduce labour, pollution, waste and so on or increase output with little or no social impact.

It should also be mentioned here that research would be pursued more and more as people take an increased interest in both their own work and education. As people become liberated from the grind of everyday life, they will explore possibilities as their interests take them and so research will take place on many levels within society — in the workplace, in the community, in education and so on.

This means that research and innovation would be in the direct interests of everyone involved and that all would have the means to do it. Under capitalism, this is not the case. Most research is conducted in order to get an edge in the market by increasing productivity or expanding production into new (previously unwanted) areas. Any increased productivity often leads to unemployment, deskilling and other negative effects for those involved. Libertarian socialism will not face this problem. Moreover, it should be stressed that basic research is not something which free-market capitalism does well. As Doug Henwood notes, basic science research *"is heavily funded by the public sector and non-profit institutions like universities."* The internet and computer, for example, were both projects for the Pentagon and *"the government picked up the basic R&D tab for decades, when neither Wall Street nor private industry showed any interest. In fact, capital only became interested when the start-up costs had all been borne by the public sector and there were finally profits to be made ... good American individualists don't like to talk about the public sector, since their hero is the plucky entrepreneur."* [**After the New Economy**, p. 196 and p. 6] The rise of such systems across the world indicates that basic research often needs public support in order

to be done. Even such a leading neo-classical economist as Kenneth Arrow had to admit in the 1960s that market forces are insufficient:

> *"basic research, the output of which is only used as an informational input into other inventive activities, is especially unlikely to be rewarded. In fact, it is likely to be of commercial value to the firm undertaking it only if other firms are prevented from using the information. But such restriction reduces the efficiency of inventive activity in general, and will therefore reduce its quantity also."* [quoted by David Schweickart, **Against capitalism**, p. 132]

Nothing has changed since. Would modern society have produced so many innovations if it had not been for the Pentagon system, the space race and so on? Take the Internet, for example — it is unlikely that this would have got off the ground if it had not been for public funding. Needless to say, of course, much of this technology has been developed for evil reasons and purposes and would be in need of drastic change (or, in many some, abolition) before it could be used in a libertarian society. However, the fact remains that it is unlikely that a pure market based system could have generated most of the technology we take for granted. As Noam Chomsky argues:

> *"[Alan] Greenspan [then head of the US Federal Reserve] gave a talk to newspaper editors in the US. He spoke passionately about the miracles of the market, the wonders brought by consumer choice, and so on. He also gave examples: the Internet, computers, information processing, lasers, satellites, transistors. It's an interesting list: these are textbook examples of creativity and production in the public sector. In the case of the Internet, for 30 years it was designed, developed and funded primarily in the public sector, mostly the Pentagon, then the National Science Foundation — that's most of the hardware, the software, new ideas, technology, and so on. In just the last couple of years it has been handed over to people like Bill Gates ... In the case of the Internet, consumer choice was close to zero, and during the crucial development stages that same was true of computers, information processing, and all the rest ...*
>
> *"In fact, of all the examples that Greenspan gives, the only one that maybe rises above the level of a joke is transistors, and they are an interesting case. Transistors, in fact, were developed in a private laboratory — Bell Telephone Laboratories of AT&T — which also made major contributions to solar cells, radio astronomy, information theory, and lots of other important things. But what is the role of markets and consumer choice in that? Well, again, it turns out, zero. AT&T was a government supported monopoly, so there was no consumer choice, and as a monopoly they could charge high prices: in effect a tax on the public which they could use for institutions like Bell Laboratories ... So again, it's publicly subsidised. As if to demonstrate the point, as soon as the industry was deregulated, Bell Labs went out of existence, because the public wasn't paying for it any more ... But that's only the beginning of the story. True, Bell invented transistors, but they used wartime technology, which, again, was publicly subsidised and state-initiated. Furthermore, there was nobody to buy transistors at that time, because they were very expensive to produce. So, for ten years the government was the major procurer ... Government procurement provided entrepreneurial initiatives and guided the development of the technology, which could then be disseminated to industry."* [**Rogue States**, pp. 192–3]

The free market can also have a negative impact on innovation. This is because, in order to please shareholders with higher share prices, companies may reduce funds available for real investment as well as R&D which would also depress growth and employment in the long term. What shareholders might condemn as "uneconomic" (investment projects and R&D) can, and does, make society as a whole better off. However, these gains are over the long term and, within capitalism, it is short-term gains which count. Higher share prices in the here and now are essential in order to survive and so see the long-run.

A socialised economy with a wide-scale sharing of surpluses and resources could easily allocate resources for R&D, long term investment, innovation and so on. Via the use of mutual banks or confederations of syndicates and communes, resources could be allocated which take into account the importance of long-term priorities, as well as social costs, which are not taken into account (indeed, are beneficial to ignore) under capitalism. Rather than penalise long term investment and research and development, a socialised economy would ensure that adequate resources are available, something which would benefit everyone in society in some way.

If we look at vocational training and education, a wide basis of surplus distribution would aid this no end. Under free market capitalism, vocational training suffers for profit seeking firms will not incur costs that will be enjoyed by others. This means that firms will be reluctant to spend money on training if they fear that the trained workers will soon be poached by other firms which can offer more money because they had not incurred the cost of providing training. As a result few firms will provide the required training as they could not be sure that the trained workers will not leave for their competitors (and, of course, a trained work force also, due to their skill, have more workplace power and are less replaceable). So as well as technological developments, a wide basis of surplus distribution would help improve the skills and knowledge of the members of a community. As Keynesian economist Michael Stewart points out, *"[t]here are both theoretical and empirical reasons to suppose that market forces under-provide research and development expenditures, as well as both education and training."* [**Keynes in the 1990s**, p. 77]

By socialising training via confederations of workplaces, syndicates could increase productivity via increasing the skill levels of their members. Higher skill levels will also tend to increase innovation and enjoyment at "work" when combined with workers' self-management. This is because an educated workforce in control of their own time will be unlikely to tolerate mundane, boring, machine-like work and seek ways to eliminate it, improve the working environment and increase productivity to give them more free time.

In addition to work conducted by syndicates, education establishments, communes and so on, it would be essential to provide resources for individuals and small groups to pursue "pet projects." Of course, syndicates and confederations will have their own research institutions but the innovatory role of the interested "amateur" cannot be over-rated. As Kropotkin argued:

> *"What is needed to promote the spirit of innovation is ... the awakening of thought, the boldness of conception, which our entire education causes to languish; it is the spreading of a scientific education, which would increase the numbers of inquirers a hundred-fold; it is faith that humanity is going to take a step forward, because it is enthusiasm, the hope of doing good, that has inspired all the great inventors. The Social Revolution alone can give this impulse to thought, this boldness, this knowledge, this conviction of working for all.*

> *"Then we shall have vast institutes ... immense industrial laboratories open to all inquirers, where men will be able to work out their dreams, after having acquitted themselves of their duty towards society; ... where they will make their experiments; where they will find other comrades, experts in other branches of industry, likewise coming to study some difficult problem, and therefore able to help and enlighten each other — the encounter of their ideas and experiences causing the longed-for solution to be found."* [**The Conquest of Bread**, p. 117]

The example of free software (operating systems, programming languages, specific packages and code) today show the potential this. Thus socialisation would aid innovation and scientific development by providing the necessary resources (including free time) for such work. Moreover, it would also provide the community spirit required to push the boundaries of science forward. As John O'Neil argues:

> *"There is, in a competitive market economy, a disincentive to communicate information. The market encourages secrecy, which is inimical to openness in science. It presupposes a view of property in which the owner has rights to exclude others. In the sphere of science, such rights of exclusion place limits on the communication of information and theories which are incompatible with the growth of knowledge ... science tends to grow when communication is open... [In addition a] necessary condition for the acceptability of a theory or experimental result is that it pass the public, critical scrutiny of competent scientific judges. A private theory or result is one that is shielded from the criteria of scientific acceptability."* [**The Market**, p. 153]

Today inventors often *"carefully hide their inventions from each other, as they are hampered by patents and Capitalism — that bane of present society, that stumbling-block in the path of intellectual and moral progress."* In a free society, socialisation would ensure that inventors will be able to build upon the knowledge of everyone, including past generations. Rather than hide knowledge from others, in case they get a competitive advantage, knowledge would be shared, enriching all involved as well as the rest of society. Thus the *"spreading of a scientific education, which would increase the number of inquirers"*, *"faith that humanity is going to take a step forward"* and the *"enthusiasm, the hope of doing good, that has inspired all the great inventors"* will be maximised and innovation increased. [Kropotkin, **Op. Cit.**, p. 117 and pp. 116–7]

Social anarchists would also suggest that socialisation would produce more benefits by looking at existing societies. The evidence from the UK, USA, Australia, New Zealand and China shows that privatisations of nationalised industries associated with neo-liberalism failed in its stated aims of cheaper and better services while more than succeeding in their unstated aim of redistributing wealth upwards (for details see **In Government we Trust: Market Failure and the delusions of privatisation** by Warrick Funnell, Robert Jupe and Jane Andrew). The examples of railway and utility privatisation, the energy crisis in California (with companies like Enron reaping huge speculative profits while consumers faced blackouts) and the Sydney water treatment scandal in Australia are sadly all too typical. Ironically, in the UK after 30 years of Thatcherite policies (first under the Tories and then New Labour) the readers of the right-wing press who supported it are subjected to article after article complaining about *"Rip off Britain"* and yet more increases in the prices charged for privatised utilities, services and goods. This,

it must be stressed, if not to suggest that anarchists aim for nationalisation (we do not, we aim for socialisation and workers' self-management) but rather to indicate that privatising resources does not benefit the majority of people in a given society.

It should also be noted that more unequal societies are bad for almost everyone within them. Richard Wilkinson and Kate Pickett in their book **The Spirit Level: Why More Equal Societies Almost Always Do Better** show that almost every modern social and environmental problem (including ill-health, lack of community life, violence, drugs, obesity, mental illness, long working hours, big prison populations) is more likely to occur in an unequal society than a more equal one. Based on thirty years of research, it shows that inequality, as anarchists have long argued, is bad for us. As such, socialisation of wealth would benefit us all.

Lastly, there is the issue of those who cannot work and the general provision of public goods. With a wide distribution to surplus, communal hospitals, schools, universities and so on can be created. The simple fact is that any society has members who cannot (indeed, should not) work unless they want to, such as the young, the old and the sick. In an Individualist Anarchist society, there is no real provision for these individuals unless someone (a family member, friend or charity) provides them with the money required for hospital fees and so on. For most anarchists, such a situation seems far too much like the system we are currently fighting against to be appealing. As such, social anarchists argue that everyone deserves an education, health care and so on as a right and so be able live a fully human life as a right, rather than a privilege to be paid for. A communal basis for distribution would ensure that every member of the commune can receive such things automatically, as and when required. The removal of the worry that, for example, privatised health care produces can be seen as a benefit of socialisation which cannot be reflected in, say, GDP or similar economic measures (not to mention the ethical statement it makes).

Significantly, though, non-privatised system of health care are more efficient. Competition as well as denying people treatment also leads to inefficiencies as prices are inflated to pay for advertising, competition related administration costs, paying dividends to share-holders and so on. This drives up the cost for those lucky enough to be covered, not to mention the stress produced by the constant fear of losing insurance or being denying payment due to the insurance company deciding against the patient and their doctor. For example, in 1993, Canada's health plans devoted 0.9% of spending to overhead, compared to U.S. figures of 3.2% for Medicare and 12% for private insurers. In addition, when Canada adopted its publicly financed system in 1971, it and the U.S. both spent just over 7% of GDP on health care. By 1990, the U.S. was up to 12.3%, verses Canada's 9%. Since then costs have continued to rise and rise, making health-care reform of key interest to the public who are suffering under it (assuming they are lucky enough to have private insurance, of course).

The madness of private health-care shows the benefits of a society-wide distribution of surpluses. Competition harms health-care provision and, as a result, people. According to Alfie Kohn:

> *"More hospitals and clinics are being run by for-profit corporations; many institutions, forced to battle for 'customers,' seem to value a skilled director of marketing more highly than a skilled caregiver. As in any other economic sector, the race for profits translates into pressure to reduce costs, and the easiest way to do it here is to cut back on services to unprofitable patients, that is, those who are more sick than rich … The result: hospital*

*costs are actually **higher** in areas where there is more competition for patients."* [**No Contest**, p. 240]

American Liberal Robert Kuttner concurs:

> *"The American health-care system is a tangle of inequity and inefficiency — and getting worse as private-market forces seek to rationalise it. A shift to a universal system of health coverage would cut this Gordian knot at a stroke. It would not only deliver the explicitly medical aspects of health more efficiently and fairly, but, by socialising costs of poor health, it would also create a powerful financial incentive for society as a whole to stress primary prevention. .. every nation with a universal system spends less of its GDP on health care than the United States ... And nearly every other nation with a universal system has longer life spans from birth (though roughly equivalent life spans from adulthood) ... most nations with universal systems also have greater patient satisfaction.*
>
> *"The reasons ... should be obvious. By their nature, universal systems spend less money on wasteful overhead, and more on primary prevention. Health-insurance overhead in the United States alone consumes about 1 percent of the GDP, compared to 0.1 percent in Canada. Though medical inflation is a problem everywhere, the universal systems have had far lower rates of cost inflation ... In the years between 1980 and 1987, total health costs in the United States increased by 2.4 times the rate of GDP growth. In nations with universal systems, they increased far more slowly. The figures for Sweden, France, West Germany, and Britain were 1.2, 1.6, 1.8, and 1.7 percent, respectively ...*
>
> *"Remarkably enough, the United States spends most money on health care, but has the fewest beds per thousand in population, the lowest admission rate, and the lowest occupancy rate — coupled with the highest daily cost, highest technology-intensiveness, and greatest number of employees per bed."* [**Everything for Sale**, pp. 155–6]

In 1993, the US paid 13.4% of its GDP towards health care, compared to 10% for Canada, 8.6% for Sweden and Germany, 6.6% for Britain and 6.8% for Japan. Only 40% of the US population was covered by public health care and over 35 million people, 14% of the population, went without health insurance for all of 1991, and about twice that many were uninsured for some period during the year. In terms of health indicators, the US people are not getting value for money. Life expectancy is higher in Canada, Sweden, Germany, Japan and Britain. The USA has the highest levels of infant mortality and is last in basic health indicators as well as having fewer doctors per 1,000 people than the OECD average. All in all, the US system is miles begin the universal systems of other countries.

Of course, it will be argued that the USA is not a pure "free market" and so comparisons are pointless. However, it seems strange that the more competitive system, the more privatised system, is less efficient and less fair than the universal systems. It also seems strange that defenders of competition happily use examples from "actually existing" capitalism to illustrate their politics but reject negative examples as being a product of an "impure" system. They want to have their cake and eat it to.

Significantly, we should note that the use of surplus for communal services (such as hospitals and education) can be seen from the Spanish Revolution. Many collectives funded new hospitals

and colleges for their members, providing hundreds of thousands with services they could never have afforded by their own labour. This is a classic example of co-operation helping the co-operators achieve far more than they could by their own isolated activities. This libertarian health system was run and how other public services would be organised in a free society are discussed in section I.5.12.

So we can generalise from our experiences of different kinds of capitalism. If you want to live in a society of well-educated people, working today as equals in pleasant surroundings with more than ample leisure time to pursue their own projects and activities, then a wide sharing of the social surplus is required. Otherwise, you could live in a society where people work long and hard to survive on the market, without the time or opportunity for education and leisure, and be bossed about for most of their waking hours to enrich the wealthy few so that they can live a life of leisure (which, in turn, will inspire you to be work harder in spite of the fact that such high inequality produces low social mobility). The first society, according to some, would be one of self-sacrificing altruism and "collectivism" while the latter is, apparently, one based on "individualism" and self-interest...

I.4.11 If socialism eliminates the profit motive, won't performance suffer?

Firstly, just to be totally clear, by the profit motive we mean money profit. As anarchists consider co-operation to be in our self-interest – i.e. we will "profit" from it in the widest sense possible — we are **not** dismissing the fact people usually act to improve their own situation. However, money profit is a **very** narrow form of "self-interest," indeed so narrow as to be positively harmful to the individual in many ways (in terms of personal development, interpersonal relationships, economic and social well-being, and so on). In other words, do not take our discussion here on the "profit motive" to imply a denial of self-interest, quite the reverse. Anarchists simply reject the *"narrow concept of life which consist[s] in thinking that **profits** are the only leading motive of human society."* [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 25]

Secondly, we cannot hope to deal fully with the harmful effects of competition and the profit motive. For more information, we recommend Alfie Kohn's **No Contest: The Case Against Competition** and **Punished by Rewards: The Trouble with Gold Stars, Incentive Plans, A's, Praise and Other Bribes**. He documents the extensive evidence accumulated that disproves the "common sense" of capitalism that competition and profits are the best way to organise a society.

According to Kohn, a growing body of psychological research suggests that rewards can lower performance levels, especially when the performance involves creativity. His books summarise the related series of studies shows which show that intrinsic interest in a task — the sense that something is worth doing for its own sake — typically declines when someone is rewarded for doing it. Much of the research on creativity and motivation has been performed by Theresa Amabile, associate professor of psychology at Brandeis University and she has found consistently that those were promised rewards did the least creative work. Thus *"rewards killed creativity, and this was true regardless of the type of task, the type of reward, the timing of the reward or the age of the people involved."* [**Punished by Rewards**, p. 45] Such research casts doubt on the claim that financial reward is the only effective way — or even the best way — to motivate people. They

challenge the behaviourist assumption that any activity is more likely to occur or be better in terms of outcome if it is rewarded.

These findings re-enforce the findings of other scientific fields. Biology, social psychology, ethnology and anthropology all present evidence that support co-operation as the natural basis for human interaction. For example, ethnological studies indicate that virtually all indigenous cultures operate on the basis of highly co-operative relationships and anthropologists have presented evidence to show that the predominant force driving early human evolution was co-operative social interaction, leading to the capacity of hominids to develop culture. This is even sinking into capitalism, with industrial psychology now promoting "worker participation" and team functioning because it is decisively more productive than hierarchical management. More importantly, the evidence shows that co-operative workplaces are more productive than those organised on other principles. All other things equal, producers' co-operatives will be more efficient than capitalist or state enterprises, on average. Co-operatives can often achieve higher productivity even when their equipment and conditions are worse. Furthermore, the better the organisation approximates the co-operative ideal, the better the productivity.

All this is unsurprising to social anarchists (and it should make individualist anarchists reconsider their position). Peter Kropotkin argued that, *"[i]f we ... ask Nature: 'Who are the fittest: those who are continually at war with each other, or those who support one another?' we at once see that those animals which acquire habits of mutual aid are undoubtedly the fittest. They have more chances to survive, and they attain, in their respective classes, the highest development of intelligence and bodily organisation."* [**Mutual Aid**, p. 24]

It should be noted that, as one biologist points out, *"Kropotkin's ideas, though unorthodox, were scientifically respectable, and indeed the contention that mutual aid can be a means of increasing fitness had become a standard part of modern sociobiology."* [Douglas H. Boucher, *"The Idea of Mutualism, Past and Future"*, pp. 1–28, **The Biology of Mutualism: Biology and Evolution**, Douglas H. Boucher (ed.), p. 17] Frans de Waal (a leading primatologist) and Jessica C. Flack argue that Kropotkin is part of a wider tradition *"in which the view has been that animals assist each other precisely because by doing so they achieve long term, collective benefits of greater value than the short term benefits derived from straightforward competition."* They summarise that the *"basic tenet of [Kropotkin's] ideas was on the mark. Almost seventy years later, in an article entitled 'The Evolution of Reciprocal Altruism', [Robert] Trivers refined the concepts Kropotkin advanced and explained how co-operation and, more importantly, a system of reciprocity (called 'reciprocal altruism' by Trivers) could have evolved."* [*"'Any Animal Whatever': Darwinian Building Blocks of Morality in Monkeys and Apes"*, pp. 1–29, **Journal of Consciousness Studies**, Vol. 7, No. 1–2, p. 4]

So modern research has reinforced Kropotkin's argument. This applies to both human and non-human animals. For the former, the evidence is strong that we have intrinsic abilities and needs to co-operate as well as an intrinsic senses of fairness and ethics. This suggests that co-operation is part of "human nature" and so studies which show that such behaviour is more productive than competition should come as no surprise — and the evidence is impressive. As noted, Alfie Kohn is also the author of **No Contest: The Case Against Competition** and he spent seven years reviewing more than 400 research studies dealing with competition and co-operation. According to Kohn, there are three principle consequences of competition:

Firstly, it has a negative effect on productivity and excellence. This is due to increased anxiety, inefficiency (as compared to co-operative sharing of resources and knowledge), and the under-

mining of inner motivation. Competition shifts the focus to victory over others, and away from intrinsic motivators such as curiosity, interest, excellence, and social interaction. Studies show that co-operative behaviour, by contrast, consistently produces good performance — a finding which holds true under a wide range of subject variables. Interestingly, the positive benefits of co-operation become more significant as tasks become more complex, or where greater creativity and problem-solving ability is required.

Secondly, competition lowers self-esteem and hampers the development of sound, self-directed individuals. A strong sense of self is difficult to attain when self-evaluation is dependent on seeing how we measure up to others. On the other hand, those whose identity is formed in relation to how they contribute to group efforts generally possess greater self-confidence and higher self-esteem.

Thirdly, competition undermines human relationships. Humans are social beings; we best express our humanness in interaction with others. By creating winners and losers, competition is destructive to human unity and prevents close social feeling.

Social Anarchists have long argued these points. In the competitive mode, people work at cross purposes, or purely for (material) personal gain. This leads to an impoverishment of society as well as hierarchy, with a lack of communal relations that result in an impoverishment of all the individuals involved (mentally, spiritually, ethically and, ultimately, materially). This not only leads to a weakening of individuality and social disruption, but also to economic inefficiency as energy is wasted in class conflict and invested in building bigger and better cages to protect the haves from the have-nots. Instead of creating useful things, human activity is spent in useless toil reproducing an injustice and authoritarian system.

All in all, the results of competition (as documented by a host of scientific disciplines) show its poverty as well as indicating that co-operation is the means by which the fittest survive.

Moreover, the notion that material rewards result in better work is simply not true. Basing itself on simple behaviourist psychology, such arguments fail to meet the test of long-term success (and, in fact, can be counter-productive). Indeed, it means treating human beings as little better that pets or other animals (Kohn argues that it is *"not an accident that the theory behind 'Do this and you'll get that' derives from work with other species, or that behaviour management is frequently described in words better suited to animals."*) In other words, it *"is by its very nature dehumanising."* Rather than simply being motivated by outside stimuli like mindless robots, people are not passive. We are *"beings who possess natural curiosity about ourselves and our environment, who search for and overcome challenges, who try and master skills and attain competence, and who seek new levels of complexity in what we learn and do ... in general we act on the environment as much as we are acted on by it, and we do not do so simply in order to receive a reward."* [**Punished by Rewards**, p. 24 and p. 25]

Kohn presents extensive evidence to back upon his case that rewards harm activity and individuals. We cannot do justice to it here so we will present a few examples. One study with college students showed that those paid to work on a puzzle *"spent less time on it than those who hadn't been paid"* when they were given a choice of whether to work on it or not. *"It appeared that working for a reward made people less interested in the task."* Another study with children showed that *"extrinsic rewards reduce intrinsic motivation."* [**Op. Cit.**, p. 70 and p. 71] Scores of other studies confirmed this. This is because a reward is effectively saying that a given activity is not worth doing for its own sake — and why would anyone wish to do something they have to be bribed to do?

In the workplace, a similar process goes on. Kohn presents extensive evidence to show that extrinsic motivation also fails even there. Indeed, he argues that *"economists have it wrong if they think of work as a 'disutility' — something unpleasant we must do in order to be able to buy what we need, merely a means to an end."* Kohn stresses that *"to assume that money is what drives people is to adopt an impoverished understanding of human motivation."* Moreover, *"the risk of **any** incentive or pay-for-performance system is that it will make people less interested in their work and therefore less likely to approach it with enthusiasm and a commitment to excellence. Furthermore, **the more closely we tie compensation (or other rewards) to performance, the most damage we do.**"* [**Op. Cit.**, p. 131, p. 134 and p. 140]

Kohn argues that the idea that humans will only work for profit or rewards *"can be fairly described as dehumanising"* if *"the capacity for responsible action, the natural love of learning, and the desire to do good work are already part of who we are."* Also, it is *"a way of trying to control people"* and so to *"anyone who is troubled by a model of human relationships founded principally on the idea of one person controlling another must ponder whether rewards are as innocuous as they are sometimes made out to be".* So *"there is no getting around the fact that 'the basic purpose of merit pay is manipulative.' One observer more bluntly characterises incentives as 'demeaning' since the message they really convey is, 'Please big daddy boss and you will receive the rewards that the boss deems appropriate.'"* [**Op. Cit.**, p. 26]

Given that much work is controlled by others and can be a hateful experience under capitalism does not mean that it has to be that way. Clearly, even under wage slavery most workers can and do find work interesting and seek to do it well — not because of possible rewards or punishment but because we seek meaning in our activities and try and do them well. Given that research shows that reward orientated work structures harm productivity and excellence, social anarchists have more than just hope to base their ideas. Such research confirms Kropotkin's comments:

> *"Wage-work is serf-work; it cannot, it must not, produce all it could produce. And it is high time to disbelieve the legend which presents wagedom as the best incentive to productive work. If industry nowadays brings in a hundred times more than it did in the days of our grandfathers, it is due to the sudden awakening of physical and chemical sciences towards the end of the [18th] century; not to the capitalist organisation of wagedom, but **in spite** of that organisation."* [**The Conquest of Bread**, p. 150]

For these reasons, social anarchists are confident that the elimination of the profit motive within the context of self-management will not harm productivity and creativity, but rather **enhance** them (within an authoritarian system in which workers enhance the power and income of bureaucrats, we can expect different results). With the control of their own work and workplaces ensured, all working people can express their abilities to the full. This will see an explosion of creativity and initiative, not a reduction.

I.4.12 Won't there be a tendency for capitalist enterprise to reappear?

This is a common right-wing "libertarian" objection. Robert Nozick, for example, imagined the following scenario:

> *"small factories would spring up in a socialist society, unless forbidden. I melt some of my personal possessions and build a machine out of the material. I offer you and others a philosophy lecture once a week in exchange for yet other things, and so on ... some persons might even want to leave their jobs in socialist industry and work full time in this private sector ... [This is] how private property even in means of production would occur in a socialist society ... [and so] the socialist society will have to forbid capitalist acts between consenting adults."* [**Anarchy, State and Utopia**, pp. 162–3]

There are numerous flawed assumptions in this argument and we will discuss them here. The key flaws are the confusion of exchange with capitalism and the typically impoverished propertarian vision that freedom is, essentially, the freedom to sell your liberty, to become a wage slave and so unfree. Looking at history, we can say that both these assumptions are wrong. Firstly, while markets and exchange have existed for thousands of years capitalism has not. Wage-labour is a relatively recent development and has been the dominant mode of production for, at best, a couple of hundred years. Secondly, few people (when given the choice) have freely become wage-slaves. Just as the children of slaves often viewed slavery as the "natural" order, so do current workers. Yet, as with chattel slavery, substantial state coercion was required to achieve such a "natural" system.

As discussed in section F.8, actually existing capitalism was **not** created by Nozick's process — it required substantial state intervention to separate workers from the means of production they used and to ensure, eventually, that the situation in which they sold their liberty to the property owner was considered "natural." Without that coercion, people do **not** seek to sell their liberty to others. Murray Bookchin summarised the historical record by noting that in *"every precapitalist society, countervailing forces .. . existed to restrict the market economy. No less significantly, many precapitalist societies raised what they thought were insuperable obstacles to the penetration of the State into social life."* He pointed to *"the power of village communities to resist the invasion of trade and despotic political forms into society's abiding communal substrate."* [**The Ecology of Freedom**, pp. 207–8] Anarchist anthropologist David Graeber notes that in the ancient Mediterranean world *"[w]hile one does periodically run into evidence of arrangements which to the modern eye look like wage-labour contracts, on closer examination they almost always actually turn out to be contracts to rent slaves ... Free men and women thus avoided anything remotely like wage-labour, seeing it as a matter, effectively, of slavery, renting themselves out."* This means that wage labour *"(as opposed to, say, receiving fees for professional services) involves a degree of subordination: a labourer has to be to some degree at the command of his or her employer. This is exactly why, through most of history, free men and women tended to avoid wage-labour, and why, for most of history, capitalism ... never emerged."* [**Possibilities**, p. 92]

Thus while the idea that people will happily become wage slaves may be somewhat common place today (particularly with supporters of capitalism) the evidence of history is that people, given a choice, will prefer self-employment and **resist** wage labour (often to the death). As E. P. Thompson noted, for workers at the end of the 18th and beginning of the 19th centuries, the *"gap in status between a 'servant,' a hired wage-labourer subject to the orders and discipline of the master, and an artisan, who might 'come and go' as he pleased, was wide enough for men to shed blood rather than allow themselves to be pushed from one side to the other. And, in the value system of the community, those who resisted degradation were in the right."* [**The Making of the English Working Class**, p. 599] Over one hundred years later, the rural working class

of Aragon showed the same dislike of wage slavery. After Communist troops destroyed their self-managed collectives, the *"[d]ispossessed peasants, intransigent collectivists, refused to work in a system of private property, and were even less willing to rent out their labour."* [Jose Peirats, **Anarchists in the Spanish Revolution**, p. 258] The rural economy collapsed as the former collectivists refused to be the servants of the few.

People who have tasted freedom are unlikely to go back to oppression. Therefore, any perception that people will become wage-slaves through choice in a free society is based on the assumption what people accept through necessity under capitalism will pass over, without change, into a free one. This assumption is unfounded and anarchists expect that once people struggle for freedom and taste the pleasures of freedom they will not freely accept a degradation back to having a master — and as history shows, we have some evidence to support our argument. It seems a strangely debased perspective on freedom to ponder whether people will be "free" to alienate their freedom — it is a bit like proclaiming it a restriction of freedom to *"forbid"* owning slaves (and, as noted in section F.2.2, Nozick did support voluntary slave contracts).

So anarchists think Nozick's vision of unfreedom developing from freedom is unlikely. As anarcho-syndicalist Jeff Stein points out *"the only reason workers want to be employed by capitalists is because they have no other means for making a living, no access to the means of production other than by selling themselves. For a capitalist sector to exist there must be some form of private ownership of productive resources, and a scarcity of alternatives. The workers must be in a condition of economic desperation for them to be willing to give up an equal voice in the management of their daily affairs and accept a boss."* [*"Market Anarchism? Caveat Emptor!"*, **Libertarian Labour Review**, no. 13]

In an anarchist society, there is no need for anyone to *"forbid"* capitalist acts. All people have to do is **refrain** from helping would-be capitalists set up monopolies of productive assets. This is because, as we have noted in section B.3.2, capitalism cannot exist without some form of state to protect such monopolies. In a libertarian-socialist society, of course, there would be no state to begin with, and so there would be no question of it "refraining" people from doing anything, including protecting would-be capitalists' monopolies of the means of production. In other words, would-be capitalists would face stiff competition for workers in an anarchist society. This is because self-managed workplaces would be able to offer workers more benefits (such as self-government, better working conditions, etc.) than the would-be capitalist ones. The would-be capitalists would have to offer not only excellent wages and conditions but also, in all likelihood, workers' control and hire-purchase on capital used. The chances of making a profit once the various monopolies associated with capitalism are abolished are slim.

Thus the would-be capitalist would *"not [be] able to obtain assistance or people to exploit"* and *"would find none because nobody, having a right to the means of production and being free to work on his own or as an equal with others in the large organisations of production would want to be exploited by a small employer"*. [Malatesta, **Errico Malatesta: His Life and Ideas**, pp. 102–103] So where would the capitalist wannabe find people to work for him? As Kropotkin argued:

> *"Everywhere you will find that the wealth of the wealthy springs from the poverty of the poor. That is why an anarchist society need not fear the advent of a [millionaire] who would settle in its midst. If every member of the community knows that after a few hours of productive toil he [or she] will have a right to all the pleasures that civilisation procures, and to those deeper sources of enjoyment which art and science offer to all*

who seek them, he [or she] will not sell his strength ... No one will volunteer to work for the enrichment of your [millionaire]." [**Conquest of Bread**, p. 61]

However, let us suppose there is a self-employed inventor, Ferguson, who comes up with a new innovation without the help of the socialised sector. Would anarchists steal his idea? Not at all. The syndicates, which by hypothesis have been organised by people who believe in giving producers the full value of their product, would pay Ferguson an equitable amount for his idea, which would then become common across society. However, if he refused to sell his invention and instead tried to claim a patent monopoly on it in order to gather a group of wage slaves to exploit, no one would agree to work for him unless they got the full control over both the product of their labour and the labour process itself. And, assuming that he did find someone willing to work for him (and so be governed by him), the would-be capitalist would have to provide such excellent conditions and pay such good wages as to reduce his profits to near zero. Moreover, he would have to face workers whose neighbours would be encouraging them to form a union and strike for even **better** conditions and pay, including workers' control and so on. Such a militant workforce would be the last thing a capitalist would desire. In addition, we would imagine they would also refuse to work for someone unless they also got the capital they used at the end of their contract (i.e. a system of "hire-purchase" on the means of production used). In other words, by removing the statist supports of capitalism, would-be capitalists would find it hard to "compete" with the co-operative sector and would not be in a position to exploit others' labour.

With a system of communal production (in social anarchism) and mutual banks (in individualist anarchism), **usury** — i.e. charging a use-fee for a monopolised item, of which patents are an instance — would no longer be possible and the inventor would be like any other worker, exchanging the product of his or her labour. As Benjamin Tucker argued, *"the patent monopoly ... consists in protecting inventors and authors against competition for a period of time long enough for them to extort from the people a reward enormously in excess of the labour measure of their services — in other words, in giving certain people a right of property for a term of years in laws and facts of nature, and the power to extract tribute from others for the use of this natural wealth, which should be open to all. The abolition of this monopoly would fill its beneficiaries with a wholesome fear of competition which should cause them to be satisfied with pay for their services equal to that which other labourers get for theirs, and secure it by placing their products and works on the market at the outset at prices so low that their lines of business would be no more tempting to competitors than any other lines."* [**The Anarchist Reader**, pp. 150–1]

So, if someone has labour to sell then they deserve a free society to do it in — as Tucker once pointed out. Such an environment would make the numbers seeking employment so low as to ensure that the rate of exploitation would be zero. Little wonder that, when faced with a self-employed, artisan workforce, capitalists have continually turned to the state to create the "correct" market forces. So without statism to back up various class-based monopolies of capitalist privilege, capitalism would not have become dominant.

It should also be noted that Nozick makes a serious error in his case. He assumes that the "use rights" associated with an anarchist (i.e. socialist) society are identical to the "property rights" of a capitalist one. This is **not** the case, and so his argument is weakened and loses its force. Simply put, there is no such thing as an absolute or *"natural"* law of property. As John Stuart Mill pointed out, *"powers of exclusive use and control are very various, and differ greatly in different countries and in different states of society."* Therefore, Nozick slips an ideological ringer

into his example by erroneously interpreting socialism (or any other society for that matter) as specifying a distribution of capitalist property rights along with the wealth. As Mill argued: *"One of the mistakes oftenest committed, and which are the sources of the greatest practical errors in human affairs, is that of supposing that the same name always stands for the same aggregation of ideas. No word has been subject of more of this kind of misunderstanding that the word property."* [*"Chapters on Socialism,"* **Principles of Political Economy**, p. 432]

In other words, Nozick assumes that in **all** societies capitalist property rights are distributed along with consumption **and** production goods. As Cheyney C. Ryan comments *"[d]ifferent conceptions of justice differ not only in how they would apportion society's holdings but in what rights individuals have over their holdings once they have been apportioned."* [*"Property Rights and Individual Liberty"*, pp. 323–43, **Reading Nozick**, Jeffrey Paul (Ed.), p. 331] This means that when goods are distributed in a libertarian socialist society the people who receive or take them have specific (use) rights to them. As long as an individual remained a member of a commune and abided by the rules they helped create in that commune then they would have full use of the resources of that commune and could use their possessions as they saw fit (even *"melt them down"* to create a new machine, or whatever). If they used those goods to create an enterprise to employ (i.e., exploit and oppress) others then they have, in effect, announced their withdrawal from civilised society and, as a result, would be denied the benefits of co-operation. They would, in effect, place themselves in the same situation as someone who does not wish to join a syndicate (see section I.3.7). If an individual did desire to use resources to employ wage labour then they would have effectively removed themselves from *"socialist society"* and so that society would bar them from using **its** resources (i.e. they would have to buy access to all the resources they currently took for granted).

Would this be a restriction of freedom? While it may be considered so by the impoverished definitions of capitalism, it is not. In fact, it mirrors the situation within capitalism as what possessions someone holds are **not** his or her property (in the capitalist sense) any more than a company car is currently the property of the employee under capitalism. While the employee can use the car outside of work, they lack the "freedom" to sell it or melt it down and turn it into machines. Such lack of **absolute** "ownership" in a free society does not reduce liberty any more than in this case.

This point highlights another flaw in Nozick's argument. If his argument were true, then it applies equally to capitalist society. For 40 hours plus a week, workers are employed by a boss. In that time they are given resources to use and they are most definitely **not** allowed to melt down these resources to create a machine or use the resources they have been given access to further their own plans. This can apply equally to rented accommodation as well, for example when landlords ban working from home or selling off the furniture that is provided. Thus, ironically, *"capitalist society will have to forbid capitalist acts between consenting adults"* — and does so all the time.

Moreover, it must be stressed that as well as banning capitalist acts between consenting adults, capitalism involves the continual banning of socialist acts between consenting adults. For example, if workers agree to form a union, then the boss can fire them. If they decide to control their own work, the boss can fire them for not obeying orders. Thus capitalism forbids such elemental freedoms as association and speech — at least for the majority, for the wage slaves. Why would people seek such "freedom" in a free society?

Of course, Nozick's reply to this point would be that the individual's involved have "consented" to these rules when they signed their contract. Yet the same can be said of an anarchist society — it is freely joined and freely left. To join a communist-anarchist society it would simply be a case of agreeing to "exchange" the product of ones labour freely with the other members of that society and not to create oppressive or exploitation social relationships within it. If this is "authoritarian" then so is capitalism — and we must stress that at least anarchist associations are based on self-management and so the individuals involved have an equal say in the obligations they live under.

Notice also that Nozick confused exchange with capitalism (*"I offer you a lecture once a week in exchange for other things"*). This is a telling mistake by someone who claims to be an expert on capitalism, because the defining feature of capitalism is not exchange (which obviously took place long before capitalism existed) but labour contracts involving wage labour. Nozick's example is merely a direct labour contract between the producer and the consumer. It does not involve wage labour, what makes capitalism capitalism. It is only this latter type of transaction that libertarian socialism prevents — and not by "forbidding" it but simply by refusing to maintain the conditions necessary for it to occur, i.e. protection of capitalist property.

In addition, we must note that Nozick also confused *"private property in the means of production"* with capitalism. Liberation socialism can be easily compatible with *"private property in the means of production"* when that *"private property"* is limited to what a self-employed worker uses rather than capitalistic property (see section G.2.1). Nozick, in other words, confused pre-capitalist forms of production with capitalist ones (see section G.1.2). Thus possession of the means of production by people outside of the free commune is perfectly acceptable to social anarchists (see section I.6.2).

Thus an anarchist society would have a flexible approach to Nozick's (flawed) argument. Individuals, in their free time, could *"exchange"* their time and possessions as they saw fit. These are **not** *"capitalist acts"* regardless of Nozick's claims. However, the moment an individual employs wage labour then, by this act, they have broken their agreements with their fellows and, therefore, no longer part of *"socialist society."* This would involve them no longer having access to the benefits of communal life and to communal possessions. They have, in effect, placed themselves outside of their community and must fair for themselves. After all, if they desire to create *"private property"* (in the capitalist sense) then they have no right of access to communal possessions without paying for that right. For those who become wage slaves, a socialist society would, probably, be less strict. As Bakunin argued:

> *"Since the freedom of every individual is inalienable, society shall never allow any individual whatsoever legally to alienate his [or her] freedom or engage upon any contract with another on any footing but the utmost equality and reciprocity. It shall not, however, have the power to disbar a man or woman so devoid of any sense of personal dignity as to contract a relationship of voluntary servitude with another individual, but it will consider them as living off private charity and therefore unfit to enjoy political rights* ***throughout the duration of that servitude.***" [**Michael Bakunin: Selected Writings**, pp. 68–9]

Lastly, we must also note that Nozick also ignored the fact that acquisition **must** come before transfer, meaning that before "consenting" capitalist acts occur, individual ones must precede

it. As argued in section B.3.4, Nozick provided no convincing arguments why natural resources held in common can be appropriated by individuals. This means that his defence of transferring absolute capitalist property rights in goods is without foundations. Moreover, his argument in favour of such appropriations ignore that liberties are very definitely restricted by private property (and it should be keep in mind that the destruction of commonly held resources, such as village commons, was imposed by the state — see section F.8.3). As pointed out in section F.2, right-wing "libertarians" would better be termed *"Propertarians"* (why is liberty according a primary importance when arguing against socialism but not when private property restricts liberty?). As Cheyney C. Ryan points out, Nozick *"invoke[s] personal liberty as the decisive ground for rejecting patterned principles of justice [such as socialism] and restrictions on the ownership of capital ... [b]ut where the rights of private property admittedly restrict the liberties of the average person, he seems perfectly happy to* ***trade off*** *such liberties against material gain for society as a whole."* [**Op. Cit.**, p. 339] This can be seen by his lack of comment on how capitalism forbids socialist acts between consenting adults, not to mention quite a few numerous capitalist acts for good measure.

Thus Nozick's acquisition of resources is based on the would-be capitalist stealing communally owned resources and barring others from using them. This obviously would restrict the liberty of those who currently used them and so be hotly opposed by members of a community. As Murray Bookchin noted, a free society is based on *"the practice of* ***usufruct****, the freedom of individuals in a community to appropriate resources merely by virtue of the fact that they are using them. Such resources belong to the user as long as they are being used."* [**The Ecology of Freedom**, p. 116] As the would-be capitalist is not actually using the machines they have created, they would be in constant worry that their wage-slaves would simply expropriate them — with the full backing of the local commune and its federations.

So, to conclude, this question involves some strange logic (and many question begging assumptions) and ultimately fails in its attempt to prove libertarian socialism must *"forbid capitalistic acts between individuals."* In addition, Nozick cannot support the creation of private property out of communal property in the first place. It also undermines capitalism because that system must forbid socialistic acts by and between individuals. Thus Nozick's society would forbid squatting unused property or trespassing on private property as well as, say, the formation of unions against the wishes of the property owner (who is sovereign over their property and those who use it) or the use of workplace resources to meet the needs of the producer rather than the owner. As such, Nozick exposes how capitalism's hierarchical nature means that capitalist society *"forbids socialist acts between consenting adults."*

I.4.13 Who will do the dirty or unpleasant work?

This problem affects every society, including capitalism of course. Under capitalism, this problem is "solved" by ensuring that such jobs are done by those at the bottom of the social pile. In other words, it does not really solve the problem at all — it just ensures that some people are subject to this work the bulk of their working lives. Most anarchists reject this flawed solution in favour of something better, one that shares the good with the bad and so ensure everyone's life is better. How this would be done depends on the kind of libertarian community you are a member of.

Obviously, few would argue against the idea that individuals will voluntarily work at things they enjoyed doing. However there are some jobs that few, if any, would enjoy (for example, collecting rubbish, processing sewage, dangerous work, etc.). So how would an anarchist society deal with it?

It is obvious that not all "jobs" are equal in interest or enjoyment. It is sometimes argued that people would start to join or form syndicates which are involved in more fun activities. By this process excess workers would be found in the more enjoyable "jobs" while the boring and dangerous ones would suffer from a scarcity of willing workers. Hence, so the argument goes, a socialist society would have to force people to do certain jobs and that requires a state. Obviously, this argument ignores the fact that under capitalism usually it is the boring, dangerous work which is the least well paid with the worse working conditions. In addition, this argument ignores the fact that under workers self-management boring, dangerous work would be minimised and transformed as much as possible. Only under capitalist hierarchy are people in no position to improve the quality of their work and working environment. As George Barrett argued:

> *"Now things are so strangely organised at present that it is just the dirty and disagreeable work that men will do cheaply, and consequently there is no great rush to invent machines to take their place. In a free society, on the other hand, it is clear that the disagreeable work will be one of the first things that machinery will be called upon to eliminate. It is quite fair to argue, therefore, that the disagreeable work will, to a large extent, disappear in a state of anarchism."* [**Objections to Anarchism**, p. 361]

Moreover, most anarchists would think that the argument that there would be a flood of workers taking up "easy" work placements is abstract and ignores the dynamics of a real society. While many individuals would try to create new productive syndicates in order to express themselves in innovative work outwith the existing research and development going on within existing syndicates, the idea that the majority of individuals would leave their current work at a drop of a hat is crazy. A workplace is a community and part of a community and people would value the links they have with their fellow workers. As such they would be aware of the impacts of their decisions on both themselves and society as a whole. So, while we would expect a turnover of workers between syndicates, the mass transfers claimed in this argument are unlikely. Most workers who did want to try their hand at new work would apply for work places at syndicates that required new people, not create their own ones. Because of this, work transfers would be moderate and easily handled.

However, the possibility of mass desertions does exist and so must be addressed. So how would a libertarian socialist society deal with a majority of its workers deciding to all do interesting work, leaving the boring and/or dangerous work undone? It, of course, depends on the type of anarchism in question and each offers alternative ways to ensure that individual preferences for certain types of work matches the requirements of social demand for labour.

Under individualist anarchism and mutualism, those who desired a certain form of work done would reach an agreement with workers or a co-operative and pay them to do the work in question. Within a co-operative, as Proudhon argued, a person's *"education, instruction, and apprenticeship should ... be so directed that, while permitting him to do his share of unpleasant and disagreeable tasks, they may also give variety of work and knowledge, and may assure him ... an encyclopaedic attitude and a sufficient income."* [**General Idea of the Revolution**, p. 222]

In terms of unpleasant tasks for other people (for example, collecting and processing a community's rubbish) then individuals would form co-operatives which would have to find their place on the market and this would ensure that such work was done as they would contract with others to provide the appropriate services. However, this could lead to some people doing unpleasant work all the time and so is hardly a solution. As in capitalism, we may see some people doing terrible work because it is better than no work at all. This is a solution few anarchists would support.

In a collectivist or communist anarchist society, such an outcome would be avoided as far as possible. Noam Chomsky points to two possible alternatives, one *"in which the undesired work, after the best efforts to make it meaningful, is shared"* and another one *"where the undesired work receives high extra pay, so that individuals voluntarily choose to do it."* Such schemes are *"consistent with ... anarchist principles"* unlike the current situation where *"the undesired work is given to wage-slaves."* [**Radical Priorities**, p. 220] Another way, somewhat complementary to these two, would be to take a leaf from *"peasant attitudes toward labour"* and their *"most striking feature"*, the extent *"to which any kind of communal toil, however onerous, can be transformed by the workers themselves into festive occasions that serve to reinforce community ties."* [**The Ecology of Freedom**, p. 342]

It would be easy to imagine a free community sharing such tasks as fairly as possible between a community's members by, for example, allocating a few days a month to all fit members of a community to do work which no one volunteers to do. This would soon ensure that it would be done, particularly if it were part of a festival or before a party. In this way, every one shares in the unpleasant as well as pleasant tasks (and, of course, minimises the time any one individual has to spend on it). Or, for tasks which are very popular, individuals would also have to do unpleasant tasks as well. In this way, popular and unpopular tasks could balance each other out. Or such tasks could be rotated randomly by lottery. The possibilities are many and, undoubtedly, a free people will try many different ones in different areas.

Another possible solution could be to follow the ideas of Josiah Warren and take into account the undesirability of the work when considering the level of labour notes received or communal hours worked. In other words, in a collectivist society the individuals who do unpleasant work may be "rewarded" (along with social esteem) with a slightly higher pay – the number of labour notes, for example, for such work would be a multiple of the standard amount, the actual figure being related to how much supply exceeds demand (in a communist society, a similar solution could be possible, with the number of necessary hours required by an individual being reduced by an amount that corresponds to the undesirability of the work involved). The actual levels of "reward" would be determined by agreements between the syndicates. For example, if a given type of work has 50% more people wanting to do it than actually required, then the labour value for one hours work in this industry would correspondingly be less than one hour. If fewer people applied than required, then the labour value would increase, as would holiday time, etc. For "work" placements in which supply exceeded demand, it would be easy to arrange a work share scheme to ensure that most people get a chance to do that kind of work (along with such methods as increasing the value of an hour's labour, reducing holiday allocations and such like).

In this way, "supply and demand" for workers would soon approximate each other. In addition, a collectivist society would be better placed than the current system to ensure work-sharing and other methods to spread unpleasant and pleasant tasks equally around society due to its organs

of self-management and the rising social awareness via participation and debate within those organs.

A communist-anarchist society's solution would be similar to the collectivist one. There would still be basic agreements between its members for work done and so for work placements with excess supply of workers the amount of hours necessary to meet the agreed minimum would correspondingly increase. For example, an industry with 100% excess supply of volunteers would see its minimum requirement increase from (say) 20 hours a week to 30 hours. An industry with less applicants than required would see the number of required hours decrease, plus increases in holiday time and so on. As G.D.H. Cole argued in respect of this point:

> *"Let us first by the fullest application of machinery and scientific methods eliminate or reduce ... 'dirty work' that admit to such treatment. This has never been tried ... under capitalism ... It is cheaper to exploit and ruin human beings ... Secondly, let us see what forms of 'dirty work' we can do without ... [and] if any form of work is not only unpleasant but degrading, we will do without it, whatever the cost. No human being ought to be allowed or compelled to do work that degrades. Thirdly, for what dull or unpleasant work remains, let us offer whatever special conditions are required to attract the necessary workers, not in higher pay, but in shorter hours, holidays extending over six months in the year, conditions attractive enough to men who have other uses for their time or attention to being the requisite number to undertake it voluntarily."* [**Guild Socialism Restated**, p. 76]

By these methods a balance between industrial sectors would be achieved as individuals would balance their desire for interesting work with their desires for free time. Over time, by using the power of appropriate technology, even such time keeping would be minimised or even got eliminated as society developed freely. Until such time as it can be automated away, a free society will have to encourage people to volunteer for "work" placements they do not particularly want to do by these and other methods.

It will be clear what is considered unpleasant work in any society — few people (if any) will volunteer to do it. As in any advanced society, communities and syndicates who required extra help would inform others of their need by the various form of media that existed. In addition, it would be likely that each community would have a *"division of activity"* syndicate whose work would be to distribute information about these posts and to which members of a community would go to discover what placements existed for the line of "work" they were interested in. So we have a means by which syndicates and communes can ask for new associates and the means by which individuals can discover these placements. Obviously, some tasks will still require qualifications and that will be taken into account when syndicates and communes "advertise" for help.

And it is important to remember that the means of production required by new syndicates do not fall from the sky. Other members of society will have to work to produce the required goods. Therefore it is likely that the syndicates and communes would agree that only a certain (maximum) percentage of production would be allocated to start-up syndicates (as opposed to increasing the resources of existing confederations). Such a figure would obviously be revised periodically in order to take into account changing circumstances. Members of the community who decide to form syndicates for new productive tasks or syndicates which do the same work

but are independent of existing confederations would have to get the agreement of other workers to supply them with the necessary means of production (just as today they have to get the agreement of a bank to receive the necessary credit to start a new business). By budgeting the amounts available, a free society can ensure that individual desires for specific kinds of work can be matched with the requirements of society for useful production.

And we must point out (just to make sure we are not misunderstood) that there will be no group of "planners" deciding which applications for resources get accepted. Instead, individuals and associations would apply to different production units for resources, whose workers in turn decide whether to produce the goods requested. If it is within the syndicate's agreed budget then it is likely that they will produce the required materials. In this way, a communist-anarchist society will ensure the maximum amount of economic freedom to start new syndicates and join existing ones plus ensure that social production does not suffer in the process.

Of course, no system is perfect — we are sure that not everyone will be able to do the work they enjoy the most (this is also the case under capitalism, we may add). In an anarchist society every method of ensuring that individuals pursue the work they are interested in would be investigated. If a possible solution can be found, we are sure that it will. What a free society would make sure of was that neither the capitalist market redeveloped (which ensures that the majority are marginalised into wage slavery) or a state socialist *"labour army"* type allocation process developed (which would ensure that free socialism did not remain free or socialist for long).

In this manner, anarchism will be able to ensure the principle of voluntary labour and free association as well as making sure that unpleasant and unwanted "work" is done. Moreover, most anarchists are sure that in a free society such requirements to encourage people to volunteer for unpleasant work will disappear over time as feelings of mutual aid and solidarity become more and more common place. Indeed, it is likely that people will gain respect for doing jobs that others might find unpleasant and so it might become "glamorous" to do such activity. Showing off to friends can be a powerful stimulus in doing any activity. So anarchists would agree with Albert and Hahnel when they say that:

> *"In a society that makes every effort to depreciate the esteem that derives from anything other than conspicuous consumption, it is not surprising that great income differentials are seen as necessary to induce effort. But to assume that only conspicuous consumption can motivate people because under capitalism we have strained to make it so is unwarranted. There is plenty of evidence that people can be moved to great sacrifices for reasons other than a desire for personal wealth .. . there is good reason to believe that for nonpathological people wealth is generally coveted only as a* ***means*** *of attaining other ends such as economic security, comfort, social esteem, respect, status, or power."*
> [**The Political Economy of Participatory Economics**, p. 52]

We should note here that the education syndicates would obviously take into account the trends in "work" placement requirements when deciding upon the structure of their classes. In this way, education would respond to the needs of society as well as the needs of the individual (as would any productive syndicate).

I.4.14 What about the person who will not work?

Anarchism is based on voluntary labour. If people do not desire to work then they cannot (must not) be forced to by means of physical coercion. This makes some wonder what happens if someone refuses to work in a libertarian society.

In terms of a mutualist or collectivist anarchy, this question is easy to answer for goods are distributed according to work done and so if people do not work then they are left dependent on the charity of those who do (exceptions for the young, old and ill would apply, of course).

So this question is directed towards communist-anarchists, with many people arguing that communism is impossible because people simply would not work unless they get paid. This ignores the many people who do volunteer work (often in addition to their "real jobs"). It also ignores those who spend their time contributing to projects they are interested in (such as fan journals) which would be considered work in other contexts. A classic example of this is the internet, particularly webpages like Wikipedia and software projects like php. Then there is the activity of the pro-capitalists themselves, often fanatical anti-communists (which they almost always equate to Stalinism), who spend their free time working on wikipedia, newsgroups, webpages and journals explaining how communism could not work because people would never voluntarily contribute to society! It is one of the great ironies of life that those who hate communism the most often, by their actions, prove its viability.

So, communist-anarchists argue, in a society based on self-managed work in pleasant surroundings and a reduction of the working week to a minimum, there would be few people who refuse to do any kind of productive activity. The question arises of what to do with those (a small minority, to be sure) who refuse to work.

On this question there is some disagreement. Some anarchists argue that the lazy should not be deprived of the means of life. Social pressure, they argue, would ensure those who take from, but do not contribute, to the community to listen to their conscience and start producing for the community that supports them. If this did not happen, then the person who refused to contribute would be asked to leave (freedom of association means the freedom **not** to associate). As Kropotkin argued;

> *"First of all, is it not evident that if a society, founded on the principle of free work, were really menaced by loafers, it could protect itself without the authoritarian organisation we have nowadays, and without having recourse to wagedom [i.e., payment by deeds]?*
>
> *"Let us take a group of volunteers, combining for some particular enterprise. Having its success at heart, they all work with a will, save one of the associates, who is frequently absent from his post ... some day the comrade who imperils their enterprise will be told: 'Friend, we should like to work with you; but as you are often absent from your post, and you do your work negligently, we must part. Go and find other comrades who will put up with your indifference!'*
>
> *"This is so natural that it is practised everywhere, even nowadays, in all industries ... [I]f [a worker] does his work badly, if he hinders his comrades by his laziness or other defects, if he is quarrelsome, there is an end of it; he is compelled to leave the workshop.*
>
> *"Authoritarians pretend that it is the almighty employer and his overseers who maintain regularity and quality of work in factories. In reality ... it is the factory itself, the*

> *workmen [and women] who see to the good quality of the work.*" [**The Conquest of Bread**, pp. 152–3]

Most anarchists agree with Camillo Berneri when he argued that anarchism should be based upon *"no compulsion to work, but no duty towards those who do not want to work."* [*"The Problem of Work"*, pp. 59–82, **Why Work?**, Vernon Richards (ed.), p. 74] This means that an anarchist society will not continue to feed, clothe, house someone who can produce but refuses to. Anarchists have had enough of the wealthy under capitalism consuming but not producing and do not see why they should support a new group of parasites after the revolution.

Obviously, there is a difference between not wanting to work and being unable to work. The sick, children, the old, pregnant women and so on will be looked after in libertarian communism. As child rearing would be considered "work" along with other more obviously economic tasks, mothers and fathers will not have to leave their children unattended and work to make ends meet. Instead, consideration will be given to the needs of both parents and children as well as the creation of community nurseries and child care centres.

We have to stress here that an anarchist society will not deny anyone the means of life. This would violate the voluntary labour which is at the heart of all schools of anarchism. Unlike capitalism, the means of life will not be monopolised by any group — including the commune. This means that someone who does not wish to join a commune or who does not pull their weight within a commune and are expelled or choose to leave will have access to the means of making a living.

We stated that we stress this fact as many supporters of capitalism seem to be unable to understand this point (or prefer to ignore it and so misrepresent the anarchist position). In an anarchist society, no one will be forced to join a commune simply because they do not have access to the means of production and/or land required to work alone. Unlike capitalism, where access to these essentials of life is dependent on buying access to them from the capitalist class (and so, effectively, denied to the vast majority), an anarchist society will ensure that all have access and have a real choice between living in a commune and working independently. This access is based on the fundamental difference between possession and property — the commune possesses as much land as it needs, as do non-members. The resources used by them are subject to the usual possession rationale — they possess it only as long as they use it and cannot bar others using it if they do not (i.e., it is not property).

Thus an anarchist commune remains a voluntary association and ensures the end of all forms of domination. The member of the commune has the choice of working as part of a community, giving according to their abilities and taking according to their needs (or some other means of organising production and consumption such as equal income or receiving labour notes, and so on), or working independently and so free of communal benefits as well as any commitments (bar those associated with using communal resources such as roads and so on).

So, in most, if not all, anarchist communities, individuals have two options, either they can join a commune and work together as equals, or they can work as an individual or independent co-operative and exchange the product of their labour with others. If an individual joins a commune and does not carry their weight, even after their fellow workers ask them to, then that person will possibly be expelled and given enough land, tools or means of production to work alone. Of course, if a person is depressed, run down or otherwise finding it hard to join in communal responsibilities then their friends and fellow workers would do everything in their power to help

and be flexible in their approach to the problem. What method a community would use would depend on what people in that community thought was best.

However, most social anarchists think that the problem of people trying not to work would be a very minor one in a free society. This is because productive activity is part of human life and an essential way to express oneself. With work being voluntary and self-managed, it will become like current day hobbies and many people work harder at their hobbies than they do at "real" work (this FAQ can be considered as an example of this!). How long this takes to organise fully is, of course, unknown but one of the most important tasks of a free society will be to ensure work is transformed and the burden of what remains is shared in order to reduce toil to a minimum.

It is the nature of employment under capitalism, the hierarchical nature of its workplace, that makes it "work" instead of pleasure. Work need not be a part of the day that we wish would end. It is **not** work that people hate. Rather it is **over**-work, in unpleasant circumstances and under the control of others that people hate. Reduce the hours of labour, improve the working conditions and place the work under self-management and work will stop being a hated thing. All these will help ensure that only an idiot would desire to work alone for, as Malatesta argued, the *"individual who wished to supply his own material needs by working alone would be the slave of his labours."* [**The Anarchist Revolution**, p. 15]

So, enlightened self-interest would secure the voluntary labour and egalitarian distribution anarchists favour in the vast majority of the population. The parasitism associated with capitalism would be a thing of the past. Thus the problem of the "lazy" person fails to understand the nature of humanity nor the revolutionising effects of freedom on the nature and content of work.

I.4.15 What will the workplace of tomorrow look like?

Given the anarchist desire to liberate the artist in all of us, we can easily imagine that a free society would totally transform the working environment. No longer would workers be indifferent to their workplaces, but they would express themselves in transforming them into pleasant places, integrated into both the life of the local community and into the local environment. After all, *"no movement that raises the demand for workers' councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place."* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 88]

A glimpse of the future workplace can been seen from the actual class struggle. In the 40 day sit-down strike at Fisher Body plant #1 in Flint, Michigan in 1936, *"there was a community of two thousand strikers ... Committees organised recreation, information, classes, a postal service, sanitation ... There were classes in parliamentary procedure, public speaking, history of the labour movement. Graduate students at the University of Michigan gave courses in journalism and creative writing."* [Howard Zinn, **A People's History of the United States**, p. 391] In the same year, during the Spanish Revolution, collectivised workplaces also created libraries and education facilities as well as funding schools, health care and other social necessities (a practice, we must note, that had started before the revolution when anarchist unions had funded schools, social centres, libraries and so on).

The future workplace would be expanded to include education and classes in individual development. This follows Proudhon's suggestion made during the 1848 revolution that we should *"[o]rganise association, and by the same token, every workshop becoming a school, every worker*

becomes a master, every student an apprentice." [**No Gods, No Masters**, vol. 1, pp. 62–3] This means that in a free society *"Workers' associations have a very important role to play ... Linked to the system of public education, they will become both centres of production and centres and for education ... The working masses will be in daily contact with the youthful army of agricultural and industrial workers. Labour and study, which have for so long and so foolishly been kept apart, will finally emerge side by side in their natural state of union. Instead of being confined to narrow, specialised fields, vocational education will include a variety of different types of work which, taken as a whole, will insure that each student becomes an all-round worker.*" [Proudhon, **Selected Writings of Pierre-Joseph Proudhon**, p. 87]

This would allow work to become part of a wider community, drawing in people from different areas to share their knowledge and learn new insights and ideas. In addition, children would have part of their school studies with workplaces, getting them aware of the practicalities of many different forms of work and so allowing them to make informed decisions in what sort of activity they would be interested in pursuing when they were older.

Obviously, a workplace managed by its workers would also take care to make the working environment as pleasant as possible. No more "sick building syndrome" or unhealthy and stressful work areas for *"can we doubt that work will become a pleasure and a relaxation in a society of equals, in which 'hands' will not be compelled to sell themselves to toil, and to accept work under any conditions Repugnant tasks will disappear, because it is evident that these unhealthy conditions are harmful to society as a whole. Slaves can submit to them, but free men [and women] will create new conditions, and their work will be pleasant and infinitely more productive.*" [Kropotkin, **The Conquest of Bread**, p. 123] Workplaces would be designed to maximise space and allow individual expression within them. We can imagine such places surrounded by gardens and allotments which were tended by workers themselves, giving a pleasant surrounding to the workplace. There would, in effect, be a break down of the city/rural divide — workplaces would be placed next to fields and integrated into the surroundings:

> *"Have the factory and the workshop at the gates of your fields and gardens, and work in them. Not those large establishments, of course, in which huge masses of metals have to be dealt with and which are better placed at certain spots indicated by Nature, but the countless variety of workshops and factories which are required to satisfy the infinite diversity of tastes among civilised men [and women] ... factories and workshops which men, women and children will not be driven by hunger, but will be attracted by the desire of finding an activity suited to their tastes, and where, aided by the motor and the machine, they will choose the branch of activity which best suits their inclinations.*" [Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 197]

This vision of rural and urban integration is just part of the future anarchists see for the workplace. As Kropotkin argued, *"[w]e proclaim* ***integration****... a society of integrated, combined labour. A society where each individual is a producer of both manual and intellectual work; where each able-bodied human being is a worker, and where each worker works both in the field and the industrial workshop; where every aggregation of individuals, large enough to dispose of a certain variety of natural resources — it may be a nation, or rather a region — produces and itself consumes most of its own agricultural and manufactured produce.*" [**Op. Cit.**, p. 26]

The future workplace would be an expression of the desires of those who worked there. It would be based around a pleasant working environment, within gardens and with extensive li-

brary, resources for education classes and other leisure activities. All this, and more, will be possible in a society based upon self-realisation and self-expression and one in which individuality is not crushed by authority and capitalism. To quote Kropotkin, the future workplace would be *"airy and hygienic, and consequently economical, factories in which human life is of more account than machinery and the making of extra profits."* [**Op. Cit.**, p. 197] For, obviously, *"if most of the workshops we know are foul and unhealthy, it is because the workers are of no account in the organisation of factories"*. [**The Conquest of Bread**, p. 121]

"So in brief," argued William Morris, *"our buildings will be beautiful with their own beauty of simplicity as workshops"* and *"besides the mere workshops, our factory will have other buildings which may carry ornament further than that, for it will need dinning-hall, library, school, places for study of different kinds, and other such structures."* [**A Factory as It Might Be**, p. 9] This is possible and is only held back by capitalism which denounces such visions of freedom as "uneconomic." Yet such claims ignore the distribution of income in class society:

> *"Impossible I hear an anti-Socialist say. My friend, please to remember that most factories sustain today large and handsome gardens, and not seldom parks ... **only** the said gardens, etc. are twenty miles away from the factory, **out of the smoke,** and are kept up for **one member of the factory only,** the sleeping partner to wit."* [Morris, **Op. Cit.**, pp. 7–8]

Pleasant working conditions based upon the self-management of work can produce a workplace within which economic "efficiency" can be achieved without disrupting and destroying individuality and the environment (also see section I.4.9 for a fuller discussion of anarchism and technology).

I.4.16 Won't a libertarian communist society be inefficient?

It is often argued that anarcho-communism and other forms of non-market libertarian-socialism would promote inefficiency and unproductive work. The basis of this argument is that without market forces to discipline workers and the profit motive to reward them, workers would have no incentive to work in a way which minimises time or resources. The net effect of this would be inefficient use of recourses, particularly an individual's time.

This is a valid point in some ways; for example, a society can (potentially) benefit from increasing productivity as the less time and resources it takes to produce a certain good, the more of both it gains for other activities (although, of course, in a class society the benefits of increased productivity generally accrue to, first and foremost, those at the top and, for the rest, the "other activities" mean more work). Indeed, for an individual, a decent society depends on people having time available for them to do what they want, to develop themselves in whatever way they want, to enjoy themselves. In addition, doing more with less can have a positive environment impact as well. It is for these reasons that an anarchist society would be interested in promoting efficiency and productiveness during production.

A free society will undoubtedly create new criteria for what counts as an efficient use of resources and time. What passes for "efficient" use capitalism often means what is efficient in increasing the power and profits of the few, without regard to the wasteful use of individual time, energy and potential as well as environmental and social costs. Such a narrow criteria for

decision making or evaluating efficient production will not exist in an anarchist society (see our discussion of the irrational nature of the price mechanism in section I.1.2, for example). When we use the term efficiency we mean the dictionary definition of efficiency (i.e. reducing waste, maximising use of resources) rather than what the capitalist market distorts this into (i.e. what creates most profits for the boss).

While capitalism has turned improvements in productivity as a means of increasing work, enriching the few and generally proletarianising the working class, a free society would take a different approach to the problem. As argued in section I.4.3, a communist-anarchist society would be based upon the principle of *"**for some much per day** (in money today, in labour tomorrow) **you are entitled to satisfy — luxury excepted — this or the other of your wants**."* [Peter Kropotkin, **Small Communal Experiments and why the fail**, p. 8] Building upon this, we can imagine a situation where the average output for a given industry in a given amount of time is used to encourage efficiency and productivity. If a given syndicate can produce this average output with at least average quality in less time than the agreed average/minimum (and without causing ecological or social externalities, of course) then the members of that syndicate can and should have that time off.

This would be a powerful incentive to innovate, improve productivity, introduce new machinery and processes as well as work efficiently without reintroducing the profit motive and material inequality. With the possibility of having more time available for themselves and their own projects, people involved in productive activities would have a strong interest in being efficient. Of course, if the work in question is something they enjoy then any increases in efficiency would **enhance** what makes their work enjoyable and not eliminate it.

Rewarding efficiency with free time would also be an important means to ensure efficient use of resources as well as a means of reducing time spent in productive activity which was considered as boring or otherwise undesirable. The incentive of getting unpleasant tasks over with as quickly as possible would ensure that the tasks were done efficiently and that innovation was directed towards them. Moreover, when it came to major investment decisions, a syndicate would be more likely to get others to agree to its plans if the syndicate had a reputation of excellence. This, again, would encourage efficiency as people would know that they could gain resources for their communities and workplaces (i.e. themselves) more easily if their work is efficient and reliable. This would be a key means of encouraging efficient and effective use of resources.

Similarly, an inefficient or wasteful syndicate would have negative reactions from their fellow workers. As we argued in section I.4.7, a libertarian communist economy would be based on free association. If a syndicate or community got a reputation for being inefficient with resources then others would not associate with them (i.e. they would not supply them with materials, or place them at the end of the queue when deciding which production requests to supply, and so on). As with a syndicate which produced shoddy goods, the inefficient syndicate would also face the judgement of its peers. This will produce an environment which will encourage efficient use of resources and time.

All these factors, the possibility of increased free time, the respect and resources gained for an efficient and excellent work and the possibility of a lack of co-operation with others for inefficient use of resources, would ensure that an anarchist-communist or anarchist-collectivist society would have no need to fear inefficiency. Indeed, by placing the benefits of increased efficiency into the hands of those who do the work, efficiency will no doubt increase.

With self-management, we can soon see time and resources being used efficiently and productively simply because those doing the work would have a direct and real interest in it. Rather than alienate their liberty, as under capitalism, they would apply their creativity and minds to transforming their productive activity in such a way as to make it enjoyable and not a waste of their time.

Little wonder Kropotkin argued that modern knowledge could be applied to a society in which people, *"with the work of their own hands and intelligence, and by the aid of the machinery already invented and to be invented, should themselves create all imaginable riches. Technics and science will not be lagging behind if production takes such a direction. Guided by observation, analysis and experiment, they will answer all possible demands. They will reduce the time required for producing wealth to any desired amount, so as to leave to everyone as much leisure as he or she may ask for ... they guarantee ... the happiness that can be found in the full and varied exercise of the different capacities of the human being, in work that need not be overwork."* [**Fields, Factories and Workshops Tomorrow**, pp. 198–9]

I.5 What could the social structure of anarchy look like?

The social and political structure of anarchy is similar to that of its economic structure, i.e., it is based on a voluntary federation of decentralised, directly democratic community assemblies (communes). In these grassroots political units and their confederations, the concept of ***"self-management"*** becomes that of ***"self-government"***, a form of municipal organisation in which people take back control of their living places from the bureaucratic state and the capitalist class whose interests it serves. Bakunin's comments are very applicable here:

> *"[A] truly popular organisation begins from below, from the association, from the commune. Thus starting out with the organisation of the lowest nucleus and proceeding upward, federalism becomes a political institution of socialism, the free and spontaneous organisation of popular life."* [**The Political Philosophy of Bakunin**, pp. 273–4]

"A new economic phase demands a new political phase," argued Kropotkin, *"A revolution as profound as that dreamed of by the socialists cannot accept the mould of an out-dated political life. A new society based on equality of condition, on the collective possession of the instruments of work, cannot tolerate for a week ... the representative system ... if we want the social revolution, we must seek a form of political organisation that will correspond to the new method of economic organisation ... The future belongs to the free groupings of interests and not to governmental centralisation; it belongs to freedom and not to authority."* [**Words of a Rebel**, pp. 143–4]

Thus the social structure of an anarchist society will be the opposite of the current system. Instead of being centralised and top-down as in the state, it will be decentralised and organised from the bottom up. As Kropotkin argued, *"socialism must become **more popular**, more communalistic, and less dependent upon indirect government through elected representatives. It must become more **self-governing.**"* [**Anarchism**, p. 185] In this, Kropotkin (like Bakunin) followed Proudhon who argued that *"[u]nless democracy is a fraud, and the sovereignty of the People a joke, it must be admitted that each citizen in the sphere of his [or her] industry, each municipal, district or provincial council within its own territory, is the only natural and legitimate representative of the Sovereign, and that therefore each locality should act directly and by itself in administering the interests which it includes, and should exercise full sovereignty in relation to them."* [**General Idea of the Revolution**, p. 276] While anarchists have various different conceptions of how this communal system would be constituted (as we will see), they is total agreement on these basic visions and principles.

The aim is *"to found an order of things wherein the principle of the sovereignty of the people, of man and of the citizen, would be implemented to the letter"* and *"where every member"* of a society *"retaining his independence and continuing to act as sovereign, would be self-governing"* and any social organisation *"would concern itself solely with collective matters; where as a consequence, there would be certain common matters but no centralisation."* This means that the *"federative, mutualist*

republican sentiment" (as summarised these days by the expression self-management) will *"bring about the victory of Worker Democracy right around the world."* [Proudhon, **Anarchism**, vol. 1, Robert Graham (ed.), p. 74 and p. 77]

This empowerment of ordinary citizens through decentralisation and direct democracy will eliminate the alienation and apathy that are now rampant and (as always happens when people are free) unleash a flood of innovation in dealing with the social breakdown now afflicting our world. The gigantic metropolis with its hierarchical and impersonal administration, its atomised and isolated "residents," will be transformed into a network of humanly scaled participatory communities, each with its own unique character and forms of self-government, which will be co-operatively linked through federation with other communities, from the municipal through the bio-regional to the global level.

This means that the social perspective of libertarian socialism is as distinctive as its economic vision. While mainstream socialism is marked by support for centralised states, anarchists stay true to socialism as equality and argue that means decentralisation. Thus socialism *"wears two distinct faces. When it is said that a man is a Socialist, it is implies that he regards the monopoly of private property in the means of production as the cause of the existing unequal distribution of wealth and its attendant ills ... Socialists are divided into the centralising and decentralising parties, the party of the State and the party of the federatic commune."* [Charlotte M. Wilson, **Anarchist Essays**, p. 37] Only such a federal, bottom-up, system can ensure people can manage their own fates and ensure genuine freedom and equality through mass participation and self-management.

Of course, it can (and has) been argued that people are just not interested in "politics." Further, some claim that this disinterest is why governments exist — people delegate their responsibilities and power to others because they have better things to do.

Such an argument, however, is flawed on empirical grounds. As we indicated in section B.2.6, centralisation of power in both the French and American revolutions occurred **because** the wealthy few thought that working class people were taking **too much** interest in politics and social issues, not the reverse (*"To attack the central power, to strip it of its prerogatives, to decentralise, to dissolve authority, would have been to abandon to the people the control of its affairs, to run the risk of a truly popular revolution. That is why the bourgeoisie sought to reinforce the central government even more..."* [Kropotkin, **Words of a Rebel**, p. 143]). Simply put, the state is centralised to facilitate **minority rule** by excluding the mass of people from taking part in the decision making processes within society. This is to be expected as social structures do not evolve by chance — rather they develop to meet specific needs and requirements. The specific need of the ruling class is to rule and that means marginalising the bulk of the population. Its requirement is for minority power and this is reflected in the structure of the state (see section H.3.7).

Even if we ignore the historical evidence on this issue, anarchists do not draw this conclusion from the current apathy that surrounds us. In fact, we argue that this apathy is not the cause of government but its result. Government is an inherently hierarchical system in which ordinary people are deliberately marginalised. The powerlessness people feel due to the workings of the system ensure that they are apathetic about it, thus guaranteeing that wealthy and powerful elites govern society without hindrance from the oppressed and exploited majority.

Moreover, government usually sticks its nose into areas that most people have no real interest in. Some things, as in the regulation of industry or workers' safety and rights, a free society could leave to those affected to make their own decisions (we doubt that workers would subject them-

selves to unsafe working conditions, for example). In others, such as the question of personal morality and acts, a free people would have no interest in (unless it harmed others, of course). This, again, would reduce the number of issues that would be discussed in a free commune. Also, via decentralisation, a free people would be mainly discussing local issues, so reducing the complexity of many questions and solutions. Wider issues would, of course, be discussed but these would be on specific issues and so more focused in their nature than those raised in the legislative bodies of the state. So, a combination of centralisation and an irrational desire to discuss every and all questions also helps make "politics" seem boring and irrelevant.

As noted above, this result is not an accident and the marginalisation of "ordinary" people is actually celebrated in bourgeois "democratic" theory. As Noam Chomsky notes:

> *"Twentieth century democratic theorists advise that 'The public must be put in its place,' so that the 'responsible men' may 'live free of the trampling and roar of a bewildered herd,' 'ignorant and meddlesome outsiders' whose 'function' is to be 'interested spectators of action,' not participants, lending their weight periodically to one or another of the leadership class (elections), then returning to their private concerns. (Walter Lippman). The great mass of the population, 'ignorant and mentally deficient,' must be kept in their place for the common good, fed with 'necessary illusion' and 'emotionally potent oversimplifications' (Wilson's Secretary of State Robert Lansing, Reinhold Niebuhr). Their 'conservative' counterparts are only more extreme in their adulation of the Wise Men who are the rightful rulers – in the service of the rich and powerful, a minor footnote regularly forgotten."* [**Year 501**, p. 18]

This marginalisation of the public from political life ensures that the wealthy can be *"left alone"* to use their power as they see fit. In other words, such marginalisation is a necessary part of a fully functioning capitalist society and so libertarian social structures have to be discouraged. Or as Chomsky put it, the *"rabble must be instructed in the values of subordination and a narrow quest for personal gain within the parameters set by the institutions of the masters; meaningful democracy, with popular association and action, is a threat to be overcome."* [**Op. Cit.**, p. 18] This philosophy can be seen in the statement of a US Banker in Venezuela under the murderous Jimenez dictatorship:

> *"You have the freedom here to do whatever you want to do with your money, and to me, that is worth all the political freedom in the world."* [quoted by Chomsky, **Op. Cit.**, p. 99]

Deterring libertarian alternatives to statism is a common feature of our current system. By marginalising and disempowering people, the ability of individuals to manage their own social activities is undermined and weakened. They develop a "fear of freedom" and embrace authoritarian institutions and "strong leaders", which in turn reinforces their marginalisation.

This consequence is hardly surprising. Anarchists maintain that the desire to participate and the ability to participate are in a symbiotic relationship: participation builds on itself. By creating the social structures that allow participation, participation will increase. As people increasingly take control of their lives, so their ability to do so also increases. The challenge of having to take responsibility for decisions that make a difference is at the same time an opportunity for

personal development. To begin to feel power, having previously felt powerless, to win access to the resources required for effective participation and learn how to use them, is a liberating experience. Once people become active subjects, making things happen in one aspect of their lives, they are less likely to remain passive objects, allowing things to happen to them, in other aspects.

All in all, "politics" is far too important an subject to leave to politicians, the wealthy and bureaucrats. After all, it is (or, at least, it should be) what affects, your friends, community, and, ultimately, the planet you live on. Such issues cannot be left to anyone but you.

Hence a meaningful communal life based on self-empowered individuals is a distinct possibility (indeed, it has repeatedly appeared throughout history). It is the hierarchical structures in statism and capitalism, marginalising and disempowering the majority, which is at the root of the current wide scale apathy in the face of increasing social and ecological disruption. Libertarian socialists therefore call for a radically new form of political system to replace the centralised nation-state, a form that would be based around confederations of self-governing communities: *"**Society is a society of societies; a league of leagues of leagues; a commonwealth of commonwealths of commonwealths; a republic of republics of republics.** Only there is freedom and order, only there is spirit, a spirit which is self-sufficiency and community, unity and independence."* [Gustav Landauer, **For Socialism**, pp. 125–126]

To create such a system would require dismantling the nation-state and reconstituting relations between communities on the basis of self-determination and free and equal confederation from below. In the following subsections we will examine in more detail why this new system is needed and what it might look like. As we have stressed repeatedly, these are just suggestions of possible anarchist solutions to social organisation. Most anarchists recognise that anarchist communities will co-exist with non-anarchist ones after the destruction of the existing state. As we are anarchists we are discussing anarchist visions. We will leave it up to non-anarchists to paint their own pictures of a possible future.

I.5.1 What are participatory communities?

A key concept in anarchist thought is that of the participatory community. Traditionally, these participatory communities are called **communes** in anarchist theory (*"The basic social and economic cell of the anarchist society is the free, independent commune"* [A. Grachev, quoted by Paul Avrich, **The Anarchists in the Russian Revolution**, p. 64]).

The reason for the use of the term commune is due to anarchism's roots in France where it refers to the lowest level of administrative division in the Republic. In France, a commune can be a city of 2 million inhabitants (hence the Paris Commune of 1871); a town of 10,000; or just a 10-person hamlet. It appeared in the 12th century from Medieval Latin **communia**, which means a gathering of people sharing a common life (from Latin **communis**, things held in common). Proudhon used the term to describe the social units of a non-statist society and subsequent anarchists like Bakunin and Kropotkin followed his lead. As the term "commune", since the 1960s, often refers to "intentional communities" where people drop out of society and form their own counter-cultural groups and living spaces we have, in order to avoid confusion, decided to use "participatory community" as well (anarchists have also used other terms, including *"free municipality"*).

These community organisations are seen as the way people participate in the decisions that affect them and their neighbourhoods, regions and, ultimately, planet. These are the means for transforming our social environment from one disfigured by economic and political power and its needs to one fit for human beings to life and flourish in. The creation of a network of participatory communities ("communes") based on self-government through direct, face-to-face democracy in grassroots neighbourhood assemblies is the means to that end. As we argued in section I.2.3 such assemblies will be born in social struggle and so reflect the needs of the struggle and those within it so our comments here must be considered as generalisations of the salient features of such communities and **not** blue-prints.

Within anarchist thought, there are two main conceptions of the free commune. One vision is based on workplace delegates, the other on neighbourhood assemblies. We will sketch each in turn.

The first type of participatory community (in which *"the federative Alliance of all working men's associations ... will constitute the commune"*) is most associated with Bakunin. He argued that the *"future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in communes, regions, nations and finally in a great federation, international and universal."* [**Michael Bakunin: Selected Writings**, p. 170 and p. 206] This vision was stressed by later anarchist thinkers. For example, Spanish anarchist Issac Puente thought that in towns and cities *"the part of the free municipality is played by local federation ... Ultimate sovereignty in the local federation of industrial unions lies with the general assembly of all local producers."* [**Libertarian Communism**, p. 27] The Russian anarchist G. P. Maximoff saw the *"communal confederation"* as being *"constituted by thousands of freely acting labour organisations."* [**The Program of Anarcho-Syndicalism**, p. 43]

This vision of the commune was created during many later revolutions (such as in Russia in 1905 and 1917 as well as Hungary in 1956). Being based on workplaces, this form of commune has the advantage of being based on groups of people who are naturally associated during most of the day (Bakunin considered workplace bodies as *"the natural organisation of the masses"* as they were *"based on the various types of work"* which *"define their actual day-to-day life"* [**The Basic Bakunin**, p. 139]). This would facilitate the organisation of assemblies, discussion on social, economic and political issues and the mandating and recalling of delegates. Moreover, it combines political and economic power in one organisation, so ensuring that the working class actually manages society.

Other anarchists counterpoise neighbourhood assemblies to workers' councils. These assemblies will be general meetings open to all citizens in every neighbourhood, town, and village, and will be the source of public policy for all levels of confederal co-ordination. Such "town meetings" will bring people directly into the political process and give them an equal voice in the decisions that affect their lives. Such anarchists point to the experience of the French Revolution of 1789 and the *"sections"* of the Paris Commune as the key example of *"a people governing itself directly — when possible — without intermediaries, without masters."* It is argued, based on this experience, that *"the principles of anarchism ... dated from 1789, and that they had their origin, not in theoretical speculations, but in the **deeds** of the Great French Revolution."* [Peter Kropotkin, **The Great French Revolution**, vol. 1, p. 210 and p. 204] Anarchists also point to the clubs created during the 1848 Revolution in France and in the Paris Commune of 1871 not to mention the community assemblies created in Argentina during the revolt against neo-liberalism at the start of the 21st century.

Critics of workers' councils point out that not all people work in traditional workplaces (many are parents who look after children, for example). By basing the commune around the workplace, such people are automatically excluded. Moreover, in most modern cities many people do not live near where they work. It would mean that local affairs could not be effectively discussed in a system of workers' councils as many who take part in the debate are unaffected by the decisions reached. In addition, some anarchists argue that workplace based systems automatically generate "special interests" and so exclude community issues. Only community assemblies can *"transcend the traditional special interests of work, workplace, status, and property relations, and create a **general** interest based on shared community problems."* [Murray Bookchin, **From Urbanisation to Cities**, p. 254]

However, such communities assemblies can only be valid if they can be organised rapidly in order to make decisions and to mandate and recall delegates. In the capitalist city, many people work far from where they live and so such meetings have to be called for after work or at weekends (thus the key need is to reduce the working day/week and to communalise industry). For this reason, many anarchists continue to support the workers' council vision of the commune, complemented by community assemblies for those who live in an area but do not work in a traditional workplace (e.g. parents bringing up small children, the old, the sick and so on). It should be noted that this is something which the supporters of workers' councils **have** noticed and some argue for councils which are delegates from both the inhabitants **and** the enterprises of an area.

These positions are not hard and fast divisions, far from it. Puente, for example, thought that in the countryside the dominant commune would be *"all the residents of a village or hamlet meeting in an assembly (council) with full powers to administer local affairs."* [**Op. Cit.**, p. 25] Kropotkin supported the soviets of the Russian Revolution, arguing that the *"idea of soviets ... of councils of workers and peasants ... controlling the economic and political life of the country is a great idea. All the more so, since it necessarily follows that these councils should be composed of all who take part in the production of natural wealth by their own efforts."* [**Anarchism**, p. 254]

Which method, workers' councils or community assemblies, will be used in a given community will depend on local conditions, needs and aspirations and it is useless to draw hard and fast rules. It is likely that some sort of combination of the two approaches will be used, with workers' councils being complemented by community assemblies until such time as a reduced working week and decentralisation of urban centres make purely community assemblies the more realistic option. It is likely that in a fully libertarian society, community assemblies will be the dominant communal organisation but in the period immediately after a revolution this may not be immediately possible. Objective conditions, rather than predictions, will be the deciding factor. Under capitalism, anarchists pursue both forms of organisation, arguing for community **and** industrial unionism in the class struggle (see sections J.5.1 and J.5.2).

Regardless of the exact make up of the commune, it has certain key features. It would be free a association, based upon the self-assumed obligation of those who join them. In free association, participation is essential simply because it is the **only** means by which individuals can collectively govern themselves (and unless they govern themselves, someone else will). *"As a unique individual,"* Stirner argued, *"you can assert yourself alone in association, because the association does not own you, because you are one who owns it or who turns it to your own advantage."* The rules governing the association are determined by the associated and can be changed by them (and so a vast improvement over "love it or leave") as are the policies the association follows.

Thus, the association *"does not impose itself as a spiritual power superior to my spirit. I have no wish to become a slave to my maxims, but would rather subject them to my ongoing criticism."* [Max Stirner, **No Gods, No Masters**, vol. 1, p. 17]

Thus participatory communities are freely joined and self-managed by their members with no division between order givers and order takers as exists within the state. Rather the associated govern themselves and while the assembled people collectively decide the rules governing their association, and are bound by them as individuals, they are also superior to them in the sense that these rules can always be modified or repealed (see section A.2.11 for more details). As can be seen, a participatory commune is new form of social life, radically different from the state as it is decentralised, self-governing and based upon individual autonomy and free agreement. Thus Kropotkin:

> *"The representative system was organised by the bourgeoisie to ensure their domination, and it will disappear with them. For the new economic phase that is about to begin we must seek a new form of political organisation, based on a principle quite different from that of representation. The logic of events imposes it."* [**Words of a Rebel**, p. 125]

This *"new form of political organisation has to be worked out the moment that socialistic principles shall enter our life. And it is self-evident that this new form will have to be* ***more popular, more decentralised, and nearer to the folk-mote self-government*** *than representative government can ever be."* Kropotkin, like all anarchists, considered the idea that socialism could be created by taking over the current state or creating a new one as doomed to failure. Instead, he recognised that socialism would only be built using new organisations that reflect the spirit of socialism (such as freedom, self-government and so on). He, like Proudhon and Bakunin before him, therefore argued that *"**[t]his was the form that the social revolution must take** — the independent commune... [whose] inhabitants have decided that they **will** communalise the consumption of commodities, their exchange and their production."* [Kropotkin, **Anarchism**, p. 184 and p. 163]

In a nutshell, a participatory community is a free association, based upon the mass assembly of people who live in a common area, the means by which they make the decisions that affect them, their communities, bio-regions and the planet. Their essential task is to provide a forum for raising public issues and deciding upon them. Moreover, these assemblies will be a key way of generating a community (and community spirit) and building and enriching social relationships between individuals and, equally important, of developing and enriching individuals by the very process of participation in communal affairs. By discussing, thinking and listening to others, individuals develop their own abilities and powers while at the same time managing their own affairs, so ensuring that no one else does (i.e. they govern themselves and are no longer governed from above by others). As Kropotkin argued, self-management has an educational effect on those who practice it:

> *"The 'permanence' of the general assemblies of the sections — that is, the possibility of calling the general assembly whenever it was wanted by the members of the section and of discussing everything in the general assembly... will educate every citizen politically... The section in permanence — the forum always open — is the only way ... to assure an honest and intelligent administration."* [**The Great French Revolution**, vol. 1, pp. 210–1]

As well as integrating the social life of a community and encouraging the political and social development of its members, these free communes will also be integrated into the local ecology. Humanity would life in harmony with nature as well as with itself — as discussed in section E.2, these would be **eco**-communities part of their local eco-systems with a balanced mix of agriculture and industry (as described by Kropotkin in his classic work **Fields, Factories and Workshops**). Thus a free commune would aim to integrate the individual into social and communal life, rural and urban life into a balanced whole and human life into the wider ecology. In this way the free commune would make human habitation fully ecological, ending the sharp and needless (and dehumanising and de-individualising) division of human life from the rest of the planet. The commune will be a key means of the expressing diversity within humanity and the planet as well as improving the quality of life in society:

> *"The Commune ... will be entirely devoted to improving the communal life of the locality. Making their requests to the appropriate Syndicates, Builders', Public Health, Transport or Power, the inhabitants of each Commune will be able to gain all reasonable living amenities, town planning, parks, play-grounds, trees in the street, clinics, museums and art galleries. Giving, like the medieval city assembly, an opportunity for any interested person to take part in, and influence, his town's affairs and appearance, the Commune will be a very different body from the borough council ...*
>
> *"In ancient and medieval times cities and villages expressed the different characters of different localities and their inhabitants. In redstone, Portland or granite, in plaster or brick, in pitch of roof, arrangements of related buildings or patterns of slate and thatch each locality added to the interests of travellers ... each expressed itself in castle, home or cathedral.*
>
> *"How different is the dull, drab, or flashy ostentatious monotony of modern England. Each town is the same. The same Woolworth's, Odeon Cinemas, and multiple shops, the same 'council houses' or 'semi-detached villas' ... North, South, East or West, what's the difference, where is the change?*
>
> *"With the Commune the ugliness and monotony of present town and country life will be swept away, and each locality and region, each person will be able to express the joy of living, by living together."* [Tom Brown, **Syndicalism**, p. 59]

The size of the neighbourhood assemblies will vary, but it will probably fluctuate around some ideal size, discoverable in practice, that will provide a viable scale of face-to-face interaction and allow for both a variety of personal contacts. This suggests that any town or city would itself be a confederation of assemblies — as was, of course, practised very effectively in Paris during the Great French Revolution.

Such assemblies would meet regularly, at the very least monthly (probably more often, particularly during periods which require fast and frequent decision making, like a revolution) and deal with a variety of issues. In the words of the CNT's resolution on libertarian communism:

> *"the foundation of this administration will be the commune. These communes are to be autonomous and will be federated at regional and national levels to achieve their general goals. The right to autonomy does not preclude the duty to implement agreements regarding collective benefits ... [A] commune without any voluntary restrictions*

will undertake to adhere to whatever general norms may be agreed by majority vote after free debate ... the commune is to be autonomous and confederated with the other communes ... the commune will have the duty to concern itself with whatever may be of interest to the individual.

"It will have to oversee organising, running and beautification of the settlement. It will see that its inhabitants are housed and that items and products be made available to them by the producers' unions or associations.

"Similarly, it is to concern itself with hygiene, the keeping of communal statistics and with collective requirements such as education, health services and with the maintenance and improvement of local means of communication.

"It will orchestrate relations with other communes and will take care to stimulate all artistic and cultural pursuits.

"So that this mission may be properly fulfilled, a communal council is to be appointed ... None of these posts will carry any executive or bureaucratic powers ... [its members] will perform their role as producers coming together in session at the close of the day's work to discuss the detailed items which may not require the endorsement of communal assemblies.

"Assemblies are to be summoned as often as required by communal interests, upon the request of the communal council or according to the wishes of the inhabitants of each commune ... The inhabitants of a commune are to debate among themselves their internal problems." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, pp. 106–7]

Thus the communal assembly discusses that which affects the community and those within it. As these local community associations will be members of larger communal bodies, the communal assembly will also discuss issues which affect wider areas, as indicated, and mandate their delegates to discuss them at confederation assemblies. This system, we must note, was applied with great success during numerous revolutions (see section J.5.4) and so cannot be dismissed as wishful thinking.

However, of course, the actual framework of a free society will be worked out in practice. As Bakunin correctly argued, society *"can, and must, organise itself in a different fashion [than what came before], but not from top to bottom and according to an ideal plan"* [**Michael Bakunin: Selected Writings**, p. 205] What does seem likely is that confederations of communes will be required. We turn to this in the next section.

I.5.2 Why are confederations of participatory communities needed?

Since not all issues are local, the community assemblies will also elect mandated and recallable delegates to the larger-scale units of self-government in order to address issues affecting urban districts, the city or town as a whole, the county, the bio-region, and ultimately the entire planet. Thus the assemblies will confederate at several levels in order to develop and co-ordinate common

policies to deal with common problems. In the words of the CNT's resolution on libertarian communism:

> *"The inhabitants of a commune are to debate among themselves their internal problems ... Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes.*
>
> *"If, say, roads have to be built to link villages of a county or any matter arises to do with transportation and exchange of produce between agricultural and industrial counties, then naturally every commune which is implicated will have its right to have its say.*
>
> *"On matters of a regional nature, it is the duty of the regional federation to implement agreements which will represent the sovereign will of all the region's inhabitants. So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation.*
>
> *"Similarly, discussion of all problems of a national nature shall follow a like pattern ...* " [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, p. 107]

In other words, the commune *"cannot any longer acknowledge any superior: that, above it, there cannot be anything, save the interests of the Federation, freely embraced by itself in concert with other Communes."* [Kropotkin, **No Gods, No Masters**, vol. 1, p. 259]

Federalism is applicable at all levels of society. As Kropotkin pointed out, anarchists *"understand that if no central government was needed to rule the independent communes, if national government is thrown overboard and national unity is obtained by free federation, then a central* ***municipal*** *government becomes equally useless and noxious. The same federative principle would do within the commune."* [**Anarchism**, pp. 163–164] Thus the whole of society would be a free federation, from the local community right up to the global level. And this free federation would be based squarely on the autonomy and self-government of local groups. With federalism, co-operation replaces coercion.

This need for co-operation does not imply a centralised body. To exercise your autonomy by joining self-managing organisations and, therefore, agreeing to abide by the decisions you help make is not a denial of that autonomy (unlike joining a hierarchical structure, where you forsake autonomy **within** the organisation). In a **centralised** system, we must stress, **power** rests at the top and the role of those below is simply to obey (it matters not if those with the power are elected or not, the principle is the same). In a **federal** system, power is **not** delegated into the hands of a few (obviously a "federal" government or state is a centralised system). Decisions in a federal system are made at the base of the organisation and flow upwards so ensuring that power remains decentralised in the hands of all. Working together to solve common problems and organise common efforts to reach common goals is not centralisation and those who confuse the two make a serious error — they fail to understand the different relations of authority each generates and confuse obedience with co-operation.

As in the economic federation of syndicates, the lower levels will control the higher, thus eliminating the current pre-emptive powers of centralised government hierarchies. Delegates to higher-level co-ordinating councils or conferences will be instructed, at every level of confederation, by the assemblies they come from on how to deal with any issues. These instructions

will be binding, committing delegates to a framework of policies within which they must act and providing for their recall and the nullification of their decisions if they fail to carry out their mandates. Delegates may be selected by election and/or sortition (i.e. random selection by lot, as for jury duty currently). As Murray Bookchin argued:

> *"A confederalist view involves a clear distinction between policy making and the co-ordination and execution of adopted policies. Policy making is exclusively the right of popular community assemblies based on the practices of participatory democracy. Administration and co-ordination are the responsibility of confederal councils, which become the means for interlinking villages, towns, neighbourhoods, and cities into confederal networks. Power flows from the bottom up instead of from the top down, and in confederations, the flow of power from the bottom up diminishes with the scope of the federal council ranging territorially from localities to regions and from regions to ever-broader territorial areas."* [**From Urbanisation to Cities**, p. 253]

Thus the people will have the final word on policy, which is the essence of self-government, and each citizen will have his or her turn to participate in the co-ordination of public affairs. In other words, self-government will be the people themselves organised in their community assemblies and their confederal co-ordinating councils, with any delegates limited to implementing policy formulated by the people. Such policies will still be subject to approval by the neighbourhood and community assemblies through their right to recall their delegates and revoke their decisions. Needless to say, the higher the confederation the less often it would meet and the less it would have to consider in terms of issues to decide. On such a level, only the most general issues and decisions could be reached (in effect, only guidelines which the member confederations would apply as they saw fit).

In such a system there will, undoubtedly, be the need for certain individuals to be allocated certain tasks to do. We stress the word "tasks" because their work is essentially administrative in nature, without power. For example, an individual or a group of individuals may be elected to look into alternative power supplies for a community and report back on what they discover. They cannot impose their decision **onto** the community as they do not have the power to do so. They simply present their findings to the body which had mandated them. These findings are **not** a law which the electors are required to follow, but a series of suggestions and information from which the assembled people chose what they think is best. Or, to use another example, someone may be elected to overlook the installation of a selected power supply but the decision on what power supply to use and which specific project to implement has been decided upon by the whole community. Similarly with any delegate elected to a confederal council.

The scales and levels of confederation can only be worked out in practice. In general, it would be safe to say that confederations would be needed on a wide scale, starting with towns and cities and then moving onto regional and other levels. No village, town or city could be self-sufficient nor would desire to be — communication and links with other places are part and parcel of life and anarchists have no desire to retreat back into an isolated form of localism:

> *"No community can hope to achieve economic autarchy, nor should it try to do so. Economically, the wide range of resources that are needed to make many of our widely used goods preclude self-enclosed insularity and parochialism. Far from being a liability, this interdependence among communities and regions can well be regarded as*

> *an asset — culturally as well as politically ... Divested of the cultural cross-fertilisation that is often a product of economic intercourse, the municipality tends to shrink into itself and disappear into its own civic privatism. Shared needs and resources imply the existence of sharing and, with sharing, communication, rejuvenation by new ideas, and a wider social horizon that yields a wider sensibility to new experiences."* [Bookchin, **Op. Cit.**, p. 237]

Combined with this consideration, we must also raise the issue of economies of scale. A given level of confederation may be required to make certain social and economic services efficient (we are thinking of economies of scale for such social needs as universities, hospitals, and cultural institutions). While every commune may have a doctor, nursery, local communal stores and small-scale workplaces, not all can have a university, hospital, factories and so forth. These would be organised on a wider level, so necessitating the appropriate confederation to exist to manage them. Ties between bio-regions or larger territories based on the distribution of such things as geographically concentrated mineral deposits, climate dependent crops, and production facilities that are most efficient when concentrated in one area will unite communities confederally on the basis of common material needs as well as values.

This means that the scale and level of the confederations created by the communes will be varied and extensive. It would be hard to generalise about them, particularly as different confederations will exist for different tasks and interests. Moreover, any system of communes would start off based on the existing villages, towns and cities of capitalism. That is unavoidable and will, of course, help determine the initial scale and level of confederations.

In urban areas, the town or city would have to be broken down into confederations and these confederations would constitute the town or city assembly of delegates. Given a huge city like London, New York or Mexico City it would be impossible to organise in any other way. Smaller towns would probably be able to have simpler confederations. We must stress that few, if any, anarchists consider it desirable to have huge cities in a free society and one of the major tasks of social transformation will be to break the metropolis into smaller units, integrated with the local environment. However, a social revolution will take place in these vast metropolises and so we have to take them into account in our discussion.

In summary, the size and scale of confederations will depend on practical considerations, based on what people found were optimal sizes for their neighbourhood assemblies and the needs of co-operation between them, towns, cities, regions and so on. We cannot, and have no wish, to predict the development of a free society. Therefore the scale and levels of confederation will be decided by those actually creating an anarchist world although it is almost certain that levels of confederation would be dependent on the number of delegates required. After a certain number, the confederation assembly may became difficult to manage, so implying that another level of confederation is required. This would, undoubtedly, be the base for determining the scale and level of confederation, ensuring that any confederal assembly can actually manage its activities and remain under the control of lower levels.

Finally, confederations are required to ensure solidarity can be expressed in the unlikely situation of local oppression. After all, history is full of local communities which have been oppressive to minorities within them (most obviously, the American South) and so confederation is required so that members of any such minority can appeal for help and mutual aid to end its domination. Equally, though, confederation is needed to ensure that local communes can experiment and try

out new ideas without having to wait until the majority agree to it as would be required in a centralised system.

Thus confederations of communes are required to co-ordinate joint activity and discuss common issues and interests. It is also required to protect individual, community and social freedom as well as allowing social experimentation and protecting the distinctiveness, dignity, freedom and self-management of communities and so society as a whole. Thus *"socialism is federalist"* and *"true federalism, the political organisation of socialism, will be attained only when these popular grass-roots institutions [namely,* "communes, industrial and agricultural associations"*] are organised in progressive stages from the bottom up."* [Bakunin, **Bakunin on Anarchism**, p. 402]

I.5.3 Would confederations produce bureaucrats and politicians?

Of course, **any** organisation holds the danger that the few who have been given tasks to perform could misuse their position for personal benefit or, over time, evolve into a bureaucracy with power over the rest of society. As such, some critics of social anarchism suggest that a system of communes and confederations would simply be a breeding ground for politicians and bureaucrats. This is obviously the case with the state and many generalise from this experience for **all** forms of social organisation, including the anarchist commune.

While recognising that this **is** a danger, anarchists are sure that such developments are unlikely in an anarchy. This is because, based on our analysis and critique of the state, we have long argued for various institutional arrangements which reduce the danger of such things developing. These include electing delegates rather than representatives, giving these delegates a binding mandate and subjecting them to instant recall by their electors. They would **not**, in general, be paid and so, in other words, delegates are expected, as far as possible, to remain in their current communities and conduct their communal tasks after their usual work. For the few exceptions to this that may occur, delegates would receive the average pay of their commune, in mutualism and collectivism or, in communism, no special access to communal resources. Moreover, it seems likely that regular rotation of delegates would be utilised and, perhaps, random selection as happens in jury duty today in many countries. Lastly, communes could leave any confederation if its structure was becoming obviously misshapen and bureaucratic.

By these methods, delegates to communal bodies would remain under the control of their electors and not, as in the state, become their masters. Moreover, anarchists have stressed that any communal body must be a working organisation. This will reduce bureaucratic tendencies as implementing tasks will be done by elected delegates rather than faceless (and usually unelected) bureaucrats. This means, as Bakunin put it in 1868, that *"the Communal Council"* (made up of delegates *"with binding mandates and accountable and revocable at all times"*) would create *"separate executive committees from among its membership for each branch of the Commune's revolutionary administration."* [Bakunin, **No Gods, No Masters**, vol. 1, p. 155] Thus would no longer be a body of people, a government, separate from the delegates of the people. This, it should be noted, echoed Proudhon's comments from 1848:

> *"It is up to the National Assembly, through organisation of its committees, to exercise executive power, just the way it exercises legislative power ... Besides universal suffrage and as a consequence of universal suffrage, we want implementation of the binding mandate. Politicians balk at it! Which means that in their eyes, the people, in electing*

representatives, do not appoint mandatories but rather abjure their sovereignty! That is assuredly not socialism: it is not even democracy." [**Op. Cit.**, p. 63]

Due to mandating and recall, any delegate who starts to abuse their position or even vote in ways opposed to by the communal assembly would quickly be recalled and replaced. As such a person may be an elected delegate of the community but that does not mean that they have power or authority (i.e., they are **not** a representative but rather a delegate). Essentially they are an agent of the local community who is controlled by, and accountable to, that community. Clearly, such people are unlike politicians. They do not, and cannot, make policy decisions on behalf of (i.e., govern) those who elected them — they are not given power to make decisions for people. In addition, people in specific organisations or with specific tasks will be rotated frequently to prevent a professionalisation of politics and the problem of politicians being largely on their own once elected. And, of course, they will continue to work and live with those who elected them and receive no special privileges due to their election (in terms of more income, better housing, and so on). This means that such delegates would be extremely unlikely to turn into representatives or bureaucrats as they would be under the strict control of the organisations that elected them to such posts. As Kropotkin argued, the general assembly of the community *"in permanence — the forum always open — is the only way .. . to assure an honest and intelligent administration"* as it is based upon *"**distrust of all executive powers.**"* [**The Great French Revolution**, Vol. 1, p. 211]

The current means of co-ordinating wide scale activity — centralism via the state — is a threat to freedom as, to quote Proudhon, *"the citizen divests himself of sovereignty, the town and the Department and province above it, absorbed by central authority, are no longer anything but agencies under direct ministerial control." "The Consequences"* he continued, *"soon make themselves felt: the citizen and the town are deprived of all dignity, the state's depredations multiply, and the burden on the taxpayer increases in proportion. It is no longer the government that is made for the people; it is the people who are made for the government. Power invades everything, dominates everything, absorbs everything."* [**The Principle of Federation**, p. 59] In such a regime, the generation of a specific caste of politicians and bureaucrats is inevitable.

Moreover, *"[t]he principle of political centralism is openly opposed to all laws of social progress and of natural evolution. It lies in the nature of things that every cultural advance is first achieved within a small group and only gradually finds adoption by society as a whole. Therefore, political decentralisation is the best guaranty for the unrestricted possibilities of new experiments. For such an environment each community is given the opportunity to carry through the things which it is capable of accomplishing itself without imposing them on others. Practical experimentation is the parent of ever development in society. So long as each distinct is capable of effecting the changes within its own sphere which its citizens deem necessary, the example of each becomes a fructifying influence on the other parts of the community since they will have the chance to weigh the advantages accruing from them without being forced to adopt them if they are not convinced of their usefulness. The result is that progressive communities serve the others as models, a result justified by the natural evolution of things."* [Rudolf Rocker, **Pioneers of American Freedom**, pp. 16–7] The contrast with centralisation of the state could not be more clear. Rocker continued:

> *"In a strongly centralised state, the situation is entirely reversed and the best system of representation can do nothing to change that. The representatives of a certain district*

> *may have the overwhelming majority of a certain district on his [or her] side, but in the legislative assembly of the central state, he [or she] will remain in the minority, for it lies in the nature of things that in such a body not the intellectually most active but the most backward districts represent the majority. Since the individual district has indeed the right to give expression of its opinion, but can effect no changes without the consent of the central government, the most progressive districts will be condemned to stagnate while the most backward districts will set the norm."* [**Op. Cit.**, p. 17]

Little wonder anarchists have always stressed what Kropotkin termed *"local action"* and considered the libertarian social revolution as *"proceed[ing] by proclaiming independent Communes which Communes will endeavour to accomplish the economic transformation within ... their respective surroundings."* [Peter Kropotkin, **Act For Yourselves**, p. 43] Thus the advanced communities will inspire the rest to follow them by showing them a practical example of what is possible. Only decentralisation and confederation can promote the freedom and resulting social experimentation which will ensure social progress and make society a good place to live.

Moreover, confederation is required to maximise self-management and reduce the possibility that delegates will become isolated from the people who mandated them. As Rocker explained:

> *"In a smaller community, it is far easier for individuals to observe the political scene and become acquainted with the issues which have to be resolved. This is quite impossible for a representative in a centralised government. Neither the single citizen nor his [or her] representative is completely or even approximately to supervise the huge clockwork of the central state machine. The deputy is forced daily to make decisions about things of which he [or she] has no personal knowledge and for the appraisal of which he must therefore depend on others [i.e. bureaucrats and lobbyists]. That such a system necessarily leads to serious errors and mistakes is self-evident. And since the citizen for the same reason is not able to inspect and criticise the conduct of his representative, the class of professional politicians is given added opportunity to fish in troubled waters."* [**Op. Cit.**, p. 17–18]

These principles, it must be stressed, have worked well on a mass scale For example, this is how anarcho-syndicalist unions operate and, as was the case with the CNT in Spain in the 1930s, worked well with over one million members. There were also successfully applied during the Spanish Revolution and the federations of collectives produced by it.

So the way communes and confederations are organised protect society and the individual against the dangers of centralisation, from the turning of delegates into representatives and bureaucrats. As Bakunin stressed, there are two ways of organising society, *"as it is today, from high to low and from the centre to circumference by means of enforced unity and concentration"* and the way of the future, by federalism *"starting with the free individual, the free association and the autonomous commune, from low to high and from circumference to centre, by means of free federation."* [**Michael Bakunin: Selected Writings**, p. 88] In other words, *"the organisation of society from the bottom up."* [**The Basic Bakunin**, p. 131] This suggests that a free society will have little to fear in way of its delegates turning into politicians or bureaucrats as it includes the necessary safeguards (election, mandates, recall, decentralisation, federalism, etc.) which will reduce such developments to a small, and so manageable, level (if not eliminate it totally).

I.5.4 How will anything ever be decided by all these meetings?

Anarchists have little doubt that the confederal structure will be an efficient means of decision making and will not be bogged down in endless meetings. We have various reasons for thinking this. After all, as Murray Bookchin once noted, *"[h]istory does provide us with a number of working examples of forms that are largely libertarian. It also provides us with examples of confederations and leagues that made the co-ordination of self-governing communities feasible without impinging on their autonomy and freedom."* [**The Ecology of Freedom**, p. 436]

Firstly, we doubt that a free society will spend all its time in assemblies or organising confederal conferences. Certain questions are more important than others and few anarchists desire to spend all their time in meetings. The aim of a free society is to allow individuals to express their desires and wants freely — they cannot do that if they are continually at meetings (or preparing for them). So while communal and confederal assemblies will play an important role in a free society, do not think that they will be occurring all the time or that anarchists desire to make meetings the focal point of individual life. Far from it!

Thus communal assemblies may occur, say, once a week, or fortnightly or monthly in order to discuss truly important issues. There would be no real desire to meet continuously to discuss every issue under the sun and few people would tolerate this occurring. This would mean that such meetings would current regularly and when important issues needed to be discussed, **not** continuously (although, if required, continuous assembly or daily meetings may have to be organised in emergency situations but this would be rare). Nor is it expected that everyone will attend every meeting for *"[w]hat is decisive, here, is the principle itself: the freedom of the individual to participate, not the compulsive need to do so."* [**Op. Cit.**, p. 435] This suggests that meetings will be attended by those with a specific interest in an issue being discussed and so would be focused as a result.

Secondly, it is extremely doubtful that a free people would desire waste vast amounts of time at such meetings. While important and essential, communal and confederal meetings would be functional in the extreme and not forums for hot air. It would be the case that those involved in such meetings would quickly make their feelings known to time wasters and those who like the sound of their own voices. Thus Cornelius Castoriadis:

> *"It might be claimed that the problem of numbers remains and that people never would be able to express themselves in a reasonable amount of time. This is not a valid argument. There would rarely be an assembly over twenty people where everyone would want to speak, for the very good reason that when there is something to be decided upon there are not an infinite number of options or an infinite number of arguments. In unhampered rank-and-file workers' gatherings (convened, for instance, to decide on a strike) there have never been 'too many' speeches. The two or three fundamental opinions having been voiced, and various arguments exchanged, a decision is soon reached.*
>
> *"The length of speeches, moreover, often varies inversely with the weight of their content. Russian leaders sometimes talk on for four hours at Party Congresses without saying anything ... For an account of the laconicism of revolutionary assemblies, see Trotsky's account of the Petrograd soviet of 1905 — or accounts of the meetings of factory representatives in Budapest in 1956."* [**Political and Social Writings**, vol. 2, pp. 144–5]

As we shall see below, this was definitely the case during the Spanish Revolution as well.

Thirdly, as these assemblies and congresses are concerned purely with joint activity and co-ordination. Different associations and syndicates have a functional need for co-operation and so would meet more regularly and take action on practical activity which affects a specific section of a community or group of communities. Not every issue that a member of a community is interested in is necessarily best discussed at a meeting of all members of a community or at a confederal conference. As Herbert Read suggested, anarchism *"proposes to liquidate the bureaucracy first by federal devolution"* and so *"hands over to the syndicates all ... administrative functions"* related to such things as *"transport, and distribution, health and education."* [**Anarchy and Order**, p. 101] Such issues will be mainly discussed in the syndicates involved and so community discussion would be focused on important issues and themes of general policy rather than the specific and detailed laws discussed and implemented by politicians who know nothing about the issues or industries at hand.

By reducing conferences to functional bodies based on concrete issues, the problems of endless discussions can be reduced, if not totally eliminated. In addition, as functional groups would exist outside of these communal confederations (for example, industrial collectives would organise conferences about their industry with invited participants from consumer groups), there would be a limited agenda in most communal get-togethers.

In other words, communal assemblies and conferences will have specific, well defined agendas, and so there is little danger of "politics" (for want of a better word!) taking up everyone's time. Hence, far from discussing abstract laws and pointless motions on everything under the sun and on which no one actually knows much about, the issues discussed in these conferences will be on specific issues which are important to those involved. In addition, the standard procedure may be to elect a sub-group to investigate an issue and report back at a later stage with recommendations. The conference can change, accept, or reject any proposals. As Kropotkin argued, anarchy would be based on *"free agreement, by exchange of letters and proposals, and by congresses at which delegates met to discuss well specified points, and to come to an agreement about them, but not to make laws. After the congress was over, the delegates [would return] ... not with a law, but with the draft of a contract to be accepted or rejected."* [**Conquest of Bread**, p. 131]

Is this system fantasy? Given that such a system has existed and worked at various times, we can safely argue that it is not. Obviously we cannot cover **every** example, so we point to just two — revolutionary Paris and Spain.

As Murray Bookchin points out, Paris *"in the late eighteenth century was, by the standards of that time, one of the largest and economically most complex cities in Europe: its population approximated a million people ... Yet in 1793, at the height of the French Revolution, the city was managed* ***institutionally*** *almost entirely by [48] citizen assemblies... and its affairs were co-ordinated by the* ***Commune*** *... and often, in fact, by the assemblies themselves, or sections as they were called, which established their own interconnections without recourse to the* ***Commune.***" [*"Transition to the Ecological Society"*, pp. 92–105, **Society and Nature**, no. 3, p. 96]

Here is his account of how communal self-government worked in practice:

> *"What, then, were these little-know forty-eight sections of Paris ... How were they organised? And how did they function?*
>
> *"Ideologically, the* ***sectionnaires*** *(as their members were called) believed primarily in sovereignty of the people. This concept of popular sovereignty, as Albert Soboul observes, was for them 'not an abstraction, but the concrete reality of the people united in sectional*

assemblies and exercising all their rights.' It was in their eyes an inalienable right, or, as the section de la Cite declared in November 1792, 'every man who assumes to have sovereignty will be regarded as a tyrant, usurper of public liberty and worthy of death.'

*"Sovereignty, in effect, was to be enjoyed by **all** citizens, not pre-empted by 'representatives' ... The radical democrats of 1793 thus assumed that every adult was, to one degree or another, competent to participate in management public affairs. Thus, each section ... was structured around a **face-to-face democracy**: basically a general assembly of the people that formed the most important deliberative body of a section, and served as the incarnation of popular power in a given part of the city ... each elected six deputies to the Commune, presumably for the purpose merely of co-ordinating all the sections in the city of Paris.*

"Each section also had its own various administrative committees, whose members were also recruited from the general assembly." [**The Third Revolution**, vol. 1, p. 319]

Little wonder Kropotkin argued that these "sections" showed *"the principles of anarchism ... had their origin, not in theoretical speculations, but in the **deeds** of the Great French Revolution"* [**The Great French Revolution**, vol. 1, p. 204]

Communal self-government was also practised, and on a far wider scale, in revolutionary Spain where workers and peasants formed communes and federations of communes (see section I.8 for fuller details). Gaston Leval summarised the experience:

"There was, in the organisation set in motion by the Spanish Revolution and by the libertarian movement, which was its mainspring, a structuring from the bottom to the top, which corresponds to a real federation and true democracy ... the controlling and co-ordinating Comites, clearly indispensable, do not go outside the organisation that has chosen them, they remain in their midst, always controllable by and accessible to the members. If any individuals contradict by their actions their mandates, it is possible to call them to order, to reprimand them, to replace them. It is only by and in such a system that the 'majority lays down the law.'

"The syndical assemblies were the expression and the practice of libertarian democracy, a democracy having nothing in common with the democracy of Athens where the citizens discussed and disputed for days on end on the Agora; where factions, clan rivalries, ambitions, personalities conflicted, where, in view of the social inequalities precious time was lost in interminable wrangles ...

"Normally those periodic meetings would not last more than a few hours. They dealt with concrete, precise subjects concretely and precisely. And all who had something to say could express themselves. The Comite presented the new problems that had arisen since the previous assembly, the results obtained by the application of such and such a resolution . .. relations with other syndicates, production returns from the various workshops or factories. All this was the subject of reports and discussion. Then the assembly would nominate the commissions, the members of these commissions discussed between themselves what solutions to adopt, if there was disagreement, a majority report and a minority report would be prepared.

*"This took place in **all** the syndicates **throughout Spain**, in **all** trades and **all** industries, in assemblies which, in Barcelona, from the very beginnings of our movement brought together hundreds or thousands of workers depending on the strength of the organisations. So much so that the awareness of the duties, responsibilities of each spread all the time to a determining and decisive degree ...*

"The practice of this democracy also extended to the agricultural regions ... the decision to nominate a local management Comite for the villages was taken by general meetings of the inhabitants of villages, how the delegates in the different essential tasks which demanded an indispensable co-ordination of activities were proposed and elected by the whole assembled population. But it is worth adding and underlining that in all the collectivised villages and all the partially collectivised villages, in the 400 Collectives in Aragon, in the 900 in the Levante region, in the 300 in the Castilian region, to mention only the large groupings ... the population was called together weekly, fortnightly or monthly and kept fully informed of everything concerning the commonweal.

"This writer was present at a number of these assemblies in Aragon, where the reports on the various questions making up the agenda allowed the inhabitants to know, to so understand, and to feel so mentally integrated in society, to so participate in the management of public affairs, in the responsibilities, that the recriminations, the tensions which always occur when the power of decision is entrusted to a few individuals, be they democratically elected without the possibility of objecting, did not happen there. The assemblies were public, the objections, the proposals publicly discussed, everybody being free, as in the syndical assemblies, to participate in the discussions, to criticise, propose, etc. Democracy extended to the whole of social life." [**Collectives in the Spanish Revolution**, pp. 205–7]

These collectives organised federations embracing thousands of communes and workplaces, whole branches of industry, hundreds of thousands of people and whole regions of Spain. As such, it was a striking confirmation of Proudhon's argument that under federalism *"the sovereignty of the contracting parties ... serves as a positive guarantee of the liberty of ... communes and individuals. So, no longer do we have the abstraction of people's sovereignty ... but an effective sovereignty of the labouring masses."* The *"labouring masses are actually, positively and effectively sovereign: how could they not be when the economic organism — labour, capital, property and assets — belongs to them entirely ... ?"* [**Anarchism**, vol. 1, Robert Graham (ed.), p. 75]

In other words, it **is** possible. It **has** worked. With the massive improvements in communication technology it is even more viable than before. Whether or not we reach such a self-managed society depends on whether we desire to be free or not.

I.5.5 Aren't participatory communities and confederations just new states?

No. As we have seen in section B.2, a state can be defined both by its structure and its function. As far as structure is concerned, a state involves the politico-military and economic domination of a certain geographical territory by a ruling elite, based on the delegation of power into the hands of the few, resulting in hierarchy (centralised authority). As such, it would be a massive

theoretical error to confuse any form of social organisation with the specific form which is the state.

As we have discussed in section H.3.7, the state has evolved its specific characteristics as a result of its function as an instrument of class rule. If a social organisation does not have these characteristics then it is not a state. Thus, for anarchists, *"the essence of the state"* is *"centralised power* ***or to put it another way the coercive authority*** *of which the state enjoys the monopoly, in that organisation of violence know as 'government'; in the hierarchical despotism, juridical, police and military despotism that imposes laws on everyone."* [Luigi Fabbri, *"Anarchy and 'Scientific' Communism"*, in **The Poverty of Statism**, pp. 13–49, Albert Meltzer (ed.), pp. 24–5] This is why Malatesta stressed that the state *"means the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few."* [**Anarchy**, p. 41] If a social organisation is **not** centralised and top-down then it is not a state.

In a system of federated participatory communities there is no ruling elite, and thus no hierarchy, because power is retained by the lowest-level units of confederation through their use of direct democracy and mandated, rotating, and recallable delegates to confederal bodies. This eliminates the problem in "representative" democratic systems of the delegation of power leading to the elected officials becoming isolated from and beyond the control of the mass of people who elected them. An anarchist society would make decisions by *"means of congresses, composed of delegates, who discuss among themselves, and submit* ***proposals****, not* ***laws****, to their constituents"* [Kropotkin, **The Conquest of Bread**, p. 135] So it is based on **self**-government, **not** representative government (and its inevitable bureaucracy). As Proudhon put it, *"the federal system is the contrary of hierarchy or administrative and governmental centralisation"* and so *"a confederation is not exactly a state ... What is called federal authority ... is no longer a government; it is an agency created ... for the joint execution of certain functions"*. [**The Principle of Federation**, pp. 40–1]

Perhaps it will be objected that communal decision making is just a form of "statism" based on direct, as opposed to representative, democracy — "statist" because the individual is still be subject to the rules of the majority and so is not free. This objection, however, confuses statism with free agreement (i.e. co-operation). Since participatory communities, like productive syndicates, are voluntary associations, the decisions they make are based on self-assumed obligations (see section A.2.11), and dissenters can leave the association if they so desire. Thus communes are no more "statist" than the act of promising and keeping your word.

In addition, in a free society, dissent and direct action can be used by minorities to press their case (or defend their freedom) as well as debate. As Carole Pateman argues, *"[p]olitical disobedience is merely one possible expression of the active citizenship on which a self-managing democracy is based."* [**The Problem of Political Obligation**, p. 162] In this way, individual liberty can be protected in a communal system and society enriched by opposition, confrontation and dissent. Without self-management and minority dissent, society would become an ideological cemetery which would stifle ideas and individuals as these thrive on discussion (*"those who will be able to create in their mutual relations a movement and a life based on the principles of free understanding ... will understand that* ***variety, conflict even, is life and that uniformity is death****"* [Kropotkin, **Anarchism**, p. 143]). So a society based on voluntary agreements and self-management would, out of interpersonal empathy and self-interest, create a society that encouraged individuality and respect for minorities.

Therefore, a commune's participatory nature is the opposite of statism. April Carter agrees, stating that *"commitment to direct democracy or anarchy in the socio-political sphere is incompatible*

with political authority" and that the *"only authority that can exist in a direct democracy is the collective 'authority' vested in the body politic ... it is doubtful if authority can be created by a group of equals who reach decisions be a process of mutual persuasion."* [**Authority and Democracy**, p. 69 and p. 380] Which echoes, we must note, Proudhon's comment that *"the true meaning of the word 'democracy'"* was the *"dismissal of government."* [**No Gods, No Masters**, vol. 1, p. 42] Bakunin argued that when the *"whole people govern"* then *"there will be no one to be governed. It means that there will be no government, no State."* [**The Political Philosophy of Bakunin**, p. 287] Malatesta, decades later, made the same point: *"government by everybody is no longer government in the authoritarian, historical and practical sense of the word."* [**No Gods, No Masters**, vol. 2, p. 38] And, of course, Kropotkin argued that by means of the directly democratic sections of the French Revolution the masses *"practic[ed] what was to be described later as Direct Self-Government"* and expressed *"the principles of anarchism."* [**The Great French Revolution**, vol. 1, p. 200 and p. 204]

Anarchists argue that individuals and the institutions they create cannot be considered in isolation. Authoritarian institutions will create individuals who have a servile nature, who cannot govern themselves. We, therefore, consider it common sense that individuals, in order to be free, **must** have take part in determining the general agreements they make with their neighbours which give form to their communities. Otherwise, a free society could not exist and individuals would be subject to rules others make **for** them (following orders is hardly libertarian). Somewhat ironically, those who stress "individualism" and denounce communes as new "states" advocate a social system which produces extremely hierarchical social relationships based on the authority of the property owner. In other words, abstract individualism produces authoritarian (i.e., state-like) social relationships (see section F.1). Therefore, anarchists recognise the social nature of humanity and the fact any society based on an abstract individualism (like capitalism) will be marked by authority, injustice and inequality, **not** freedom. As Bookchin pointed out: *"To speak of 'The Individual' apart from its social roots is as meaningless as to speak of a society that contains no people or institutions."* [**Anarchism, Marxism, and the Future of the Left**, p. 154]

Society cannot be avoided and *"[u]nless everyone is to be psychologically homogeneous and society's interests so uniform in character that dissent is simply meaningless, there must be room for conflicting proposals, discussion, rational explication and majority decisions — in short, democracy."* [Bookchin, **Op. Cit.**, p. 155] Those who reject democracy in the name of liberty (such as many supporters of capitalism claim to do) usually also see the need for laws and hierarchical authority (particularly in the workplace). This is unsurprising, as such authority is the only means left by which collective activity can be co-ordinated if self-management is rejected (which is ironic as the resulting institutions, such as a capitalist company, are far more statist than self-managed ones).

So, far from being new states by which one section of a community (historically, almost always a wealthy elite) imposes its ethical standards on another, the anarchist commune is just a public forum. In this forum, issues of community interest (for example, management of the commons, control of communalised economic activity, and so forth) are discussed and policy agreed upon. In addition, interests beyond a local area are also discussed and delegates for confederal conferences are mandated with the wishes of the community. Hence, administration of things replaces government of people, with the community of communities existing to ensure that the interests of all are managed by all and that liberty, justice and equality for all are more than just ideals. Moreover, a free society would be one without professional bodies of armed people (i.e.,

there would be no armed forces or police). It would not have the means of enforcing the decisions of conferences and communes which reflected the interests of a few (would-be politicians or bureaucrats) rather than popular opinion.

Of course, it could be argued that popular opinion can be as oppressive as any state, a possibility anarchists are aware of and take steps to combat. Remember, the communities and confederations of a free society would be made up of free people. They would **not** be too concerned with the personal behaviour of others unless it impacted on their own lives. As such, they would not be seeking to restrict the liberty of those who live with them. A community, therefore, is unlikely to make decisions like, for example, outlawing homosexuality or censoring the press. This is not to say that there is no danger of majorities abusing minorities. As we discuss in the next section, anarchists suggest means of reducing it, even eliminating it. Suffice to say, a free society would seek to encourage diversity and so leave minorities free to live their own lives (assuming they are not oppressing or exploiting others, of course).

For these reasons, a libertarian-socialist society would not have a state. Structurally, it would be based on egalitarian and decentralised institutions, the direct opposite of the hierarchical and centralised state. Functionally, it would be based on mass participation of all to ensure they manage their own affairs rather than, as in a state, exclusion of the many to ensure the rule of an elite. The communes and confederations of a libertarian system are not just states with new names but rather the forums by which free people manage their own affairs rather than being ruled by a state and its politicians and bureaucrats.

This is why Proudhon argued that *"under the democratic constitution .. . the political and the economic are ... one and the same system ... based upon a single principle, mutuality ... and form this vast humanitarian organism of which nothing previously could give the idea . .. [I]s this not the system of the old society turned upside down"*? [**Anarchism**, vol. 1, Robert Graham (ed.), pp. 74–5]

I.5.6 Won't there be a danger of a *"tyranny of the majority"* under libertarian socialism?

While the *"tyranny of the majority"* objection does contain an important point, it is often raised for self-serving reasons. This is because those who have historically raised the issue (for example, and as discussed in section B.2.5, creators of the 1789 American constitution like Hamilton and Madison) saw the minority to be protected as the rich. In other words, the objection is not opposed to majority tyranny as such (they have no objections when the majority support their right to their riches and powers) but rather attempts of the majority to change their society to a fairer and freer one. Such concerns can easily be dismissed as an ingenious argument in favour of rule by the few — particularly as its proponents (such as the propertarian right and other defenders of capitalism) have no problem with the autocratic rule of property owners over their wage-slaves!

However, as noted, the objection to majority rule **does** contain a valid point and one which anarchists have addressed — namely, what about minority freedom within a self-managed society? So this is a danger, one raised by people who are most definitely **not** seeking minority rule. For example, someone who was sympathetic to anarchism, George Orwell, suggested:

> *"the totalitarian tendency ... is explicit in the anarchist ... vision of Society. In a Society in which there is no law, and in theory no compulsion, the only arbiter of behaviour is public opinion. But pubic opinion, because of the tremendous urge to conformity in gregarious animals, is less tolerant than any system of law. When human beings are governed by 'thou shalt not', the individual can practise a certain amount of eccentricity: when they are supposedly governed by 'love' or 'reason', he is under continuous pressure to make him behave and think in exactly the same way as everyone else."* [**Inside the Whale and Other Essays**, p. 132]

There is, of course, this danger in **any** society, be its decision making structure direct (anarchy) or indirect (by some form of government). However, this does not really address the issue to point out this obvious fact. Anarchists are at the forefront in expressing concern about it, recognising that the majority is often a threat to freedom by its fear of change (see, for example, Emma Goldman's classic essay *"Minorities versus Majorities"*). We are well aware that the mass, as long as the individuals within it do not free themselves, can be a dead-weight on others, resisting change and enforcing conformity. As Goldman argued, *"even more than constituted authority, it is social uniformity and sameness that harass the individual the most."* [**Red Emma Speaks**, p. 116] Hence Malatesta's comment that anarchists *"have the special mission of being vigilant custodians of freedom, against all aspirants to power and against the possible tyranny of the majority."* [**Errico Malatesta: His Life and Ideas**, p. 161]

However, rather than draw elitist conclusions from this fact of life under capitalism and urge forms of government and organisation which restrict popular participation (and promote rule, and tyranny, by the few) — as classical liberals do — libertarians argue that only a process of self-liberation through struggle and participation can break up the mass into free, self-managing individuals (as discussed in section H.2.11 attempts by Leninists to portray anarchists as elitists are both hypocritical and false). Moreover, we also argue that participation and self-management is the only way that majorities can come to see the point of minority ideas and for seeing the importance of protecting minority freedoms. This means that any attempt to restrict participation in the name of minority rights actually enforces the herd mentality, undermining minority and individual freedom rather than protecting it. As Carole Pateman argues:

> *"the evidence supports the arguments ... that we do learn to participate by participating and that feelings of political efficacy are more likely to be developed in a participatory environment. Furthermore, the evidence indicates that experience of a participatory authority structure might also be effective in diminishing tendencies towards non-democratic attitudes in the individual."* [**Participation and Democratic Theory**, p. 105]

So while there is cause for concern (and anarchists are at the forefront in expressing it), the *"tyranny of the majority"* objection fails to take note of the vast difference between direct and representative forms of democracy.

In the current system, as we pointed out in section B.5, voters are mere passive spectators of occasional, staged, and highly rehearsed debates among candidates pre-selected by the corporate elite, who pay for campaign expenses. The public is expected to choose simply on the basis of political ads and news sound bites. Once the choice is made, cumbersome and ineffective recall procedures insure that elected representatives can act more or less as they (or rather,

their wealthy sponsors) please. The function, then, of the electorate in bourgeois "representative government" is ratification of "choices" that have been **already made for them**! This is also the case in referendum, where the people *"are not to **propose** the questions: the government is to do that. Only to questions **proposed** by the government, the people may answer **Yes** or **No**, like a child in the catechism. The people will not even have a chance to make amendments."* [Proudhon, **General Idea of the Revolution**, p. 148]

By contrast, in a libertarian society decisions are made following public discussion in community assemblies open to all. After decisions have been reached, outvoted minorities — even minorities of one — still have ample opportunity to present reasoned and persuasive counter-arguments to try to change the decision. This process of debate, disagreement, challenge, and counter-challenge, which goes on even after the defeated minority has temporarily acquiesced in the decision of the majority, is virtually absent in the representative system, where *"tyranny of the majority"* is truly a problem. In addition, minorities can secede from an association if the decision reached by it are truly offensive to them.

And let us not forget that in all likelihood, issues of personal conduct or activity will not be discussed in the neighbourhood assemblies. Why? Because we are talking about a society in which most people consider themselves to be unique, free individuals, who would thus recognise and act to protect the uniqueness and freedom of others. Unless people are indoctrinated by religion or some other form of ideology, they can be tolerant of others and their individuality. If this is not the case now, then it has more to do with the existence of authoritarian social relationships — relationships that will be dismantled under libertarian socialism — and the type of person they create rather than some innate human flaw.

Thus there will be vast areas of life in a libertarian socialist community which are none of other people's business. Anarchists have always stressed the importance of personal space and "private" areas. Indeed, for Kropotkin, the failure of many "utopian" communities directly flowed from a lack of these and *"the desire to manage the community after the model of a family, to make it 'the great family.' They lived all in the same house and were thus forced to continuously meet the same 'brethren and sisters.' It is already difficult often for two real brothers to live together in the same house, and family life is not always harmonious; so it was a fundamental error to impose on all the 'great family' instead of trying, on the contrary, to guarantee as much freedom and home life to each individual."* In an anarchist society, continual agreement on all issues is not desired. The members of a free society *"need only agree as to some advantageous method of common work, and are free otherwise to live in their own way."* [**Small Communal Experiments and Why they Fail**, pp. 8–9 and p. 22]

Which brings us to another key point. When anarchists talk of democratising or communalising the household or any other association, we do not mean that it should be stripped of its private status and become open to regulation by general voting in a single, universal public sphere. Rather, we mean that households and other relationships should take in libertarian characteristics and be consistent with the liberty of all its members. Thus a society based on self-management does not imply the destruction of private spheres of activity — it implies the extension of anarchist principles into all spheres of life, both private and public. It does not mean the subordination of the private by the public, or vice versa.

As an example, we can point to inter-personal relationships. Anarchists are opposed to the patriarchy implicit (and, in the past, explicit) in marriage and suggest free love as an alternative. As discussed in section H.4.2 , free love means that both people in a relationship have equal

decision making power rather than, as in marriage, the woman becoming the property of the husband. Thus, self-management in this context does not mean the end of interpersonal relationships by the imposition of the commune onto all spheres of life but, obviously, the creation of interpersonal relationships based on equality and liberty.

So it is highly unlikely that the *"tyranny of the majority"* will exert itself where most rightly fear it — in their homes, how they act with friends, their personal space, how they act, and so on. As long as individual freedom and rights are protected, it is of little concern what people get up to (included the rights of children, who are also individuals and **not** the property of their parents). Direct democracy in anarchist theory is purely concerned with common resources, their use and management. It is highly unlikely that a free society would debate issues of personal behaviour or morality and instead would leave them to those directly affected by them — as it should be, as we all need personal space and experimentation to find the way of life that best suits us.

Today an authoritarian worldview, characterised by an inability to think beyond the categories of domination and submission, is imparted by conditioning in the family, schools, religious institutions, clubs, fraternities, the army, etc., and produces a type of personality that is intolerant of any individual or group perceived as threatening to the perpetuation of that worldview and its corresponding institutions and values. Thus, as Bakunin argued, *"public opinion"* is potentially intolerant *"simply because hitherto this power has not been humanised itself; it has not been humanised because the social life of which it is ever the faithful expression is based ... in the worship of divinity, not on respect for humanity; in authority, not on liberty; on privilege, not on equality; in the exploitation, not on the brotherhood, of men; on iniquity and falsehood, not on justice and truth. Consequently its real action, always in contradiction of the humanitarian theories which it professes, has constantly exercised a disastrous and depraving influence."* [**God and the State**, p. 43f] In other words, *"if society is ever to become free, it will be so through liberated individuals, whose free efforts make society."* [Emma Goldman, **Anarchism and Other Essays**, p. 44] In an anarchist society a conscious effort will be made to dissolve the institutional and traditional sources of the authoritarian/submissive type of personality, and thus to free "public opinion" of its current potential for intolerance.

This is not to suggest that such a society of free individuals will not become stuck in routine and, over time, become oppressive to minorities who question certain aspects of public opinion or how it works. Public opinion and social organisations can evolve over generations in ways which no one expects. The best know, albeit fictional, example is in Ursula Le Guin's classic science-fiction book **The Dispossessed** where the anarchist society of Anarres has developed something of a weak informal bureaucracy due to the routine of everyday life and the unconscious pressures of public opinion. When the protagonist, Shevek, and his friends try to point this out and do something about (including Shevek leaving Anarres for the capitalist world of Urras), most on the planet are extremely hostile to this activity (precisely because it is going against the normal routine). Significantly, though, a large minority end up supporting their activities, activities which can occur precisely **because** the society is still fundamentally communist-anarchist and so the dissenters have a rich libertarian tradition and sensibility to base their direct action on as well having use-rights over the resources they need to propagate their ideas and practice their protest.

In the real world, the best example would be the **Mujeres Libres** in the Spanish anarchist movement during the 1930s (see Martha A. Ackelsberg's classic **Free Women Of Spain: Anarchism And The Struggle For The Emancipation Of Women** for more on this important

movement). This organisation arose in response to the fact that many male anarchists, while expressing a theoretical commitment to sexual equality, were as sexist as the system they were fighting against and so they subconsciously reflected the oppressive public opinion of what a woman's position should be. Unsurprisingly, many anarchist women were (rightly) angry at this and their marginalised status within a libertarian movement that ostensibly sought to abolish all forms of domination and hierarchy. In response, and often in the face of the hostility or indifference of their male comrades, they organised themselves to change this situation, to combat and transform public opinion both within and outwith the anarchist movement. Their activities meet with some success before, like the rest of the libertarian revolution, it was crushed by Franco's victory in the civil war.

We can, therefore, suggest that a free society is unlikely to see public opinion becoming authoritarian. This is because, as the example of the **Mujeres Libres** shows, members of that society would organise to combat such developments and use various means to raise the problem to public awareness and to combat it. Once a free society has been gained, the task of anarchists would be to ensure it remained free and that would mean keeping a constant watch on possible sources of authority, including those associated with organisations developing informal bureaucracies and public opinion. While a free society would place numerous safeguards against such developments, no system would be perfect and so the actions of dissident minorities would be essential to point out and protest as if such dangers appeared to be developing.

As such, it should be noted that anarchists recognise that the practice of self-assumed political obligation implied in free association also implies the right to practice dissent and disobedience as well. As Carole Pateman notes:

> *"Even if it is impossible to be unjust to myself, I do not vote for myself alone, but along with everyone else. Questions about injustice are always appropriate in political life, for there is no guarantee that participatory voting will actually result in decisions in accord with the principles of political morality."* [**The Problem of Political Obligation**, p. 160]

If an individual or group of individuals feel that a specific decision threatens their freedom (which is the basic principle of political morality in an anarchist society) they can (and must) act to defend that freedom:

> *"The political practice of participatory voting rests in a collective self-consciousness about the meaning and implication of citizenship. The members of the political association understand that to vote is simultaneously to commit oneself, to commit one's fellow citizens, and also to commit oneself to them in a mutual undertaking ... a refusal to vote on a particular occasion indicates that the refusers believe .. . [that] the proposal ... infringes the principle of political morality on which the political association is based ... A refusal to vote [or the use of direct action] could be seen as an appeal to the 'sense of justice' of their fellow citizens."* [Pateman, **Op. Cit.**, p. 161]

As they no longer consent to the decisions made by their community they can appeal to the "sense of justice" of their fellow citizens by direct action and indicate that a given decision may have impacts which the majority were not aware. Hence direct action and dissent is a key aspect

of an anarchist society and help ensure against the tyranny of the majority. Anarchism rejects the *"love it or leave it"* attitude that marks an authoritarian organisation.

This vision of self-assumed obligation, with its basis in individual liberty, indicates the basic flaw of Joseph Schumpeter's argument against democracy as anything bar a political method of arriving at decisions (in his case who will be the leaders of a society). Schumpeter proposed *"A Mental Experiment"* of imagining a country which, using a democratic process, *"reached the decision to persecute religious dissent"* (such as Jews and witches). He argued that we should not approve of these practices just because they have been decided upon by a majority or using a democratic method and, therefore, democracy cannot be an end in itself. [**Capitalism, Socialism and Democracy**, pp. 240–3]

However, such systematic persecution would conflict with the rules of procedure required if a country's or community's political method is to be called "democratic." This is because, in order to be democratic, the minority must be in a position for its ideas to become the majority's via argument and that requires freedom of speech, discussion and association. A country or community in which the majority persecutes or represses a minority automatically ensures that the minority can never be in a position to become the majority (as the minority is barred by force from becoming so) or convince the majority of the errors of its way (even if it cannot become the majority physically, it can become so morally by convincing the majority to change its position). Schumpeter's example utterly violates democratic principles and so cannot be squared with the it (Rousseau's somewhat opaque distinction between *"the General Will"* and majority rule sought to express this). Thus majority tyranny is an outrage against both democratic theory **and** individual liberty (unsurprisingly, as the former has its roots in the latter).

This argument applies with even more force to a self-managed community too and so any system in which the majority tyrannises over a minority is, by definition, **not** self-managed as one part of the community is excluded from convincing the other (*"the enslavement of part of a nation denies the federal principal itself."* [Proudhon, **The Principle of Federation**, p. 42f]). Thus individual freedom and minority rights are essential to self-management. As Proudhon argued, *"a new spirit has dawned on the world. Freedom has opposed itself to the State, and since the idea of freedom has become universal people have realised that it is not a concern of the individual merely, but rather that it must exist in the group also."* [quoted by Martin Buber, **Paths in Utopia**, p. 28] Unsurprisingly, then, the *"freedom of the collectivity to crush the individual is not, however, true Liberty in the eyes of Anarchists. It is one of those shams, which the Revolution is to destroy."* [Charlotte M. Wilson, **Anarchist Essays**, p. 25]

It should be stressed, however, that most anarchists do not think that the way to guard against possible tyranny by the majority is to resort to decision-making by consensus (where no action can be taken until every person in the group agrees) or a property system (based in contracts). Both consensus (see section A.2.12) and contracts (see section A.2.14) soon result in authoritarian social relationships developing in the name of "liberty." Rather, we seek new forms of free agreement to replace contract and new forms of decision making which do not replace the possible tyranny of the majority with the real tyranny of a minority.

Then there is freedom of association. As Malatesta argued, *"for if it is unjust that the majority should oppress the minority, the contrary would be quite as unjust; and if the minority has a right to rebel, the majority has a right to defend itself ... it is true that this solution is not completely satisfactory. The individuals put out of the association would be deprived of many social advantages, which an isolated person or group must do without, because they can only be procured by the co-*

operation of a great number of human beings. But what would you have? These malcontents cannot fairly demand that the wishes of many others should be sacrificed for their sakes." [**A Talk about Anarchist-Communism**, p. 29] In other words, freedom of association means the freedom **not** to associate and so communities can expel individuals or groups of individuals who constantly hinder community decisions — assuming they do not leave voluntarily and seek a community more in tune with their needs. This a very important freedom for both the majority and the minority, and must be defended.

So while minorities have significant rights in a free society, so does the majority. We can imagine that there will be ethical reasons why participants will not act in ways to oppose joint activity — as they took part in the decision making process they would be considered childish if they reject the final decision because it did not go in their favour. Moreover, they would also have to face the reaction of those who also took part in the decision making process. It would be likely that those who ignored such decisions (or actively hindered them) would soon face non-violent direct action in the form of non-co-operation, shunning, boycotting and so on. Anarchists think that such occurrences would be rare.

As an isolated life is impossible, the need for communal associations is essential. It is only by living together in a supportive community can individuality be encouraged and developed along with individual freedom. However, anarchists are aware that not everyone is a social animal and that there are times that people like to withdraw into their own personal space. Thus our support for free association and federalism along with solidarity, community and self-management. Most anarchists have recognised that majority decision making, though not perfect, is the best way to reach decisions in a political system based on maximising individual and so social freedom. Self-management in grassroots confederal assemblies and workers' councils ensures that decision making is "horizontal" in nature (i.e. between **equals**) and not hierarchical (i.e. governmental, between order giver and order taker). In other words, anarchists support self-management because it ensures liberty — **not** because we subscribe to the flawed assumption that the majority is always right.

I.5.7 What if I don't want to join a commune?

As would be expected, no one would be **forced** to join a commune nor take part in its assemblies. To suggest otherwise would be contrary to anarchist principles. Thus a commune would be a free society, in which individual liberty would be respected and encouraged.

However, what about individuals who live within the boundaries of a commune but decide not to join? For example, a local neighbourhood may include households that desire to associate and a few that do not (this is actually happened during the Spanish Revolution). What happens to the minority of dissenters?

Obviously individuals can leave to find communities more in line with their own concepts of right and wrong if they cannot convince their neighbours of the validity of their ideas. And, equally obviously, not everyone will want to leave an area they like. So we must discuss what happens to those who decide to not to find a more suitable neighbourhood. Are the communal decisions binding on non-members? Obviously not. If an individual or family desire **not** to join a commune (for whatever reason), their freedoms must be respected. However, this also means that they cannot benefit from communal activity and resources (such a free parks, hospitals, and

so forth) and have to pay for their use. As long as they do not exploit or oppress others, an anarchist community would respect their decision (as discussed in section G.2.1, for example).

Many who oppose anarchist self-management in the name of freedom often do so because they desire to oppress and exploit others. In other words, they oppose participatory communities because they (rightly) fear that this would restrict their ability to grow rich off the labour of others (this type of opposition can be seen from history, when rich elites, in the name of liberty, have replaced democratic forms of social decision making with representative or authoritarian ones — see section B.2.5).

It goes without saying that the minority, as in any society, will exist within the ethical norms of the surrounding society and they will be have to adhere to them in the same sense that they have to adhere to not murdering people (few sane people would say that forcing people not to commit murder is a restriction of their liberty). Therefore, while allowing the maximum of individual freedom of dissent, an anarchist community would still have to apply its ethical standards to those beyond that community. Individuals would not be allowed to murder, harm or enslave others and claim that they are allowed to do so because they are not part of the local community (see section I.5.8 on crime in an anarchist society).

Similarly, individuals would not be allowed to develop private property (as opposed to possession) simply because they wanted to. This rejection of private property would not be a restriction on liberty simply because stopping the development of authority hardly counts as an authoritarian act (for an analogy, supporters of capitalism do not think that banning theft is a restriction of liberty and because this view is — currently – accepted by the majority it is enforced on the minority). Regardless of what defenders of capitalism claim, "voluntary bilateral exchanges" affect third parties and can harm others indirectly. This can easily be seen from examples like concentrations of wealth which have effects across society or the ecological impacts of consumption and production. This means that an anarchist society would be aware that inequality, and so statism, could develop again and take precautions against it. As Malatesta put it, some *"seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of respect for the* ***freedom*** *of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas."* [**Anarchy**, p. 43]

The suggestion that denying property ownership is a restriction in freedom is wrong, as it is the would-be capitalist who is trying to ban freedom for others on their property. Members of a free society would simply refuse to recognise the claims of private property — they would simply ignore the would-be capitalist's pretensions and "keep out" signs. Without a state, or hired thugs, to back up their claims, they would just end up looking silly.

This means that Anarchists do not support the liberty of being a boss (anarchists will happily work **with** someone but not **for** someone). Of course, those who desire to create private property against the wishes of others expect those others to respect **their** wishes. So, when would-be propertarians happily fence off their "property" and exclude others from it, could not these others remember these words from Woody Guthrie's **This Land is Your Land**, and act accordingly?

"As I went rumbling that dusty highway
I saw a sign that said private property
But on the other side it didn't say nothing
This land was made for you and me" While happy to exclude people from "their" property, such owners seem more than happy to use the resources held in common by others. They are the ultimate "free riders," desiring the benefits of society but rejecting the responsibilities that

go with it. In the end, such "individualists" usually end up supporting the state (an institution they claim to hate) precisely because it is the only means by which private property and their "freedom" to exercise authority can be defended.

This does not mean denying the freedom to live your life as you see fit, using the resources you need to do so. It simply means not being able to proclaim ownership over more than you could reasonably use. In other words, *"occupancy and use"* would be the limits of possession — and so property would become *"that control of a thing by a person which will receive either social sanction, or else unanimous individual sanction, when the laws of social expediency shall have been fully discovered."* [Benjamin Tucker, **Instead of a Book**, p. 131] As we discuss in section I.6.2, this perspective on use rights is shared by both individualist and social anarchists.

Therefore anarchists support the maximum of experiments while ensuring that the social conditions that allow this experimentation are protected against concentrations of wealth and power. As Malatesta put it: *"Anarchism involves all and only those forms of life that respect liberty and recognise that every person has an equal right to enjoy the good things of nature and the products of their own activity."* [**The Anarchist Revolution**, p. 14]

So, as a way to eliminate the problem of minorities seeking power and property for themselves, an anarchist revolution places social wealth (starting with the land) in the hands of all and promises to protect only those uses of it which are considered just by society as a whole. In other words, by recognising that "property" is a product of society, an anarchist society will ensure than an individual's "property" is protected by his or her fellows when it is based purely upon actual occupancy and use. Thus attempts to transform minority dissent into, say, property rights would be fought by simply ignoring the "keep out" signs of property owned, but not used, by an individual or group. Therefore, individuals are free not to associate, but their claims of "ownership" will be based around **use** rights, not property rights. Without a state to back up and protect property "rights," we see that all rights are, in the end, what society considers to be fair (the difference between law and social custom is discussed in section I.7.3). What the state does is to impose "rights" which do not have such a basis (i.e. those that protect the property of the elite) or "rights" which have been corrupted by wealth and would have been changed because of this corruption had society been free to manage its own affairs.

In summary, individuals will be free not to join a participatory community, and hence free to place themselves outside its decisions and activities on most issues that do not apply to the fundamental ethical standards of a society. Hence individuals who desire to live outside of anarchist communities would be free to live as they see fit but would not be able to commit murder, rape, create private property or other activities that harmed individuals. It should be noted, moreover, that this does not mean that their possessions will be taken from them by "society" or that "society" will tell them what to do with them. Freedom, in a complex world, means that such individuals will not be in a position to turn their possessions into **property** and thus recreate capitalism (for the distinction between *"property"* and *"possessions,"* see section B.3.1). This will not be done by "anarchist police" or by "banning" voluntary agreements, but purely by recognising that "property" is a social creation and by creating a social system that will encourage individuals to stand up for their rights and co-operate with each other to protect their freedom against those seeking to reduce others to the conditions of servants working their property for them.

I.5.8 What about crime?

For anarchists, "crime" can best be described as anti-social acts, or behaviour which harms someone else or which invades their personal space. Anarchists, in other words, *"believe that to act criminally means to violate the liberty of others"* and so criminals in a free society would be *"those who would encroach on personal integrity, liberty and the well being of others."* [Malatesta, **At the Café**, p. 100 and p. 132]

This definition of crime is similar, of course, to that used in capitalist society but libertarians note that the state defines as "crime" many things which a sane society would not (such as, say, consensual acts of adults in private or expropriation of private property). Similarly, a free society would consider as anti-social many acts which the state defends under capitalism (such as the appropriation of resources or exploitation of others labour). This is to be expected, as social customs evolve and reflect the socio-economic basis of a given society. Hence Malatesta:

> *"Naturally the crimes we are talking about are anti-social acts, that is those which offend human feelings and which infringe the right of others to equality in freedom, and not the many actions which the penal code punishes simply because they offend against the privileges of the dominant classes."* [**Errico Malatesta: His Life and Ideas**, pp. 105–6]

Anarchists argue that the root cause for crime is not some perversity of human nature or "original sin" but is due to the type of society by which people are moulded. For example, anarchists point out that by eliminating private property, crime could be reduced significantly, since most crime today is currently motivated by evils stemming from private property such as poverty, homelessness, unemployment, and alienation. Moreover, by adopting anarchist methods of non-authoritarian child rearing and education, most of the remaining crimes could also be eliminated, because they are largely due to the anti-social, perverse, and cruel "secondary drives" that develop because of authoritarian child-rearing practices (see section J.6). However, as long as the few *"violates the equal freedom of others ... we must defend ourselves."* [Malatesta, **Op. Cit.**, p. 106]

First, it cannot be said that governments are required to protect people from crime and criminals. Rather, as Alexander Berkman argued, *"[d]oes not government itself create and uphold conditions which make for crime? Does not the invasion and violence upon which all governments rest cultivate the spirit of intolerance and persecution, of hatred and more violence?"* Crime, then, *"is the result of economic conditions, of social inequality, of wrongs and evils of which government and monopoly are parents. Government and law can only punish the criminal. They neither cure nor prevent crime. The only real cure for crime is to abolish its causes, and the government can never do because it is there to preserve those very causes."* This suggests that crimes *"resulting form government, from its oppression and injustice, from inequality and poverty, will disappear under Anarchy. These constitute by far the greatest percentage of crime."* [**What is Anarchism?**, p. 151] Nor should we forget that today we are subject to rule by the anti-social, for the *"owners and rulers"* are *"criminals"* who are *"powerful and have organised their dominance on a stable basis"* (*"Who is more of a thief than the owners who get wealthy stealing the produce of the workers' labour?"*). [Malatesta, **At the Café**, p. 100 and p. 130]

"Crime", therefore, cannot be divorced from the society within which it occurs. Society, in Emma Goldman's words, gets the criminals it deserves. For example, anarchists do not think

it unusual nor unexpected that crime exploded under the pro-free market capitalist regimes of Thatcher and Reagan. Crime, the most obvious symptom of social crisis, took 30 years to double in Britain (from 1 million incidents in 1950 to 2.2 million in 1979). However, between 1979 and 1992 the crime rate more than doubled, exceeding the 5 million mark in 1992. These 13 years were marked by a government firmly committed to the "free market" and "individual responsibility." It was entirely predictable that the social disruption, atomisation of individuals, and increased poverty caused by freeing capitalism from social controls would rip society apart and increase criminal activity. Also unsurprisingly (from an anarchist viewpoint), under these pro-market governments we also saw a reduction in civil liberties, increased state centralisation, and the destruction of local government. As Malatesta put it, the classical liberalism which these governments represented could have had no other effect, for *"the government's powers of repression must perforce increase as free competition results in more discord and inequality."* [**Anarchy**, p. 47]

Hence the apparent paradox of governments with flowing rhetoric about "individual rights," the "free market" and "getting the state off our backs" increasing state power and reducing rights while holding office during a crime explosion is no paradox at all. *"The conjuncture of the rhetoric of individual freedom and a vast increase in state power,"* argues Carole Pateman, *"is not unexpected at a time when the influence of contract doctrine is extending into the last, most intimate nooks and crannies of social life. Taken to a conclusion, contract undermines the conditions of its own existence. Hobbes showed long ago that contract — all the way down — requires absolutism and the sword to keep war at bay."* [**The Sexual Contract**, p. 232]

Capitalism, and the contract theory on which it is built, will inevitably rip apart society. It is based upon a vision of humanity as isolated individuals with no connection other than that of money. Such a vision cannot help but institutionalise anti-social acts. As Kropotkin argued *"it is not love and not even sympathy upon which Society is based in mankind. It is the conscience — be it only at the stage of an instinct — of human solidarity. It is the unconscious recognition of the force that is borrowed by each man [and woman] from the practice of mutual aid; of the close dependency of every one's happiness upon the happiness of all; and of the sense of justice, or equity, which brings the individual to consider the rights of every other individual as equal to his [or her] own."* [**Mutual Aid**, p. 16] The social atomisation required and created by capitalism destroys the basic bonds of society – namely human solidarity — and hierarchy crushes the individuality required to understand that we share a common humanity with others and so understand **why** we must be ethical and respect others rights. Significantly, as Richard Wilkinson and Kate Pickett note in **The Spirit Level: Why More Equal Societies Almost Always Do Better**, more unequal societies have more crime and bigger prison populations (equality, as well as reducing crime, consistently deliver other advantages for people).

We are not saying, however, that anarchists reject the concept of individual responsibility. While recognising that rape, for example, is the result of a social system which represses sexuality and is based on patriarchy (i.e. rape has more to do with power than sex), anarchists do not "sit back" and say "it's society's fault." Individuals have to take responsibility for their own actions and recognise that consequences of those actions. Part of the current problem with "law codes" is that individuals have been deprived of the responsibility for developing their own ethical code, and so are less likely to develop "civilised" social standards (see section I.7.3).

Therefore, while anarchists reject the ideas of law and a specialised justice system, they are not blind to the fact that anti-social action may not totally disappear in a free society. Nor are they blind to the fact that, regardless of our hopes about a free society reducing crime, we will

not create it over-night (*"all the bad passions ... will not disappear at a stroke. There will still be for a long time those who will feel tempted to impose their will on others with violence, who will wish to exploit favourable circumstances to create privileges for themselves"* [Malatesta, **At the Café**, p. 131]). Therefore, some sort of justice system would still be necessary to deal with the remaining crimes and to adjudicate disputes between people.

This does not, it must be stressed, signify some sort of contradiction within anarchism. Anarchists have never advocated the kind of "freedom" which assumes that people can do what they want. When people object to anarchy, they often ask about those who would steal, murder, rape and so forth and seem to assume that such people would be free to act as they like. This is, needless to say, an utter misunderstanding of both our ideas and freedom in general. Simply put, if people impose themselves by force on others then *"they will be the government"* and *"we will oppose them with force"* for *"if today we want to make a revolution against the government, it is not in order to submit ourselves supinely to new oppressors."* [Malatesta, **Op. Cit.**, p. 99] This applies to defending a free society against organised counter-revolution and against those within it conducting anti-social ("criminal") activities. The principle is the same, it is just the scale which is different.

It should be remembered that just because the state monopolises or organises a (public) service, it does not mean that the abolition of the state means the abolition of what useful things it provided. For example, many states own and run the train network but the abolition of the state does not mean that there will no longer be any trains! In a free society management of the railways would be done by the rail workers themselves, in association with the community. The same applies to anti-social behaviour and so we find Kropotkin, for example, pointing to how *"voluntary associations"* would *"substitute themselves for the State in all its functions,"* including *"mutual protection"* and *"defence of the territory."* [**Anarchism**, p. 284]

This applies to what is termed justice, namely the resolution of disputes and anti-social acts ("crime"). Anarchists argue that *"people would not allow their wellbeing and their freedom to be attacked with impunity, and if the necessity arose, they would take measures to defend themselves against the anti-social activities of a few. But to do so, what purpose is served by people whose profession is the making of laws; while other people spend their lives seeking out and inventing law-breakers?"* [Malatesta, **Anarchy**, pp. 43–4] This means that in a free society the resolution of anti-social behaviour would rest in the hands of all, **not** in a specialised body separate from and above the masses. As Proudhon put it, an anarchy would see the *"police, judiciary, administration, everywhere committed to the hands of the workers"* [**General Idea of the Revolution**, p. 281] And so:

> *"Let each household, each factory, each association, each municipality, each district, attend to its own police, and administer carefully its own affairs, and the nation will be policed and administered. What need have we to be watched and ruled, and to pay, year in and year out, ... millions? Let us abolish prefects, commissioners, and policemen too."* [**Op. Cit.**, p. 273]

Precisely how this will work will be determined by free people based on the circumstances they face. All we can do is sketch out likely possibilities and make suggestions.

In terms of resolving disputes between people, it is likely that some form of arbitration system would develop. The parties involved could agree to hand their case to a third party (for example,

a communal jury or mutually agreed individual or individuals). There is the possibility that the parties cannot agree (or if the victim were dead), then the issue could be raised at a communal assembly and a "court" appointed to look into the issue. These "courts" would be independent from the commune, their independence strengthened by popular election instead of executive appointment of judges, by protecting the jury system by random selection of citizens, and so *"all disputes ... will be submitted to juries which will judge not only the facts but the law, the justice of the law [or social custom], its applicability to the given circumstances, and the penalty or damage to be inflicted because of its infraction"*. [Benjamin Tucker, **The Individualist Anarchists**, p. 160] For Tucker, the jury was a *"splendid institution, the principal safeguard against oppression."* [**Liberty**, vol. 1, no. 16, p. 1]

As Malatesta suggested, *"when differences were to arise between men [sic!], would not arbitration voluntarily accepted, or pressure of public opinion, be perhaps more likely to establish where the right lies than through an irresponsible magistrate which has the right to adjudicate on everything and everybody and is inevitably incompetent and therefore unjust?"* [**Anarchy**, p. 45] It is in the arbitration system and communal assemblies that what constitutes anti-social behaviour will be discussed and agreed.

In terms of anti-social events when they happen, *"when there remains a residue of criminals, the collective directly concerned should think of placing them in a position where they can do no harm, without delegating to anyone the specific function of persecuting criminals"* [Malatesta, **At the Café**, p. 101] In the case of a "police force", this would not exist either as a public or private specialised body or company. If a local community did consider that public safety required a body of people who could be called upon for help, we imagine that a new system would be created. Such a system would *"not be entrusted to, as it is today, to a special, official body: all able-bodied inhabitants will be called upon to take turns in the security measures instituted by the commune."* [James Guillaume, *"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, p. 371]

This system could be based around a voluntary militia, in which all members of the community could serve if they so desired. Those who served would not constitute a professional body; instead the service would be made up of local people who would join for short periods of time and be replaced if they abused their position. Hence the likelihood that a communal militia would become corrupted by power, like the current police force or a private security firm exercising a policing function, would be vastly reduced. Moreover, by accustoming a population to intervene in anti-social as part of the militia, they would be empowered to do so when not an active part of it, so reducing the need for its services even more. In this way *"we will defend ourselves ... without delegating to anyone the special function of the defence of society"* and this is *"the only effective method"* of stopping and reducing anti-social activity. [Malatesta, **Op. Cit.**, p. 132]

Such a body would not have a monopoly on protecting others, but would simply be on call if required. It would no more be a monopoly of defence (i.e. a "police force") than the current fire service is a monopoly. Individuals are not banned from putting out fires today because the fire service exists, similarly individuals will be free to help stop anti-social crime by themselves, or in association with others, in an anarchist society.

Of course there are anti-social acts which occur without witnesses and so the "guilty" party cannot be readily identified. If such acts did occur we can imagine an anarchist community taking two courses of action. The injured party may look into the facts themselves or appoint an agent to do so or, more likely, an ad hoc group would be elected at a community assembly

to investigate specific crimes of this sort (subject to control and recall by the community). Once the investigating body thought it had enough evidence it would inform the community as well as the affected parties and then organise a court. Of course, a free society will produce different solutions to such problems, solutions no-one has considered yet and so these suggestions are just that, suggestions.

As is often stated, prevention is better than cure. This is as true of crime as of disease and so crime is best fought by rooting out its **causes** as opposed to punishing those who act in response to these causes. As Emma Goldman argued, crime *"is naught but misdirected energy. So long as every institution of today, economic, political, social, moral conspires to misdirect human energy into wrong channels; so long as most people are out of place doing things they hate to do, living a life they loathe to live, crime will be inevitable, and all the laws on the statues can only increase, but never do away with, crime"* [**Red Emma Speaks**, p. 71] Erich Fromm, decades later, made the same point:

> *"It would seem that the amount of destructiveness to be found in individuals is proportionate to the amount to which expansiveness of life is curtailed. By this we do not refer to individual frustrations of this or that instinctive desire but to the thwarting of the whole of life, the blockage of spontaneity of the growth and expression of man's sensuous, emotional, and intellectual capacities. Life has an inner dynamism of its own; it tends to grow, to be expressed, to be lived .. . the drive for life and the drive for destruction are not mutually interdependent factors but are in a reversed interdependence. The more the drive towards life is thwarted, the stronger is the drive towards destruction; the more life is realised, the less is the strength of destructiveness.* ***Destructiveness is the outcome of unlived life.*** *Those individual and social conditions that make for suppression of life produce the passion for destruction that forms, so to speak, the reservoir from which particular hostile tendencies — either against others or against oneself — are nourished."* [**The Fear of Freedom**, p. 158]

Therefore, by reorganising society so that it empowers everyone and actively encourages the use of all our intellectual, emotional and sensuous abilities, crime would soon cease to be the huge problem that it is now. As for the anti-social behaviour or clashes between individuals that might still exist in such a society, it would be dealt with in a system based on respect for the individual and a recognition of the social roots of the problem. Restraint would be kept to a minimum. Anarchists think that public opinion and social pressure would be the main means of preventing anti-social acts in an anarchist society, with such actions as boycotting and ostracising used as powerful sanctions to convince those attempting them of the errors of their way. Extensive non-co-operation by neighbours, friends and work mates would be the best means of stopping acts which harmed others. Thus Malatesta:

> *"In order for crime to be treated rationally, in order to seek for its causes and really do everything possible to eliminate it, it is necessary for this task to be entrusted to those who are exposed to and suffer the consequences of crime, in other words the whole public, and not those to whom the existence of crime is a source of power and earnings."* [**At the Café**, p. 135]

An anarchist system of justice, we should note, would have a lot to learn from aboriginal societies simply because they are examples of social order without the state. Indeed many of

the ideas we consider as essential to justice today can be found in such societies. As Kropotkin argued, *"when we imagine that we have made great advances in introducing, for instance, the jury, all we have done is to return to the institutions of the so-called 'barbarians' after having changed it to the advantage of the ruling classes."* [**The State: Its Historic Role**, p. 18] Like aboriginal justice (as documented by Rupert Ross in **Returning to the Teachings: Exploring Aboriginal Justice**) anarchists contend that justice be achieved by the teaching and healing of all involved. Public condemnation of the wrongdoing would be a key aspect of this process, but the wrong doer would remain part of the community and so see the effects of their actions on others in terms of grief and pain caused. It would be likely that wrong doers would be expected to try to make amends for their act by community service or helping victims and their families.

So, from a practical viewpoint, almost all anarchists oppose prisons on both practical grounds and ethical grounds. Prisons have numerous negative affects on society as well as often re-enforcing criminal (i.e. anti-social) behaviour. Anarchists use the all-to-accurate description of prisons as *"Universities of Crime"* wherein the first-time criminal learns new techniques and have adapt to the prevailing ethical standards within them. Hence, prisons would have the effect of increasing the criminal tendencies of those sent there and so prove to be counter-productive. In addition, prisons do not affect the social conditions which promote many forms of crime. Simply put, prison *"does not improve the prisoner ... it does not prevent him from committing more crimes. It does not then achieve any of the ends it has set itself"* [Kropotkin, **Anarchism**, p. 228] Moreover, they are a failure in terms of their impact on those subject to them: *"We know what prisons mean — they mean broken down body and spirit, degradation, consumption, insanity"*. [Voltairine de Cleyre, quoted by Paul Avrich, **An American Anarchist**, p. 146] The Makhnovists took the usual anarchist position on prisons:

> *"Prisons are the symbol of the servitude of the people, they are always built only to subjugate the people, the workers and peasants ... Free people have no use for prisons. Wherever prisons exist, the people are not free ... In keeping with this attitude, [the Makhnovists] demolished prisons wherever they went."* [Peter Arshinov, **The History of the Makhnovist Movement**, p. 153]

With the exception of Benjamin Tucker, no major anarchist writer supported the institution. Few anarchists think that private prisons (like private policemen) are compatible with their notions of freedom. However, all anarchists are against the current "justice" system which seems to them to be organised around **revenge** and punishing effects and not fixing causes.

However, there are psychopaths and other people in any society who are too dangerous to be allowed to walk freely. Restraint in this case would be the only option and such people may have to be isolated from others for their own, and others, safety. Perhaps mental hospitals would be used, or an area quarantined for their use created (perhaps an island, for example). However, such cases (we hope) would be rare and *"should be cared for according to the most humane methods of treating the mentally afflicted."* [Voltairine de Cleyre, **The Voltairine de Cleyre Reader**, p. 160]

The one thing that needs to be avoided is the creation of a professional and specialised "justice" system as this would be a key means by which the state could reconstitute itself. As Malatesta explained, *"the major damage caused by crime is not so much the single and transitory instance of the violation of the rights of a few individuals, but the danger that it will serve as an opportunity and*

pretext for the constitution of an authority that, with the outward appearance of defending society will subdue and oppress it." In other words, it *"would truly be a great piece of foolishness to protect oneself from a few violent people, a few idlers and some degenerates, by opening a school for idleness and violence"* [**Op. Cit.**, p. 101 and p. 132] The libertarian perspective on crime does not rest on an idealised vision of people. *"We do not believe"*, as Malatesta suggested, *"in the infallibility, nor even the general goodness of the masses"*, rather *"we believe even less in the infallibility and goodness of those who seize power and legislate"* and so we must *"avoid the creation of bodies specialising in police work"*. [**Errico Malatesta: His Life and Ideas**, p. 109 and p. 108] As George Barrett argued:

> *"All that we can say is that ... disputes are very much better settled without the interference of authority. If the two [parties] were reasonable, they would probably mutually agree to allow their dispute to be settled by some mutual friend whose judgement they could trust. But if instead of taking this sane course they decide to set up a fixed authority, disaster will be the inevitable result. In the first place, this authority will have to be given power wherewith to enforce its judgement in such matters. What will then take place? The answer is quite simple. Feeling it is a superior force, it will naturally in each case take to itself the best of what is disputed, and allot the rest to its friends.*
>
> *"What a strange question is this. It supposes that two people who meet on terms of equality and disagree could not be reasonable or just. But, on the other hand, it supposes that a third party, starting with an unfair advantage, and backed up by violence, will be the incarnation of justice itself. Common-sense should certainly warn us against such a supposition, and if we are lacking in this commodity, then we may learn the lesson by turning to the facts of life. There we see everywhere Authority standing by, and in the name of justice and fair play using its organised violence in order to take the lion's share of the world's wealth for the governmental class."* [**Objections to Anarchism**, pp. 349–50]

So instead of prisons and a legal code based on the concept of punishment and revenge, anarchists support the use of pubic opinion and pressure to stop anti-social acts and the need to therapeutically rehabilitate those who commit them. Rather than a parasitic legal system which creates and defends inequality and privilege, anarchists agree with Kropotkin: *"Liberty, equality, and practical human sympathy are the most effective barriers we can oppose to the anti-social instinct of certain among us"*. [**Op. Cit.**, p. 218] *"We want justice, not rigid, but elastic"*, argued Tucker, *"we want justice, not stern, but tempered with mercy, with eyes sharp enough to detect causes, conditions, and circumstances; we want justice, not superficial, but profound."* The current system of rigid law imposed by the state and implemented by a judge was false and *"no such justice is wanted in any civilised community."* [**Op. Cit.**, Vol. 13, No. 5, p. 4]

In summary, then, anarchists have spent considerable time discussing the issue. Somewhat ironically, given that many think the issue of crime is the weakest point of the anarchist case, the outlines of a solution to this problem are well established in anarchist theory, both in terms of what **not** to do and in terms of combating both crime and its causes. Anarchy is based on people being free but freedom does **not** mean the "freedom" to violate the equal freedom of others. That is oppression, that is exploitation, that is the embryo of the state and capitalism.

We can recommend the section *"Crime and Punishment"* by Malatesta (**Errico Malatesta: His Life and Ideas**) as well as Kropotkin's essays *"Law and Authority"* and *"Prisons and their moral influence on prisoners"* (both within the **Anarchism** collection). Emma Goldman's *"Prisons: A social crime and Failure"* (**Red Emma Speaks**), de Cleyre's *"Crime and Punishment"* (**The Voltairine de Cleyre Reader**) and Colin Ward's *"How Deviant Dare you get?"* (**Anarchy in Action**) are also worth reading. A useful collection of writings on this issue are found in **Under the Yoke of the State: Selected Anarchist Responses to Prisons and Crime** (edited by the Dawn Collective).

I.5.9 What about Freedom of Speech under Anarchism?

Free speech in an anarchist society would be far greater than under capitalism. This is obvious, anarchists argue, because we *"fight against oppression and tyranny for a future in which they will be neither masters nor slaves, neither rich nor poor, neither oppressors nor oppressed ... the freedom of each is rooted in the freedom of all, and that in this universal freedom is the guarantee of liberty, self-development, autonomy, and free speech for each and everyone."* [Emma Goldman, **A Documentary History of the American Years**, p. 104] As such, libertarian socialism would be marked by extensive freedom of speech but also freedom of the press, of the media and so forth.

Some, however, express the idea that **all** forms of socialism would endanger freedom of speech, press, and so forth. The usual formulation of this argument is in relation to state socialism and goes as follows: if the state (or "society") owned all the means of communication, then only the views which the government supported would get access to the media.

This is an important point and it needs to be addressed. However, before doing so, we should point out that under capitalism the major media are effectively controlled by the wealthy. As we argued in section D.3, the media are **not** the independent defenders of freedom that they like to portray themselves as. This is hardly surprising, since newspapers, television companies, and so forth are capitalist enterprises owned by the wealthy and with managing directors and editors who are also wealthy individuals with a vested interest in the status quo. Hence there are institutional factors which ensure that the "free press" reflects the interests of capitalist elites.

However, in democratic capitalist states there is little overt censorship. Radical and independent publishers can still print their papers and books without state intervention (although market forces ensure that this activity can be difficult and financially unrewarding). Under socialism, it is argued, because "society" owns the means of communication and production, this liberty will not exist. Instead, as can be seen from all examples of "actually existing socialism," such liberty is crushed in favour of the ruling elites' point of view.

As anarchism rejects the state, we can say that this danger does not exist under libertarian socialism. However, since social anarchists argue for the communalisation of production, could not restrictions on free speech still exist? We argue no, for three reasons.

Firstly, publishing houses, radio stations, and so on will be run by their workers directly. They will be supplied by other syndicates, with whom they will make agreements, and **not** by "central planning" officials (who would not exist). In other words, there is no bureaucracy of officials allocating (and so controlling) resources and so the means of communication. Hence, anarchist self-management will ensure that there is a wide range of opinions in different magazines and

papers. There would be community papers, radio stations, etc., and obviously they would play an increased role in a free society. But they would not be the only media. Associations, political parties, industrial syndicates, and so on would have their own media and/or would have access to the resources run by communication workers syndicates, so ensuring that a wide range of opinions can be expressed.

Secondly, the "ultimate" power in a free society will be the individuals of which it is composed. This power will be expressed in communal and workplace assemblies that can recall delegates and revoke their decisions. It is doubtful that these assemblies would tolerate a set of would-be bureaucrats determining what they can or cannot read, see, or hear.

Thirdly, individuals in a free society would be interested in hearing different viewpoints and discussing them. This is the natural side-effect of critical thought (which self-management would encourage), and so they would have a vested interest in defending the widest possible access to different forms of media for different views. Having no vested interests to defend, a free society would hardly encourage or tolerate the censorship associated with the capitalist media (*"I listen to criticism because I am **greedy.** I listen to criticism because I am **selfish.** I would not deny myself another's insights"* [For Ourselves, **The Right to be Greedy**, Thesis 113]).

Therefore, anarchism will **increase** freedom of speech in many important ways, particularly in the workplace (where it is currently denied under capitalism). This will be a natural result of a society based on maximising freedom and the desire to enjoy life: *"We claim the right of discussing ... whatever subject interests us. If free speech and free press mean anything, they mean freedom of discussion."* [Goldman, **Op. Cit.**, p. 203]

We would also like to point out that during both the Spanish and Russian revolutions, freedom of speech was protected within anarchist areas. For example, the Makhnovists in the Ukraine *"fully applied the revolutionary principles of freedom of speech, of thought, of the Press, and of political association. In all the cities and towns occupied ... Complete freedom of speech, Press, assembly, and association of any kind and for everyone was immediately proclaimed."* [Peter Arshinov, **The History of the Makhnovist Movement**, p. 153] This is confirmed by Michael Malet: *"One of the most remarkable achievements of the Makhnovists was to preserve a freedom of speech more extensive than any of their opponents."* [**Nestor Makhno in the Russian Civil War**, p. 175] In revolutionary Spain republicans, liberals, communists, Trotskyites and many different anarchist groups all had freedom to express their views. *"On my first visit to Spain in September 1936,"* Emma Goldman reported *"nothing surprised me so much as the amount of political freedom I found everywhere. True, it did not extend to Fascists"* but *"everyone of the anti-Fascist front enjoyed political freedom which hardly existed in any of the so-called European democracies."* As for the few restrictions that were in place, remember that there was a war on so it was *"childish to expect the CNT-FAI to include Fascists and other forces engaged in their destruction in the extension of complete political freedom."* [**Vision on Fire**, p.147 and p. 228] The freedom of speech in anarchist areas is confirmed in a host of other eye-witnesses, including George Orwell in **Homage to Catalonia** (in fact, it was the rise of the pro-capitalist republicans and communists that introduced censorship). Both movements were fighting a life-and-death struggle against communist, fascist and pro-capitalist armies and so this defence of freedom of expression, given the circumstances, is particularly noteworthy.

Freedom of speech, like freedom of association, applies to all groups (including, of course, religious ones). The only exception would be, as Goldman noted, for organisations which are actively fighting to enslave a free society. In other words, during a social revolution it is unlikely that

freedom of speech and organisation would apply to those supporting the counter-revolutionary forces. As the threat of violence by these forces decreases, so the freedom of their supporters would increase.

It is in this context we must discuss what some could point to as an example of anarchists denying freedom of speech and association, namely the burning of churches during the Spanish Revolution. In fact, some would use this as evidence of anarchist intolerance of religion and to those who disagree with them. Anarchists reject such charges.

As is well known, after the successful defeat of the fascist-military coup in mid-July 1936, Catholic Churches were burned and members of the Catholic Church were killed. However, these acts were **not** acts against freedom of religion or speech. Rather they are popular acts against both the oppressive and reactionary role of the Catholic Church in Spanish society as well as its active support for fascism throughout the 1920s and 1930s, including Franco's coup. As historian Paul Preston summarises:

> *"religion was an issue which could be used to mobilise mass peasant support behind the interests of the oligarchy. Having lost the political hegemony in April 1931, the ruling classes clung all the more to the Church as one of the key redoubts of their social and economic dominance. Equally, the Church hierarchy, as a major landowner, had a somewhat similar view of the value of an alliance with the new political formation being created to defend oligarchical agrarian interests. Not surprisingly, throughout the Republic, the clergy used both pulpit and confessional to defend the existing socio-economic order and to make electoral propaganda for the successive political organisations of the Right."* [**The Coming of the Spanish Civil War**, pp. 42–3]

The Catholic Church *"was the bulwark of the country's conservative forces"* and no more than 15 days after the announcement of the Republic in 1931, the Primate of Spain *"issued a pastoral denouncing the new government's intention to establish freedom of worship and to separate Church and state. The cardinal urged Catholics to vote in future elections against an administration which in his view wanted to destroy religion."* [Antony Beevor, **The Battle for Spain**, p. 91 and p. 25] This opposition to the Republic and support for right-wing, near-fascist parties such as the CEDA, continued throughout the 1930s and climaxed with the Church's backing of Franco's coup.

Nor should it be forgotten that the *"Catholic press applauded the Nazi destruction of the German Socialist and Communist movements. Nazism was much admired on the Spanish Right because of its emphasis on authority, the fatherland and hierarchy — all three of which were central preoccupations of CEDA."* It also *"urged its readers to follow the example of Italy and Germany and organise against the dragon of revolution"* while the Nazis *"signed a concordat with the Vatican"*. The CEDA would *"proceed to the establishment of an authoritarian regime of semi-fascist character along Austrian lines"*. So awareness of what had happened in Italy and Germany (with Church support) was keen in anarchist and other left-wing circles, particularly as the *"Spanish Right had not hidden its sympathy for the achievements of Hitler and Mussolini. The CEDA had many of the trappings of a fascist organisation"* and its leader *"had declared his determination to establish a corporative state in Spain."* [**Op. Cit.** p. 69, p. 72, p. 120 and p. 121] As one Catholic writer, Francois Mauriac, put it *"Christianity and fascism have become intermingled, and [many] cannot hate one without hating the other."* [quoted Antony Beevor, **Op. Cit.**, p. 270]

Given all this, the attacks on the Catholic Church really comes as no surprise. If, after an attempted fascist coup, people burned down the offices of the fascist and pro-fascist parties few

people would be surprised. Why should a pro-fascist church be considered immune to such popular anger? As George Orwell pointed out:

"No one can blame [someone] for being angry when churches are burned and priests murdered or driven into exile. But I think it is a pity that he has not looked more deeply into the reasons why these things happen." [**Orwell in Spain**, p. 314]

Unsurprisingly, then, those priests who had not supported the right, those who had treated the working class the same as the rich, were spared. In the Basque Country, where the church supported the Republic, not a single church was burnt. Nor were synagogues or Protestant church targeted. In Barcelona *"the Quakers established canteens which were staffed by refugee women."* [Gabriel Jackson, **The Spanish Republic and the Civil War, 1931–1939**, p. 446]

It should also be stressed that the repression in the fascist zone was much worse than that in the Republican one. Of a ecclesiastical community of 115,000, 6,845 were killed (*"the vast majority during the summer of 1936"*). This is in stark contrast to right-wing claims at the time. It should be mentioned that in the province of Seville, the fascist repression killed 8,000 during 1936 alone. In Cordoba, 10,000 were killed during the war — a tenth of the population. Once an area was captured by nationalist forces, after the initial killing of captured troops, union and party leaders, a *"second and more intense wave of slaughter would begin"* (*"in fact anyone who was even suspected of having voted for the Popular Front was in danger"*). This was organised by *"local committees, usually consisting of leading right-wingers, such as the major landowner, the local Civil Guard commander, a Falangist and quite often the priest"*. This was *"clearly not just a question of revenge, they were also motivated by the idea of establishing a reign of terror"*. This did not, of course, hinder *"the unqualified backing of the Vatican and the Spanish Church for General Franco"* while *"the Catholic press abroad sprang to the support of the nationalist rising"*. Obviously killing (many, many more) left-wingers in the name of god is of no concern to the Catholic hierarchy nor did it stop *"the Church's official support for Franco"*. [Beevor, **Op. Cit.**, p. 92, p. 101, p. 99, p. 104, p. 250, p. 269 and p. 270]

Under Franco, everyone had to *"submit themselves to the authority of the Church as well as to their temporal masters. Franco had been extremely generous in restoring all the Church's privileges and wealth, as well as its power in education, but in return he expected the priesthood to act virtually as another arm of the state."* In other words, *"Nationalist Spain was little more than an open prison for all those who did not sympathise with the regime"* and the *"population was encouraged to accuse people as part of its patriotic duty. Concierges and caretakers became police spies ... and priests noted those who did not turn up to mass."* [Beevor, **Op. Cit.**, p. 452, p. 453 and p. 454] All with the firm support of the Catholic Church.

Rather than an attempt to repress religion as such, the attacks on the Catholic Church in republican areas it was a product of popular hostility to a corrupt institution, one which was deeply reactionary, pro-fascist and a major landowner in its own right. This means that an awareness of the nature and role of the Church *"does not leave much doubt as to why practically all the churches in Catalonia and eastern Aragon were burnt at the outbreak of war."* The anti-clerical movement was a *"popular movement and a native Spanish movement. It has its roots not in Marx or Bakunin, but in the condition of the Spanish people themselves."* [Orwell, **Op. Cit.**, p. 300 and p. 315] While under Franco *"the relentless purging of 'reds and atheists' was to continue for years"* in the Republican areas *"the worse of the violence was mainly a sudden and quickly spent reaction of suppressed fear, exacerbated by desires of revenge for the past."* [Beevor, **Op. Cit.**, p. 91]

So the burning of churches in Spain had very little to do with anarchist atheism and much, much more to do with the Catholic Church's social role in Spain, its reactionary position, its hatred of the unions and social protest and the fact it supported the fascist coup. It does not imply an opposition to freedom of speech by libertarian socialists but was rather an expression of popular opposition to a ruling class and pro-fascist organisation.

One last point to make on this issue. Given the actual role of the Church during this period and its wholehearted support for fascism in the 1920s onwards, it seems strange that the Catholic church has declared the murdered priests in Spain to be martyrs, part of a planned religious persecution. This is not true, if they were martyrs then they were martyrs to their pro-fascist politics and not their faith (*"The political role of the Church was ignored when the religious victims were made into martyrs"*). Significantly, the Catholic Church *"said nothing when the nationalists shot sixteen of the Basque clergy, including the arch-priest of Mondragon"* (the nationalists also killed some twenty Protestant ministers). In 2003 when John Paul II beatified a teacher killed in July 1936 he *"still made no mention of the Basque priests killed by the nationalists."* [Beevor, **Op. Cit.**, p. 270, p. 92 and p. 527] Clearly a priest being murdered by fascists backed by the Vatican is ineligible for sainthood.

Given the actual role of the Catholic Church during this period it is surprising the Catholic hierarchy would seek to bring attention to it. Perhaps it is confidant that the media will not mention these awkward facts, although this context explains the deaths and church-burning in 1936. As we noted in section A.2.18, it appears that killing working class people is not worthy of comment but assassinating members of the ruling elite (and its servants) is. So the fact that the burning of churches and killing of clergy is well known but the pro-fascist activities of the church (a product of both its reactionary politics and position in the ruling elite) which provoked it is not should come as no surprise.

In summary, then, a free society would have substantial freedom of speech along with other fundamental freedoms (including freedom of worship and of association). Such freedoms would be respected, supported and encouraged for all shades of political opinion, from the left through to the right. The only exception would be if an organisation were **actively** supporting those seeking to impose their rule on a free people and in such cases some restrictions may be decided upon (their nature would depend on the state of the struggle, with them decreasing as the danger decreased).

To those who claim that refusing freedom of speech to counter-revolutionaries equates to statism or implies a contradiction in libertarian ideas, anarchists would reply that such arguments are flawed. In terms of the former, it is equating state imposed censorship with the active disobedience of a free people. Rather than the government imposing a ban, members of a free society would simply discuss the issue at hand and, if considered appropriate, actively and collectively boycott those supporting attempts to enslave them. Without electricity, paper, distribution networks and so on, reactionaries would find it hard to publish or broadcast. As for the latter, there is no contradiction as it is hardly contradictory to support and encourage freedom while, at the same time, resisting attempts to enslave you! As such, this suggestion makes the same logical error Engels made in his diatribe against anarchism, namely considering it "authoritarian" to destroy authority (see section H.4.7). Similarly, it is hardly authoritarian to resist those seeking to impose their authority on you or their supporters! This perspective seems to assume that the true "libertarian" approach is to let others impose their rule on you as stopping them is "authoritarian"! A truly strange way of understanding our ideas...

To conclude, based upon both theory and practice, we can say that anarchism will not endanger freedom of expression. Indeed, by breaking up the capitalist oligopoly which currently exists and introducing workers' self-management of the media, a far wider range of opinions will become available in a free society. Rather than reflect the interests of a wealthy elite, the media would reflect the interests of society as a whole and the individuals and groups within it.

I.5.10 What about political parties, interest groups and professional bodies?

Political parties and other interest groups will exist in an anarchist society as long as people feel the need to join them. They will not be banned in any way, and their members will have the same rights as everyone else. Individuals who are members of political parties or associations can take part in communal and other assemblies and try to convince others of the soundness of their ideas.

However, there is a key difference between such activity and politics under a capitalist democracy. This is because the elections to positions of responsibility in an anarchist society will not be based on party tickets nor will it involve the delegation of power. Emile Pouget's description of the difference between the syndicalist union and political elections drives this difference home:

> *"The constituent part of the trade union is the individual. Except that the union member is spared the depressing phenomenon manifest in democratic circles where, thanks to the veneration of universal suffrage, the trend is towards the crushing and diminution of the human personality. In a democratic setting, the elector can avail of his [or her] will only in order to perform an act of abdication: his role is to 'award' his 'vote' to the candidate whom he [or she] wishes to have as his [or her] 'representative.'*
>
> *"Affiliation to the trade union has no such implication ... In joining the union, the worker merely enters into a contract — which he may at any time abjure — with comrades who are his equals in will and potential ... In the union, say, should it come to the appointment of a trade union council to take charge of administrative matters, such 'selection' is not to be compared with 'election': the form of voting customarily employed in such circumstances is merely a means whereby the labour can be divided and is not accompanied by any delegation of authority. The strictly prescribed duties of the trade union council are merely administrative. The council performs the task entrusted to it, without ever overruling its principals, without supplanting them or acting in their place.*
>
> *"The same might be said of all decisions reached in the union: all are restricted to a definite and specific act, whereas in democracy, election implies that the elected candidate has been issued by his [or her] elector with a carte blanche empowering him [or her] to decide and do as he [or she] pleases, in and on everything, without even the hindrance of the quite possibly contrary views of his [or her] principals, whose opposition, in any case, no matter how pronounced, is of no consequence until such time as the elected candidate's mandate has run its course.*
>
> *"So there cannot be any possible parallels, let alone confusion, between trade union activity and participation in the disappointing chores of politics."* [**No Gods, No Masters**, vol. 2, pp. 67–68]

In other words, when individuals are elected to administrative posts they are elected to carry out their mandate, **not** to carry out their party's programme. Of course, if the individuals in question had convinced their fellow workers and citizens that their programme was correct, then this mandate and the programme would be identical. However this is unlikely in practice. We would imagine that the decisions of collectives and communes would reflect the complex social interactions and diverse political opinions their members and of the various groupings within the association.

Anarchism will likely contain many different political groupings and ideas. The relative influence of these within collectives and communes would reflect the strength of their arguments and the relevance of their ideas, as would be expected in a free society. As Bakunin argued: *"The abolition of this mutual influence would be death. And when we vindicate the freedom of the masses, we are by no means suggesting the abolition of any of the natural influences that individuals or groups of individuals exert on them. What we want is the abolition of influences which are artificial, privileged, legal, official."* [quoted by Malatesta, **Anarchy**, p. 51] It is only when representative government replaces self-management that political debate results in "elected dictatorship" and centralisation of power into the hands of one party which claims to speak for the whole of society, as if the latter had one mind.

This freedom of political association has existed in every anarchist revolution. During the Russian Revolution, the Makhnovists organised soviets and regional congresses at every opportunity and these saw delegates elected who were members of different political parties. For example, members of the socialist Left-SR party were active in the Makhnovist movement and attended soviet congresses (for example, the resolution of the February 1919 congress *"was written by the anarchists, left Socialist Revolutionaries, and the chairman."* [Michael Palij, **The Anarchism of Nestor Makhno, 1918–1921**, p. 155]). The Makhnovist Revolutionary Military Soviet created at the Aleksandrovsk congress in late 1919 had three Communists elected to it while there were 18 delegates from workers at that congress, six being Mensheviks and the remaining 12 included Communists [Micheal Malet, **Nestor Makhno in the Russian Civil War**, p. 111 and p. 124] In the words of the Makhnovist reply to Bolshevik attempt to ban one of their congresses:

> *"The Revolutionary Military Council ... holds itself above the pressure and influence of all parties and only recognises the people who elected it. Its duty is to accomplish what the people have instructed it to do, and to create no obstacles to any left socialist party in the propagation of ideas. Consequently, if one day the Bolshevik idea succeeds among the workers, the Revolutionary Military Council ... will necessarily be replaced by another organisation, 'more revolutionary' and more Bolshevik."* [quoted by Peter Arshinov, **The History of the Makhnovist Movement**, pp. 103–4]

As such, the Makhnovists supported the right of working-class self-determination, as expressed by one delegate to a conference in February 1919:

> *"No party has a right to usurp governmental power into its hands ... We want life, all problems, to be decided locally, not by order from any authority above; and all peasants and workers should decide their own fate, while those elected should only carry out the toilers' wish."* [quoted by Palij, **Op. Cit.**, p. 154]

It should be mentioned that a myth has sprung up fostered by some Leninists that parties were banned from election to these bodies (for example, see Jason Yanowitz's terrible *"On the Makhno*

Myth" [**International Socialist Review**, no. 53]). These claims flow from basic ignorance of how the soviets were organised during the revolution combined with a misunderstanding of this Makhnovist proclamation from January 1920:

> *"Only workers participating in work vital to the people's economy should be elected to these soviets. The representatives of political organisations have no place in the soviets of workers and peasants given that their participation in a soviet could turn it into a soviet of party political deputies, thereby leading the soviet order to perdition."* [quoted by Alexandre Skirda, **Nestor Makhno: Anarchy's Cossack**, p. 164]

When the soviets were formed in Petrograd and other Russian cities in 1917 the initiative had come (unlike in 1905) from political parties and these ensured that they had representatives from political parties within their executive committees (as distinct from elected delegates who happened to be members of a political party). This was how, for example, *"high party leaders became voting delegates"* in the soviets, by being *"selected by the leadership of each political organisation, and not by the soviet assembly itself."* [Samuel Farber, **Before Stalinism**, p. 31] Thus the Makhnovists were rejecting the means by which many soviet members were not directly elected by actual workers.

In addition, the Makhnovists were following the Russian Anarcho-Syndicalists who argued for *"effective soviets organised on collective lines with the direct delegation of workers and peasants .. . and not political chatterboxes gaining entry through party lists and turning the soviets into talking-shops"*. [**The Anarchists in the Russian Revolution**, Paul Avrich (ed.), p. 118] This use of party lists meant that soviet delegates could be anyone. For example, the leading left-wing Menshevik Martov recounted that in early 1920 a chemical factory *"put up Lenin against me as a candidate [to the Moscow soviet]. I received seventy-six votes he — eight (in an open vote)."* [quoted by Israel Getzler, **Martov**, p. 202] How would either of these two intellectuals actually know and reflect the concerns and interests of the workers they would be "delegates" of? If the soviets were meant to be the delegates of working people, then why should non-working class members of political parties be elected as mandated and recallable delegates to a soviet from a workplace they have never visited except, perhaps, to gather votes?

This applies, needless to say, to other areas of life. Anarchists do not think that social life can be reduced to political and economic associations alone. Individuals have many different interests and desires which they must express in order to have a truly free and fulfilling life. Therefore an anarchist society will see the development of numerous voluntary associations and groups to express these interests. For example, there would be consumer groups, musical groups, scientific associations, art associations, clubs, housing co-operatives and associations, craft and hobby guilds, fan clubs, animal rights associations, groups based around gender, sexuality, creed and colour and so forth. Associations will be created for all human interests and activities. As Kropotkin argued:

> *"He who wishes for a grand piano will enter the association of musical instrument makers. And by giving the association part of his half-days' leisure, he will soon possess the piano of his dreams. If he is fond of astronomical studies he will join the association of astronomers ... and he will have the telescope he desires by taking his share of the associated work ... In short, the five or seven hours a day which each will have*

> *at his disposal, after having consecrated several hours to the production of necessities, would amply suffice to satisfy all longings for luxury, however varied. Thousands of associations would undertake to supply them.*" [**The Conquest of Bread**, p. 120]

We can imagine, therefore, an anarchist society being based around associations and interest groups on every subject which fires the imagination of individuals and for which individuals want to meet in order to express and further their interests. Housing associations, for example, would exist to allow inhabitants to manage their local areas, design and maintain their homes and local parks and gardens. Vegetarian groups would produce information on issues they consider important, trying to convince others of the errors of eating meat. Consumer groups would be in dialogue with syndicates about improving products and services, ensuring that syndicates produce what is required by consumers. Environment groups would exist to watch production and make sure that it is not creating damaging side effects and informing both syndicates and communes of their findings. Feminist, homosexual, bisexual and anti-racist groups would exist to put their ideas across, highlighting areas in which social hierarchies and prejudice still existed. All across society, people would be associating together to express themselves and convince others of their ideas on all kinds of issues.

This applies to professional groupings who would seek to ensure that those work tasks that require qualifications to do (medicine and such like) have recognised standards and certificates. In this way, others in society would know whether a fellow worker is a recognised expert in their field and has the appropriate qualifications to do the work required or give advice. While a free society would break down the line between intellectual and manual work, ensure the end of the division of labour, the fact remains that people will wish to be happy that the doctor or nurse they are visiting knows what they are doing. This is where professional groupings would come into play, organising training and certification based on mutually agreed standards and qualifications. This would not stop others seeking to practice such tasks, of course, but it will mean that few, if any, would frequent someone without the recognised professional standards.

Hence in a anarchist society, free association would take on a stronger and more positive role than under capitalism. In this way, social life would take on many dimensions, and the individual would have the choice of thousands of societies to join to meet his or her interests or create new ones with other like-minded people. Anarchists would be the last to deny that there is more to life than work!

I.5.11 How will an anarchist society defend itself against the power hungry?

A common objection to anarchism is that a libertarian society will be vulnerable to be taken over by thugs or those who seek power. A similar argument is that a group without a leadership structure becomes open to charismatic leaders so anarchy would just lead to tyranny.

For anarchists, such arguments are strange. Society already **is** run by thugs and/or the offspring of thugs. Kings were originally just successful thugs who imposed their domination over a specific territorial area. The modern state has evolved from the structure created to impose this domination. Similarly with property, with most legal titles to land being traced back to its violent seizure by thugs who then passed it on to their children who then sold it or gave it to

their offspring. The origins of the current system in violence can be seen by the continued use of violence by the state and capitalists to enforce and protect their domination over society. When push comes to shove, the dominant class will happily re-discover their thug past and employ extreme violence to maintain their privileges. The descent of large parts of Europe into Fascism in the 1920s and 1930s, or Pinochet's coup in Chile in 1973 indicates how far they will go. As Peter Arshinov argued (in a slightly different context):

> *"Statists fear free people. They claim that without authority people will lose the anchor of sociability, will dissipate themselves, and will return to savagery. This is obviously rubbish. It is taken seriously by idlers, lovers of authority and of the labour of others, or by blind thinkers of bourgeois society. The liberation of the people in reality leads to the degeneration and return to savagery, not of the people, but of those who, thanks to power and privilege, live from the labour of the people's arms and from the blood of the people's veins ... The liberation of the people leads to the savagery of those who live from its enslavement."* [**The History of the Makhnovist Movement**, p. 85]

So anarchists are not impressed with the argument that anarchy would be unable to stop thugs seizing power. It ignores the fact that we live in a society where the power-hungry already rule. As an argument against anarchism it fails and is, in fact, an argument against hierarchical societies.

Moreover, it also ignores fact that people in an anarchist society would have gained their freedom by overthrowing every existing and would-be thug who had, or desired, power over others. They would have defended that freedom against those who desired to re-impose it. They would have organised themselves to manage their own affairs and, therefore, to abolish all hierarchical power. And we are to believe that these people, after struggling to become free, would quietly let a new set of thugs impose themselves? As Kropotkin argued:

> *"The only way in which a state of Anarchy can be obtained is for each man [or woman] who is oppressed to act as if he [or she] were at liberty, in defiance of all authority to the contrary ... In practical fact, territorial extension is necessary to ensure permanency to any given individual revolution. In speaking of the Revolution, we signify the aggregate of so many successful individual and group revolts as will enable every person within the revolutionised territory to act in perfect freedom ... without having to constantly dread the prevention or the vengeance of an opposing power upholding the former system ... Under these circumstance it is obvious that any visible reprisal could and would be met by a resumption of the same revolutionary action on the part of the individuals or groups affected, and that the* ***maintenance*** *of a state of Anarchy in this manner would be far easier than the gaining of a state of Anarchy by the same methods and in the face of hitherto unshaken opposition ... They have it in their power to apply a prompt check by boycotting such a person and refusing to help him with their labour or to willing supply him with any articles in their possession. They have it in their power to use force against him. They have these powers individually as well as collectively. Being either past rebels who have been inspired with the spirit of liberty, or else habituated to enjoy freedom from their infancy, they are hardly to rest passive in view of what they feel to be wrong."* [Kropotkin, **Act for Yourselves**, pp. 87–8]

Thus a free society would use direct action to resist the would-be ruler just as it had used direct action to free itself from existing rulers. It would be organised in a way which would facilitate this direct action as it would be based on networks of solidarity and mutual aid. An injury to one is an injury to all and a would-be ruler would face a whole liberated society acting against him or her. Faced with the direct action of the population (which would express itself in non-co-operation, strikes, demonstrations, occupations, insurrections and so on) a would-be power seeker would find it difficult to impose themselves. Unlike those accustomed to rulership in existing society, an anarchist people would be a society of rebels and so difficult to dominate and conquer: *"In the future society, Anarchy will be defence, the prevention of the re-establishment of any authority, any power, any State."* [Carlo Cafiero, *"Anarchy and Communism"*, pp. 179–86, **The Raven**, No. 6, p. 180]

Anarchists point to the example of the rise of Fascism in Italy, Spain and Germany. In areas with strong anarchist movements the fascists were resisted most strongly. While in Germany Hitler was met with little or no opposition, in Italy and Spain the fascists had to fight long and hard to gain power. The anarchist and anarcho-syndicalist organisations fought the fascists tooth and nail, with some success before betrayal by the Republicans and Marxists. From this historical experience anarchists argue that an anarchist society would quickly and easily defeat would-be thugs as people would be used to practising direct action and self-management and would have no desire to stop. A free people would quickly organise itself in self-managed militias for self-defence (just as they would during a social revolution to defend it — section J.7.6).

As for self-management resulting in "charismatic" leaders, well the logic is astounding. As if hierarchical structures are **not** based on leadership structures and do not require a charismatic leader! Such an argument is inherently self-contradictory — as well as ignoring the nature of modern society and its leadership structures. Rather than mass assemblies being dominated by leaders, it is the case that hierarchical structures are the natural breeding ground for dictators. All the great dictators the world have seen have come to the forefront in **hierarchical** organisations, **not** libertarian structured ones. Hitler, for example, did not come to power via self-management. Rather he used a highly centralised and hierarchically organised party to take control of a centralised, hierarchical state. The very disempowerment of the population in capitalist society results in them looking to leaders to act for them and so *"charismatic"* leaders are a natural result. An anarchist society, by empowering all, would make it more difficult, not less, for a would-be leader to gain power — few people, if any, would be willing to sacrifice and negate themselves for the benefit of another.

Our discussion on the power hungry obviously relates to the more general the question of whether ethical behaviour be rewarded in an anarchist society. In other words, could an anarchist society be stable or would the unethical take over?

It is one of the most disturbing aspects of living in a world where the rush to acquire wealth is the single most important aspect of living is what happens to people who follow an ethical path in life. Under capitalism, the ethical generally do not succeed as well as those who stab their fellows in the back, those who cut corners, indulge in sharp business practises, drive competitors into the ground and live their lives with an eye on the bottom line but they do survive. Loyalty to a firm or a group, bending over backwards to provide a service, giving a helping hand to somebody in need, placing friendship above money, count for nothing when the bills come in. People who act ethically in a capitalist society are usually punished and penalised for their ethical and principled

behaviour. Indeed, the capitalist market rewards unethical behaviour as it generally reduces costs and so gives those who do it a competitive edge.

It is different in a free society. Anarchism is based on equal access to power and wealth. Everybody in an anarchist society irrespective of what they do, or who they are or what type of work they perform is entitled to share in society's wealth. Whether a community survives or prospers depends on the combined efforts of the people in that community. Ethical behaviour would become the norm in an anarchist community; those people who act ethically would be rewarded by the standing they achieve in the community and by others being more than happy to work with and aid them. People who cut corners, try to exercise power over others, refuse to co-operate as equals or otherwise act in an unethical manner would lose their standing. Their neighbours and work mates would refuse to co-operate with them (or reduce co-operation to a minimum) and take other forms of non-violent direct action to point out that certain forms of activity was inappropriate. They would discuss the issue with the unethical person and try to convince them of the errors of their way. In a society where the necessities are guaranteed, people would tend to act ethically because ethical behaviour raises an individuals profile and standing within such a community. Capitalism and ethical behaviour are mutually exclusive concepts; anarchism encourages and rewards ethical behaviour. Needless to say, as we discussed in section I.5.8, anarchists are aware that a free society would need to defend itself against whatever anti-social behaviour remains in a free and equal society and seeking to impose your will on others defines unethical and anti-social!

Therefore, as can be seen, anarchists argue that a free society would not have to fear would-be thugs, "charismatic" leaders or the unethical. An anarchist society would be based on the co-operation of free individuals. It is unlikely that they would tolerate bad behaviour and would use their own direct action as well as social and economic organisations to combat it. Moreover, the nature of free co-operation would reward ethical behaviour as those who practice it would have it reciprocated by their fellows. and, if worse came to worse, they would defend their liberty!

One last point. Some people seem to think that anarchism is about the powerful being appealed to **not** to oppress and dominate others. Far from it. Anarchism is about the oppressed and exploited refusing to let others dominate them. It is **not** an appeal to the "better side" of the boss or would-be boss; it is about the solidarity and direct action of those subject to a boss **getting rid of the boss** — whether the boss agrees to it or not! Once this is clearly understood the idea that an anarchist society is vulnerable to the power-hungry is clearly nonsense — anarchy is based on resisting power and so is, by its very nature, more resistant to would-be rulers than a hierarchical one.

So, to summarise, anarchists are well aware that an anarchist society will have to defend itself from both inside and outside attempts to re-impose capitalism and the state. Indeed, every revolutionary anarchist has argued that a revolution will have to defend itself (as proven in section H.2.1, Marxist assertions otherwise have always been myths). This applies to both internal and external attempts to re-introduce authority.

I.5.12 Would an anarchist society provide health care and other public services?

It depends on the type of anarchist society you are talking about. Different anarchists propose different solutions.

In an individualist-mutualist society, for example, health care and other public services would be provided by individuals or co-operatives on a pay-for-use basis. It would be likely that individuals or co-operatives/associations would subscribe to various insurance providers or enter into direct contracts with health care providers. Thus the system would be similar to privatised health care but without the profit margins as competition, it is hoped, would drive prices down to cost.

Other anarchists reject such a system. They are favour of socialising health care and other public services. They argue that a privatised system would only be able to meet the requirements of those who can afford to pay for it and so would be unjust and unfair. In addition, such systems would have higher overheads (the need to pay share-holders and the high wages of upper management, most obviously, and not to mention paying for propaganda against "socialised" medicine) as well as charge more (privatised public utilities under capitalism have tended to charge consumers more, unsurprisingly as by their very nature they are natural monopolies).

Looking at health care, for example, the need for medical attention is not dependent on income and so a civilised society would recognise this fact. Under capitalism, profit-maximising medical insurance sets premiums according to the risks of the insured getting ill or injured, with the riskiest and most ill not being able to find insurance at any price. Private insurers shun entire industries as too dangerous for their profits due to the likelihood of accidents or illness. They review contracts regularly and drop sick people for the slightest reason (understandably, given that they make profits by minimising pay-outs for treatment). Hardly a vision to inspire a free society or one compatible with equality and mutual respect.

Therefore, most anarchists are in favour of a socialised and universal health-care system for both ethical and efficiency reasons (see section I.4.10). Needless to say, an anarchist system of socialised health care would differ in many ways to the current systems of universal health-care provided by the state (which, while called socialised medicine by its enemies is better described as nationalised medicine — although it should be stressed that this is better than the privatised system). Such a system of socialised health-care will be built from the bottom-up and based around the local commune. In a social anarchist society, *"medical services .. . will be free of charge to all inhabitants of the commune. The doctors will not be like capitalists, trying to extract the greatest profit from their unfortunate patients. They will be employed by the commune and expected to treat all who need their services."* Moreover, prevention will play an important part, as *"medical treatment is only the* ***curative*** *side of the science of health care; it is not enough to treat the sick, it is also necessary to prevent disease. That is the true function of hygiene."* [James Guillaume, *"On Building the New Social Order"*, pp. 356–79, **Bakunin on Anarchism**, p. 371] The same would go for other public services and works.

While rejecting privatisation, anarchists also reject nationalisation in favour of socialisation and worker's self-management. In this we follow Proudhon, who argued that there was a series of industries and services which were *"public works"* which he thought best handled by communes and their federations. Thus *"the control undertaking such works will belong to the mu-*

nicipalities, and to districts within their jurisdiction" while *"the control of carrying them out will rest with the workmen's associations."* This was due to both their nature and libertarian values as the *"direct, sovereign initiative of localities, in arranging for public works that belong to them, is a consequence of the democratic principle and the free contract: their subordination to the State is ... a return to feudalism."* Workers' self-management of such public workers is, again, a matter of libertarian principles for *"it becomes necessary for the workers to form themselves into democratic societies, with equal conditions for all members, on pain of a relapse into feudalism."* Railways should be given *"to responsible companies, not of capitalists, but of WORKMEN."* [**General Idea of the Revolution**, p. 276, p. 277 and p. 151]

This was applied during the Spanish Revolution. Gaston Leval discussed *"Achievements in the Public Sector"* in his classic account of the collectives. Syndicates organised water, gas and electricity utilities in Catalonia, while the trams and railways were run more efficiently and cheaper than under capitalist management. All across Spain, the workers in the health service re-organised their industry on libertarian lines and in association with the collectives, communes and the unions of the CNT. As Leval summarised:

> *"For the socialisation of medicine was not just an initiative of militant libertarian doctors. Wherever we were able to make s study of villages and small towns transformed by the Revolution, medicine and existing hospitals had been municipalised, expanded, placed under the aegis of the Collective. When there were none, they were improvised. The socialisation of medicine was becoming everyone's concern, for the benefit of all. It constituted one of the most remarkable achievements of the Spanish Revolution."* [**Collectives in the Spanish Revolution**, p. 278]

So the Spanish Revolution indicates how an anarchist health service would operate. In rural areas local doctors would usually join the village collective and provided their services like any other worker. Where local doctors were not available, *"arrangements were made by the collectives for treatment of their members by hospitals in nearby localities. In a few cases, collectives themselves build hospitals; in many they acquired equipment and other things needed by their local physicians."* For example, the Monzon comercal (district) federation of collectives in Aragon established maintained a hospital in Binefar, the **Casa de Salud Durruti**. By April 1937 it had 40 beds, in sections which included general medicine, prophylaxis and gynaecology. It saw about 25 outpatients a day and was open to anyone in the 32 villages of the comarca. [Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 331 and pp. 366–7]

In the Levante, the CNT built upon its existing **Sociedad de Socorros Mutuos de Levante** (a health service institution founded by the union as a kind of mutual benefit society which had numerous doctors and specialists). During the revolution, the Mutua had 50 doctors and was available to all affiliated workers and their families. The socialisation of the health care took on a slightly different form in Catalonia but on the same libertarian principles. Gaston Leval provided us with an excellent summary:

> *"The socialisation of health services was one of the greatest achievements of the revolution. To appreciate the efforts of our comrades it must be borne in mind that they rehabilitated the health service in all of Catalonia in so short a time after July 19th. The revolution could count on the co-operation of a number of dedicated doctors whose ambition was not to accumulate wealth but to serve the afflicted and the underprivileged.*

> *"The Health Workers' Union was founded in September, 1936. In line with the tendency to unite all the different classifications, trades, and services serving a given industry,* ***all*** *health workers, from porters to doctors and administrators, were organised into one big union of health workers ...*
>
> *"Our comrades laid the foundations of a new health service ... The new medical service embraced all of Catalonia. It constituted a great apparatus whose parts were distributed according to different needs, all in accord with an overall plan. Catalonia was divided into nine zones . .. In turn, all the surrounding villages and towns were served from these centres.*
>
> *"Distributed throughout Catalonia were twenty-seven towns with a total of thirty-six health centres conducting services so thoroughly that every village, every hamlet, every isolated peasant in the mountains, every woman, every child, anywhere, received adequate, up-to-date medical care. In each of the nine zones there was a central syndicate and a Control Committee located in Barcelona. Every department was autonomous within its own sphere. But this autonomy was not synonymous with isolation. The Central Committee in Barcelona, chosen by all the sections, met once a week with one delegate from each section to deal with common problems and to implement the general plan ...*
>
> *"The people immediately benefited from the projects of the health syndicate. The syndicate managed all hospitals and clinics. Six hospitals were opened in Barcelona ... Eight new sanatoriums were installed in converted luxurious homes ideally situated amidst mountains and pine forests. It was no easy task to convert these homes into efficient hospitals with all new facilities."* [**The Anarchist Collectives**, Sam Dolgoff (ed.), pp. 99–100]

People were no longer required to pay for medical services. Each collective, if it could afford it, would pay a contribution to its health centre. Building and facilities were improved and modern equipment introduced. Like other self-managed industries, the health service was run at all levels by general assemblies of workers who elected delegates and hospital administration.

We can expect a similar process to occur in the future anarchist society. It would be based on self-management, of course, with close links to the local commune and federations of communes. Each hospital or health centre would be autonomous but linked in a federation with the others, allowing resources to be shared as and when required while allowing the health service to adjust to local needs and requirements as quickly as possible. Workers in the health industry will organise their workplaces, federate together to share resources and information, to formulate plans and improve the quality of service to the public in a system of generalised self-management and socialisation. The communes and their federations, the syndicates and federations of syndicates will provide resources and effectively own the health system, ensuring access for all.

Similar systems would operate in other public services. For example, in education we expect the members of communes to organise a system of free schools. This can be seen from the Spanish revolution. Indeed, the Spanish anarchists organised Modern Schools before the outbreak of the revolution, with 50 to 100 schools in various parts funded by local anarchist groups and CNT unions. During the revolution everywhere across Spain, syndicates, collectives and federations of collectives formed and founded schools. Indeed, education *"advanced at an unprecedented pace.*

Most of the partly or wholly socialised collectives and municipalities built at least one school. By 1938, for example, every collective in the Levant Federation had its own school." [Gaston Leval, quoted by Sam Dolgoff, **Op. Cit.**, p. 168] These schools aimed, to quote the CNT's resolution on Libertarian Communism, to *"help mould men with minds of their own — and let it be clear that when we use the word 'men' we use it in the generic sense — to which end it will be necessary for the teacher to cultivate every one of the child's faculties so that the child may develop every one of its capacities to the full."* [quoted by Jose Periats, **The CNT in the Spanish Revolution**, p. 70] The principles of libertarian education, of encouraging freedom instead of authority in the school, was applied on vast scale (see section J.5.13 for more details on Modern Schools and libertarian education).

This educational revolution was not confined to collectives or children. For example, the **Federacion Regional de Campesinos de Levante** formed institutes in each of its five provinces. The first was set up in October 1937 in an old convent with 100 students. The Federation also set up two universities in Valencia and Madrid which taught a wide variety of agricultural subjects and combined learning with practical experience in an experimental form attached to each university. The Aragon collectives formed a similar specialised school in Binefar. The CNT was heavily involved in transforming education in Catalonia. In addition, the local federation of the CNT in Barcelona established a school to train women workers to replace male ones being taken into the army. The school was run by the anarcha-feminist group the **Mujeres Libres**. [Robert Alexander, **Op. Cit.**, p. 406, p. 670 and pp. 665–8 and p. 670]

Ultimately, the public services that exist in a social anarchist society will be dependent on what members of that society desire. If, for example, a commune or federation of communes desires a system of communal health-care or schools then they will allocate resources to implement it. They will allocate the task of creating such a system to, say, a special commission based on volunteers from the interested parties such as the relevant syndicates, professional associations, consumer groups and so on. For example, for communal education a commission or working group would include delegates from the teachers union, from parent associations, from student unions and so on. The running of such a system would be, like any other industry, by those who work in it. Functional self-management would be the rule, with doctors managing their work, nurses theirs and so on, while the general running of, say, a hospital would be based on a general assembly of all workers there who would elect and mandate the administration staff and decide the policy the hospital would follow. Other interested parties would have a say, including patients in the health system and students in the education system. As Malatesta argued *"the carrying out and the normal functioning of public services vital to our daily lives would be more reliable if carried out ... by the workers themselves who, by direct election or through agreements made with others, have chosen to do that kind of work and carry it out under the direct control of all the interested parties."* [**Anarchy**, p. 41]

Needless to say, any system of public services would not be imposed on those who did not desire it. They would be organised for and by members of the communes and so individuals who were not part of one would have to pay to gain access to communal resources. However, it is unlikely that an anarchist society would be as barbaric as a capitalist one and refuse entry to people who were ill and could not pay, nor turn away emergencies because they did not have enough money. And just as other workers need not join a syndicate or commune, so doctors, teachers and so on could practice their trade outside the communal system as either individual artisans or as part of a co-operative. However, given the availability of free medical services it

is doubtful they would grow rich doing so. Medicine, teaching and so on would revert back to what usually motivates people to initially take these up professions — the desire to help others and make a positive impact in society.

Thus, as would be expected, public services would be organised by the public, organised in their syndicates and communes. They would be based on workers' self-management of their daily work and of the system as a whole. Non-workers who took part in the system (patients, students, etc.) would not be ignored and would also play a role in providing essential feedback to assure quality control of services and to ensure that it is responsive to users needs. The resources required to maintain and expand the system would be provided by the communes, syndicates and their federations. For the first time, public services would truly be public and not a statist system imposed upon the public from above nor a system by which the few fleece the many by exploiting natural monopolies for their own interests.

So Public Services in a free society will be organised by those who do the work and under the effective control of those who use them. This vision of public services being run by workers' associations would be raised as a valid libertarian reform under capitalism (not to mention raising the demand to turn firms into co-operatives when they are bailed out during an economic crisis). Equally, rather than nationalisation or privatisation, public utilities could be organised as a consumer co-operative (i.e., owned by those who use it) while the day-to-day running could be in the hands of a producer co-operative.

I.6 What about the *"Tragedy of the Commons"*?

The term *"Tragedy of the Commons"* is a phrase which is used to describe why, according to some, commonly owned resources will be destructively overused. The term was first coined by Garret Hardin in December 1968. [*"The Tragedy of the Commons"*, **Science**, Vol. 162, No. 3859, pp. 1243–1248] It quickly became popular with those arguing against any form of collective ownership or socialism and would be the basis for many arguments for privatisation.

Unsurprisingly, given its popularity with defenders of capitalism and neo-classical economists, Hardin's argument was a pure thought experiment with absolutely no empirical evidence to support it. He suggested a scenario in which commonly owned pasture was open to all local herdsmen to feed their cattle on. Completing this assumption with the standard ones of neo-classical economics, with Hardin arguing that each herdsman would try to keep as many cattle as possible on the commons to maximise their income. This would result in overgrazing and environmental destruction as the cost of each feeding addition animals is shouldered by all who use the commons while the benefits accrue to the individual herdsman. However, what is individually rational becomes collectively irrational when each herdsman, acting in isolation, does the same thing. The net result of the individual's actions is the ending of the livelihood of **every** herdsman as the land becomes overused.

His article was used to justify both nationalisation and privatisation of communal resources (the former often a precursor for the latter). As state ownership fell out of favour, the lesson of this experiment in logic was as uniform as it was simple: only privatisation of common resources could ensure their efficient use and stop them being overused and destroyed. Coming as it before the rise of neo-liberalism in the 1970s, Hardin's essay was much referenced by those seeking to privatise nationalised industries and eliminate communal institutions in tribal societies in the Third World. That these resulted in wealth being concentrated in a few hands should come as no surprise.

Needless to say, there are numerous problems with Hardin's analysis. Most fundamentally, it was a pure thought experiment and, as such, was not informed by historical or current practice. In other words, it did not reflect the reality of the commons as a social institution. The so-called *"Tragedy of the Commons"* was no such thing. It is actually an imposition of the *"tragedy of the free-for-all"* to communally owned resources (in this case, land). In reality, commons were **never** *"free for all"* resources and while the latter may be see overuse and destruction the former managed to survive thousands of years. So, unfortunately for the supporters of private property who so regularly invoke the *"Tragedy of the Commons"*, they simply show their ignorance of what true commons are. As socialist Allan Engler points out:

> *"Supporters of capitalism cite what they call the tragedy of the commons to explain the wanton plundering of forests, fish and waterways, but common property is not the*

problem. When property was held in common by tribes, clans and villages, people took no more than their share and respected the rights of others. They cared for common property and when necessary acted together to protect it against those who would damage it. Under capitalism, there is no common property. (Public property is a form of private property, property owned by the government as a corporate person.) Capitalism recognises only private property and free-for-all property. Nobody is responsible for free-for-all property until someone claims it as his own. He then has a right to do as he pleases with it, a right that is uniquely capitalist. Unlike common or personal property, capitalist property is not valued for itself or for its utility. It is valued for the revenue it produces for its owner. If the capitalist owner can maximise his revenue by liquidating it, he has the right to do that." [**Apostles of Greed**, pp. 58–59]

Therefore, as Colin Ward argues, *"[l]ocal, popular, control is the surest way of avoiding the tragedy of the commons."* [**Reflected in Water**, p. 20] Given that a social anarchist society is a communal, decentralised one, it will have little to fear from irrational overuse or abuse of communally owned and used resources.

So, the **real** problem is that a lot of economists and sociologists conflate Hardin's scenario, in which **unmanaged** resources are free for all, with the situation that prevailed in the use of commons which were communally **managed** resources in village and tribal communities. Historian E.P. Thompson, for example, noted that Hardin was *"historically uninformed"* when he assumed that commons were pastures open to all. The commons, in reality, **were** managed by common agreements between those who used them. In an extensive investigation on this subject, Thompson showed that the *"argument [is] that since resources held in common are not owned and protected by anyone, there is an inexorable economic logic that dooms them to over-exploitation ... Despite its common sense air, what it overlooks is that commoners themselves were not without common sense. Over time and over space the users of commons have developed a rich variety of institutions and community sanctions which have effected restraints and stints upon use . .. As the old ... institutions lapsed, so they fed into a vacuum in which political influence, market forces, and popular assertion contested with each other without common rules."* [**Customs in Common**, p. 108fn and p. 107] Colin Ward points to a more recent example, that of Spain after the victory of Franco:

"The water history of Spain demonstrates that the tragedy of the commons is not the one identified by Garrett Hardin. Communal control developed an elaborate and sophisticated system of fair shares for all. The private property recommended by Hardin resulted in the selfish individualism that he thought was inevitable with common access, or in the lofty indifference of the big landowners." [**Op. Cit.**, p. 27]

So, for a while, Hardin's essay *"was taken to provide an argument for the privatisation of the commons. It is now a well-developed point that Hardin's argument is not a tragedy of common ownership at all ... Hardin's argument is a problem not of common ownership, but of open access in a context of private ownership of particular assets."* [John O'Neill, **Markets, Deliberation and Environment**, p. 54] Significantly, Hardin later admitted his mistake and noted that *"it is clear to me that the title of my original contribution should have been* ***The Tragedy of the*** *Unmanaged* ***Commons*** *... I can understand how I might have misled others."* [quoted by O'Neill, **Op. Cit.**, p. 199] But, of course, by then the damage had been done.

There is something quite arrogant about Hardin's assertions, as he basically assumed that peasant farmers are unable to recognise certain disaster and change their behaviour accordingly. This, apparently, is where enlightened elites (governmental and economic) step in. However, in the real world, small farmers (and others) have created their own institutions and rules for preserving resources and ensuring that their community has the resources it needed to survive. Hardin, in other words, ignored what actually happens in a real commons, namely communal control and self-regulation by the communities involved who develop the appropriate communal institutions to do so.

Surely, the very obvious fact that humans have lived in societies with commons for centuries and did not overuse them disproves Hardin's most fundamental assumptions. *"If we misunderstand the true nature of the commons,"* argues scientist Susan Jane Buck Cox *"we also misunderstand the implications of the demise of the traditional, commons system. Perhaps what existed in fact was not a 'tragedy of the commons' but rather a triumph: that for hundreds of years — and perhaps thousands, although written records do not exist to prove the longer era — land was managed successfully by communities."* This suggests that it is a case of *"the myth of the tragedy of the commons"*, rooted in an argument which is *"historically false"* as the *"commons were carefully and painstakingly regulated."* She points to a wider issue, namely whether *"our perceptions of the nature of humankind are awry"* for *"it seems quite likely if 'economic man' had been managing the commons that tragedy really would have occurred,"* so *"perhaps someone else was running the common."* [*"No Tragedy on the Commons"*, pp. 49–61, **Environmental Ethics**, vol. 7, p. 60, p. 53, p. 56 and p. 61]

One economist has noted that the "tragedy of the commons" only makes sense once the assumption of neo-classical economics are taken for granted. If we assume atomised individuals accessing unmanaged lands then Hardin's conclusions automatically flow. However, *"if the property were **really** common, this would imply the necessary existence of institutional agreements ... between the co-owners to establish the rules for decisions governing the management of the resource. To put it more clearly, for common property to be truly common property implies its existence as an institution."* It is precisely these kinds of human institutions which neo-classical economics ignores and so *"the so-called 'tragedy of the commons' is more accurately considered 'the tragedy of a methodological individualism'"*. As many critics note, there are numerous *"conceptual errors"* contained in the article and these *"have been repeated systematically by economists."* In summary, *"the so-called tragedy of the commons has nothing to do with common property, but with unrestricted and unregulated access."* [F. Aguilera-Klink, *"Some Notes on the Misuse of Classic Writings in Economics on the Subject of Common Property"*, pp. 221–8, **Ecological Economics**, No. 9, p. 223, p. 221, p. 224 and p. 226]

Much the same can be said against those who argue that the experience of the Stalinism in the Eastern Block and elsewhere shows that public property leads to pollution and destruction of natural resources. Such arguments also show a lack of awareness of what common property actually is (it is no co-incidence that the propertarian-right use such an argument). This is because the resources in question, as we discussed in section B.3.5, were **not** owned or managed in common — the fact that these countries were dictatorships excluded popular control of resources. Thus Stalinism does not, in fact, show the dangers of having commons or public ownership. Rather it shows the danger of not subjecting those who manage a resource to public control (and it is no co-incidence that the USA is far more polluted than Western Europe — in the USA, like in the USSR, the controllers of resources are not subject to popular control and so pass pollution on

to the public). Stalinism shows the danger of state owned resource use (nationalisation) rather than commonly owned resource use (socialisation), particularly when the state in question is not under even the limited control of its subjects implied in representative democracy.

This confusion of public and state owned resources has, of course, been used to justify the stealing of communal property by the rich and the state. The continued acceptance of this "confusion" in political debate, like the continued use of Hardin's original and flawed *"Tragedy of the Commons"*, is due to the utility of the theory for the rich and powerful, who have a vested interest in undermining pre-capitalist social forms and stealing communal resources. Most examples used to justify the *"tragedy of the commons"* are **false** examples, based on situations in which the underlying social context is assumed to be radically different from that involved in using true commons.

In reality, the *"tragedy of the commons"* comes about only after wealth and private property, backed by the state, starts to eat into and destroy communal life. This is well indicated by the fact that commons existed for thousands of years and only disappeared after the rise of capitalism — and the powerful central state it requires — had eroded communal values and traditions. Without the influence of wealth concentrations and the state, people get together and come to agreements over how to use communal resources and have been doing so for millennia. That was how the commons were successfully managed before the wealthy sought to increase their holdings and deny the poor access to land in order to make them fully dependent on the power and whims of the owning class.

Thus, as Kropotkin stressed, the state *"systematically weeded out all institutions in which the mutual-aid tendency had formerly found its expression. The village communities were bereft of their folkmotes, their courts and independent administration; their lands were confiscated."* [**Mutual Aid**, p. 182] The possibilities of free discussion and agreement were destroyed in the name of "absolute" property rights and the power and authority which goes with them. Both political influence and market forces were, and are, dominated by wealth: *"There were two occasions that dictated absolute precision: a trial at law and a process of enclosure. And both occasions favoured those with power and purses against the little users."* Popular assertion meant little when the state enforces property rights in the interests of the wealthy. Ultimately, *"Parliament and law imposed capitalist definitions to exclusive property in land."* [Thompson, **Op. Cit.**, p. 134 and p. 163] As Cox suggested, many tenants were *"denied [their] remedy at law for the illegal abuses of the more powerful landowners"* and *"[s]ponsored by wealthy landowners, the land reform was frequently no more than a sophisticated land-grab."* [**Op. Cit.**, p. 58 and p. 59] Gerrard Winstanley, the Digger (and proto-anarchist), was only expressing a widespread popular sentiment when he complained that *"in Parishes where Commons lie the rich Norman Freeholders, or the new (more covetous) Gentry overstock the Commons with sheep and cattle, so that the inferior Tenants and poor labourers can hardly keep a cow but half starve her."* [quoted by Maurice Dobb, **Studies in the Development of Capitalism**, p. 173] The working class is only "left alone" to starve.

As discussed in section F.8, the enclosures were part of a wider state-imposition of capitalism onto society. Of course, enclosure was often justified by supporters of capitalism by the increased productivity which, they claim, resulted from it (in effect, repeating Locke's earlier, and flawed, argument — see section B.3.4). There are three objections to this. First, it cannot be assumed that increased productivity could not be achieved by keeping the commons and by the commoners applying the improved techniques and technologies that contributed to any post-enclosure increased productivity. Second, it ignores the key issue of liberty and replaces it with property

(increases in wealth being considered more important than reducing the freedom of the working class). Third, and more importantly, this paternalistic rationale for coercion and state action does not fit well with such apologist's opposition to (certain forms of) state intervention today (such as taxation or popular land reform). If the "ends justify the means" (which is what their arguments boil down to) when applied to the rural working class, then they have little basis for opposing taxation of the wealthy elite or pro-worker land-reform in a democracy or a popular social revolution.

To conclude. The "tragedy of the commons" argument is conceptually flawed and empirically wrong (unsurprising, given that no actual empirical evidence was presented to support the argument). Sadly, this has not stopped Hardin, or those inspired by his arguments, from suggesting policies based on a somewhat dubious understanding of history and humanity. Perhaps this is not that surprising, given that Hardin's assumptions (which drive his conclusions) are based not on actual people nor historical evidence but rather by fundamental components of capitalist economic theory. While under capitalism, and the short-termism imposed by market forces, you could easily imagine that a desire for profit would outweigh a person's interest in the long-term survival of their community, such a perspective is relatively recent in human history.

In fact, communal ownership produces a strong incentive to protect such resources for people are aware that their offspring will need them and so be inclined to look after them. By having more resources available, they would be able to resist the pressures of short-termism and so resist maximising current production without regard for the future. Capitalist owners have the opposite incentive for, as argued in section E.3, unless they maximise short-term profits then they will not be around in the long-term (so if wood means more profits than centuries-old forests then the trees will be chopped down). By combining common ownership with decentralised and federated communal self-management, anarchism will be more than able to manage resources effectively, avoiding the pitfalls of both privatisation and nationalisation.

I.6.1 How can property *"owned by everyone in the world"* be used?

First, we need to point out the fallacy normally lying behind this objection. It is assumed that because everyone owns something, then everyone has to be consulted in what it is used for. This, however, applies the logic of private property to non-capitalist social forms. While it is true that everyone owns collective "property" in an anarchist society, it does not mean that everyone **uses** it. Carlo Cafiero, one of the founders of communist-anarchism, stated the obvious:

> *"The common wealth being scattered right across the planet, while belonging by right to the whole of humanity, those who happen to be within reach of that wealth and in a position to make use of it will utilise it in common. The folk from a given country will use the land, the machines, the workshops, the houses, etc., of that country and they will all make common use of them. As part of humanity, they will exercise here, in fact and directly, their rights over a portion of mankind's wealth. But should an inhabitant of Peking visit this country, he [or she] would enjoy the same rights as the rest: in common with the others, he would enjoy all the wealth of the country, just as he [or she] would have in Peking."* [**No Gods, No Masters**, vol. 1, p. 250]

Anarchists, therefore, think that those who **use** a part of society's wealth have the most say in what happens to it (e.g., workers control the means of production they use and the work they do when using it). This does not mean that those using it can do what they like to it. Users would be subject to recall by local communities if they are abusing their position (for example, if a workplace were polluting the environment, then the local community could act to stop or, if need be, close down the workplace). Thus use rights (or usufruct) replace property rights in a free society, combined with a strong dose of *"think globally, act locally."*

It is no coincidence that societies that are stateless are also without private property. As Murray Bookchin pointed out *"an individual appropriation of goods, a personal claim to tools, land, and other resources ... is fairly common in organic [i.e. aboriginal] societies ... By the same token, co-operative work and the sharing of resources on a scale that could be called communistic is also fairly common ... But primary to both of these seemingly contrasting relationships is the practice of* ***usufruct.***" Such stateless societies are based upon *"the principle of* ***usufruct****, the freedom of individuals in a community to appropriate resources merely by the virtue of the fact they are using them ... Such resources belong to the user as long as they are being used. Function, in effect, replaces our hallowed concept of possession."* [**The Ecology of Freedom**, p. 116] The future stateless society anarchists hope for would also be based upon such a principle.

In effect, critics of social anarchism confuse property with possession and think that abolishing property automatically abolishes possession and use rights. However, as argued in section B.3, property and possession are distinctly different. In the words of Charlotte Wilson:

> *"**Property** is the **domination** of an individual, or a coalition of individuals, over things; it is not the claim of any person or persons to the use of things — this is, usufruct, a very different matter. Property means the monopoly of wealth, the right to prevent others using it, whether the owner needs it or not. Usufruct implies the claim to the use of such wealth as supplies the users needs. If any individual shuts of a portion of it (which he is not using, and does not need for his own use) from his fellows, he is defrauding the whole community."* [**Anarchist Essays**, p. 40]

Thus an anarchist society has a simple and effective means of deciding how communally owned resources are used, one based on possession and usufruct. The key thing to remember, as discussed in section I.3.3, is that socialisation means that **access** is free: users of a resource are not subjected to hierarchical social relationships in order to use it. Socialisation does not mean that people can, say, wander into someone's workplace and simply take away a machine or computer. Rather, it means that when someone joins a workplace they are sharing in the use of a common resource and do so as a free and equal associate rather than as an obedient wage-slave. If a resource is not being used, then they have free access to use it. If it is being used then it will be managed by those who use it, with access granted in agreed ways which ensure egalitarian, and so free, relationships and outcomes.

As for deciding what a given area of commons is used for, that falls to the local communities who live next to them. If, for example, a local self-managed factory wants to expand and eat into the commons, then the local community who uses (and so controls) the local commons would discuss it and come to an agreement concerning it. If a minority **really** objects, they can use direct action to put their point across. But anarchists argue that rational debate among equals will not result in too much of that. Or suppose an individual wanted to set up an allotment in a

given area, which had not been allocated as a park. Then he or she would notify the community assembly by appropriate means (e.g. on a notice board or newspaper), and if no one objected at the next assembly or in a set time-span, the allotment would go ahead, as no one else desired to use the resource in question.

Other communities would be confederated with this one, and joint activity would also be discussed by debate, with a community (like an individual) being free **not** to associate if they so desire. Other communities could and would object to ecologically and individually destructive practices. The interrelationships of both ecosystems and freedom is well known, and its doubtful that free individuals would sit back and let some amongst them destroy **their** planet.

Therefore, those who use something control it. This means that "users groups" would be created to manage resources used by more than one person. For workplaces this would (essentially) be those who worked there (with, possibly, the input of consumer groups and co-operatives). Housing associations made up of tenants would manage housing and repairs. Resources that are used by associations within society, such as communally owned schools, workshops, computer networks, and so forth, would be managed on a day-to-day basis by those who use them. User groups would decide access rules (for example, time-tables and booking rules) and how they are used, making repairs and improvements. Such groups would be accountable to their local community. Hence, if that community thought that any activities by a group within it was destroying communal resources or restricting access to them, the matter would be discussed at the relevant assembly. In this way, interested parties manage their own activities and the resources they use (and so would be very likely to have an interest in ensuring their proper and effective use), but without private property and its resulting hierarchies and restrictions on freedom.

Lastly, let us examine clashes of use rights, i.e. cases where two or more people, communes or syndicates desire to use the same resource. In general, such problems can be resolved by discussion and decision making by those involved. This process would be roughly as follows: if the contesting parties are reasonable, they would probably mutually agree to allow their dispute to be settled by some mutual friend whose judgement they could trust, or they would place it in the hands of a jury, randomly selected from the community or communities in question. This would take place only if they could not come to an agreement between themselves to share the resource in question.

On thing is certain, however, such disputes are much better settled without the interference of authority or the re-creation of private property. If those involved do not take the sane course described above and instead decide to set up an authority, disaster will be the inevitable result. In the first place, this authority will have to be given power to enforce its judgement in such matters. If this happens, the new authority will undoubtedly keep for itself the best of what is disputed (as payment for services rendered, of course!). If private property were re-introduced, such authoritarian bodies would develop sooner, rather than later, with two new classes of oppressors being created — the property owners and the enforcers of "justice." Ultimately, it is strange to think that two parties who meet on terms of equality and disagree could not be reasonable or just, and that a third party with power backed up by violence will be the incarnation of justice itself. Common sense should warn us against such an illusion and, if common sense is lacking, then history shows that using authority or property to solve disputes is not wise!

And, we should note, it is equally as fallacious, as Leninists suggest, that only centralisation can ensure common access and common use. Centralisation, by removing control from the users into a body claiming to represent "society", replaces the dangers of abuse by a small group of

workers with the dangers of abuse by a bureaucracy invested with power and authority over **all**. If members of a commune or syndicate can abuse their position and restrict access for their own benefit, so can the individuals who make up the bureaucracy gathered round a centralised body (whether that body is, in theory, accountable by election or not). Indeed, it is far more likely to occur as the experience of Leninism shows beyond doubt. Thus **decentralisation** is the key to common ownership and access, **not** centralisation.

Communal ownership needs communal structures in order to function. Use rights, and discussion among equals, replace property rights in a free society. Freedom cannot survive if it is caged behind laws enforced by public or private states.

I.6.2 Doesn't communal ownership involve restricting individual liberty?

This point is expressed in many different forms. John Henry MacKay (an individualist anarchist) put the point as follows:

> *"'Would you [the social anarchist], in the system of society which you call 'free Communism' prevent individuals from exchanging their labour among themselves by means of their own medium of exchange? And further: Would you prevent them from occupying land for the purpose of personal use?' ... [The] question was not to be escaped. If he answered 'Yes!' he admitted that society had the right of control over the individual and threw overboard the autonomy of the individual which he had always zealously defended; if on the other hand he answered 'No!' he admitted the right of private property which he had just denied so emphatically."* [**Patterns of Anarchy**, p. 31]

However, anarchist theory has a simple and clear answer to this question. To see what this answer is, it simply a case of remembering that use rights replace property rights in an anarchist society. In other words, individuals can exchange their labour as they see fit and occupy land for their own use. This in no way contradicts the abolition of private property, because occupancy and use is directly opposed to private property (see section B.3). Socialisation is rooted in this concept of *"occupancy and use"* and this means that in a free communist society individuals can occupy and use whatever land and such tools and equipment as they need — they do not have to join the free communist society (see section I.5.7). If they do not, however, they cannot place claims on the benefits others receive from co-operation and communal life.

This can be seen from Charlotte Wilson's discussions on anarchism written a few years before MacKay published his *"inescapable"* question. She asks the question: *"Does Anarchism ... then ... acknowledge ... no personal property?"* She answers by noting that *"every man [or woman] is free to take what he [or she] requires"* and so *"it is hardly conceivable that personal necessaries and conveniences will not be appropriated"* by individual's for their personal consumption and use. For *"[w]hen property is protected by no legal enactments, backed by armed force, and is unable to buy personal service, its resuscitation on such a scale as to be dangerous to society is little to be dreaded. The amount appropriated by each individual .. . must be left to his [or her] own conscience, and the pressure exercised upon him [or her] by the moral sense and distinct interests of his [or her] neighbours."* This system of *"usufruct"* would also apply to the *"instruments of production*

— land included", being *"free to all workers, or groups of workers"* for *"as long as long and capital are unappropriated, the workers are free, and that, when these have a master, the workers also are slaves."* [**Anarchist Essays**, p. 24 and p. 21] This is because, as with all forms of anarchism, communist-anarchism bases itself on the distinction between property and possession.

In other words, **possession** replaces private property in a free society. This applies to those who decide to join a free communist society and those who desire to remain outside. This is clear from the works of many leading theorists of free communism (as indicated in section G.2.1), none of whom thought the occupying of land for personal use (or a house or the means of production) entailed the *"right of private property."* For example, looking at land we find both Kropotkin and Proudhon arguing along the same lines. For the former: *"Who, then, can appropriate for himself the tiniest plot of ground ... without committing a flagrant injustice?"* [**Conquest of Bread**, p. 90] For the latter: *"The land cannot be appropriated"*. Neither denied that individuals could **use** the land or other resources, simply that it could not be turned into private property. Thus Proudhon: *"Every occupant is, then, necessarily a possessor or usufructuary, — a function that excludes proprietorship."* [**What is Property?**, p. 103 and p. 98] Obviously John Henry MacKay, unlike Kropotkin, had not read his Proudhon! As Wilson argued:

> *"Proudhon's famous dictum, 'Property is theft', is the key to the equally famous enigma ... 'From each according to his capacities, to each according to his needs'. When the workers clearly understand that in taking possession of railways and ships, mines and fields, farm buildings and factories, raw material and machinery, and all else they need for their labour, they are claiming the right to use freely for the benefit of society, what social labour has created, or utilised in the past, and that, in return for their work, they have a just right to take from the finished product whatever they personally require."* [**Op. Cit.**, pp. 20–1]

This can be seen from libertarian communist William Morris and his account of Proudhon. Morris classed the French anarchist as *"the most noteworthy figure"* of a group of *"Socialist thinkers who serve as a kind of link between the Utopians and the school of ... scientific Socialists."* As far as his critique of property went, Morris argued that in **What is Property?** Proudhon's *"position is that of a Communist pure and simple."* [**Political Writings**, p. 569 and p. 570]

Unsurprisingly, then, we find Kropotkin arguing that *"[a]ll things belong to all, and provided that men and women contribute their share of labour for the production of necessary objects, they are entitled to their share of all that is produced by the community at large."* He went on to state that *"free Communism ... places the products reaped or manufactured in common at the disposal of all, leaving to each the liberty to consume them as he [or she] pleases in his [or her] own home."* [**The Place of Anarchism in Socialistic Evolution,**, p. 6 and p. 7] This obviously implies a situation of *"occupancy and use"* (with those who are actually using a resource controlling it).

This support for possession does not, of course, imply any contradiction with communism as MacKay suggested. The aim of communism is to place the fruits of society at the disposal of society, to be used and consumed as the members of that society desire. As such, individuals are **not** stopped from taking and using the goods produced and, obviously, this automatically means "excluding" others from using and consuming them. This in no way implies the recreation of private property in any meaningful sense. Significantly, this perspective has been pretty commonplace in human society and numerous authors have pointed out *"how many languages lack any verb for unilateral ownership."* [David Graeber, **Possibilities**, p. 23]

For example, a group of friends go on a picnic and share the food stuffs they bring. If someone takes an apple from the common bounty and eats it, then obviously it is no longer available for others to eat. However, this does not change the common ownership of foodstuffs the picnic is based on. Similarly, in a communist society people would still have their own homes and, of course, would have the right to restrict entry to just those whom they have invited. People would not come in from the street and take up residence in the main bedroom on the dubious rationale that it is not being used as the inhabitant is watching TV in the lounge, is on holiday or visiting friends.

Thus communism is based on the obvious fact that individuals will "appropriate" (use) the products of society to satisfy their own needs (assuming they can find someone who needs to produce it). What it does, though, is to deprive individuals of the ability to turn possession into private property and, as a result, subjugate others to their will by means of wage labour or landlordism.

In other words, possession (personal "property") is not transformed into social property. Hence the communist support for individuals **not** joining the commune, working their land or tools and living by their own hands. Being based on **possession**, this is utterly compatible with communist principles and the abolition of private property. This is because people are **using** the resources in question and for that simple reason are exercising the same rights as the rest of communist society. Thus the case of the non-member of free communism is clear — they would also have access to what they possessed and used such as the land, housing and means of production. The difference is that the non-communists would have to barter with the rest of society for goods rather than take what they need from the communal stores.

To re-iterate, the resources non-communists use do **not** become private property because they are being used and they revert back into common ownership once they are no longer occupied and used. In other words, **possession** replaces **property.** Thus communist-anarchists agree with Individualist Anarchist John Beverley Robinson when he wrote:

> *"There are two kinds of land ownership, proprietorship or property, by which the owner is absolute lord of the land to use it or hold it out of use, as it may please him; and possession, by which he is secure in the tenure of land which he uses and occupies, but has no claim on it at all if he ceases to use it. For the secure possession of his crops or buildings or other products, he needs nothing but the possession of the land he uses."* [**Patterns of Anarchy**, p. 273]

This system, we must note, was used in the rural collectives during the Spanish Revolution, with people free to remain outside the collective working only as much land and equipment as they could *"occupy and use"* by their own labour. Similarly, the individuals within the collective worked in common and took what they needed from the communal stores (see section I.8).

MacKay's comments raise another interesting point. Given that Individualist Anarchists oppose the current system of private property in land, **their** system entails that *"society ha[s] the right of control over the individual."* If we look at the *"occupancy and use"* land system favoured by the likes of Tucker, we discover that it is based on restricting property in land (and so the owners of land). As discussed in section G.1.2, the likes of Tucker looked forward to a time when public opinion (i.e., society) would limit the amount of land which individuals could acquire and so, from MacKay's perspective, controlling their actions and violating their autonomy. Which,

we must say, is not surprising as individualism requires the supremacy of the rest of society over the individual in terms of rules relating to the ownership and use of possessions (or "property") — as the Individualist Anarchists themselves implicitly acknowledge.

MacKay goes on to state that *"every serious man must declare himself: for Socialism, and thereby for force and against liberty, or for Anarchism, and thereby for liberty and against force."* [**Op. Cit.**, p. 32] Which, we must note, is a strange statement for, as indicated in section G.1, individualist anarchists like Benjamin Tucker considered themselves socialists and opposed capitalist private property (while, confusingly, many of them calling their system of possession "property").

However, MacKay's statement begs the question: does private property support liberty? He does not address or even acknowledge the fact that private property will inevitably lead to the owners of such property gaining control over the individuals who use, but do not own, it and so denying them liberty (see section B.4). As Proudhon argued:

> *"The purchaser draws boundaries, fences himself in, and says, 'This is mine; each one by himself, each one for himself.' Here, then, is a piece of land upon which, henceforth, no one has right to step, save the proprietor and his friends; which can benefit nobody, save the proprietor and his servants. Let these multiply, and soon the people .. . will have nowhere to rest, no place of shelter, no ground to till. They will die of hunger at the proprietor's door, on the edge of that property which was their birth-right; and the proprietor, watching them die, will exclaim, 'So perish idlers and vagrants.'"* [**Op. Cit.**, p. 118]

Of course, as Proudhon suggested, the non-owner can gain access to the property by becoming a servant, by selling their liberty to the owner and agreeing to submit to the owner's authority. Little wonder that he argued that the *"second effect of property is despotism."* [**Op. Cit.**, p. 259] As discussed in section G.4.1, this points to a massive contradiction in any form of individualist anarchism which defends private property which goes beyond possession and generates wage-labour. This is because both the state and the property owner **both** assume sole authority over a given area and all within it. Little wonder Emile Pouget, echoing Proudhon, argued that:

> *"Property and authority are merely differing manifestations and expressions of one and the same 'principle' which boils down to the enforcement and enshrinement of the servitude of man. Consequently, the only difference between them is one of vantage point: viewed from one angle, slavery appears as a* ***property crime****, whereas, viewed from a different angle, it constitutes an* ***authority crime.****"* [**No Gods, No Masters**, vol. 2, p. 66]

So the issue changes if someone claims more resources than they can use as individuals or as a co-operative group. If they are attempting to restrict access to others of resources they are not using then the others are entitled to simply ignore the pretensions of the would-be monopoliser. Without a state to enforce capitalist property rights, attempts to recreate private property will flounder in the laughter of their neighbours as these free people defend their liberty by ignoring the would-be capitalist's attempts to subjugate the labour of others for their own benefit by monopolising the means of life. Unsurprisingly, MacKay does not address the fact that private property requires extensive force (i.e. a state) to protect it against those who use it or could use it but do not own it.

So MacKay ignores two important aspects of private property. Firstly, that private property is based upon force, which must be used to ensure the owner's right to exclude others (the main reason for the existence of the state). And secondly, he ignores the anti-libertarian nature of "property" when it creates wage labour — the other side of "private property" — in which the liberty of employees is obviously restricted by the owners whose property they are hired to use. Unlike in a free communist society, in which members of a commune have equal rights, power and say within a self-managed association, under "private property" the owner of the property governs those who use it. When the owner and the user is identical, this is not a problem (i.e. when possession replaces property) but once possession becomes property then despotism, as Proudhon noted, is created. As Charlotte Wilson put it:

> *"Property — not the claim to use, but to a right to prevent others from using — enables individuals who have appropriated the means of production, to hold in subjection all those who possess nothing ... and who must work that they may live. No work is possible without land, materials, and tools or machinery; thus the masters of those things are the masters also of the destitute workers, and can live in idleness upon their labour... We look for th[e] socialisation of wealth, not to restraints imposed by authority upon property, but to the removal, by direct personal action of the people themselves, of the restraints which secure property against the claims of popular justice. For authority and property are both manifestations of the egoistical spirit of domination".* [**Op. Cit.**, pp. 57–8]

Therefore, it seems that in the name of "liberty" John Henry MacKay and a host of other "individualists" end up supporting authority and (effectively) some kind of state. This is hardly surprising as private property is the opposite of personal possession, not its base. In summary, then, far from communal property restricting individual liberty (or even personal use of resources) it is in fact its only defence. That is why all anarchists would agree with Emma Goldman that *"it is our endeavour to abolish private property, State ... we aim to free men from tyrants and government."* [**A Documentary History of the American Years**, vol. 1, p. 181]

I.7 Won't Libertarian Socialism destroy individuality?

No. Libertarian socialism only suppresses individuality for those who are so shallow that they cannot separate their identity from what they own. However, be that as it may, this is an important objection to any form of socialism and, given the example of "socialist" Russia, needs to be discussed more.

The basic assumption behind this question is that capitalism encourages individuality, but this assumption can be faulted on many levels. As Kropotkin noted, *"individual freedom [has] remained, both in theory and in practice, more illusory than real"* and that the *"want of development of the personality (leading to herd-psychology) and the lack of individual creative power and initiative are certainly one of the chief defects of our time. Economical individualism has not kept its promise: it did not result in any striking development of individuality."* [**Ethics**, p. 27 and p. 28] In effect, modern capitalism has reduced individuality to a parody of what it could and should be (see section I.7.4). Little wonder Emma Goldman argued that:

> *"The oft repeated slogan of our time is ... that ours is an era of individualism ... Only those who do not probe beneath the surface might be led to entertain this view. Have not the few accumulated the wealth of the world? Are they not the masters, the absolute kings of the situation? Their success, however, is due not to individualism, but the inertia, the cravenness, the utter submission of the mass. The latter wants but to be dominated, to be led, to be coerced. As to individualism, at no time in human history did it have less chance of expression, less opportunity to assert itself in a normal, healthy manner."* [**Anarchism and Other Essays**, pp. 70–1]

So we see a system which is apparently based on "egotism" and "individualism" but whose members are free be standardised individuals, who hardly express their individuality at all. Far from increasing individuality, capitalism standardises it and so restricts it — that it survives at all is more an expression of the strength of humanity than any benefits of the capitalist system. This impoverishment of individuality is hardly surprising in a society based on hierarchical institutions which are designed to assure obedience and subordination. Given this, it comes as no surprise to find libertarian communists like Kropotkin suggesting that *"as for knowing what will be the essence of* ***individual*** *development, I do not think it* ***could*** *be along individualist lines. Individual — yes, without doubt, but individ****ualist*** *— I have my doubts. That would mean:* ***narrow egoism*** *— regressive evolution and even that would be limited to a certain number."* [Kropotkin, quoted by Ruth Kinna, *"Kropotkin's theory of Mutual Aid in Historical Context"*, pp. 259–283, **International Review of Social History**, No. 40, p. 268]

So, can we say that libertarian socialism will **increase** individuality or is this conformity and lack of "individualism" a constant feature of the human race? In order to make some sort of statement on this, we have to look at non-hierarchical societies and organisations. We will discuss

tribal cultures as an example of non-hierarchical societies in section I.7.1. Here, however, we indicate how anarchist organisations will protect and increase an individual's sense of self.

Anarchist organisations and tactics are designed to promote individuality. They are decentralised, participatory organisations and so they give those involved the "social space" required to express themselves and develop their abilities and potential in ways restricted under capitalism. As Gaston Leval noted in his book on the anarchist collectives during the Spanish Revolution, *"so far as collective life is concerned, the freedom of each is the right to participate spontaneously with one's thought, one's will, one's initiative to the full extent of one's capacities. A negative liberty is not liberty; it is nothingness."* [**Collectives in the Spanish Revolution**, p. 346]

By being able to take part in and manage the decision making processes which directly affect you, your ability to think for yourself is increased and so you are constantly developing your abilities and personality. The spontaneous activity described by Leval has important psychological impacts. Thus Erich Fromm: *"In all spontaneous activity, the individual embraces the world. Not only does his [sic] individual self remain intact; it becomes stronger and more solidified.* ***For the self is as strong as it is active."*** [**Escape from Freedom**, p. 225]

Therefore, individuality does not atrophy within an anarchist organisation as it does under capitalism. It will become stronger as people participate and act within the social organisation. In other words, individuality requires community. As German philosopher and sociologist Max Horkheimer once observed, *"individuality is impaired when each man decides to fend for himself ... The absolutely isolated individual has always been an illusion. The most esteemed personal qualities, such as independence, will to freedom, sympathy, and the sense of justice, are social as well as individual virtues. The fully developed individual is the consummation of a fully developed society."* [**The Eclipse of Reason**, p. 135]

The sovereign, self-sufficient individual is as much a product of a healthy community as it is from individual self-realisation and the fulfilment of desire. There is a tendency for **community** to enrich and develop **individuality**, with this tendency being seen throughout human history. This suggests that the abstract individualism of capitalism is more the exception than the rule in social life. In other words, history indicates that by working together with others as equals individuality is strengthened far more than in the so-called "individualism" associated with capitalism. Hence the need, as Murray Bookchin put it, to *"arrest the ravaging and simplification of the human spirit, of human personality, of human community, of humanity's idea of the good."* [**The Ecology of Freedom**, p. 409]

Communal support for individuality is hardly surprising as individuality is a product of the interaction between **social** forces and individual attributes. The more an individual cuts themselves off from social life, the more likely their individuality will suffer. This can be seen from the 1980's when neo-liberal governments supporting the individualism associated with free market capitalism were elected in both Britain and the USA. The promotion of market forces lead to social atomisation, social disruption and a more centralised state. As this swept across society, the resulting disruption of social life ensured that many individuals became impoverished ethically and culturally as society became increasingly privatised. Two decades later, David Cameron, the leader of the Conservative party, complained of a broken society in Britain while, of course, skilfully avoiding discussing the neo-liberal reforms imposed by his predecessor Thatcher which made it so.

In other words, many of the characteristics which we associate with a developed individuality (namely ability to think, to act, to hold your own opinions and standards and so forth) are (es-

sentially) **social** skills and are encouraged by a well developed community. Remove that social background and these valued aspects of individuality are undermined by lack of use, fear of authority, atomisation and limited social interaction. Taking the case of workplaces, for example, surely it is an obvious truism that a hierarchical working environment will marginalise the individual and ensure that they cannot express their opinions, exercise their thinking capacities to the full or manage their own activity. This will have in impact in all aspects of an individual's life.

Hierarchy in all its forms produces oppression and a crushing of individuality (see section B.1). In such a system, as left-wing classical liberal John Stuart Mill argued, the *"business"* side of group activities would be *"properly carried out"* but at the expense of the individuals involved. Anarchists agree with Mill when he called it *"benevolent dictatorship"* and asked *"what sort of human beings can be formed under such a regimen? What development can either their thinking or their active faculties attain under it? ... Their moral capacities are equally stunted. Wherever the sphere of action of human beings is artificially circumscribed, their sentiments are narrowed and dwarfed."* [**Representative Government**, pp. 203–4] Like anarchists, he extended his critique of political organisations into all forms of associations and stated that if *"mankind is to continue to improve"* then in the end one form of association will predominate, *"not that which can exist between a capitalist as chief, and workpeople without a voice in the management, but the association of labourers themselves on terms of equality, collectively owning the capital with which they carry on their operations, and working under managers elected and removable by themselves."* [**The Principles of Political Economy**, p. 147]

Hence, anarchism will protect and develop individuality by creating the means by which all individuals can participate in the decisions that affect them, in all aspects of their lives. Anarchism is built upon the central assertion that individuals and their institutions cannot be considered in isolation from one another. Authoritarian organisations will create a servile personality, one that feels safest conforming to authority and what is considered normal. A libertarian organisation, one that is based upon participation and self-management will encourage a strong personality, one that knows its own mind, thinks for itself and feels confident in its own powers.

Therefore, as Bakunin argued, liberty *"is not a fact springing from isolation but from reciprocal action, a fact not of exclusion, but, on the contrary, of social interaction — for freedom of every individual is simply the reflection of his humanity or his human right in the consciousness of all free men, his brothers, his equals."* Freedom *"is something very positive, very complex, and above all eminently social, since it can be realised only by society and only under conditions of strict equality and solidarity."* Hierarchical power, by necessity, kills individual freedom as it is *"characteristic of privilege and of every privileged position to kill the minds and hearts of men"* and *"power and authority corrupt those who exercise them as much as those who are compelled to submit to them."* [**The Political Philosophy of Bakunin**, p. 266, p. 268, p. 269 and p. 249]

A libertarian re-organisation of society will be based upon, and encourage, a self-empowerment and self-liberation of the individual and by participation within self-managed organisations individuals will educate themselves for the responsibilities and joys of freedom. As Carole Pateman points out, *"participation develops and fosters the very qualities necessary for it; the more individuals participate the better able they become to do so."* [**Participation and Democratic Theory**, pp. 42–43] This, of course, implies a mutually interactive transformation of individuals, their social relationships and organisations (in the words of Spanish anarchist

Garcia Oliver: *"Who hasn't been changed by the revolution? It wouldn't be worth making it just to continue being the same."* [quoted by Abel Paz, **Durruti in the Spanish Revolution**, p. 498]).

Such a re-organisation (as we will see in section J.2) is based upon the tactic of **direct action.** This tactic also encourages individuality by encouraging the individual to fight for themselves, by their own self-activity, that which they consider to be wrong. As Voltairine de Cleyre put it:

> *"Every person who ever thought he had a right to assert, and went boldly and asserted it, himself, or jointly with others that shared his convictions, was a direct actionist ...*
>
> *"Every person who ever had a plan to do anything, and went and did it, or who laid his plan before others, and won their co-operation to do it with him, without going to external authorities to please do the thing for them, was a direct actionist. All co-operative experiments are essentially direct action.*
>
> *"Every person who ever in his life had a difference with anyone to settle, and want straight to the other persons involved to settle it .. . was a direct actionist. Examples of such action are strikes and boycotts ...*
>
> *"These actions ... are the spontaneous retorts of those who feel oppressed by a situation."* [**The Voltairine de Cleyre Reader**, pp. 47–8]

Therefore, anarchist tactics base themselves upon self-assertion and this can only develop individuality. Self-activity can only occur when there is a independent, free-thinking self. As self-management is based upon the principle of direct action (*"all co-operative experiments are essentially direct action"*) we can suggest that individuality will have little to fear from an anarchist society. Indeed, anarchists strongly stress the importance of individuality within a society. To quote communist-anarchist J. Burns-Gibson:

> *"[T]o destroy individuality is to destroy society. For society is only realised and alive in the individual members. Society has no motive that does not issue from its individual members, no end that does not centre in them, no mind that is not theirs. 'Spirit of the age,' 'public opinion,' 'commonweal or good,' and like phrases have no meaning if they are thought of as features of something that hovers or floats between man and woman. They name what resides in and proceeds from individuals. Individuality and community, therefore, are equally constitutive of our idea of human life."* [quoted by William R. McKercher, **Freedom and Authority**, p. 31]

Little wonder, then, that anarchism *"recognises and values individuality which means character, conduct and the springs of conduct, free initiative, creativeness, spontaneity, autonomy."* [J. Burns-Gibson, quoted by McKercher, **Op. Cit.**, p. 31f] As Kropotkin put it, anarchism *"seeks the most complete development of individuality combined with the highest development of voluntary association in all its aspects ... ever changing, ever modified"*. [**Anarchism**, p. 123]

For anarchists real liberty requires social equality. For *"[i]f individuals are to exercise the maximum amount of control over their own lives and environment then authority structures in these areas most be so organised that they can participate in decision making."* [Pateman, **Op. Cit.**, p. 43] Hence individuality will be protected, encouraged and developed in an anarchist society far more than in a class ridden, hierarchical society like capitalism. As Kropotkin argued:

"[Libertarian] Communism is the best basis for individual development and freedom; not that individualism which drives men to the war of each against all ... but that which represents the full expansion of man's [and woman's] faculties, the superior development of what is original in him [or her], the greatest fruitfulness of intelligence, feeling and will." [**Op. Cit.**, p. 141]

It is because wonders are so enriching to life, and none is more wonderful than individuality, that anarchists oppose capitalism in the name of socialism — libertarian socialism, the free association of free individuals.

I.7.1 Do tribal cultures indicate that communalism defends individuality?

Yes. In many tribal cultures (or aboriginal cultures), we find a strong respect for individuality. As anthropologist Paul Radin pointed out, *"respect for the individual, irrespective of age or sex"* was one of *"the outstanding features of aboriginal civilisation"* as well as *"the amazing degree of social and political integration achieved by them"* and *"a concept of personal security."* [quoted by Murray Bookchin, **Remaking Society**, p. 48] Murray Bookchin commented on Radin's statement:

"respect for the individual, which Radin lists first as an aboriginal attribute, deserves to be emphasised, today, in an era that rejects the collective as destructive of individuality on the one hand, and yet, in an orgy of pure egotism, has actually destroyed all the ego boundaries of free-floating, isolated, and atomised individuals on the other. A strong collectivity may be even more supportive of the individual as close studies of certain aboriginal societies reveal, than a 'free market' society with its emphasis on an egoistic, but impoverished, self." [**Op. Cit.**, p. 48]

This individualisation associated with tribal cultures was also noted by historian Howard Zinn. He quotes fellow historian Gary Nash describing Iroquois culture (which appears typical of most Native American tribes):

"No laws and ordinances, sheriffs and constables, judges and juries, or courts or jails — the apparatus of authority in European societies — were to be found in the northeast woodlands prior to European arrival. Yet boundaries of acceptable behaviour were firmly set. Though priding themselves on the autonomous individual, the Iroquois maintained a strict sense of right and wrong." [quoted by Zinn, **A People's History of the United States**, p. 21]

This respect for individuality existed in a society based on communistic principles. As Zinn notes, in the Iroquois *"land was owned in common and worked in common. Hunting was done together, and the catch was divided among the members of the village. Houses were considered common property and were shared by several families. The concept of private ownership of land and homes was foreign to the Iroquois."* In this communal society women *"were important and respected"* and families were matrilineal. Power was shared between the sexes (unlike the European idea of male domination). Similarly, children *"while taught the cultural heritage of their*

people and solidarity with the tribe, were also taught to be independent, not to submit to overbearing authority. They were taught equality of status and the sharing of possessions." As Zinn stresses, Native American tribes *"paid careful attention to the development of personality, intensity of will, independence and flexibility, passion and potency, to their partnership with one another and with nature."* [**Op. Cit.**, p. 20 and pp. 21–2]

Thus tribal societies indicate that community defends individuality, with communal living actually encouraging a strong sense of individuality. This is to be expected, as equality is the only condition in which individuals can be free and so in a position to develop their personality to its full. Furthermore, this communal living took place within an anarchist environment:

> *"The foundation principle of Indian government had always been the rejection of government. The freedom of the individual was regarded by practically all Indians north of Mexico as a canon infinitely more precious than the individual's duty to his [or her] community or nation. This anarchistic attitude ruled all behaviour, beginning with the smallest social unity, the family. The Indian parent was constitutionally reluctant to discipline his [or her] children. Their every exhibition of self-will was accepted as a favourable indication of the development of maturing character..."* [Van Every, quoted by Zinn, **Op. Cit.**, p. 136]

In addition, Native American tribes also indicate that communal living and high standards of living can and do go together. For example, during the 1870s in the Cherokee Nation *"land was held collectively and life was contented and prosperous"* with the US Department of the Interior recognising that it was *"a miracle of progress, with successful production by people living in considerable comfort, a level of education 'equal to that furnished by an ordinary college in the States,' flourishing industry and commerce, an effective constitutional government, a high level of literacy, and a state of 'civilisation and enlightenment' comparable to anything known: 'What required five hundred years for the Britons to accomplish in this direction they have accomplished in one hundred years,' the Department declared in wonder."* [Noam Chomsky, **Year 501**, p. 231]

Senator Henry Dawes of Massachusetts visited in 1883 and described what he found in glowing terms: *"There was not a pauper in that nation, and the nation did not owe a dollar. It built its own capitol ... and it built its schools and its hospitals."* No family lacked a home. In spite of this (or, perhaps, more correctly, because of this), Dawes recommended that the society must be destroyed: *"They have got as far as they can go, because they own their land in common ... there is no enterprise to make your home any better than that of your neighbours. There is no selfishness, which is the bottom of civilisation. Till this people will consent to give up their lands, and divide them among their citizens so that each can own the land he cultivates, they will not make much more progress."* [quoted by Chomsky, **Op. Cit.**, p. 231–2] The introduction of capitalism — as usual by state action — resulted in poverty and destitution, again showing the link between capitalism and high living standards is not clear cut, regardless of claims otherwise.

Undoubtedly, having access to the means of life ensured that members of such cultures did not have to place themselves in situations which could produce a servile character structure. As they did not have to follow the orders of a boss they did not have to learn to obey others and so could develop their own abilities to govern themselves. This self-government allowed the development of a custom in such tribes called *"the principle of non-interference"* in anthropology. This is the principle of defending someone's right to express the opposing view and it is a pervasive principle in the tribal world, and it is so much so as to be safely called a universal.

The principle of non-interference is a powerful principle that extends from the personal to the political, and into every facet of daily life (significantly, tribal groups *"respect the personality of their children, much as they do that of the adults in their communities."* [Bookchin, **The Ecology of Freedom**, p. 115]). Most people today, used as they are to hierarchy everywhere, are aghast when they realise the extent to which it is practised, but it has proven itself to be an integral part of living anarchy. It means that people simply do not limit the activities of others, period (unless that behaviour is threatening the survival of the tribe). This in effect makes absolute tolerance a custom (the difference between law and custom is important to point out: Law is dead, and Custom lives — see section I.7.3). This is not to idealise such communities as they are must be considered imperfect anarchist societies in many ways (mostly obviously in that many eventually evolved into hierarchical systems so suggesting that informal hierarchies, undoubtedly a product of religion and other factors, existed).

As people accustomed to authority we have so much baggage that relates to "interfering" with the lives of others that merely visualising the situation that would eliminate this daily pastime for many is impossible. But think about it. First of all, in a society where people do not interfere with each other's behaviour, people tend to feel trusted and empowered by this simple social fact. Their self-esteem is already higher because they are trusted with the responsibility for making learned and aware choices. This is not fiction; individual responsibility is a key aspect of social responsibility.

Therefore, given the strength of individuality documented in tribes with no private property, no state and little or no other hierarchical structures within them, can we not conclude that anarchism will defend individuality and even develop it in ways blocked by capitalism? At the very least we can say "possibly", and that is enough to allow us to question that dogma that capitalism is the only system based on respect for the individual.

I.7.2 Do anarchists worship the past or the "noble savage"?

No. However, this is a common attack on socialists by supporters of capitalism and on anarchists by Marxists. Both claim that anarchism is "backward looking", opposed to "progress" and desire a society based on inappropriate ideas of freedom. In particular, ideological capitalists maintain that all forms of socialism base themselves on the ideal of the "noble savage" (see, for example, free market capitalist guru Frederick von Hayek's work **Fatal Conceit: The Errors of Socialism**).

Anarchists are well aware of the limitations of the "primitive communist" societies they have used as examples of anarchistic tendencies within history or society. They are also aware of the problems associated with using **any** historical period as an example of "anarchism in action." Take for example the "free cities" of Medieval Europe, which was used by Kropotkin as an example of the potential of decentralised, confederated communes. He was sometimes accused of being a *"Medievalist"* (as was William Morris) while all he was doing was indicating that capitalism need not equal progress and that alternative social systems have existed which have encouraged freedom in ways capitalism restricts.

In a similar way, Marxists often accuse Proudhon of being "petty-bourgeois" and looking backward to a pre-industrial society of artisans and peasants. Of course, nothing could be further from the truth. Proudhon lived in a France which was predominantly pre-industrial and based

on peasant and artisan production. He, therefore, based his socialist ideas on the needs of working people as they required them at the time. When Proudhon did look at large-scale production (such as railways, factories and so on) he proposed co-operative associations to run them. These associations would maintain the dignity of the worker by maintaining the essential feature of artisan and peasant life, namely the control of work and product by the labourer. Thus he used "the past" (artisan production) to inform his analysis of current events (industrialisation) to create a solution to the social problem which built upon and extended a freedom crushed by capitalism (namely workers' self-management in production). Rather than being backward looking and worshipping a past which was disappearing, Proudhon analysed the present **and** past, drew any positive features he could from both and applied them to the present and the future (see also section I.3.8). Unlike Marx, who argued that industrialisation (i.e. proletarianisation) was the pre-conditions of socialism, Proudhon wanted justice and freedom for working class people during his lifetime, not some (unspecified) time in the future after capitalism had fully developed.

Again it is hardly surprising to find that many supporters of capitalism ignore the insights that can be gained by studying tribal cultures and the questions they raise about capitalism and freedom. Instead, they duck the issues raised and accuse socialists of idealising the "noble savage." As indicated, nothing could be further from the truth. Indeed, this claim has been directed towards Rousseau (often considered the father of socialist and anarchist idealisation of the "noble savage") even though he explicitly asked *"must societies be totally abolished? Must **meum** and **tuum** be annihilated, and must we return again to the forests to live among bears? This is a deduction in the manner of my adversaries, which I would as soon anticipate as let them have the shame of drawing."* Similarly, Rousseau is often thought of idealising "natural man" but he actually wrote that *"men in a state of nature, having no moral relations or determinate obligations one with another, could not be either good or bad, virtuous or vicious."* [**The Social Contract and Discourses**, p. 112 and p. 64] Rousseau failed to understand that his adversaries, both then and now, seem to know no shame and will happy suggest that he advocated the exact opposite of what he actually wrote. Anarchists are also subject to this (particularly by Marxists), particularly when we look through history, draw libertarian currents from it and are then denounced as backward looking utopians.

What libertarian socialists point out from this analysis of history is that the atomised individual associated with capitalist society is not "natural" and that capitalist social relationships help to weaken individuality. All the many attacks on libertarian socialist analysis of past societies are a product of capitalists attempts to deny history and state that "Progress" reaches its final resting place in capitalism. As David Watson argues:

> *"When we consider people living under some of the harshest, most commanding conditions on earth, who can nevertheless do what they like when the notion occurs to them, we should be able to witness the contemporary doubt about civilisation's superiority without growing indignant. Primitivism, after all, reflects not only a glimpse of life before the rise of the state, but also a legitimate response to real conditions of life under civilisation ... Most people do not live in aboriginal societies, and most tribal peoples themselves now face wholly new contexts which will have to be confronted in new ways if they are to survive as peoples. But their lifeways, their histories, remind us that **other modes of being are possible.** Reaffirmation of our primal past offers insight into our history — not the only possible insight, to be sure, but one important, legitimate entry*

point for a reasoned discussion about (and an impassioned reaction to) this world we must leave behind." [**Beyond Bookchin**, p. 240]

This essential investigation of history and modern society to see what other ways of living have and do exist is essential. It is too easy to forget that what exists under modern capitalism has not always existed (as neo-classical economics does with its atomistic and ahistoric analysis, for example). It is also useful to remember what many people now consider as "normal" was not always the case. As we discussed in section F.8.6, the first generation of industrial wage slaves **hated** the system, considering it both tyranny and unnatural. Studying history, previous cultures and the process of hierarchical society and the resistance of the oppressed to it can enrich our analysis and activity in the here and now and help us to envision an anarchist society, the problems it could face and possible solutions to them.

If the challenge for anarchists is to smash power-relations and domination, it would make sense to get to the root of the problem. Hierarchy, slavery, coercion, patriarchy, and so on far outdate capitalism and it is hardly enough to just analyse the economic system of capitalism, which is merely the current and most insidious form of hierarchical civilisation. Similarly, without looking to cultures and communities that functioned quite well before the rise of the state, hierarchies and classes, anarchists do not really have much solid ground to prove to people that anarchy is desirable or possible. For this reason, historical analysis and the celebration of the positive aspects of tribal and other societies is essential.

Moreover, as George Orwell pointed out, attacks that reject this critical analysis as worshipping the "noble savage" miss the point:

> *"In the first place he [the defender of modern life] will tell you that it is impossible to 'go back' ... and will then accuse you of being a medievalist and begin to descant upon the horrors of the Middle Ages .. . As a matter of fact, most attacks upon the Middle Ages and the past generally by apologists of modernity are beside the point, because their essential trick is to project a modern man, with his squeamishness and his high standard of comfort, into an age when such things were unheard of. But notice that in any case this is not an answer. For dislike of the mechanised future does not imply the smallest reverence for any period of the past ... When one pictures it merely as an objective; there is no need to pretend that it has ever existed in space and time."* [**The Road to Wigan Pier**, p. 183]

We should also note that such attacks on anarchist investigations of past cultures assumes that these cultures have **no** good aspects at all and so indicates a sort of intellectual "all or nothing" approach to modern life. The idea that past (and current) civilisations may have got **some** things right and others wrong and should be investigated is rejected for a totally uncritical "love it or leave" approach to modern society. Of course, the well known "free market" capitalist love of 19th century capitalist life and values (specifically the grim reality of Victorian Britain or Gilded Age America) warrants no such claims of "past worship" by the supporters of the system.

Therefore attacks on anarchists as supporters of the "noble savage" ideal indicate more about the opponents of anarchism and their fear of looking at the implications of the system they support than about anarchist theory.

I.7.3 Is the law required to protect individual rights?

No, far from it. It is obvious that, as Kropotkin put it, *"[n]o society is possible without certain principles of morality generally recognised. If everyone grew accustomed to deceiving his fellow-men; if we never could rely on each other's promise and words; if everyone treated his fellow as an enemy, against whom every means of warfare is justified — no society could exist."* [**Anarchism**, p. 73] However, this does not mean that a legal system (with its resultant bureaucracy, vested interests and inhumanity) is the best way to protect individual rights within a society.

What anarchists propose instead of the current legal system (or an alternative law system based on religious or "natural" laws) is **custom** — namely the development of living "rules of thumb" which express what a society considers as right at any given moment. However, the question arises, if an agreed set of principles are used to determine the just outcome, in what way would this differ from laws?

The difference is that the "order of custom" would prevail rather than the "rule of law". **Custom** is a body of living institutions that enjoys the support of the body politic, whereas **law** is a codified (read dead) body of institutions that separates social control from moral force. This, as anyone observing modern Western society can testify, alienates everyone. A **just outcome** is the predictable, but not necessarily the inevitable, outcome of interpersonal conflict because in an anarchistic society people are trusted to do it themselves. Anarchists think people have to grow up in a social environment free from the confusions generated by a fundamental discrepancy between morality, and social control, to fully appreciate the implications. However, the essential ingredient is the investment of trust, by the community, in people to come up with **functional solutions** to interpersonal conflict. This stands in sharp contrast with the present situation of people being infantilised by the state through a constant bombardment of fixed social structures removing all possibility of people developing their own unique solutions.

Therefore, anarchist recognise that social custom changes with society. What was once considered "normal" or "natural" may become to be seen as oppressive and hateful. This is because the *"conception of good or evil varies according to the degree of intelligence or of knowledge acquired. There is nothing unchangeable about it."* [Kropotkin, **Op. Cit.**, p. 92] Only by removing the dead hand of the past can society's ethical base develop and grow with the individuals that make it up (see section A.2.19 for a discussion of anarchist ethics).

We should also like to point out here that laws (or *"The Law"*) also restrict the development of an individual's sense of ethics or morality. This is because it relieves them of the responsibility of determining if something is right or wrong. All they need to know is whether it is legal. The morality of the action is irrelevant. This "nationalisation" of ethics is very handy for the would be capitalist, governor or other exploiter. In addition, capitalism also restricts the development of an individual's ethics because it creates the environment where these ethics can be bought. To quote Shakespeare's **Richard III**:

> *"Second Murderer: Some certain dregs of conscience are yet within me.*
>
> *First Murderer: Remember our reward, when the deed's done.*
>
> *Second Murderer: Zounds! He dies. I had forgot the reward.*
>
> *First Murderer: Where's thy conscience now?*
>
> *Second Murderer: O, in the Duke of Gloucester's purse."*

Therefore, as far as *"The Law"* defending individual rights, it creates the necessary conditions (such as the de-personalisation of ethics, the existence of concentrations wealth, and so on) for undermining individual ethical behaviour, and so respect for other individual's rights. As English libertarian socialist Edward Carpenter put it, *"I think we may fairly make the following general statement, viz., that legal ownership is essentially a negative and anti-social thing, and that unless qualified or antidoted by human relationship, it is pretty certain to be positively* ***harmful.*** *In fact, when a man's chief plea is 'The law allows it,' you may be pretty sure he is up to some mischief!"* The state forces an individual into a relationship with a governing body. This means, as anarchist J. B. Smith put it, *"taking away from the individual his [or her] direct interest in life and in his surroundings ... blunting his [or her] moral sense ... teaching that he [or she] must never rely on himself [or herself] ... [but] upon a small part of men who are elected to do everything ... [which] destroys to a large extent his [or her] perception of right and wrong."* [quoted by William R. McKercher, **Freedom and Authority**, p. 48 and p. 67f]

Individual rights, for anarchists, are best protected in a social environment based on the self-respect and sympathy. Custom, because it is based on the outcome of numerous individual actions and thought reflects (and so encourages the development of) individual ethical standards and so a generalised respect for others. Thus, *"under anarchism all rules and laws will be little more than suggestions for the guidance of juries which will judge not only the facts but the law, the justice of the law, its applicability to the given circumstances, and the penalty or damage to be inflicted because if its infraction .. . under Anarchism the law will be so flexible that it will shape itself to every emergency and need no alteration. And it will be regarded as* ***just*** *in proportion to its flexibility, instead of as now in proportion to its rigidity."* [Benjamin Tucker, **The Individualist Anarchists**, pp. 160–1] Tucker, like other individualist Anarchists, believed that the role of juries had been very substantial in the English common-law tradition and that they had been gradually emasculated by the state. This system of juries, based on common-law/custom could be the means of ensuring justice in a free society.

Tolerance of other individuals depends far more on the attitudes of the society in question that on its system of laws. In other words, even if the law does respect individual rights, if others in society disapprove of an action then they can and will act to stop it (or restrict individual rights). All that the law can do is try to prevent this occurring but given the power of social custom this is often limited in scope and has to wait until people recognise the need for change. Needless to say, governments can, and have, been far more at the forefront of denying and ignoring individual rights and so appealing to it for justice is, to say the least, problematic!

As such, anarchists are well aware that social custom can be oppressive and, as discussed in section I.5.6, argue for direct action by oppressed minorities to combat any tendency towards "dictatorship by the majority". Anarchists, as Kropotkin suggested, are *"the last to underrate the part which the self-assertion of the individual has played in the evolution of mankind."* However, this *"has often been, and continually is, something quite different from, and far larger and deeper than, the petty, unintelligent narrow-mindedness which, with a large class of writers goes for 'individualism' and 'self-assertion.'"* There are *"two classes of revolted individuals"*, those who rise up and aim to *"purify the old institutions [of mutual aid], or to work out a higher form of commonwealth, based on the same Mutual Aid principles"* and those who sought to *"break down the protective institutions of mutual support, with no other intention but to increase their own wealth and their own powers."* [**Mutual Aid**, pp. 18–9] We aim to support and encourage the former.

However, while recognising the potential tyranny of custom anarchists stress that, firstly, this is a natural part of human society and, secondly, it palls into insignificance compared to the actual tyranny of the state and the laws it imposes on society in the interests of the few. Facts which, needless to say, ruling elites are at pains to hide. As Kropotkin explained *"all our religious, historical, juridical, and social education is imbued with the idea that human beings, if left to themselves, would revert to savagery; that without authority men would eat one another; for nothing, they say, can be expected from the 'multitude' but brutishness and the warring of each against all. Men would perish if above them soared not the elect ... These saviours prevent, we are told, the battle of all against all."* This, he argued, was nonsense as *"a **scientific** study of societies and institutions brings us to quite different views. It proves that usages and customs created by mankind for the sake of mutual aid, mutual defence, and peace in general, were precisely elaborated by the 'nameless multitude.' And it was these customs that enabled man to survive in his struggle for existence in the midst of extremely hard natural conditions."* The notion that the state was merely the instrument of the people is hardly supported by history nor current practice, for what the state and its laws have done is to *"fix, or rather to crystallise in a permanent form, such customs as already were in existence"* and adding to them *"some new rules — rules of inequality and servile submission of the masses in the interest of the armed rich and the warlike minorities."* [**Evolution and Environment**, pp. 48–9] Unsurprisingly, then, the state perverts social customs for its own, and the interests of the economically and socially powerful:

> *"as society became more and more divided into two hostile classes, one seeking to establish its domination, the other struggling to escape, the strife began. Now the conqueror was in a hurry to secure the results of his actions in a permanent form, he tried to place them beyond question, to make them holy and venerable by every means in his power. Law made its appearance under the sanction of the priest, and the warriors club was placed at its service. Its office was to render immutable such customs as were to the advantage of the dominant minority ... If law, however, presented nothing but a collection of prescriptions serviceable to rulers, it would find some difficulty in insuring acceptance and obedience. Well, the legislators confounded in one code the two currents of custom ... , the maxims which represent principles of morality and social union wrought out as a result of life in common, and the mandates which are meant to ensure external existence to inequality. Customs, absolutely essential to the very being of society, are, in the code, cleverly intermingled with usages imposed by the ruling caste, and both claim equal respect from the crowd ... Such was the law; and it has maintained its two-fold character to this day."* [Kropotkin, **Anarchism**, p. 205]

In other words, the law has *"has used Man's social feelings to get passed not only moral precepts which were acceptable to Man, but also orders which were useful only to the minority of exploiters against whom he would have rebelled."* [Kropotkin quoted by Malatesta, **Anarchy**, pp. 24–5]

Therefore anarchists argue that state institutions are not only unneeded to create an ethical society (i.e. one based on respecting individuality) but actively undermines such a society. That the economically and politically powerful assert that a state is a necessary condition for a free society and individual space is hardly surprising for, as Malatesta put it, a ruling elite *"cannot maintain itself for long without hiding its true nature behind a pretence of general usefulness ... it cannot impose acceptances of the privileges of the few if it does not pretend to be the guardian of*

the rights of all." [**Op. Cit.**, p. 24] Thus laws *"exist to keep up the machinery of government which serves to secure to capital the exploitation and monopoly of wealth produced"* and *"to facilitate the exploitation of the worker by the capitalist."* And people *"who long for freedom begin the attempt to obtain it by entreating their masters to be kind enough to protect them by modifying the laws which these masters themselves have created!"* [Kropotkin, **Op. Cit.**, p. 200 and p. 210]

Therefore, its important to remember why the state exists and so whatever actions and rights it promotes for the individual it exists to protect the powerful against the powerless. Any human rights recognised by the state are a product of social struggle and exist because of pass victories in the class war and not due to the kindness of ruling elites. In addition, capitalism itself undermines the ethical foundations of any society by encouraging people to grow accustomed to deceiving their fellows and treating them as a competitor, against whom every means of action is justified. Hence capitalism undermines the basic social context and customs within which individuals develop and need to become fully human and free. Little wonder that a strong state has always been required to introduce a free market — firstly, to protect wealth from the increasingly dispossessed and secondly, to try to hold society together as capitalism destroys the social fabric which makes a society worth living in.

For more on this issue, Kropotkin's classic essay *"Law and Authority"* cannot be bettered (contained in **Anarchism** and **Words of a Rebel**).

I.7.4 Does capitalism protect individuality?

Given that many people claim that **any** form of socialism will destroy liberty (and so individuality) it is worthwhile to consider whether capitalism actually does protect individuality. The answer must be no. Capitalism creates a standardisation which helps to distort individuality and the fact that individuality does exist under capitalism says more about the human spirit than capitalist social relationships.

So, why does a system apparently based on the idea of individual profit result in such a deadening of the individual? There are four main reasons:

> 1) capitalism produces a hierarchical system which crushes self-government in many areas of life;
>
> 2) there is the lack of community which does not provide the necessary supports for the encouragement of individuality;
>
> 3) there is the psychological impact of "individual profit" when it becomes identified purely with monetary gain (as in capitalism);
>
> 4) the effects of competition in creating conformity and mindless obedience to authority.

We have discussed point one on many occasions (see, for example, section B.4). As Emma Goldman put it, under capitalism, the individual *"must sell his [or her] labour"* and so their *"inclination and judgement are subordinated to the will of a master."* This, naturally, represses individual initiative and the skills needed to know and express ones own mind. This *"condemns millions of people to be mere nonentities, living corpses without originality or power of initiative ... who pile*

up mountains of wealth for others and pay for it with a grey, dull and wretched existence for themselves." "There can be no freedom in the large sense of the word," Goldman stressed, *"so long as mercenary and commercial considerations play an important part in the determination of personal conduct."* [**Red Emma Speaks**, p. 50] Hence Bookchin:

> *"With the hollowing out of community by the market system ... we witness the concomitant hollowing out of personality itself. Just as the spiritual and institutional ties that linked human beings together into vibrant social relations are eroded by the mass market, so the sinews that make for subjectivity, character and self-definition are divested of form and meaning. The isolated, seemingly autonomous ego of 'modernity' turns out to be the mere husk of a once fairly rounded individual whose very completeness as an ego was possible because he or she was rooted in a fairly rounded and complete community."* [**The Ecology of Freedom**, p. 211]

As regards point one, given the social relationships it is based on, capitalism cannot foster individuality but only harm it. As Kropotkin argued, *"obedience towards individuals or metaphysical entities ... lead to depression of initiative and servility of mind."* [**Anarchism**, p. 285] As far as point two goes, we have discussed it above and will not repeat ourselves (see section I.7). The last two points are worth discussing more thoroughly, and we will do so here.

Taking the third point first, when this kind of "greed" becomes the guiding aspect of an individual's life (and the society they live in) they usually end up sacrificing their own ego to it. Instead of the individual dominating their "greed," "greed" dominates them and so they end up being possessed by one aspect of themselves. This "selfishness" hides the poverty of the ego who practices it. As libertarian Marxist psychiatrist Erich Fromm argued:

> *"Selfishness if not identical with self-love but with its very opposite. Selfishness is one kind of greediness. Like all greediness, it contains an insatiability, as a consequence of which there is never any real satisfaction. Greed is a bottomless pit which exhausts the person in an endless effort to satisfy the need without ever reaching satisfaction ... this type of person is basically not fond of himself, but deeply dislikes himself.*
>
> *"The puzzle in this seeming contradiction is easy to solve. Selfishness is rooted in this very lack of fondness for oneself ... He does not have the inner security which can exist only on the basis of genuine fondness and affirmation."* [**The Fear of Freedom**, pp. 99–100]

In other words, the "selfish" person allows their greed to dominate their ego and they sacrifice their personality feeding this new God. This was clearly seen by Max Stirner who denounced this as a *"one-sided, unopened, narrow egoism"* which leads the ego being *"ruled by a passion to which he brings the rest as sacrifices"* [**The Ego and Its Own**, p. 76]. Like all *"spooks,"* capitalism results in the self-negation of the individual and so the impoverishment of individuality. Little wonder, then, that a system apparently based upon "egotism" and "individualism" ends up weakening individuality.

As regards the fourth point, the effects of competition on individuality are equally as destructive. Indeed, a *"culture dedicated to creating standardised, specialised, predictable human components could find no better way of grinding them out than by making every possible aspect of life a*

matter of competition. 'Winning out' in this respect does not make rugged individualists. It shapes conformist robots." [George Leonard, quoted by Alfie Kohn, **No Contest: The Case Against Competition**, p. 129] Why is this?

Competition is based upon outdoing others and this can only occur if you are doing the same thing they are. However, individuality is the most unique thing there is and *"unique characteristics by definition cannot be ranked and participating in the process of ranking demands essential conformity."* The extensive research into the effects of competition suggests that it in fact *"encourages rank conformity"* as well as undermining the *"substantial and authentic kind of individualism"* associated by such free thinkers as Thoreau. [Alfie Kohn, **Op. Cit.**, p. 130 and p. 129] As well as impoverishing individuality by encouraging conformity, competition also makes us less free thinking and rebellious:

> *"Attitude towards authorities and general conduct do count in the kinds of competitions that take place in the office or classroom. If I want to get the highest grades in class, I will not be likely to challenge the teacher's version of whatever topic is being covered. After a while, I may cease to think critically altogether ... If people tend to 'go along to get along,' there is even more incentive to go along when the goal is to be number one. In the office or factory where co-workers are rivals, beating out the next person for a promotion means pleasing the boss. Competition acts to extinguish the Promethean fire of rebellion."* [**Op. Cit.**, p. 130]

In section I.4.11 we noted that when an artistic task is turned into a contest, children's work reveal significantly less spontaneity and creativity. In other words, competition reduces creativity and so individuality because creativity is *"anti-conformist at its core: it is nothing if not a process of idiosyncratic thinking and risk-taking. Competition inhibits this process."* Competition, therefore, will result in a narrowing of our lives, a failing to experience new challenges in favour of trying to win and be "successful." It turns *"life into a series of contests [and] turns us into cautious, obedient people. We do not sparkle as individuals* ***or*** *embrace collective action when we are in a race."* [Kohn, **Op. Cit.**, p. 130 and p. 131]

So, far from defending individuality, capitalism places a lot of barriers (both physical and mental) in the path of individuals who are trying to express their freedom. Anarchism exists precisely because capitalism has not created the free society it supporters claimed it would.

I.8 Does revolutionary Spain show that libertarian socialism can work in practice?

Yes. Revolutionary Spain *"shows you what human beings are like when they are trying to behave as human beings and not as cogs in the capitalist machine."* [George Orwell, **Orwell in Spain**, p. 254] At the heart of the transformation were the CNT (the National Confederation of Labour, an anarcho-syndicalist union) and the FAI (Iberian Anarchist Federation). As Murray Bookchin put it:

> *"In Spain, millions of people took large segments of the economy into their own hands, collectivised them, administered them, even abolished money and lived by communistic principles of work and distribution — all of this in the midst of a terrible civil war, yet without producing the chaos or even the serious dislocations that were and still are predicted by authoritarian 'radicals.' Indeed, in many collectivised areas, the efficiency with which an enterprise worked by far exceeded that of a comparable one in nationalised or private sectors. This 'green shoot' of revolutionary reality has more meaning for us than the most persuasive theoretical arguments to the contrary. On this score it is not the anarchists who are the 'unrealistic day-dreamers,' but their opponents who have turned their backs to the facts or have shamelessly concealed them."* [*"Introductory Essay,"* **The Anarchist Collectives**, Sam Dolgoff (ed.), p. xxxix]

Anarchist and CNT activist Gaston Leval comments that in those areas which defeated the fascist uprising on the 19th of July 1936 a profound social revolution took place based, mostly, on anarchist ideas:

> *"In Spain, during almost three years, despite a civil war that took a million lives, despite the opposition of the political parties ... this idea of libertarian communism was put into effect. Very quickly more than 60% of the land was collectively cultivated by the peasants themselves, without landlords, without bosses, and without instituting capitalist competition to spur production. In almost all the industries, factories, mills, workshops, transportation services, public services, and utilities, the rank and file workers, their revolutionary committees, and their syndicates reorganised and administered production, distribution, and public services without capitalists, high-salaried managers, or the authority of the state.*
>
> *"Even more: the various agrarian and industrial collectives immediately instituted economic equality in accordance with the essential principle of communism, 'From each according to his ability and to each according to his needs.' They co-ordinated their efforts through free association in whole regions, created new wealth, increased production (especially in agriculture), built more schools, and bettered public services. They instituted*

> *not bourgeois formal democracy but genuine grass roots functional libertarian democracy, where each individual participated directly in the revolutionary reorganisation of social life. They replaced the war between men, 'survival of the fittest,' by the universal practice of mutual aid, and replaced rivalry by the principle of solidarity ...*
>
> *"This experience, in which about eight million people directly or indirectly participated, opened a new way of life to those who sought an alternative to anti-social capitalism on the one hand, and totalitarian state bogus socialism on the other."* [**Op. Cit.**, pp. 6–7]

Thus about eight million people directly or indirectly participated in the libertarian based new economy during the short time it was able to survive the military assaults of the fascists and the attacks and sabotage of the Communists and Republican state. This in itself suggests that libertarian socialist ideas are of a practical nature.

Lest the reader think that Leval and Bookchin are exaggerating the accomplishments and ignoring the failures of the Spanish collectives, in the following subsections we will present specific details and answer some objections often raised by misinformed critics. We will try to present an objective analysis of the revolution, its many successes, its strong and weak points, the mistakes made and possible lessons to be drawn from the experience, both from the successes and the failures. However, this will hardly do justice to the collectivisation as it *"assumed an infinite diversity of forms from village to village, and even in the different firms collectivised in the cities ... there was an element of improvisation and of the exceptional wartime conditions experienced by the country (i.e., the war against fascism) and the arrangements had their flaws as well as their good points."* [Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 223]

This libertarian influenced revolution has (generally) been ignored by historians, or its existence mentioned in passing. Some so-called historians and "objective investigators" have slandered it and lied about (when not ignoring) the role anarchists played in it. Communist histories are particularly unreliable (to use a polite word for their activities) but it seems that almost **every** political perspective has done this (including liberal, so-called right-wing "libertarian", Stalinist, Trotskyist, Marxist, and so on). So any attempt to investigate what actually occurred in Spain and the anarchists' role in it is subject to a great deal of difficulty. Moreover, the positive role that Anarchists played in the revolution and the positive results of our ideas when applied in practice are also downplayed, if not ignored. Indeed, the misrepresentations of the Spanish Anarchist movement are downright amazing (see Jerome R. Mintz's wonderful book **The Anarchists of Casa Viejas** and J. Romero Maura's article *"The Spanish case"* [**Anarchism Today**, J. Joll and D. Apter (eds.)] for a refutation of many of the standard assertions and distortions about the Spanish anarchist movement by historians). The myths generated by Marxists of various shades are, perhaps needless to say, the most extensive (see the appendix on *"Marxists and Spanish Anarchism"* for a reply to some of the more common ones).

All we can do here is present a summary of the social revolution that took place and attempt to explode a few of the myths that have been created around the work of the CNT and FAI during those years. We must stress that this can be nothing but a short introduction to the Spanish Revolution. We concentrate on the economic and political aspects of the revolution as we cannot cover everything. However, we must mention the social transformations that occurred all across non-fascist Spain. The revolution saw the traditional social relationships between men and women, adults and children, individual and individual transformed, revolutionised in a libertarian way. CNT militant Abel Paz gave a good idea of what happened:

> *"Industry is in the hands of the workers and all the production centres conspicuously fly the red and black flags as well as inscriptions announcing that they have really become collectives. The revolution seems to be universal. Changes are also evident in social relations. The former barriers which used to separate men and woman arbitrarily have been destroyed. In the cafes and other public places there is a mingling of the sexes which would have been completely unimaginable before. The revolution has introduced a fraternal character to social relations which has deepened with practice and show clearly that the old world is dead."* [**Durruti: The People Armed**, p. 243]

The social transformation empowered individuals and these, in turn, transformed society. Anarchist militant Enriqueta Rovira presents a vivid picture of the self-liberation the revolution generated:

> *"The atmosphere then, the feelings were very special. It was beautiful. A feeling of — how shall I say it — of power, not in the sense of domination, but in the sense of things being under **our** control, of under anyone's. Of **possibility**. We **had** everything. We had Barcelona: It was ours. You'd walk out in the streets, and they were ours — here, CNT; there, **comite** this or that. It was totally different. Full of possibility. A feeling that we could, together, really **do** something. That we could make things different."* [quoted by Martha A. Ackelsberg and Myrna Margulies Breithart, *"Terrains of Protest: Striking City Women"*, pp. 151–176, **Our Generation**, vol. 19, No. 1, pp. 164–5]

Moreover, the transformation of society that occurred during the revolution extended to all areas of life and work. For example, the revolution saw *"the creation of a health workers' union, a true experiment in socialised medicine. They provided medical assistance and opened hospitals and clinics."* [Juan Gomez Casas, **Anarchist Organisation: The History of the FAI**, p. 192] We discuss this example in some detail in section I.5.12 and so will not do so here. We simply stress that this section of the FAQ is just an introduction to what happened and does not (indeed, cannot) discuss all aspects of the revolution. We just present an overview, bringing out the libertarian aspects of the revolution, the ways workers' self-management was organised, how the collectives organised and what they did.

Needless to say, many mistakes were made during the revolution. We point out and discuss some of them in what follows. Moreover, much of what happened did not correspond exactly with what many people consider as the essential steps in a communist (libertarian or otherwise) revolution. Nor, it must be stressed, did much of it reflect the pre-revolution stated aims of the CNT itself. Economically, for example, the collectives themselves were an unexpected development, one which was based on libertarian principles but also reflected the reality of the situation the CNT militants found themselves in. Much the same can be said of the fact that few collectives reached beyond mutualism or collectivism in spite of the CNT seeking a libertarian communist economy. Politically, the fear of a fascist victory made many anarchists accept collaboration with the state as a lesser evil. However, to dismiss the Spanish Revolution because it did not meet the ideals laid out by a handful of revolutionaries beforehand would be sectarian and elitist nonsense. No working class revolution is pure, no mass struggle is without its contradictions, no attempt to change society is perfect. *"It is only those who do nothing who make no mistakes,"* as Kropotkin so correctly pointed out. [**Anarchism**, p. 143] The question is whether the revolution creates a

system of institutions which will allow those involved to discuss the problems they face, change the decisions reached and correct any mistakes they make. In this, the Spanish Revolution clearly succeeded, creating organisations based on the initiative, autonomy and power of working class people.

For more information about the social revolution, Sam Dolgoff's anthology **The Anarchist Collectives** is an excellent starting place. Gaston Leval's **Collectives in the Spanish Revolution** is another essential text. Jose Peirats' **Anarchists in the Spanish Revolution** and his three volume quasi-official history **The CNT in the Spanish Revolution** are key works. Vernon Richards' **Lessons of the Spanish Revolution** is an excellent critical anarchist work on the revolution and the role of the anarchists. **Spain 1936–1939: Social Revolution and Counter-Revolution** (edited by Vernon Richards) is a useful collection of articles from the time. Abel Paz's **Durruti in the Spanish Revolution** is a classic biography of Spanish anarchism's most famous militant (this is an expanded version of his earlier **Durruti: The People Armed**). Emma Goldman's opinions on the Spanish Revolution are collected in **Vision on Fire**.

Robert Alexander's **The Anarchists in the Spanish Civil War** is a good general overview of the anarchist's role in the revolution and civil war, as is Burnett Bolloten's **The Spanish Civil War**. Daniel Guérin's anthology **No Gods, No Masters** as two sections on the Spanish Revolution, one specifically on the collectives. Noam Chomsky's excellent essay *"Objectivity and Liberal Scholarship"* indicates how liberal books on the Spanish Civil War can be misleading, unfair and essentially ideological in nature (this classic essay can be found in **Chomsky on Anarchism**, **The Chomsky Reader**, and **American Power and the New Mandarins**). George Orwell's **Homage to Catalonia** cannot be bettered as an introduction to the subject (Orwell was in the POUM militia at the Aragón Front and was in Barcelona during the May Days of 1937). This classic account is contained along with other works by Orwell about the conflict in the anthology **Orwell in Spain**. Murray Bookchin's **The Spanish Anarchists** is a useful history, but ends just as the revolution breaks out and so needs to be completed by his **To Remember Spain** and the essay *"Looking Back at Spain"*. Stuart Christie's **We, The Anarchists!** is an important history on the Iberian Anarchist Federation.

I.8.1 Is the Spanish Revolution inapplicable as a model for modern societies?

Quite the reverse. More urban workers took part in the revolution than in the countryside. So while it is true that collectivisation was extensive in rural areas, the revolution also made its mark in urban areas and in industry.

In total, the *"regions most affected"* by collectivisation *"were Catalonia and Aragón, where about 70 per cent of the workforce was involved. The total for the whole of Republican territory was nearly 800,000 on the land and a little more than a million in industry. In Barcelona workers' committees took over all the services, the oil monopoly, the shipping companies, heavy engineering firms such as Volcano, the Ford motor company, chemical companies, the textile industry and a host of smaller enterprises ... Services such as water, gas and electricity were working under new management within hours of the storming of the Atarazanas barracks ... a conversion of appropriate factories to war production meant that metallurgical concerns had started to produce armed cars by 22 July ... The industrial workers of Catalonia were the most skilled in Spain ... One of the most impressive feats*

of those early days was the resurrection of the public transport system at a time when the streets were still littered and barricaded." Five days after the fighting had stopped, 700 tramcars rather than the usual 600, all painted in the black-and-red colours of the CNT-FAI, were operating in Barcelona. [Antony Beevor, **The Spanish Civil War**, pp. 91–2]

About 75% of Spanish industry was concentrated in Catalonia, the stronghold of the anarchist labour movement, and widespread collectivisation of factories took place there. As Sam Dolgoff rightly observed, this *"refutes decisively the allegation that anarchist organisational principles are not applicable to industrial areas, and if at all, only in primitive agrarian societies or in isolated experimental communities."* [**The Anarchist Collectives**, pp. 7–8] According to Augustin Souchy:

> *"It is no simple matter to collectivise and place on firm foundations an industry employing almost a quarter of a million textile workers in scores of factories scattered in numerous cities. But the Barcelona syndicalist textile union accomplished this feat in a short time. It was a tremendously significant experiment. The dictatorship of the bosses was toppled, and wages, working conditions and production were determined by the workers and their elected delegates. All functionaries had to carry out the instructions of the membership and report back directly to the men on the job and union meetings. The collectivisation of the textile industry shatters once and for all the legend that the workers are incapable of administrating a great and complex corporation."* [**Op. Cit.**, p. 94]

Moreover, Spain in the 1930s was **not** a backward, peasant country, as is sometimes supposed. Between 1910 and 1930, the industrial working class more than doubled to over 2,500,000. This represented just over 26% of the working population (compared to 16% twenty years previously). In 1930, only 45% of the working population were engaged in agriculture. [Ronald Fraser, **The Blood of Spain**, p. 38] In Catalonia alone, 200,000 workers were employed in the textile industry and 70,000 in metal-working and machinery manufacturing. This was very different than the situation in Russia at the end of World War I, where the urban working class made up only 10% of the population.

Capitalist social relations had also penetrated the rural economy by the 1930s with agriculture oriented to the world market and approximately 90% of farm land in the hands of the bourgeoisie. [Fraser, **Op. Cit.**, p. 37] So by 1936 agriculture was predominately capitalist, with Spanish agribusiness employing large numbers of labourers who either did not own enough land to support themselves or where landless. The labour movement in the Spanish countryside in the 1930s was precisely based on this large population of rural wage-earners (the socialist UGT land workers union had 451,000 members in 1933, 40% of its total membership, for example). In Russia at the time of the revolution of 1917, agriculture mostly consisted of small farms on which peasant families worked mainly for their own subsistence, bartering or selling their surplus.

Therefore the Spanish Revolution cannot be dismissed as a product a of pre-industrial society. The urban collectivisations occurred predominately in the most heavily industrialised part of Spain and indicate that anarchist ideas are applicable to modern societies Indeed, comforting Marxist myths aside, the CNT organised most of the unionised urban working class and, internally, agricultural workers were a minority of its membership (by 1936, the CNT was making inroads in Madrid, previously a socialist stronghold while the UGT main area of growth in the 1930s was with, ironically, rural workers). The revolution in Spain was the work (mostly) of

rural and urban wage labourers (joined with poor peasants) fighting a well developed capitalist system.

In summary, then, the anarchist revolution in Spain has many lessons for revolutionaries in developed capitalist countries and cannot be dismissed as a product of industrial backwardness. The main strength lay of the anarchist movement was in urban areas and, unsurprisingly, the social revolution took place in both the most heavily industrialised areas as well as on the land.

I.8.2 How were the anarchists able to obtain mass popular support in Spain?

Revolutionary anarchism was introduced in Spain in 1868 by Giuseppi Fanelli, an associate of Michael Bakunin, and found fertile soil among both the workers and the peasants. Those historians who gleefully note that Bakunin sent someone who did not speak Spanish to spread his message in Spain forget how close the Latin languages are to each other. Fanelli was more than able to be understood by his Spanish and Catalan speaking hosts who, it should be noted, were already familiar with Proudhon's ideas.

The key reason why Bakunin's ideas gained such ready support in Spain was that they reflected ideas that they had already developed themselves. The peasants supported anarchism because of the rural tradition of Iberian collectivism which had existed for generations. The urban workers supported it because its ideas of direct action, solidarity and free federation of unions corresponded to their needs in their struggle against capitalism and the state. Neither needed to be told that capitalism was oppressive and exploitative or that the state existed to defend this class system. In addition, many Spanish workers were well aware of the dangers of centralisation and the republican tradition in Spain was very much influenced by federalist ideas (coming, in part, from Proudhon's work as popularised by Pi y Margall, soon to become the President of the first Republic). The movement spread back and forth between countryside and cities as urban based union organisers and anarchist militants visited villages and peasants and landless agricultural workers came to industrial cities, like Barcelona, looking for work.

Therefore, from the start anarchism in Spain was associated with the labour movement (as Bakunin desired) and so anarchists had a practical area to apply their ideas and spread the anarchist message. By applying their principles in everyday life, the anarchists in Spain ensured that anarchist ideas became commonplace and accepted in a large section of the population.

This acceptance of anarchism cannot be separated from the structure and tactics of the CNT and its fore-runners. The practice of direct action and solidarity encouraged workers to rely on themselves, to identify and solve their own problems. The decentralised structure of the anarchist unions had an educational effect of their members. By discussing issues, struggles, tactics, ideals and politics in their union assemblies, the members of the union educated themselves and, by the process of self-management in the struggle, prepared themselves for a free society. The very organisational structure of the CNT ensured the dominance of anarchist ideas and the political evolution of the union membership. As one CNT militant from Casas Viejas put it, new members *"asked for too much, because they lacked education. They thought they could reach the sky without a ladder ... they were beginning to learn ... There was good faith but lack of education. For that reason we would submit ideas to the assembly, and the bad ideas would be thrown out."* [quoted by Jerome R. Mintz, **The Anarchists of Casas Viejas**, p. 27]

It was by working in the union meetings that anarchists influenced their fellow workers. The idea that the anarchists, through the FAI, controlled the CNT is a myth. Not all anarchists in the CNT were members of the FAI, for example. Almost all FAI members were also rank-and-file members of the CNT who took part in union meetings as equals. Anarchists were not members of the FAI indicate this. Jose Borras Casacarosa confirmed that *"[o]ne has to recognise that the FAI did not intervene in the CNT from above or in an authoritarian manner as did other political parties in the unions. It did so from the base through militants ... the decisions which determined the course taken by the CNT were taken under constant pressure from these militants."* Jose Campos noted that FAI militants *"tended to reject control of confederal committees and only accepted them on specific occasions ... if someone proposed a motion in assembly, the other FAI members would support it, usually successfully. It was the individual standing of the **faista** in open assembly."* [quoted by Stuart Christie, **We, the Anarchists**, p. 62]

This explains the success of anarchism in the CNT. Anarchist ideas, principles and tactics, submitted to the union assemblies, proved to be good ideas and were not thrown out. The structure of the organisation, in other words, decisively influenced the **content** of the decisions reached as ideas, tactics, union policy and so on were discussed by the membership and those which best applied to the members' lives were accepted and implemented. The CNT assemblies showed the validity of Bakunin's arguments for self-managed unions as a means of ensuring workers' control of their own destinies and organisations. As he put it, the union *"sections could defend their rights and their autonomy [against union bureaucracy] in only one way: the workers called general membership meetings ... In these great meetings of the sections, the items on the agenda were amply discussed and the most progressive opinion prevailed."* [**Bakunin on Anarchism**, p. 247] The CNT was built on such *"popular assemblies,"* with the same radicalising effect. It showed, in practice, that bosses (capitalist as well as union ones) were not needed — workers can manage their own affairs directly. As a school for anarchism it could not be bettered as it showed that anarchist principles were not utopian. The CNT, by being based on workers' self-management of the class struggle, prepared its members for self-management of the revolution and the new society.

The Spanish Revolution also shows the importance of anarchist education and media. In a country with a very high illiteracy rate, huge quantities of literature on social revolution were disseminated and read out at meetings for those who could not read. Anarchist ideas were widely discussed: *"There were tens of thousands of books, pamphlets and tracts, vast and daring cultural and popular educational experiments (the Ferrer schools) that reached into almost every village and hamlet throughout Spain."* [Sam Dolgoff, **The Anarchist Collectives**, p. 27] The discussion of political, economic and social ideas was continuous, and *"the centro [local union hall] became the gathering place to discuss social issues and to dream and plan for the future. Those who aspired to learn to read and write would sit around ... studying."* [Mintz, **Op. Cit.**, p. 160] One anarchist militant described it as follows:

> *"With what joy the orators were received whenever a meeting was held . .. We spoke that night about everything: of the ruling inequality of the regime and of how one had a right to a life without selfishness, hatred, without wars and suffering. We were called on another occasion and a crowd gathered larger than the first time. That's how the pueblo started to evolve, fighting the present regime to win something by which they could sustain themselves, and dreaming of the day when it would be possible to create*

that society some depict in books, others by word of mouth. Avid for learning, they read everything, debated, discussed, and chatted about the different modes of perfect social existence." [Perez Cordon, quoted by Mintz, **Op. Cit.**, p. 158]

Newspapers and periodicals were extremely important. By 1919, more than 50 towns in Andalusia had their own libertarian newspapers. By 1934 the CNT had a membership of around one million and the anarchist press covered all of Spain. In Barcelona the CNT published a daily, **Solidaridad Obrera** (Worker Solidarity), with a circulation of 30,000. The FAI's magazine **Tierra y Libertad** (Land and Liberty) had a circulation of 20,000. In Gijon there was **Vida Obrera** (Working Life), in Seville **El Productor** (The Producer) and in Saragossa **Accion y Cultura** (Action and Culture), each with a large circulation. There were many more.

As well as leading struggles, organising unions, and producing books, papers and periodicals, the anarchists also organised libertarian schools, cultural centres, co-operatives, anarchist groups (the FAI), youth groups (the Libertarian Youth) and women's organisations (the Free Women movement). They applied their ideas in all walks of life and so ensured that ordinary people saw that anarchism was practical and relevant to them.

This was the great strength of the Spanish Anarchist movement. It was a movement *"that, in addition to possessing a revolutionary ideology [sic], was also capable of mobilising action around objectives firmly rooted in the life and conditions of the working class ... It was this ability periodically to identify and express widely felt needs and feelings that, together with its presence at community level, formed the basis of the strength of radical anarchism, and enabled it to build a mass base of support."* [Nick Rider, *"The practice of direct action: the Barcelona rent strike of 1931"*, pp. 79–105, **For Anarchism**, David Goodway (Ed.), p. 99]

Historian Temma Kaplan stressed this in her work on the Andalusian anarchists. She argued that the anarchists were *"rooted in"* social life and created *"a movement firmly based in working-class culture."* They *"formed trade unions, affinity groups such as housewives' sections, and broad cultural associations such as workers' circles, where the anarchist press was read and discussed."* Their *"great strength ... lay in the merger of communal and militant trade union traditions. In towns where the vast majority worked in agriculture, agricultural workers' unions came to be identified with the community as a whole ... anarchism ... show[ed] that the demands of agricultural workers and proletarians could be combined with community support to create an insurrectionary situation ... It would be a mistake ... to argue that 'village anarchism' in Andalusia was distinct from militant unionism, or that the movement was a surrogate religion."* [**Anarchists of Andalusia: 1868–1903**, p. 211, p. 207 and pp. 204–5]

The Spanish anarchists, before and after the CNT was formed, fought in and out of the factory for economic, social and political issues. This refusal of the anarchists to ignore any aspect of life ensured that they found many willing to hear their message, a message based around the ideas of individual liberty. Such a message could do nothing but radicalise workers for *"the demands of the CNT went much further than those of any social democrat: with its emphasis on true equality, **autogestion** [self-management] and working class dignity, anarchosyndicalism made demands the capitalist system could not possibly grant to the workers."* [J. Romero Maura, *"The Spanish case"*, pp. 60–83, **Anarchism Today**, D. Apter and J. Joll (eds.), p. 79]

Strikes, due to the lack of strike funds, depended on mutual aid to be won, which fostered a strong sense of solidarity and class consciousness in the CNT membership. Strikes did not just involve workers. For example, workers in Jerez responded to bosses importing workers from

Malaga *"with a weapon of their own — a boycott of those using strike-breakers. The most notable boycotts were against landowners near Jerez who also had commercial establishments in the city. The workers and their wives refused to buy there, and the women stationed themselves nearby to discourage other shoppers."* [Mintz, **Op. Cit.**, p. 102]

The structure and tactics of the CNT encouraged the politicisation, initiative and organisational skills of its members. It was a federal, decentralised body, based on direct discussion and decision making from the bottom up (*"The CNT tradition was to discuss and examine everything"*, as one militant put it). In addition, the CNT created a viable and practical example of an alternative method by which society could be organised. A method which was based on the ability of ordinary people to direct society themselves and which showed in practice that special ruling authorities are undesirable and unnecessary. This produced a revolutionary working class the likes of which the world has rarely seen. As Jose Peirats pointed out, *"above the union level, the CNT was an eminently political organisation ..., a social and revolutionary organisation for agitation and insurrection."* [**Anarchists in the Spanish Revolution**, p. 239] The CNT was organised in such a way as to encourage solidarity and class consciousness. Its organisation was based on the **sindicato unico** (one union) which united all workers of the same workplace in the same union. Instead of organising by trade, and so dividing the workers into numerous different unions, the CNT united all workers in a workplace into the same organisation, all trades, skilled and unskilled, were in a single organisation and so solidarity was increased and encouraged as well as increasing their fighting power by eliminating divisions within the workforce. All the unions in an area were linked together into a local federation, the local federations into a regional federation and so on. As J. Romero Maura argued, the *"territorial basis of organisation linkage brought all the workers from one area together and fomented working-class solidarity over and above corporate [industry or trade] solidarity."* [**Op. Cit.**p. 75]

Thus the structure of the CNT encouraged class solidarity and consciousness. In addition, being based on direct action and self-management, the union ensured that working people became accustomed to managing their own struggles and acting for themselves, directly. This prepared them to manage their own personal and collective interests in a free society (as seen by the success of the self-managed collectives created in the revolution). Thus the process of self-managed struggle and direct action prepared people for the necessities of the social revolution and the an anarchist society — it built, as Bakunin argued, the seeds of the future in the present.

In other words, *"the route to radicalisation ... came from direct involvement in struggle and in the design of alternative social institutions."* Every strike and action empowered those involved and created a viable alternative to the existing system. For example, while the strikes and food protests in Barcelona at the end of the First World War *"did not topple the government, patterns of organisation established then provided models for the anarchist movement for years to follow."* [Martha A. Ackelsberg and Myrna Margulies Breithart, *"Terrains of Protest: Striking City Women"*, pp. 151–176, **Our Generation**, vol. 19, No. 1, p. 164] The same could be said of every strike, which confirmed Bakunin's and Kropotkin's stress on the strike as not only creating class consciousness and confidence but also the structures necessary to not only fight capitalism, but to replace it.

In summary, then, anarchism gained mass support by anarchists participating in mass struggles and movements, showing that its ideas and ideals were applicable to working class experiences. In fact, to even wonder why anarchism gained support in Spain is, to some degree, to implicitly assume, with Marxists of various shades, that only state socialism reflects the needs of

working class people. Discussing the question why the social democratic or Communist movements did not replace anarchism in Spain, historian J. Romero Maura correctly pointed out that this *"is based on the false assumption that the anarcho-syndicalist conception of the workers' struggle in pre-revolutionary society was completely at odds with what the **real** social process signified (hence the constant reference to 'religious' 'messianic' models as explanations)."* After discussing and refuting five common suggestions for the success of anarchism in Spain, he concluded that the *"explanation of Spanish anarcho-syndicalism's success in organising a mass movement with a sustained revolutionary **elan** should initially be sought in the very nature of the anarchist conception of society and of how to achieve revolution."* [**Op. Cit.** p. 78 and p. 65]

It was the revolutionary nature of the CNT that created a militant membership who were willing and able to use direct action to defend their liberty. Unlike the Marxist led German workers, organised in a centralised fashion and trained in the obedience required by hierarchy, who did nothing to stop Hitler, the Spanish working class (like their comrades in anarchist unions in Italy) took to the streets to stop fascism.

The revolution in Spain did not "just happen"; it was the result of nearly seventy years of persistent anarchist agitation and revolutionary struggle, including a long series of strikes, protests, boycotts, uprisings and other forms of direct action that prepared the peasants and workers organise popular resistance to the attempted fascist coup in July 1936 and to take control of society when they had defeated it in the streets.

I.8.3 How were Spanish industrial collectives organised?

Martha A. Ackelsberg gives us an excellent short summary of how the industrial collectives where organised:

> *"Pre-existing structures of worker organisation made possible a workers' take-over of much of the industrial economy, especially in Catalonia ... Factory committees formed to direct production and co-ordinate with other units within the same industry. Union organisations co-ordinated both the production and distribution of manufactured goods across industries and regions ... In most collectivised industries, general assemblies of workers decided policy, while elected committees managed affairs on a day-to-day basis."* [**Free Women of Spain**, p. 100]

The collectives were based on workers' democratic self-management of their workplaces, using productive assets that were under the custodianship of the entire working community and administered through federations of workers' associations:

> *"The collectives organised during the Spanish Civil War were workers' economic associations without private property. The fact that collective plants were managed by those who worked in them did not mean that these establishments became their private property. The collective had no right to sell or rent all or any part of the collectivised factory or workshop. The rightful custodian was the CNT, the National Confederation of Workers Associations. But not even the CNT had the right to do as it pleased. Everything had to be decided and ratified by the workers themselves through conferences and congresses."* [Augustin Souchy, **The Anarchist Collectives**, p. 67]

In Catalonia *"every factory elected its administrative committee composed of its most capable workers. Depending on the size of the factory, the function of these committees included inner plant organisation, statistics, finance, correspondence, and relations with other factories and with the community ... Several months after collectivisation the textile industry of Barcelona was in far better shape than under capitalist management. Here was yet another example to show that grass roots socialism from below does not destroy initiative. Greed is not the only motivation in human relations."* [Souchy, **Op. Cit.**, p 95]

Thus the individual collective was based on a mass assembly of those who worked there. This assembly nominated administrative staff who were mandated to implement the decisions of the assembly and who had to report back, and were accountable, to that assembly. For example, in Castellon de la Plana *"[e]very month the technical and administrative council presented the general assembly of the Syndicate with a report which was examined and discussed if necessary, and finally introduced when this majority thought it of use. Thus all the activities were known and controlled by all the workers. We find here a practical example of libertarian democracy."* [Gaston Leval, **Collectives in the Spanish Revolution**, p. 303] Power rested at the base of the collective, with *"all important decisions [being] taken by the general assemblies of the workers"* which *"were widely attended and regularly held ... if an administrator did something which the general assembly had not authorised, he was likely to be deposed at the next meeting."* An example of this process can be seen from the Casa Rivieria company. After the defeat of the army coup *"a control committee (Comite de Control) was named by the Barcelona Metal Workers' Union to take over temporary control of the enterprises ... A few weeks after July 19th, there was the first general assembly of the firm's workers ... It elected an enterprise committee (Comite de Empresa) to take control of the firm on a more permanent basis... . Each of the four sections of the firm — the three factories and the office staff — held their own general assemblies at least once a week. There they discussed matters ranging from the most important affairs to the most trivial."* [Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 469 and p. 532]

In summary, the collectives in Spain were marked by workplace self-management. They successfully implemented the long-standing libertarian goal of turning industry from an autocracy to a democracy, of replacing wage-labour with free-labour based on the association of equals (see section I.3.1). However, it would be a mistake to assume (as many do, particularly Marxists) that the CNT and FAI considered the creation of self-managed collectives as the end of the revolution. Far from it. While they embodied such key libertarian principles as workers' self-management, they were fundamentally a product of both anarchist ideas **and** the specific situation in which they were created. Rather than seek a market system of producer co-operatives, the CNT was committed to the full socialisation of the economy and the creation of libertarian communism. The collectives were, as a result, seen as development towards that goal rather than as an end in themselves. Moreover, as historian Ronald Fraser notes, it *"was doubtful that the CNT had seriously envisaged collectivisation of industry ... before this time."* [**The Blood of Spain**, p. 212] CNT policy was opposed to the collectivisation decree of the Catalonian government, for example, which formalised (and controlled) the spontaneous gains of the revolution as expressed by the collectives.

Therefore, the collectives were (initially) a form of *"self-management straddling capitalism and socialism, which we maintain would not have occurred had the Revolution been able to extend itself fully under the direction of our syndicates."* In other words, the revolution saw the abolition of wage-labour but not of the wages system. Thus capitalism was replaced by mutualism, not the

socialism desired by most anarchists (namely libertarian communism). As economic and political development are closely related, the fact that the CNT did not carry out the **political** aspect of the revolution meant that the revolution in the economy was doomed to failure. As Leval stressed, in *"the industrial collectives, especially in the large towns, matters proceeded differently as a consequence of contradictory factors and of opposition created by the co-existence of social currents emanating from different social classes."* [Gaston Leval, **Collectives in the Spanish Revolution**, pp. 227–8 and p. 227]

That the initial forms of the revolution were not as expected should, perhaps, be unsurprising. After all, no social transformation ever exactly matches the hopes of those who had advocated it and the people had more pressing matters to attend to such as re-starting production and fighting Franco. So it is utterly understandable that the collectives only embodied some and not all aspects of aims of the CNT and FAI! Moreover, social change does not produce instant perfect transformations and the workers *"had to build new circuits of consumption and distribution, new types of social relations between the proletariat and the peasantry, and new modes of production."* [Abel Paz, **Durruti in the Spanish Revolution**, p. 451] That process was started, even if it were initially incomplete. That a wider goal was envisioned by these organisations can be seen from the fact that union activists sought to extend the degree of socialisation. So, and again in line with libertarian theory, the collectives also expressed a desire to co-operate within and across industries (see section I.3.5). These attempts at federation and co-ordination will be discussed in next section, along with some of the conclusions that can be drawn from these experiments. For, as would be expected, this attempt to introduce libertarian socialism had its drawbacks as well as successes.

I.8.4 How were the Spanish industrial collectives co-ordinated?

The methods of co-operation tried by the collectives varied considerably. Initially, there were very few attempts to co-ordinate economic activities beyond the workplace. This is hardly surprising, given that the overwhelming need was to restart production, convert a civilian economy to a wartime one and to ensure that the civilian population and militias were supplied with necessary goods. This lead to a situation of anarchist mutualism developing, with many collectives selling the product of their own labour on the market.

This lead to some economic problems as there existed no framework of institutions between collectives to ensure efficient co-ordination of activity and so lead to pointless competition between collectives (which led to even more problems). As there were initially no confederations of collectives nor mutual/communal banks this lead to the continuation of any inequalities that initially existed between collectives (due to the fact that workers took over rich and poor capitalist firms) and it made the many ad hoc attempts at mutual aid between collectives difficult and often of an ad hoc nature.

Given that the CNT programme of libertarian communism recognised that a fully co-operative society must be based upon production for use, CNT militants fought against this system of mutualism and for inter-workplace co-ordination. They managed to convince their fellow workers of the difficulties of mutualism by free debate and discussion within their unions and collectives. Given this the degree of socialisation varied over time (as would be expected). Initially, after the defeat of Franco's forces, there was little formal co-ordination and organisation. The most

important thing was to get production started again. However, the needs of co-ordination soon became obvious (as predicted in anarchist theory and the programme of the CNT). Gaston Leval gives the example of Hospitalet del Llobregat with regards to this process:

> *"Local industries went through stages almost universally adopted in that revolution ... [I]n the first instance,* ***comites*** *nominated by the workers employed in them [were organised]. Production and sales continued in each one. But very soon it was clear that this situation gave rise to competition between the factories ... creating rivalries which were incompatible with the socialist and libertarian outlook. So the CNT launched the watchword: 'All industries must be ramified in the Syndicates, completely socialised, and the regime of solidarity which we have always advocated be established once and for all.'*
>
> *"The idea won support immediately."* [**Collectives in the Spanish Revolution**, pp. 291–2]

Another example was the woodworkers' union which had a massive debate on socialisation and decided to do so (the shopworkers' union had a similar debate, but the majority of workers rejected socialisation). According to Ronald Fraser a *"union delegate would go round the small shops, point out to the workers that the conditions were unhealthy and dangerous, that the revolution was changing all this, and secure their agreement to close down and move to the union-built Double-X and the 33 EU."* [Ronald Fraser, **Blood of Spain**, p. 222]

A plenum of syndicates met in December of 1936 and formulated norms for socialisation in which the inefficiency of the capitalist industrial system was analysed. The report of the plenum stated:

> *"The major defect of most small manufacturing shops is fragmentation and lack of technical/commercial preparation. This prevents their modernisation and consolidation into better and more efficient units of production, with better facilities and co-ordination ... For us, socialisation must correct these deficiencies and systems of organisation in every industry ... To socialise an industry, we must consolidate the different units of each branch of industry in accordance with a general and organic plan which will avoid competition and other difficulties impeding the good and efficient organisation of production and distribution."* [quoted by Souchy, **Anarchist Collectives**, p. 83]

As Souchy pointed out, this document is very important in the evolution of collectivisation, because it indicates a realisation that *"workers must take into account that partial collectivisation will in time degenerate into a kind of bourgeois co-operativism."* [**Op. Cit.**, p. 83] Thus many collectives did not compete with each other for profits, as surpluses were pooled and distributed on a wider basis than the individual collective.

This process went on in many different unions and collectives and, unsurprisingly, the forms of co-ordination agreed to lead to different forms of organisation in different areas and industries, as would be expected in a free society. However, the two most important forms can be termed syndicalisation and confederationalism (we will ignore the forms created by the collectivisation decree as these were not created by the workers themselves).

Syndicalisation (our term) meant that the CNT's industrial union ran the whole industry. This solution was tried by the woodworkers' union after extensive debate. One section of the

union, *"dominated by the FAI, maintained that anarchist self-management meant that the workers should set up and operate autonomous centres of production so as to avoid the threat of bureaucratisation."* However, those in favour of syndicalisation won the day and production was organised in the hands of the union, with administration posts and delegate meetings elected by the rank and file. However, the *"major failure ... (and which supported the original anarchist objection) was that the union became like a large firm"* and its *"structure grew increasingly rigid."* [Ronald Fraser, **Blood of Spain**, p. 222] According to one militant, *"From the outside it began to look like an American or German trust"* and the workers found it difficult to secure any changes and *"felt they weren't particularly involved in decision making."* [quoted by Fraser, **Op. Cit.**, p. 222 and p. 223] However, this did not stop workers re-electing almost all posts at the first Annual General Assembly.

In the end, the major difference between the union-run industry and a capitalist firm organisationally appeared to be that workers could vote for (and recall) the industry management at relatively regular General Assembly meetings. While a vast improvement on capitalism, it is hardly the best example of participatory self-management in action. However, it must be stressed that the economic problems caused by the Civil War and Stalinist led counter-revolution obviously would have had an effect on the internal structure of any industry and so we cannot say that the form of organisation created was totally responsible for any marginalisation that took place.

The other important form of co-operation was what we will term ***confederalisation***. This system was based on horizontal links between workplaces (via the CNT union) and allowed a maximum of self-management **and** mutual aid. This form of co-operation was practised by the Badalona textile industry (and had been defeated in the woodworkers' union). It was based upon each workplace being run by its elected management, selling its own production, getting its own orders and receiving the proceeds. However, *"everything each mill did was reported to the union which charted progress and kept statistics. If the union felt that a particular factory was not acting in the best interests of the collectivised industry as a whole, the enterprise was informed and asked to change course."* This system ensured that the *"dangers of the big 'union trust' as of the atomised collective were avoided."* [Fraser, **Op. Cit.**, p. 229] According to one militant, the union *"acted more as a socialist control of collectivised industry than as a direct hierarchised executive."* The federation of collectives created *"the first social security system in Spain"* (which included retirement pay, free medicines, sick and maternity pay) and a compensation fund was organised *"to permit the economically weaker collectives to pay their workers, the amount each collective contributed being in direct proportion to the number of workers employed."* [quoted by Fraser, **Op. Cit.**, p. 229]

As can be seen, the industrial collectives co-ordinated their activity in many ways, with varying degrees of success. As would be expected, mistakes were made and different solutions found as an anarchist society can hardly be produced "overnight" (as discussed in section H.2.5, anarchists have always been aware that social transformation takes time). So it is hardly surprising that the workers of the CNT faced numerous problems and had to develop their self-management experiment as objective conditions allowed them to. Unfortunately, thanks to fascist aggression and Communist Party and Republican back-stabbing, the experiment did not last long enough to fully answer all the questions we have about the viability of the solutions tried. Given time, however, we are sure they would have solved the problems they faced for the social experimentation which was conducted was not only highly successful but also rich in promise.

I.8.5 How were the Spanish agricultural co-operatives organised and co-ordinated?

Jose Peirats described collectivisation among the peasantry as follows:

> *"The expropriated lands were turned over to the peasant syndicates, and it was these syndicates that organised the first collectives. Generally the holdings of small property owners were respected, always on the condition that only they or their families would work the land, without employing wage labour. In areas like Catalonia, where the tradition of petty peasant ownership prevailed, the land holdings were scattered. There were no great estates. Many of these peasants, together with the CNT, organised collectives, pooling their land, animals, tools, chickens, grain, fertiliser, and even their harvested crops.*
>
> *"Privately owned farms located in the midst of collectives interfered with efficient cultivation by splitting up the collectives into disconnected parcels. To induce owners to move, they were given more or even better land located on the perimeter of the collective.*
>
> *"The collectivist who had nothing to contribute to the collective was admitted with the same rights and the same duties as the others. In some collectives, those joining had to contribute their money (Girondella in Catalonia, Lagunarrotta in Aragón, and Cervera del Maestra in Valencia)."* [**The Anarchist Collectives**, p. 112]

Dolgoff observed that *"supreme power was vested in, and actually exercised by, the membership in general assemblies, and all power derived from, and flowed back to, the grass roots organisations of the people."* [**Op. Cit.**, p 119fn] Peirats also noted that the collectives were *"fiercely democratic"* as regards decision-making. For example, in Ademuz *"assemblies were held every Saturday"* while in Alcolea de Cinca *"they were held whenever necessary."* [**Anarchists in the Spanish Revolution**, p. 146] Eyewitness Gaston Leval summarised this explosion in self-management as follows:

> *"Regular general membership meetings were convoked weekly, bi-weekly, or monthly ... and these meetings were completely free of the tensions and recriminations which inevitably emerge when the power of decisions is vested in a few individuals — even if democratically elected. The Assemblies were open for everyone to participate in the proceedings. Democracy embraced all social life. In most cases, even the 'individualists' who were not members of the collective could participate in the discussions, and they were listened to by the collectivists."* [**The Anarchist Collectives**, p 119fn]

Work was *"usually done in groups on a co-operative basis. In smaller collectives, all workers gathered to discuss the work needed to be done and how to allocate it. In larger collectives, representatives of each work group would gather at regular intervals. General assemblies of the collective met on a weekly, biweekly, or monthly basis, and took up issues ranging from hours and wages to the distribution of food and clothing."* [Martha A. Ackelsberg in **Free Women of Spain**, p. 106] It was in these face-to-face assemblies that decisions upon the distribution of resources were decided both within and outwith the collective. Here, when considering the importance of mutual aid, appeals were made to an individual's sense of empathy. As one activist remembered:

> *"There were, of course, those who didn't want to share and who said that each collective should take care of itself. But they were usually convinced in the assemblies. We would try to speak to them in terms they understood. We'd ask, 'Did you think it was fair when the **cacique** [local boss] let people starve if there wasn't enough work?' and they said, 'Of course not.' They would eventually come around. Don't forget, there were three hundred thousand collectivists [in Aragón], but only ten thousand of us had been members of the CNT. We had a lot of educating to do."* [quoted by Ackelsberg, **Op. Cit.**, p. 107]

In addition, regional federations of collectives were formed in many areas of Spain (for example, in Aragón and the Levant). The federations were created at congresses to which the collectives in an area sent delegates. These congresses agreed a series of general rules about how the federation would operate and what commitments the affiliated collectives would have to each other. The congress elected an administration council, which took responsibility for implementing agreed policy. The Levant Federation was organised as follows:

> *"The 900 Collectives were brought together in 54 cantonal federations which grouped themselves and at the same time subdivided into five provincial federations which at the top level ended in the Regional **Comite** ... [This] was nominated directly by the annual congresses answerable to them and to the hundreds of peasant delegates chosen by their comrades ... . It was also on their initiative that the Levante Federation was divided into 26 general sections in accordance with specialisations in work and other activities. Those 26 sections constituted a whole which embraced probably for the first time in history outside the State and governmental structures, the whole of social life."* [Gaston Leval, **Collectives in the Spanish Revolution**, p. 154]

The Aragón Federation statues were agreed at its founding congress in mid-February 1937 by 500 delegates. These stated that there would be *"as many county federations"* as deemed *"necessary for the proper running of the collectives"* and the Federation would *"hold its ordinary congress at intervals of six months, in addition to whatever extraordinary ones ... deemed appropriate."* New collectives could join after *"consent in general assembly of the inhabitants of the collective"*. The federation aimed to *"coordinate the economic potential of the region and ... be geared towards solidarity in accordance with the norms of autonomy and federalism."* [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 240]

These federations had many tasks. They ensured the distribution of surplus produce to the front line and to the cities, cutting out middlemen and ensuring the end of exploitation. They also arranged for exchanges between collectives to take place. In addition, the federations allowed the individual collectives to pool resources together in order to improve the infrastructure of the area (building roads, canals, hospitals and so on) and invest in means of production which no one collective could afford. In this way individual collectives pooled their resources, increased and improved the means of production ad the social and economic infrastructure of their regions. All this, combined with an increase of consumption in the villages and towns as well as the feeding of militia men and women fighting the fascists at the front.

Rural collectivisations allowed the potential creative energy that existed among the rural workers and peasants to be unleashed, an energy that had been wasted under private property. The

popular assemblies allowed community problems and improvements to be identified and solved directly, drawing upon the ideas and experiences of everyone and enriched by discussion and debate. To quote one participant: *"We were always prepared to adapt our ideas in every area of collective life if things did not work. That was the advantage of our collectives over state-created ones like those in Russia. We were free. Each village could do as it pleased. There was local stimulus, local initiative."* [quoted by Ronald Fraser, **Blood of Spain**, p. 357] As we discuss in the the next section, this enabled rural Spain to be transformed from one marked by poverty and fear into one of increased well-being and hope.

I.8.6 What did the agricultural collectives accomplish?

Most basically, self-management in collectives combined with co-operation in rural federations allowed an improvement in quality of rural life. From a purely economic viewpoint, production increased and as historian Benjamin Martin summarises: *"Though it is impossible to generalise about the rural land take-overs, there is little doubt that the quality of life for most peasants who participated in co-operatives and collectives notably improved."* [**The Agony of Modernisation**, p. 394] Another historian, Antony Beevor, notes that *"[i]n terms of production and improved standards for the peasants, the self-managed collectives appear to have been successful. They also seem to have encouraged harmonious community relations."* [**The Spanish Civil War**, p. 95]

More importantly, however, this improvement in the quality of life included an increase in freedom as well as in consumption. To re-quote the member of the Beceite collective in Aragón: *"it was marvellous .. . to live in a collective, a free society where one could say what one thought, where if the village committee seemed unsatisfactory one could say. The committee took no big decisions without calling the whole village together in a general assembly. All this was wonderful."* [quoted by Ronald Fraser, **Blood of Spain**, p. 288] As Beevor suggests, *"self-managed collectives were much happier when no better off than before. What mattered was that the labourers ran their own collectives — a distinct contrast to the disasters of state collectivisation in the Soviet Union."* [**Op. Cit.**, p. 95] Here are a few examples provided by Jose Peirats:

> *"In Montblanc the collective dug up the old useless vines and planted new vineyards. The land, improved by modern cultivation with tractors, yielded much bigger and better crops ... Many Aragón collectives built new roads and repaired old ones, installed modern flour mills, and processed agricultural and animal waste into useful industrial products. Many of these improvements were first initiated by the collectives. Some villages, like Calanda, built parks and baths. Almost all collectives established libraries, schools, and cultural centres."* [**The Anarchist Collectives**, p. 116]

Gaston Leval pointed out that *"the Peasant Federation of Levant ... produced more than half of the total orange crop in Spain: almost four million kilos (1 kilo equals about 2 and one-fourth pounds). It then transported and sold through its own commercial organisation (no middlemen) more than 70% of the crop. (The Federation's commercial organisation included its own warehouses, trucks, and boats. Early in 1938 the export section established its own agencies in France: Marseilles, Perpignan, Bordeaux, Cherbourg, and Paris.) Out of a total of 47,000 hectares in all Spain devoted to rice production, the collective in the Province of Valencia cultivated 30,000 hectares."* [**Op. Cit.**, p. 124] To quote Peirats again:

"Preoccupation with cultural and pedagogical innovations was an event without precedent in rural Spain. The Amposta collectivists organised classes for semi-literates, kindergartens, and even a school of arts and professions. The Seros schools were free to all neighbours, collectivists or not. Grau installed a school named after its most illustrious citizen, Joaquin Costa. The Calanda collective (pop. only 4,500) schooled 1,233 children. The best students were sent to the Lyceum in Caspe, with all expenses paid by the collective. The Alcoriza (pop. 4,000) school was attended by 600 children. Many of the schools were installed in abandoned convents. In Granadella (pop. 2,000), classes were conducted in the abandoned barracks of the Civil Guards. Graus organised a print library and a school of arts and professions, attended by 60 pupils. The same building housed a school of fine arts and high grade museum. In some villages a cinema was installed for the first time. The Penalba cinema was installed in a church. Viladecana built an experimental agricultural laboratory. [**Op. Cit.**, p. 116]

Peirats summed up the accomplishments of the agricultural collectives as follows:

"In distribution the collectives' co-operatives eliminated middlemen, small merchants, wholesalers, and profiteers, thus greatly reducing consumer prices. The collectives eliminated most of the parasitic elements from rural life, and would have wiped them out altogether if they were not protected by corrupt officials and by the political parties. Non-collectivised areas benefited indirectly from the lower prices as well as from free services often rendered by the collectives (laundries, cinemas, schools, barber and beauty parlours, etc.)." [**Op. Cit.**, p. 114]

Leval emphasised the following achievements (among others):

"In the agrarian collectives solidarity was practised to the greatest degree. Not only was every person assured of the necessities, but the district federations increasingly adopted the principle of mutual aid on an inter-collective scale. For this purpose they created common reserves to help out villages less favoured by nature. In Castile special institutions for this purpose were created. In industry this practice seems to have begun in Hospitalet, on the Catalan railways, and was applied later in Alcoy. Had the political compromise not impeded open socialisation, the practices of mutual aid would have been much more generalised ... A conquest of enormous importance was the right of women to livelihood, regardless of occupation or function. In about half of the agrarian collectives, the women received the same wages as men; in the rest the women received less, apparently on the principle that they rarely live alone ... In all the agrarian collectives of Aragón, Catalonia, Levant, Castile, Andalusia, and Estremadura, the workers formed groups to divide the labour or the land; usually they were assigned to definite areas. Delegates elected by the work groups met with the collective's delegate for agriculture to plan out the work. This typical organisation arose quite spontaneously, by local initiative ... In addition ... the collective as a whole met in weekly, bi-weekly or monthly assembly ... The assembly reviewed the activities of the councillors it named, and discussed special cases and unforeseen problems. All inhabitants — men and women, producers and non-producers – took part in the discussion and decisions ... In land cultivation the most significant advances were: the rapidly increased use of machinery and irrigation;

greater diversification; and forestation. In stock raising: the selection and multiplication of breeds; the adaptation of breeds to local conditions; and large-scale construction of collective stock barns." [**Op. Cit.**, pp. 166–167]

Collectivisation, as Graham Kelsey notes, *"allowed a rationalisation of village societies and a more efficient use of the economic resources available. Instead of carpenters and bricklayers remaining idle because no wealthy landowner had any use for their services they were put to work constructing agricultural facilities and providing the villages with the kind of social amenities which until then they had scarcely been able to imagine."* [**Anarchosyndicalism, Libertarian Communism and the State**, p. 169] Martha A. Ackelsberg sums up the experience well:

"The achievements of these collectives were extensive. In many areas they maintained, if not increased, agricultural production [not forgetting that many young men were at the front line], often introducing new patterns of cultivation and fertilisation ... collectivists built chicken coups, barns, and other facilities for the care and feeding of the community's animals. Federations of collectives co-ordinated the construction of roads, schools, bridges, canals and dams. Some of these remain to this day as lasting contributions of the collectives to the infrastructure of rural Spain. The collectivists also arranged for the transfer of surplus produce from wealthier collectives to those experiencing shortages, either directly from village to village or through mechanisms set up by regional committees." [**The Free Women of Spain**, pp. 106–7]

As well as this inter-collective solidarity, the rural collectives also supplied food to the front-line troops:

"The collectives voluntarily contributed enormous stocks of provisions and other supplies to the fighting troops. Utiel sent 1,490 litres of oil and 300 bushels of potatoes to the Madrid front (in addition to huge stocks of beans, rice, buckwheat, etc.). Porales de Tujana sent great quantities of bread, oil, flour, and potatoes to the front, and eggs, meat, and milk to the military hospital.

"The efforts of the collectives take on added significance when we take into account that their youngest and most vigorous workers were fighting in the trenches. 200 members of the little collective of Vilaboi were at the front; from Viledecans, 60; Amposta, 300; and Calande, 500." [Jose Peirats, **The Anarchist Collectives**, p. 120]

Therefore, as well as significant economic achievements, the collectives ensured social and political ones too. Solidarity was practised and previously marginalised people took direct and full management of the affairs of their communities, transforming them to meet their own needs and desires.

I.8.7 Were the rural collectives created by force?

No, they were not. The myth that the rural collectives were created by "terror," organised and carried out by the anarchist militia, was started by the Stalinists of the Spanish Communist Party. More recently, certain right-wing "libertarians" have warmed up and repeated these Stalinist

fabrications. Anarchists have been disproving these allegations since 1936 and it is worthwhile to do so again here. As Vernon Richards noted: *"However discredited Stalinism may appear to be today the fact remains that the Stalinist lies and interpretation of the Spanish Civil War still prevail, presumably because it suits the political prejudices of those historians who are currently interpreting it."* [*"Introduction"*, Gaston Leval, **Collectives in the Spanish Revolution**, p. 11] Here we shall present evidence to refute claims that the rural collectives were created by force.

Firstly, we should point out that rural collectives were created in many different areas of Spain, such as the Levant (900 collectives), Castile (300) and Estremadera (30), where the anarchist militia did not exist. In Catalonia, for example, the CNT militia passed through many villages on its way to Aragón and only around 40 collectives were created unlike the 450 in Aragón. In other words, the rural collectivisation process occurred independently of the existence of anarchist troops, with the majority of the 1,700 rural collectives created in areas without a predominance of anarchist militias.

One historian, Ronald Fraser, seems to imply that collectives were imposed upon the Aragón population. As he put it, the *"collectivisation, carried out under the general cover, if not necessarily the direct agency, of CNT militia columns, represented a revolutionary minority's attempt to control not only production but consumption for egalitarian purposes and the needs of the war."* Notice that he does not suggest that the anarchist militia actually **imposed** the collectives, a claim for which there is little or no evidence. Moreover, Fraser presents a somewhat contradictory narrative to the facts he presents. On the one hand, he suggests that *"[o]bligatory collectivisation was justified, in some libertarians' eyes, by a reasoning closer to war communism than to libertarian communism."* On the other hand, he presents extensive evidence that the collectives did not have a 100% membership rate. How can collectivisation be obligatory if people remain outside the collectives? Similarly, he talks of how **some** CNT militia leaders justified *"[f]orced collectivisation"* in terms of the war effort while acknowledging the official CNT policy of opposing forced collectivisation, an opposition expressed in practice as only around 20 (i.e., 5%) of the collectives were total. [**Blood of Spain**, p. 370, p. 349 and p. 366] This is shown in his own book as collectivists interviewed continually note that people remained outside their collectives!

Thus Fraser's attempts to paint the Aragón collectives as a form of *"war communism"* imposed upon the population by the CNT and obligatory for all fails to co-incidence with the evidence he presents.

Fraser states that *"[t]here was no need to dragoon them [the peasants] at pistol point [into collectives]: the coercive climate, in which 'fascists' were being shot, was sufficient. 'Spontaneous' and 'forced' collectives existed, as did willing and unwilling collectivists within them."* [**Op. Cit.**, p. 349] Therefore, his implied suggestion that the Aragón collectives were imposed upon the rural population is based upon the insight that there was a *"coercive climate"* in Aragón at the time. Of course a civil war against fascism would produce a *"coercive climate"* particularly near the front line. However, the CNT can hardly be blamed for that. As historian Gabriel Jackson summarised, while such executions took place the CNT did not conduct a general wave of terror:

> *"the anarchists made a constant effort to separate active political enemies from those who were simply bourgeois by birth or ideology or economic function. Anarchist political committees wanted to know what the accused monarchists or conservatives had done, not simply what they thought or how they voted ... There is no inherent contradiction involved in recognising both that the revolution included some violence and that*

> *its social and economic results ... were approved of by the majority of peasants in an area."* [quoted in Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 146]

This was a life and death struggle against fascism, in which the fascists were systematically murdering vast numbers of anarchists, socialists and republicans in the areas under their control. It is hardly surprising that some anarchist troops took the law into their own hands and murdered some of those who supported and would help the fascists. Given what was going on in fascist Spain, and the experience of fascism in Germany and Italy, the CNT militia knew exactly what would happen to them and their friends and family if they lost.

The question does arise, however, of whether the climate was made so coercive by the war and the nearness of the anarchist militia that individual choice was impossible. The facts speak for themselves. At its peak, rural collectivisation in Aragón embraced around 70% of the population in the area saved from fascism. Around 30% of the population felt safe enough not to join a collective, a sizeable percentage. If the collectives had been created by anarchist terror or force, we would expect a figure of 100% membership. This was not the case, indicating the basically voluntary nature of the experiment (we should point out that other figures suggest a lower number of collectivists which makes the forced collectivisation argument even less likely). Historian Antony Beevor (while noting that there *"had undoubtedly been pressure, and no doubt force was used on some occasions in the fervour after the rising"*) just stated the obvious when he wrote that *"the very fact that every village was a mixture of collectivists and individualists shows that peasants had not been forced into communal farming at the point of a gun."* [**The Spanish Civil War**, p. 206] In addition, if the CNT militia had forced peasants into collectives we would expect the membership of the collectives to peak almost overnight, not grow slowly over time:

> *"At the regional congress of collectives, held at Caspe in mid-February 1937, nearly 80 000 collectivists were represented from 'almost all the villages of the region.' This, however, was but a beginning. By the end of April the number of collectivists had risen to 140,000; by the end of the first week of May to 180,000; and by the end of June to 300,000."* [Graham Kelsey, *"Anarchism in Aragón,"* pp. 60–82, **Spain in Conflict 1931–1939**, Martin Blinkhorn (ed.), p. 61]

If the collectives had been created by force, then their membership would have been 300,000 in February, 1937, not increasing steadily to reach that number four months later. Neither can it be claimed that the increase was due to new villages being collectivised, as almost all villages had sent delegates in February. This indicates that many peasants joined the collectives because of the advantages associated with common labour, the increased resources it placed at their hands and the fact that the surplus wealth which had in the previous system been monopolised by the few was used instead to raise the standard of living of the entire community.

The voluntary nature of the collectives is again emphasised by the number of collectives which allowed people to remain outside. There *"were few villages which were completely collectivised."* [Beevor, **Op. Cit.**, p. 94] One eye-witness in Aragón, an anarchist schoolteacher, noted that the forcing of smallholders into a collective *"wasn't a widespread problem, because there weren't more than twenty or so villages where collectivisation was total and no one was allowed to remain outside."* [quoted by Fraser, **Op. Cit.**, p. 366] Instead of forcing the minority in a village to agree with the wishes of the majority, the vast majority (95%) of Aragón collectives stuck to their libertarian principles and allowed those who did not wish to join to remain outside.

So, only around 20 were *"total"* collectives (out of 450) and around 30% of the population felt safe enough **not** to join. In other words, in the vast majority of collectives those joining could see that those who did not were safe. These figures indicate of the basically spontaneous and voluntary nature of the movement as do the composition of the new municipal councils created after July 19th. As Graham Kesley notes: *"What is immediately noticeable from the results is that although the region has often been branded as one controlled by anarchists to the total exclusion of all other forces, the CNT was far from enjoying the degree of absolute domination often implied and inferred."* [**Anarchosyndicalism, Libertarian Communism and the State**, p. 198]

In his account of the rural revolution, Burnett Bolloten noted that it *"embraced more than 70 percent of the population"* in liberated Aragón and that *"many of the 450 collectives of the region were largely voluntary"* although *"it must be emphasised that this singular development was in some measure due to the presence of militiamen from the neighbouring region of Catalonia, the immense majority of whom were members of the CNT and FAI."* [**The Spanish Civil War**, p. 74] This, it should be noted, was not denied by anarchists. As Gaston Leval pointed out, *"it is true that the presence of these forces ... favoured indirectly these constructive achievements by preventing active resistance by the supporters of the bourgeois republic and of fascism."* [**Collectives in the Spanish Revolution**, p. 90]

So the presence of the militia changed the balance of class forces in Aragón by destroying the capitalist state (i.e. the local bosses — caciques — could not get state aid to protect their property) and many landless workers took over the land. The presence of the militia ensured that land could be taken over by destroying the capitalist "monopoly of force" that existed before the revolution (the power of which will be highlighted below) and so the CNT militia allowed the possibility of experimentation by the Aragónese population. This class war in the countryside is reflected by Bolloten: *"If the individual farmer viewed with dismay the swift and widespread collectivisation of agriculture, the farm workers of the Anarchosyndicalist CNT and the Socialist UGT saw it as the commencement of a new era."* [**Op. Cit.**, p. 63] Both were mass organisations and supported collectivisation.

Therefore, anarchist militias allowed the rural working class to abolish the artificial scarcity of land created by private property (and enforced by the state). The rural bosses obviously viewed with horror the possibility that they could not exploit day workers' labour (as Bolloten pointed out *"the collective system of agriculture threaten[ed] to drain the rural labour market of wage workers."* [**Op. Cit.**, p. 62]). Little wonder the richer peasants and landowners hated the collectives. A report on the district of Valderrobes which indicates popular support for the collectives:

> *"Collectivisation was nevertheless opposed by opponents on the right and adversaries on the left. If the eternally idle who have been expropriated had been asked what they thought of collectivisation, some would have replied that it was robbery and others a dictatorship. But, for the elderly, the day workers, the tenant farmers and small proprietors who had always been under the thumb of the big landowners and heartless usurers, it appeared as salvation."* [quoted by Bolloten, **Op. Cit.**, p. 71]

However, many historians ignore the differences in class that existed in the countryside and explain the rise in collectives in Aragón (and ignore those elsewhere) as the result of the CNT militia. For example, Fraser:

> *"Very rapidly collectives ... began to spring up. It did not happen on instructions from the CNT leadership — no more than had the [industrial] collectives in Barcelona. Here, as there, the initiative came from CNT militants; here, as there, the 'climate' for social revolution in the rearguard was created by CNT armed strength: the anarcho-syndicalists' domination of the streets of Barcelona was re-enacted in Aragón as the CNT militia columns, manned mainly by Catalan anarcho-syndicalist workers, poured in. Where a nucleus of anarcho-syndicalists existed in a village, it seized the moment to carry out the long-awaited revolution and collectivised spontaneously. Where there was none, villagers could find themselves under considerable pressure from the militias to collectivise."* [**Op. Cit.**, p. 347]

Fraser implies that the revolution was mostly imported into Aragón from Catalonia. However, as he himself notes, the CNT column leaders (except Durruti) *"opposed"* the creation of the Council of Aragón (a confederation for the collectives). Hardly an example of Catalan CNT imposed social revolution! Moreover, the Aragón CNT was a widespread and popular organisation, suggesting that the idea that the collectives were imported into the region by the Catalan CNT is simply **false**. Fraser states that in *"some [of the Aragónese villages] there was a flourishing CNT, in others the UGT was strongest, and in only too many there was no unionisation at all."* [**Op. Cit.**, p. 350 and p. 348] The question arises of how extensive was that strength. The evidence shows that the rural CNT in Aragón was extensive, strong and growing, so making the suggestion of imposed collectives a false one. In fact, by the 1930s the *"authentic peasant base of the CNT ... lay in Aragón."* CNT growth in Zaragoza *"provided a springboard for a highly effective libertarian agitation in lower Aragón, particularly among the impoverished labourers and debt-ridden peasantry of the dry steppes region."* [Murray Bookchin, **The Spanish Anarchists**, p. 203]

Graham Kelsey, in his social history of the CNT in Aragón between 1930 and 1937, provides more evidence on this matter. He points out that as well as the *"spread of libertarian groups and the increasing consciousness among CNT members of libertarian theories ... contribu[ting] to the growth of the anarchosyndicalist movement in Aragón"* the existence of *"agrarian unrest"* also played an important role in that growth. This all lead to the *"revitalisation of the CNT network in Aragón"*. So by 1936, the CNT had built upon the *"foundations laid in 1933"* and *"had finally succeeded in translating the very great strength of the urban trade-union organisation in Zaragoza into a regional network of considerable extent."* [**Op. Cit.**, pp. 80–81, p. 82 and p. 134]

Kelsey notes the long history of anarchism in Aragón, dating back to the late 1860s. However, before the 1910s there had been little gains in rural Aragón by the CNT due to the power of local bosses (called **caciques**):

> *"Local landowners and small industrialists, the **caciques** of provincial Aragón, made every effort to enforce the closure of these first rural anarchosyndicalist cells [created after 1915]. By the time of the first rural congress of the Aragónese CNT confederation in the summer of 1923, much of the progress achieved through the organisation's considerable propaganda efforts had been countered by repression elsewhere."* [*"Anarchism in Aragón"*, **Op. Cit.**, p. 62]

A CNT activist indicated the power of these bosses and how difficult it was to be a union member in Aragón:

> *"Repression is not the same in the large cities as it is in the villages where everyone knows everybody else and where the Civil Guards are immediately notified of a comrade's slightest movement. Neither friends nor relatives are spared. All those who do not serve the state's repressive forces unconditionally are pursued, persecuted and on occasions beaten up."* [quoted by Kelsey, **Op. Cit.**, p. 74]

However, while there were some successes in organising rural unions, even in 1931 *"propaganda campaigns which led to the establishment of scores of village trade-union cells, were followed by a counter-offensive from village **caciques** which forced them to close."* [**Op. Cit.** p. 67] Even in the face of this repression the CNT grew and *"from the end of 1932"* there was *"a successful expansion of the anarchosyndicalist movement into several parts of the region where previously it had never penetrated."* [Kesley, **Anarchosyndicalism, Libertarian Communism and the State**, p. 185] This growth was built upon in 1936, with increased rural activism which had slowly eroded the power of the **caciques** (which in part explains their support for the fascist coup). After the election of the Popular Front, years of anarchist propaganda and organisation paid off with *"dramatic growth in rural anarcho-syndicalist support"* in the six weeks after the general election. This *"was emphasised"* in the Aragón CNT's April congress's agenda and it was decided to direct *"attention to rural problems"* while the agreed programme was *"exactly what was to happen four months later in liberated Aragón."* In its aftermath, a series of intensive propaganda campaigns was organised through each of the provinces of the regional confederation. Many meetings were held in villages which had never before heard anarcho-syndicalist propaganda. This was very successful and by the beginning of June, 1936, the number of Aragón unions had topped 400, compared to only 278 one month earlier. [Kesley, *"Anarchism in Aragón"*, **Op. Cit.**, pp. 75–76]

This increase in union membership reflected increased social struggle by the Aragónese working population and their attempts to improve their standard of living, which was very low for most of the population. A journalist from the conservative Catholic **Heraldo de Aragón** visited lower Aragón in the summer of 1935 and noted *"[t]he hunger in many homes, where the men are not working, is beginning to encourage the youth to subscribe to misleading teachings."* [quoted by Kesley, **Op. Cit.**, p. 74] Little wonder, then, the growth in CNT membership and social struggle Kesley indicates:

> *"Evidence of a different kind was also available that militant trade unionism in Aragón was on the increase. In the five months between mid-February and mid-July 1936 the province of Zaragoza experienced over seventy strikes, more than had previously been recorded in any entire year, and things were clearly no different in the other two provinces . .. the great majority of these strikes were occurring in provincial towns and villages. Strikes racked the provinces and in at least three instances were actually transformed into general strikes."* [**Op. Cit.**, p. 76]

So in the spring and summer of 1936 there was a massive growth in CNT membership which reflected the growing militant struggle by the urban and rural population of Aragón. Years of propaganda and organising had ensured this growth in libertarian influence, a growth which was reflected in the creation of collectives in liberated Aragón during the revolution. Therefore, the construction of a collectivised society was founded directly upon the emergence, during the five years of the Second Republic, of a mass trade-union movement infused by anarchist principles.

These collectives were constructed in accordance with the programme agreed at the Aragón CNT conference of April 1936 which reflected the wishes of the rural membership of the unions within Aragón (and due to the rapid growth of the CNT afterwards obviously reflected popular feelings in the area):

"libertarian dominance in post-insurrection Aragón itself reflected the predominance that anarchists had secured before the war; by the summer of 1936 the CNT had succeeded in establishing throughout Aragón a mass trade-union movement of strictly libertarian orientation, upon which widespread and well-supported network the extensive collective experiment was to be founded." [Kesley, **Op. Cit.**, p. 61]

Additional evidence that supports a high level of CNT support in rural Aragón can be provided by the fact that it was Aragón that was the centre of the December 1933 insurrection organised by the CNT. As Bookchin noted, *"only Aragón rose on any significant scale, particularly Saragossa ... many of the villages declared libertarian communism and perhaps the heaviest fighting took place between the vineyard workers in Rioja and the authorities"*. [**Op. Cit.**, p. 238] It is unlikely for the CNT to organise an insurrection in an area within which it had little support or influence. According to Kesley, *"it was precisely those areas which had most important in December 1933"* which were in 1936 *"seeking to create a new pattern of economic and social organisation, to form the basis of libertarian Aragón."* [**Anarchosyndicalism, Libertarian Communism and the State**, p. 161]

So the majority of collectives in Aragón were the product of CNT (and UGT) influenced workers taking the opportunity to create a new form of social life, a form marked by its voluntary and directly democratic nature. For from being unknown in rural Aragón, the CNT was well established and growing at a fast rate: *"Spreading out from its urban base ... the CNT, first in 1933 and then more extensively in 1936, succeeded in converting an essentially urban organisation into a truly regional confederation."* [Kesley, **Op. Cit.**, p. 184]

The evidence suggests that historians like Fraser are wrong to imply that the Aragón collectives were created by the CNT militia and enforced upon a unwilling population. The Aragón collectives were the natural result of years of anarchist activity within rural Aragón and directly related to the massive growth in the CNT between 1930 and 1936. Thus Kesley is correct to state that libertarian communism and agrarian collectivisation *"were not economic terms or social principles enforced upon a hostile population by special teams of urban anarchosyndicalists."* [**Op. Cit.**, p. 161] This is not to suggest that there were **no** examples of people joining collectives involuntarily because of the *"coercive climate"* of the front line nor that there were villages which did not have a CNT union within them before the war and so created a collective because of the existence of the CNT militia. It is to suggest that these can be considered as exceptions to the rule.

Moreover, the way the CNT handled such a situation is noteworthy. Fraser indicates such a situation in the village of Alloza. In the autumn of 1936, representatives of the CNT district committee had come to suggest that the villagers collectivise (we would like to stress here that the CNT militia which had passed through the village had made no attempt to create a collective there). A village assembly was called and the CNT members explained their ideas and suggested how to organise the collective. However, who would join and how the villagers would organise the collective was left totally up to them (the CNT representatives *"stressed that no one was to be maltreated"*). Within the collective, self-management was the rule and one member recalled that *"[o]nce the work groups were established on a friendly basis and worked their own lands, everyone*

got on well enough." "There was no need for coercion, no need for discipline and punishment ... A collective wasn't a bad idea at all." [Fraser, **Op. Cit.**, p. 360] This collective, like the vast majority, was voluntary and democratic: *"I couldn't oblige him to join; we weren't living under a dictatorship."* [quoted by Fraser, **Op. Cit.**, p. 362] In other words, **no** force was used to create the collective and the collective was organised by local people directly.

Of course, as with any public good (to use economic jargon), all members of the community had to pay for the war effort and feed the militia. As Kelsey notes, *"[t]he military insurrection had come at a critical moment in the agricultural calendar. Throughout lower Aragón there were fields of grain ready for harvesting ... At the assembly in Albalate de Cinca the opening clause of the agreed programme had required everyone in the district, independent farmers and collectivists alike, to contribute equally to the war effort, thereby emphasising one of the most important considerations in the period immediately following the rebellion."* [**Op. Cit.**, p. 164] In addition, the collectives controlled the price of crops in order to ensure that speculation and inflation were controlled. However, these policies as with the equal duties of individualists and collectivists in the war effort were enforced upon the collectives by the war.

Lastly, in support of the popular nature of the rural collectives, we will indicate the effects of the suppression of the collectives in August 1937 by the Communists, namely the collapse of the rural economy. This sheds considerable light on the question of popular attitudes.

In October 1937, the Communist-controlled Regional Delegation of Agrarian Reform acknowledged that *"in the majority of villages agricultural work was paralysed causing great harm to our agrarian economy."* This is confirmed by Jose Silva, a Communist Party member and general secretary of the Institute of Agrarian Reform, who commented that after Lister had attacked Aragón, *"labour in the fields was suspended almost entirely, and a quarter of the land had not been prepared at the time for sowing."* At a meeting of the agrarian commission of the Aragónese Communist Party (October 9th, 1937), Silva emphasised *"the little incentive to work of the entire peasant population"* and that the situation brought about by the dissolution of the collectives was *"grave and critical."* [quoted by Bolloten, **Op. Cit.**, p. 530] Jose Peirats explained the reasons for this economic collapse as a result of popular boycott:

> *"When it came time to prepare for the next harvest, smallholders could not by themselves work the property on which they had been installed [by the communists]. Dispossessed peasants, intransigent collectivists, refused to work in a system of private property, and were even less willing to rent out their labour."* [**Anarchists in the Spanish Revolution**, p. 258]

If the collectives were unpopular, created by anarchist force, then why did the economy collapse after the suppression? If Lister had overturned a totalitarian anarchist regime, why did the peasants not reap the benefit of their toil? Could it be because the collectives were essentially a spontaneous Aragónese development and supported by most of the population there? This analysis is supported by historian Yaacov Oved:

> *"Those who were responsible for this policy [of attacking the Aragón collectives], were convinced that the farmers would greet it joyfully because they had been coerced into joining the collectives. But they were proven wrong. Except for the rich estate owners who were glad to get their land back, most of the members of the agricultural collectives objected and lacking all motivation they were reluctant to resume the same effort*

> *in the agricultural work. This phenomenon was so widespread that the authorities and the communist minister of agriculture were forced to retreat from their hostile policy."* [**"Communismo Libertario" and Communalism in the Spanish Collectivisations (1936–1939)**, pp. 53–4]

Even in the face of Communist repression, most of the collectives kept going. This, if nothing else, proves that the collectives were popular institutions. *"Through the widespread reluctance of collectivists to co-operate with the new policy,"* Oved argues, *"it became evident that most members had voluntarily joined the collectives and as soon as the policy was changed a new wave of collectives was established. However, the wheel could not be turned back. An atmosphere of distrust prevailed between the collectives and the authorities and every initiative was curtailed"* [**Op. Cit.**, p. 54]

Jose Peirats summed up the situation after the communist attack on the collectives and the legalisation of the collectives as follows:

> *"It is very possible that this second phase of collectivisation better reflects the sincere convictions of the members. They had undergone a severe test and those who had withstood it were proven collectivists. Yet it would be facile to label as anti-collectivists those who abandoned the collectives in this second phase. Fear, official coercion and insecurity weighed heavily in the decisions of much of the Aragónese peasantry."* [**Op. Cit.**, p. 258]

While the collectives had existed, there was a 20% increase in production (and this is compared to the pre-war harvest which had been *"a good crop"* [Fraser, **Op. Cit.**p. 370]). After the destruction of the collectives, the economy collapsed. Hardly the result that would be expected if the collectives were forced upon an unwilling peasantry (the forced collectivisation by Stalin in Russia resulted in a famine). Only the victory of fascism made it possible to restore the so-called "natural order" of capitalist property in the Spanish countryside. The same land-owners who welcomed the Communist repression of the collectives also, we are sure, welcomed the fascists who ensured a lasting victory of property over liberty.

So, overall, the evidence suggests that the Aragón collectives, like their counterparts in the Levante, Catalonia and so on, were **popular** organisations, created by and for the rural population and, essentially, an expression of a spontaneous and popular social revolution. Claims that the anarchist militia created them by force of arms are **false.** While acts of violence **did** occur and some acts of coercion **did** take place (against CNT policy, we may add) these were the exceptions to the rule. Bolloten's summary best fits the facts:

> *"But in spite of the cleavages between doctrine and practice that plagued the Spanish Anarchists whenever they collided with the realities of power, it cannot be overemphasised that notwithstanding the many instances of coercion and violence, the revolution of July 1936 distinguished itself from all others by the generally spontaneous and far-reaching character of its collectivist movement and by its promise of moral and spiritual renewal. Nothing like this spontaneous movement had ever occurred before."* [**Op. Cit.**, p. 78]

I.8.8 But did the Spanish collectives innovate?

Yes. In contradiction to the old capitalist claim that no one will innovate unless private property exists, the workers and peasants exhibited much more incentive and creativity under libertarian socialism than they had under the private enterprise system. This is apparent from Gaston Leval's description of the results of collectivisation in Cargagente in the southern part of the province of Valencia:

> *"The climate of the region is particularly suited for the cultivation of oranges ... All of the socialised land, without exception, is cultivated with infinite care. The orchards are thoroughly weeded. To assure that the trees will get all the nourishment needed, the peasants are incessantly cleaning the soil. 'Before,' they told me with pride, 'all this belonged to the rich and was worked by miserably paid labourers. The land was neglected and the owners had to buy immense quantities of chemical fertilisers, although they could have gotten much better yields by cleaning the soil ...' With pride, they showed me trees that had been grafted to produce better fruit.*
>
> *"In many places I observed plants growing in the shade of the orange trees. 'What is this?,' I asked. I learned that the Levant peasants (famous for their ingenuity) have abundantly planted potatoes among the orange groves. The peasants demonstrate more intelligence than all the bureaucrats in the Ministry of Agriculture combined. They do more than just plant potatoes. Throughout the whole region of the Levant, wherever the soil is suitable, they grow crops. They take advantage of the four month [fallow period] in the rice fields. Had the Minister of Agriculture followed the example of these peasants throughout the Republican zone, the bread shortage problem would have been overcome in a few months."* [**Anarchist Collectives**, p. 153]

This is just one from a multitude of examples presented in the accounts of both the industrial and rural collectives. We have already noted some examples of the improvements in efficiency realised by collectivisation during the Spanish Revolution (section I.4.10). Another example was the baking industry. Souchy reported that, *"[a]s in the rest of Spain, Barcelona's bread and cakes were baked mostly at night in hundreds of small bakeries. Most of them were in damp, gloomy cellars infested with roaches and rodents. All these bakeries were shut down. More and better bread and cake were baked in new bakeries equipped with new modern ovens and other equipment."* [**Op. Cit.**, p. 82] In Granollers, the syndicate *"was at all times a prime-mover. All kinds of initiatives tending to improve the operation and structure of the local economy could be attributed to it."* The collectivised hairdressing, shoe-making, wood-working and engineering industries were all improved, with small, unhealthy and inefficient workplaces closed and replaced by larger, more pleasant and efficient establishments. *"Socialisation went hand in hand with rationalisation."* [Gaston Leval, **Collectives in the Spanish Revolution**, p. 287] For more see sectionI.8.6 as well as section C.2.8 (in which we present more examples when refuting the charge that workers' control would stifle innovation).

The substantial evidence available, of which these examples are but a small number, proves that the membership of the collectives showed a keen awareness of the importance of investment and innovation in order to increase production, to make work both lighter and more interesting **and** that the collectives allowed that awareness to be expressed freely. The collectives indicate that,

given the chance, everyone will take an interest in their own affairs and express a desire to use their minds to improve their lives and surroundings. In fact, capitalism distorts what innovation exists under hierarchy by channelling it purely into how to save money and maximise investor profit, ignoring other, more important, issues. As Gaston Leval suggested, self-management encouraged innovation:

> *"The theoreticians and partisans of the liberal economy affirm that competition stimulates initiative and, consequently, the creative spirit and invention without which it remains dormant. Numerous observations made by the writer in the Collectives, factories and socialised workshops permit him to take quite the opposite view. For in a Collective, in a grouping where each individual is stimulated by the wish to be of service to his fellow beings, research, the desire for technical perfection and so on are also stimulated. But they also have as a consequence that other individuals join those who were first to get together. Furthermore, when, in present society, an individualist inventor discovers something, it is used only by the capitalist or the individual employing him, whereas in the case of an inventor living in a community not only is his discovery taken up and developed by others, but is immediately applied for the common good. I am convinced that this superiority would very soon manifest itself in a socialised society."* [**Op. Cit.**, p. 347]

Therefore the actual experiences of self-management in Spain supports the points made in section I.4.11. Freed from hierarchy, individuals will creatively interact with the world to improve their circumstances. For the human mind is an active agent and unless crushed by authority it can no more stop thinking and acting than the Earth can stop revolving round the Sun. In addition, the Collectives indicate that self-management allows ideas to be enriched by discussion.

The experience of self-management proved Bakunin's point that society is collectively more intelligent than even the most intelligent individual simply because of the wealth of viewpoints, experience and thoughts contained there. Capitalism impoverishes individuals and society by its artificial boundaries and authority structures.

I.8.9 Why, if it was so good, did it not survive?

Just because something is good does not mean that it will survive. For example, the Warsaw Ghetto uprising against the Nazis failed but that does not mean that the uprising was a bad cause or that the Nazi regime was correct, far from it. Similarly, while the experiments in workers' self-management and free communes undertaken across Republican Spain is one of the most important social experiments in a free society ever undertaken, this cannot change the fact that Franco's forces and the Communists had access to more and better weapons.

Faced with the aggression and terrorism of Franco, and behind him the military might of Fascist Italy and Nazi Germany, the treachery of the Communists, and the aloofness of the Western "democratic" states (whose policy of "non-intervention" was strangely ignored when their citizens aided Franco) it is amazing the revolution lasted as long as it did.

This does not excuse the actions of the anarchists themselves. As is well known, the CNT co-operated with the other anti-fascist parties and trade unions on the Republican side ultimately leading to anarchists joining the government (see next section). This co-operation helped ensure

the defeat of the revolution. While much of the blame can be placed at the door of the would-be "leaders" (who like most leaders started to think themselves irreplaceable), it must be stated that the rank-and-file of the movement did little to stop them. Most of the militant anarchists were at the front-line (and so excluded from union and collective meetings) and so could not influence their fellow workers (it is no surprise that the radical *"Friends of Durruti"* anarchist group were mostly ex-militia men). However, it seems that the mirage of anti-fascist unity proved too much for the majority of CNT members (see section I.8.12).

A few anarchists still maintain that the Spanish anarchist movement had no choice and that collaboration (while having unfortunate effects) was the only choice available. This view was defended by Sam Dolgoff and finds some support in the writings of Gaston Leval, August Souchy and other participants in the revolution. However, most anarchists today oppose collaboration and think it was a terrible mistake (at the time, this position was held by the majority of non-Spanish anarchists plus a large minority of the Spanish movement, becoming a majority as the implications of collaboration became clear). This viewpoint finds its best expression in Vernon Richard's **Lessons of the Spanish Revolution** and, in part, in such works as **Anarchists in the Spanish Revolution** by Jose Peirats, **Anarchist Organisation: The History of the FAI** by Juan Gomaz Casas and **Durruti in the Spanish Revolution** by Abel Paz as well as in a host of pamphlets and articles written by anarchists ever since.

So, regardless of how good a social system is, objective facts will overcome that experiment. Saturnino Carod (a leader of a CNT Militia column at the Aragón Front) summed up the successes of the revolution as well as its objective limitations:

> *"Always expecting to be stabbed in the back, always knowing that if we created problems, only the enemy across the lines would stand to gain. It was a tragedy for the anarcho-syndicalist movement; but it was a tragedy for something greater — the Spanish people. For it can never be forgotten that it was the working class and peasantry which, by demonstrating their ability to run industry and agriculture collectively, allowed the republic to continue the struggle for thirty-two months. It was they who created a war industry, who kept agricultural production increasing, who formed militias and later joined the army. Without their creative endeavour, the republic could not have fought the war ..."* [quoted by Ronald Fraser, **Blood of Spain**, p. 394]

So, regardless of its benefits, regardless of its increase in liberty and equality, the revolution was defeated. This should not blind us to its achievements or the potential it expressed. Rather, it should be used both as a source of inspiration and lessons.

I.8.10 Why did the CNT collaborate with the state?

As is well know, in September 1936 the CNT joined the Catalan government, followed by the central government in November. This flowed from the decision made on July 21st to not speak of Libertarian Communism until after Franco had been defeated. In other words, to collaborate with other anti-fascist parties and unions in a common front against fascism. This decision, initially, involved the CNT agreeing to join a *"Central Committee of Anti-Fascist Militias"* proposed by the leader of the Catalan government, Louis Companys. This committee was made up of representatives of various anti-fascist parties and groups. From this it was only a matter of time

until the CNT joined an official government as no other means of co-ordinating activities existed (see section I.8.13).

The question must arise, **why** did the CNT decide to collaborate with the state, forsake its principles and, in its own way, contribute to the counter-revolution and the loosing of the war. This is an important question. Indeed, it is one Marxists always throw up in arguments with anarchists or in anti-anarchist diatribes. Does the failure of the CNT to implement anarchism after July 19th mean that anarchist politics are flawed? Or, rather, does the experience of the CNT and FAI during the Spanish revolution indicate a failure of **anarchists** rather than of **anarchism,** a mistake made under difficult objective circumstances and one which anarchists have learnt from? Needless to say, anarchists argue that the latter is correct. In other words, as Vernon Richards argued, *"the basis of [this] criticism is not that anarchist ideas were proved to be unworkable by the Spanish experience, but that the Spanish anarchists and syndicalists failed to put their theories to the test, adopting instead the tactics of the enemy."* [**Lessons of the Spanish Revolution**, p. 14]

So, why **did** the CNT collaborate with the state during the Spanish Civil War? Simply put, rather than being the fault of anarchist theory (as Marxists like to claim), its roots can be discovered in the situation facing the Catalan anarchists on July 20th. The objective conditions facing the leading militants of the CNT and FAI influenced the decisions they took, decisions which they later justified by **mis**-using anarchist theory.

What was the situation facing the Catalan anarchists on July 20th? Simply put, it was an unknown situation, as the report made by the CNT to the **International Workers Association** made clear:

> *"Levante was defenceless and uncertain ... We were in a minority in Madrid. The situation in Andalusia was unknown ... There was no information from the North, and we assumed the rest of Spain was in the hands of the fascists. The enemy was in Aragón, at the gates of Catalonia. The nervousness of foreign consular officials led to the presence of a great number of war ships around our ports."* [quoted by Jose Peirats, **Anarchists in the Spanish Revolution**, p. 180]

Anarchist historian Jose Peirats noted that according to the report *"the CNT was in absolute control of Catalonia in July 19, 1936, but its strength was less in Levante and still less in central Spain where the central government and the traditional parties were dominant. In the north of Spain the situation was confused. The CNT could have mounted an insurrection on its own 'with probable success' but such a take-over would have led to a struggle on three fronts: against the fascists, the government and foreign capitalism. In view of the difficulty of such an undertaking, collaboration with other antifascist groups was the only alternative."* [**Op. Cit.**, p. 179] In the words of the CNT report itself:

> *"The CNT showed a conscientious scrupulousness in the face of a difficult alternative: to destroy completely the State in Catalonia, to declare war against the Rebels [i.e. the fascists], the government, foreign capitalism, and thus assuming complete control of Catalan society; or collaborating in the responsibilities of government with the other antifascist fractions."* [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 2, p. 1156]

Moreover, as Gaston Leval later argued, given that the *"general preoccupation"* of the majority of the population was *"to defeat the fascists ... the anarchists would, if they came out against the state, provoke the antagonism ... of the majority of the people, who would accuse them of collaborating with Franco."* Implementing an anarchist revolution would, in all likelihood, also result in *"the instant closing of the frontier and the blockade by sea by both fascists and the democratic countries. The supply of arms would be completely cut off, and the anarchists would rightly be held responsible for the disastrous consequences."* [**The Anarchist Collectives**, p. 52 and p. 53]

While the supporters of Lenin and Trotsky will constantly point out the objective circumstances in which their heroes made their decisions during the Russian Revolution, they rarely mention those facing the anarchists in Spain on the 20th of July, 1936. It seems hypocritical to point to the Russian Civil War as the explanation of all of the Bolsheviks' crimes against the working class (indeed, humanity) while remaining silent on the forces facing the CNT-FAI at the start of the Spanish Civil War. The fact that **if** the CNT had decided to implement libertarian communism in Catalonia they would have to face the fascists (commanding the bulk of the Spanish army), the Republican government (commanding the rest) **plus** those sections in Catalonia which supported the republic is rarely mentioned. Moreover, when the decision to collaborate was made it was **immediately after the defeat of the army uprising in Barcelona** — the situation in the rest of the country was uncertain and when the social revolution was in its early days. Stuart Christie indicates the dilemma facing the leadership of the CNT at the time:

> *"The higher committees of the CNT-FAI-FIJL in Catalonia saw themselves caught on the horns of a dilemma: social revolution, fascism or bourgeois democracy. Either they committed themselves to the solutions offered by social revolution, regardless of the difficulties involved in fighting both fascism and international capitalism, or, through fear of fascism (or of the people), they sacrificed their anarchist principles and revolutionary objectives to bolster, to become, part of the bourgeois state ... Faced with an imperfect state of affairs and preferring defeat to a possibly Pyrrhic victory, the Catalan anarchist leadership renounced anarchism in the name of expediency and removed the social transformation of Spain from their agenda.*
>
> *"But what the CNT-FAI leaders failed to grasp was that the decision whether or not to implement Libertarian Communism, was not theirs to make. Anarchism was not something which could be transformed from theory into practice by organisational decree ... [the] spontaneous defensive movement of 19 July had developed a political direct of its own."* [**We, the Anarchists!**, p. 99]

Given that the pro-fascist army still controlled a third or more of Spain (including Aragón) and that the CNT was not the dominant force in the centre and north of Spain, it was decided that a war on three fronts would only aid Franco. Moreover, it was a distinct possibility that by introducing libertarian communism in Catalonia, Aragón and elsewhere, the workers' militias and self-managed industries would have been starved of weapons, resources and credit. That isolation was a real problem can be seen from Abad de Santillán's later comments on why the CNT joined the government:

> *"The Militias Committee guaranteed the supremacy of the people in arms ... but we were told and it was repeated to us endlessly that as long as we persisted in retaining it, that*

is, as long as we persisted in propping up the power of the people, weapons would not come to Catalonia, nor would we be granted the foreign currency to obtain them from abroad, nor would we be supplied with the raw materials for our industry. And since losing the war meant losing everything and returning to a state like that prevailed in the Spain of Ferdinand VII, and in the conviction that the drive given by us and our people could not vanish completely from the new economic life, we quit the Militias Committee to join the Generalidad government." [quoted by Christie, **Op. Cit.**, p. 109]

It was decided to collaborate and reject the basic ideas of anarchism until the war was over. A terrible mistake, but one which can be understood given the circumstances in which it was made. This is not, we stress, to justify the decision but rather to explain it and place it in context. Ultimately, the **experience** of the Civil War saw a blockade of Republic by both "democratic" and fascist governments, the starving of the militias and self-managed collectives of resources and credit as well as a war on two fronts when the State felt strong enough to try and crush the CNT and the semi-revolution its members had started. Most CNT members did not think that when faced with the danger of fascism, the liberals, the right-wing socialists and communists would prefer to undermine the anti-fascist struggle by attacking the CNT. They were wrong and, in this, history proved Durruti totally correct:

"For us it is a matter of crushing Fascism once and for all. Yes, and in spite of the Government.

"No government in the world fights Fascism to the death. When the bourgeoisie sees power slipping from its grasp, it has recourse to Fascism to maintain itself. The liberal government of Spain could have rendered the fascist elements powerless long ago. Instead it compromised and dallied. Even now at this moment, there are men in this Government who want to go easy on the rebels. You can never tell, you know — he laughed — the present Government might yet need these rebellious forces to crush the workers' movement ...

"We know what we want. To us it means nothing that there is a Soviet Union somewhere in the world, for the sake of whose peace and tranquillity the workers of Germany and China were sacrificed to Fascist barbarians by Stalin. We want revolution here in Spain, right now, not maybe after the next European war. We are giving Hitler and Mussolini far more worry to-day with our revolution than the whole Red Army of Russia. We are setting an example to the German and Italian working class on how to deal with fascism.

"I do not expect any help for a libertarian revolution from any Government in the world. Maybe the conflicting interests of the various imperialisms might have some influence in our struggle. That is quite possible ... But we expect no help, not even from our own Government, in the last analysis."

"You will be sitting on a pile of ruins if you are victorious," said [the journalist] van Paasen.

Durruti answered: *"We have always lived in slums and holes in the wall. We will know how to accommodate ourselves for a time. For, you must not forget, we can also build. It is we the workers who built these palaces and cities here in Spain and in America*

and everywhere. We, the workers, can build others to take their place. And better ones! We are not in the least afraid of ruins. We are going to inherit the earth; there is not the slightest doubt about that. The bourgeoisie might blast and ruin its own world before it leaves the stage of history. We carry a new world here, in our hearts. That world is growing this minute." [quoted by Vernon Richards, **Lessons of the Spanish Revolution**, pp. 193-4f]

This desire to push the revolution further was not limited to Durruti, as can be seen from this communication from the Catalan CNT leadership in August 1936. It also expresses the fears driving the decisions which had been made:

> *"Reports have also been received from other regions. There has been some talk about the impatience of some comrades who wish to go further than crushing fascism, but for the moment the situation in Spain as a whole is extremely delicate. In revolutionary terms, Catalonia is an oasis within Spain.*
>
> *"Obviously no one can foresee the changes which may follow the civil war and the conquest of that part of Spain which is still under the control of mutinous reactionaries."* [quoted by Jose Peirats, **Op. Cit.**, pp. 151–2]

Isolation, the uneven support for a libertarian revolution across Spain and the dangers of fascism were real problems, but they do not excuse the libertarian movement for its mistakes. The biggest of these mistakes was forgetting basic anarchist ideas and an anarchist approach to the problems facing the Spanish people. If these ideas had been applied in Spain, the outcome of the Civil War and Revolution could have been different.

In summary, while the decision to collaborate is one that can be understood (due to the circumstances under which it was made), it cannot be justified in terms of anarchist theory. Indeed, as we argue in the next section, attempts by the CNT leadership to justify the decision in terms of anarchist principles are not convincing and cannot be done without making a mockery of anarchism.

I.8.11 Was the decision to collaborate a product of anarchist theory?

Marxist critics of Anarchism point to CNT's decision to collaborate with the bourgeois state against Franco as the key proof that libertarian socialism is flawed. Such a claim, anarchists reply, is false for rather than being the product of anarchist ideology, the decision was made in light of the immediate danger of fascism and the situation in other parts of the country. The fact is that the circumstances in which the decision to collaborate was made are rarely mentioned by Marxists. To quote a sadly typical Marxist diatribe:

> *"This question of state power, and which class holds it, was to prove crucial for revolutionaries during the Spanish Civil War and in particular during the revolutionary upheavals in Catalonia. Here anarchism faced its greatest test and greatest opportunity, yet it failed the former and therefore missed the latter.*

> *"When the government in the region under the leadership of Companys admitted its impotence and offered to dissolve, effectively handing power to the revolutionary forces, the anarchists turned them down. CNT leader and FAI ... militant Garcia Oliver explained, 'The CNT and the FAI decided on collaboration and democracy, renouncing revolutionary totalitarianism which would lead to the strangulation of the revolution by the anarchist and Confederal dictatorship. We had to choose, between Libertarian Communism, which meant anarchist dictatorship, and democracy, which meant collaboration.' The choice was between leaving the state intact and paving the way for Franco's victory or building a workers' government in Catalonia which could act as a focal point for the defeat of Franco and the creation of the structures of a new workers' state. In choosing the former the anarchists were refusing to distinguish between a capitalist state and a workers' state ... The movement that started by refusing to build a workers' state ended up by recognising a capitalist one and betraying the revolution in the process."* [Pat Stack, *"Anarchy in the UK?"*, **Socialist Review**, no. 246]

There are four key flaws in this kind of argument. First, there is the actual objective situation in which the decision to collaborate was made in. Strangely, for all his talk of anarchists ignoring *"material conditions"* when we discuss the Russian revolution, Stack fails to mention any when he discusses Spain. As such, his critique is pure idealism, without any attempt to ground it in the objective circumstances facing the CNT and FAI. Second, the quote provided as the only evidence for Stack's analysis dates from a year **after** the decision was made. Rather than reflect the actual concerns of the CNT and FAI at the time, they reflect the attempts of the leaders of an organisation which had significantly departed from its libertarian principles to justify their actions. While this obviously suits Stack's idealist analysis of events, its use is flawed for that reason. Thirdly, clearly the decision of the CNT and FAI **ignored** anarchist theory. As such, it seems ironic to blame anarchism when anarchists ignores its recommendations, yet this is what Stack does. Lastly, there is the counter-example of Aragón, which clearly refutes Stack's case.

To understand why the CNT and FAI made the decisions it did, it is necessary to do what Stack fails to do, namely to provide some context. The decision to ignore anarchist theory, ignore the state rather than smashing it and work with other anti-fascist organisations was made immediately after the army had been defeated on the streets of Barcelona on the 20th of July, 1936. As we indicated in the last section, the decision of the CNT to collaborate with the state was driven by the fear of isolation. The possibility that by declaring libertarian communism it would have had to fight the Republican government and foreign interventions **as well as** the military coup influenced the decision reached by the militants of Catalan anarchism. They concluded that pursuing implementing anarchism in the situation they faced would only aid Franco and result in a quick defeat.

As such, the **real** choice facing the CNT was not *"between leaving the state intact ... or building a workers' government in Catalonia which could act as a focal point for the defeat of Franco"* but rather something drastically different: Either work with other anti-fascists against Franco so ensuring unity against the common enemy and pursue anarchism after victory **or** immediately implement libertarian communism and possibly face a conflict on two fronts, against Franco **and** the Republic (and, possibly, imperialist intervention against the social revolution). This situation made the CNT-FAI decided to collaborate with other anti-fascist groups in the Catalan **Central**

Committee of Anti-Fascist Militias. To downplay these objective factors and the dilemma they provoked and instead simply blame the decision on anarchist politics is a joke.

Similarly, the Garcia Oliver quote provided by Stack dated from July 1937. They were made as justifications of CNT-FAI actions and were designed for political effect. As such, they simply cannot be taken at face value for these two reasons. It is significant, though, that rather than discuss the actual problems facing the CNT Marxists like Stack prefer to ritualistically trot out a quote made over a year later. They argue that it exposes the bankruptcy of anarchist theory. So convinced of this, they rarely bother discussing the problems facing the CNT after the defeat of the military coup nor do they compare these quotes to the anarchist theory they claim inspired them.

There are good reasons for this. Firstly, if they presented the objective circumstances the CNT found itself it then their readers may see that the decision, while wrong, is understandable and had nothing to do with anarchist theory. Secondly, by comparing this quote to anarchist theory their readers would soon see how at odds they are with each other. Indeed, Garcia Oliver invoked anarchism to justify conclusions that were the exact **opposite** to what that theory actually recommends!

So what can be made of Garcia Oliver's argument? As Abel Paz noted *"[i]t is clear that the explanations given ... were designed for their political effect, hiding the atmosphere in which these decisions were taken. These declarations were made a year later when the CNT were already far removed from their original positions It is also the period when they had become involved in the policy of collaboration which led to them taking part in the Central Government. But in a certain way they shed light on the unknown factors which weighted so heavily on these who took part in the historic Plenum."* [**Durruti: The People Armed**, p. 215]

For example, when the decision was made, the revolution had not started yet. The street fighting had just ended and the Plenum decided *"not to speak about Libertarian Communism as long as part of Spain was in the hands of the fascists."* [Mariano R. Vesquez, quoted by Paz, **Op. Cit.**, p. 214] The revolution took place **from below** in the days following the decision, independently of the wishes of the Plenum. In the words of Abel Paz:

> *"When the workers reached their workplaces ... they found them deserted ... The major centres of production had been abandoned by their owners ... The CNT and its leaders had certainly not foreseen this situation; if they had, they would have given appropriate guidance to the workers when they called off the General Strike and ordered a return to work. What happened next was the result of the workers' spontaneous decision to take matters into their own hands.*
>
> *"Finding the factories deserted, and no instructions from their unions, they resolved to operate the machines themselves."* [**The Spanish Civil War**, pp. 54–5]

The rank and file of the CNT, on their own initiative, took advantage of the collapse of state power to transform the economy and social life of Catalonia. Paz stressed that *"no orders were given for expropriation or collectivisation — which proved that the union, which represented the will of their members until July 18th, had now been overtaken by events"* and the *"union leaders of the CNT committees were confronted with a revolution that they had not foreseen ... the workers and peasants had bypassed their leaders and taken collective action."* [**Op. Cit.**, p. 40 and p. 56] As historian Ronald summarises the *"revolutionary initiative had sprung not from the CNT's leading*

committees — how could it when the libertarian revolution had been officially 'postponed'? — but from individual CNT unions impelled by the most advanced syndicalist militants." So while the Catalan CNT *"had 'put off' libertarian revolution ... daily, the revolution in Barcelona was taking root in CNT collectives and union-run industries."* [**Blood of Spain**, p. 139 and p. 179]

As the revolution had not yet begun and the CNT Plenum had decided **not** to call for its start, it is difficult to see how *"libertarian communism"* (i.e. the revolution) could *"lead to the strangulation of the revolution"* (i.e. libertarian communism). In other words, this particular rationale put forward by Garcia Oliver could not reflect the real thoughts of those present at the CNT plenum and so, obviously, was a later justification for the CNT's actions. Moreover, the decision made then clearly stated that Libertarian Communism would be back on the agenda once Franco was defeated. Oliver's comments were applicable **after** Franco was defeated just as much as on July 20th, 1936.

Similarly, Libertarian Communism is based on self-management, by its nature opposed to dictatorship. According to the CNT's resolution at its congress in Zaragoza in May, 1936, *"the foundation of this administration will be the Commune"* which is *"autonomous"* and *"federated at regional and national levels."* The commune *"will undertake to adhere to whatever general norms [that] may be agreed by majority vote after free debate."* [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 106] It stressed the free nature of society aimed at by the CNT:

> *"The inhabitants of a commune are to debate among themselves their internal problems ... Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes ... every commune which is implicated will have its right to have its say ... On matters of a regional nature, it is the duty of the regional federation to implement agreements ... So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation."* [quoted by Peirats, **Op. Cit.**, p. 107]

Hardly a picture of *"anarchist dictatorship"*! Indeed, it is far more democratic than the capitalist state Oliver described as *"democracy."* So Oliver's arguments from 1937 are totally contradictory. After all, he is arguing that libertarian communism (a society based on self-managed free associations organised and run from the bottom up) is an *"anarchist dictatorship"* and **less** democratic than the capitalist Republic he had been fighting against between 1931 and 1936! Moreover, libertarian communism **inspired** the revolution and so to reject it in favour of capitalist democracy to stop *"the strangulation of the revolution"* makes no sense.

Clearly, these oft quoted words of Garcia Oliver cannot be taken at face value. Made in 1937, they present an attempt to misuse anarchist ideals to defend the anti-anarchist activities of the CNT leadership rather than a meaningful explanation of the decisions made on the 20th of July, 1936. It is safe to take his words with a large pinch of salt. To rely upon them for an analysis of the actions of the Spanish Anarchists or the failings of anarchism suggests an extremely superficial perspective. This is particularly the case when we look at both the history of the CNT and anarchist theory.

This can clearly been seen from the report made by the CNT to the **International Workers Association** to justify the decision to forget anarchist theory and collaborate with bourgeois parties and join the government. The report states that *"the CNT, loyal to its ideals and its purely*

anarchist nature, did not attack the forms of the State, nor try publicly to penetrate or dominate it … none of the political or juridical institutions were abolished." [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 2, p. 1156] In other words, according to this report, "anarchist" ideals do not, in fact, mean the destruction of the state, but rather the **ignoring** of the state. That this is nonsense, concocted to justify the CNT leaderships' betrayal of its ideals, is clear. To prove this we just need to look at Bakunin and Kropotkin and look at the activities of the CNT **before** the start of the war.

According to anarchist ideas, to quote Bakunin, *"the revolution must set out from the first to radically and totally destroy the State"* and that the *"natural and necessary consequence of this destruction"* will include the *"dissolution of army, magistracy, bureaucracy, police and priesthood"* as well as the *"confiscation of all productive capital and means of production on behalf of workers' associations, who are to put them to use"*. The state would be replaced by *"the federative Alliance of all working men's associations"* which *"will constitute the Commune."* These communes, in turn, would *"constitute the federation of insurgent associations … and organise a revolutionary force capable of defeating reaction."* [**Michael Bakunin: Selected Writings**, pp. 170–1] For Kropotkin, the *"Commune … must break the State and replace it by the Federation."* [**Words of a Rebel**, p. 83]

Thus anarchism has always been clear on what to do with the state, and it is obviously not what the CNT did to it! The CNT ignored these recommendations and so given that it did **not** destroy the state, nor create a federation of workers' councils, then how can anarchist theory be blamed? It seems strange to point to the failure of anarchists to apply their politics as an example of the failure of those politics, yet this is what the likes of Stack are doing.

Nor had the CNT always taken this perspective. Before the start of the Civil War, the CNT had organised numerous insurrections against the state. For example, in the spontaneous revolt of CNT miners in January 1932, the workers *"seized town halls, raised the black-and-red flags of the CNT, and declared **communismo liberatario.**"* In Tarassa, the same year, the workers again *"seiz[ed] town halls"* and the town was *"swept by street fighting."* The revolt in January 1933 began with *"assaults by Anarchist action groups … on Barcelona's military barracks … Serious fighting occurred in working-class **barrios** and the outlying areas of Barcelona … Uprising occurred in Tarassa, Sardanola-Ripollet, Lerida, in several **pueblos** in Valencia province, and in Andalusia."* In December 1933, the workers *"reared barricades, attacked public buildings, and engaged in heavy street fighting … many villages declared libertarian communism."* [Murray Bookchin, **The Spanish Anarchists**, p. 225, p. 226, p. 227 and p. 238]

It seems that the CNT leadership's loyalty to *"its ideals and its purely anarchist nature"* which necessitated *"not attack[ing] the forms of the State"* was a very recent development!

As can be seen, the rationales later developed to justify the betrayal of anarchist ideas and the revolutionary workers of Spain have no real relationship to anarchist theory. They were created to justify a non-anarchist approach to the struggle against fascism, an approach based on ignoring struggle from below and instead forging alliances with parties and unions at the top. This had been not always been the case. Throughout the 1930s the UGT and Socialist Party had rejected the CNT's repeated calls for a revolutionary alliance from below in favour of a top-down *"Workers' Alliance"* which, they believed, would be the only way which would allow them to control the labour movement. The CNT, rightly, rejected such a position in favour of an alliance from the bottom up yet, in July 1936, the need for unity was obvious and the UGT was not changing its position. So while in Barcelona the state has been destroyed in all but name,

"in Madrid, thanks to the Socialist Party, bourgeois structures were left intact and even fortified: a semi-dead state received a new lease of life and no dual power was created to neutralise it." [Abel Paz, **Durruti in the Spanish Revolution**, p. 462]

Rather than trying to cement a unity with other organisations at the top level in July 1936, the leadership of the CNT should have applied their anarchist ideas by inciting the oppressed to enlarge and consolidate their gains (which they did anyway). This would have liberated all the potential energy within the country (and elsewhere), energy that clearly existed as can be seen from the spontaneous collectivisations that occurred after the fateful Plenum of July 20th and the creation of volunteer workers' militia columns sent to liberate those parts of Spain which had fallen to Franco.

The role of anarchists, therefore, was that of *"inciting the people to abolish capitalistic property and the institutions through which it exercises its power for the exploitation of the majority by a minority"* and *"to support, to incite and encourage the development of the social revolution and to frustrate any attempts by the bourgeois capitalist state to reorganise itself, which it would seek to do."* This would involve *"seeking to destroy bourgeois institutions through the creation of revolutionary organisms."* [Vernon Richards, **Lessons of the Spanish Revolution**, p. 44, p. 46 and p. 193] In other words, to encourage, the kind of federation of communities and workplaces Bakunin and Kropotkin had called for.

Indeed, such an organisation already existing in embryo in the CNT's **barrios** defence committees which had led and co-ordinated the struggle against the military coup throughout Barcelona. *"The Neighbourhood Committees, which had diverse names but all shared a libertarian outlook, federated and created a revolutionary Local Co-ordination Committee."* They *"became Revolutionary Committees and formed what was called the 'Federation of Barricades.' It was the Committees that held power in Barcelona that evening."* [Paz, **Op. Cit.**, p. 470 and p. 445] Rather than collaborate with political parties and the UGT at the top, in the Central Committee of Anti-Fascist Militias, the CNT should have developed these organs of community self-organisation:

> *"Power lay in the street on July 20, represented by the people in arms ... Life took on a new momentum and it both destroyed and created as the people worked to resolve practical necessities born from a collective life that lived — and wanted to continue living — in the street ... The street and the people in arms were the living force of the revolution ... The Defence Committees, now transformed into Revolutionary Committees, back up this force. They organised what was called the 'Federation of Barricades.' Militants, standing resolutely behind these barricades, represented them in the Revolutionary Committees."* [Paz, **Op. Cit.**, pp. 450–1]

Later, a delegate meeting from the various workplaces (whether previously unionised or not) would have to had been arranged to organise, to re-quote Bakunin, *"the federal Alliance of all working men's associations"* which would *"constitute the Commune"* and complement the *"federation of the barricades."* [**Op. Cit.**, p. 170] In more modern terminology, a federation of workers' councils combined with a federation of workers' militias and community assemblies. Without this, the revolution was doomed as was the war against Franco. A minority of anarchists **did** see this genuinely libertarian solution at the time, but sadly they were a minority. For example, the members of the **Nosotros** Group, which included Durruti, thought *"it was necessary to transcend the alliance between the CNT and the political parties and create an authentic revolutionary*

organisation. That organisation would rest directly on Barcelona's and Catalonia's unions and Revolutionary Committees. Together, those groups would form a Regional Assembly, which would be the revolution's executive body." [Paz, **Op. Cit.**, p. 471] Such a development, applying the basic ideas of anarchism (and as expounded in the CNT's May resolution on Libertarian Communism), was not an impossibility. After all, as we will see, the CNT-FAI organised along those lines in Aragón.

Concern that Catalonia would be isolated from the rest of the Republic was foremost in the minds of many in the CNT and FAI. The fear that if libertarian communism was implemented then a civil war within the anti-fascist forces would occur (so aiding Franco) was a real one. Unfortunately, the conclusion draw from that fear, namely to win the war against Franco before talking about the revolution, was the wrong one. After all, a civil war within the Republican side **did** occur, when the state had recovered enough to start it. Similarly, with the fear of a blockade by foreign governments. This happened away, confirming the analysis of activists like Durruti.

Organising a full and proper delegate meeting in the first days of the revolution would have allowed all arguments and suggestions to be discussed by the whole membership of the CNT and, perhaps, a different decision may have been reached on the subject of collaboration. After all, many CNT members were applying anarchist politics by fighting fascism via a revolutionary war. This can be seen by the rank and file of the CNT and FAI ignoring the decision to "postpone" the revolution in favour of an anti-fascist war. All across Republican Spain, workers and peasants started to expropriate capital and the land, placing it under workers' self-management. They did so on their own initiative. It is also possible, as discussed in the next section, that anti-fascist unity would have prevailed and so the some decision would have been reached.

Be that as it may, by thinking they could postpone the revolution until after the war, the CNT leadership made two mistakes. Firstly, they should have known that their members would hardly miss this opportunity to implement libertarian ideas so making their decision redundant (and a statist backlash inevitable). Secondly, they abandoned their anarchist ideas, failing to understand that the struggle against fascism would never be effective without the active participation of the working class. Such participation could never be achieved by placing the war before the revolution and by working in top-down, statist structures or within a state.

Indeed, the mistake made by the CNT, while understandable, cannot be justified given that their consequences had been predicted by numerous anarchists beforehand, including Kropotkin. Decades earlier in an essay on the Paris Commune, the Russian anarchist refuted the two assumptions of the CNT leadership — first, of placing the war before the revolution and, second, that the struggle could be waged by authoritarian structures or a state. He explicitly attacked the mentality and logic of those who argued *"Let us first make sure of victory, and then see what can be done"*:

> *"Make sure of victory! As if there were any way of transforming society into a free commune without laying hands upon property! As if there were any way of defeating the enemy so long as the great mass of the people is not directly interested in the triumph of the revolution, in witnessing the arrival of material, moral and intellectual well-being for all! They sought to consolidate the Commune first of all while postponing the social revolution for later on, while the only effective way of proceeding was* ***to consolidate the Commune by the social revolution****!"* [**Words of a Rebel**, p. 97]

Kropotkin's argument was sound, as the CNT discovered. By waiting until victory in the war they were defeated (as Abel Paz suggested, the workers of Spain *"had to build a new world to secure and defend their victory."* [**Op. Cit.**, p. 451]). Kropotkin also indicated the inevitable effects of the CNT's actions in co-operating with the state and joining representative bodies:

> *"Paris ... sent her devoted sons to the Hotel-de-Ville [town hall]. Indeed, immobilised there by fetters of red tape, forced to discuss when action was needed, and losing the sensitivity that comes from continual contact with the masses, they saw themselves reduced to impotence. Paralysed by their distancing from the revolutionary centre — the people — they themselves paralysed the popular initiative."* [**Op. Cit.**, pp. 97–8]

Which, in a nutshell, was what happened to the leading militants of the CNT who collaborated with the state. Kropotkin was proved right, as was anarchist theory from Bakunin onwards. As Vernon Richards argued, *"there can be no excuse"* for the CNT's decision, as *"they were not mistakes of judgement but the deliberate abandonment of the principles of the CNT."* [**Op. Cit.**, pp. 41–2] It seems difficult to blame anarchist theory for the decisions of the CNT when that theory argues the opposite position. That enemies of anarchism quote Garcia Oliver's words from 1937 to draw conclusions about anarchist theory says more about their politics than about anarchism!

Moreover, while the experience of Spain confirms anarchist theory **negatively**, it also confirms it **positively** by the creation of the Regional Defence Council of Aragón. The Council of Aragón was created by a meeting of delegates from CNT unions, village collectives and militia columns to protect the new society based on libertarian communism the people of Aragón were building. The meeting also decided to press for the setting up of a National Defence Committee which would link together a series of regional bodies that were organised on principles similar to the one now established in Aragón. Durruti stressed that the collectives *"had to build their own means of self-defence and not rely on the libertarian columns which would leave Aragón as the war evolved. They needed to co-ordinate themselves, although he also warned themselves an anti-fascist political front like the type existing in other parts of Spain. They needn't make the same error as their compatriots elsewhere ... The popular assembly must be sovereign."* After a CNT regional assembly militants decided to *"form the Aragón Defence Council and the Aragón Federation of Collectives."* [Paz, **Op. Cit.**, pp. 540–1] This exposes as false the claim that anarchism failed during the Spanish Civil War. In Aragón, the CNT **did** follow the ideas of anarchism, abolishing both the state and capitalism. If they had did this in Catalonia, the outcome of the Civil War may have been different.

The continuity of what happened in Aragón with the ideas of anarchism and the CNT's 1936 Zaragoza Resolution on Libertarian Communism is obvious. The formation of the Regional Defence Council was an affirmation of commitment to the principles of libertarian communism. This principled stand for revolutionary social and economic change stands at odds with the claims that the Spanish Civil War indicates the failure of anarchism. After all, in Aragón the CNT **did** act in accordance with anarchist theory as well as in its own history and politics. It created a federation of workers' associations as argued by Bakunin. To contrast Catalonia and Aragón shows the weakness of Stack's argument. The same organisation, with the same politics, yet different results. How can anarchist ideas be blamed for what happened in Catalonia when they had been applied in Aragón? Such a position could not be logically argued and, unsurprisingly, Aragón usually fails to get mentioned by Marxists when discussing Anarchism during the Spanish Civil War.

Therefore, the activities of the CNT during the Civil War cannot be used to discredit anarchism although it can be used to show that anarchists, like everyone else, can and do make wrong decisions in difficult circumstances. That Marxists always point to this event in anarchist history is unsurprising, for it **was** a terrible mistake. Yet how could anarchism have "failed" during the Spanish Revolution when it was ignored in Catalonia (for fear of fascism) and applied in Aragón? How can it be argued that anarchist politics were to blame when those very same politics had formed the Council of Aragón? It cannot. Simply put, the Spanish Civil War showed the failure of certain anarchists to apply their ideas in a difficult situation rather than the failure of anarchism. As Emma Goldman argued, the *"contention that there is something wrong with Anarchism ... because the leading comrades in Spain failed Anarchism seems to be very faulty reasoning ... the failure of one or several individuals can never take away from the depth and truth of an ideal."* [**Vision on Fire**, p. 299]

To use the Catalan CNT to generalise about anarchism is false as it, firstly, requires a dismissal of the objective circumstances the decision was made in and, secondly, it means ignoring anarchist theory and history. It also gives the impression that anarchism as a revolutionary theory must be evaluated purely from one event in its history. The experiences of the Makhnovists in the Ukraine, the USI and UAI in the factory occupations of 1920 and fighting fascism in Italy, the insurrections of the CNT during the 1930s, the Council of Aragón created by the CNT in the Spanish Revolution and so on, are all ignored. Hardly convincing, although handy for Marxists. As is clear from, for example, the experiences of the Makhnovists and the Council of Aragón, that anarchism has been applied successfully on a large scale, both politically and economically, in revolutionary situations.

Equally flawed are any attempts to suggest that those anarchists who remained true to libertarian theory somehow, by so doing, rejected it and moved towards Marxism. This is usually done to the anarchist group the **Friends of Durruti** (FoD). In the words of Pat Stack:

> *"Interestingly the one Spanish anarchist group that developed the most sophisticated critique of all this was the Friends of Durutti [sic!]. As [Trotskyist] Felix Morrow points out, 'They represented a conscious break with the anti-statism of traditional anarchism. They explicitly declared the need for democratic organs of power, juntas or soviets, in the overthrow of capitalism, and the necessary state measures of repression against the counter-revolution.' The failure of the Spanish anarchists to understand exactly that these were the stark choices, workers' power, or capitalist power followed by reaction."* [**Op. Cit.**]

That Stack could not bother to spell Durruti's name correctly shows how seriously we should take this analysis. The FoD were an anarchist grouping within the CNT and FAI which, like a large minority of others, strongly and consistently opposed the policy of anti-fascist unity. Rather than signify a *"conscious break"* with anarchism, it signified a conscious **return** to it. This can be clearly seen when we compare their arguments to those of Bakunin. As noted by Stack, the FoD argued for *"juntas"* in the overthrow of capitalism and to defend against counter-revolution. Yet this was **exactly** what revolutionary anarchists have argued for since Bakunin (see section H.2.1 for details). The continuity of the ideas of the FoD with the pre-Civil War politics of the CNT and the ideas of revolutionary anarchism are clear. As such, the FoD were simply arguing for a return to the traditional positions of anarchism and cannot be considered to have broken with it. If Stack or Morrow knew anything about anarchism, then they would have known this.

As such, the failure of the Spanish anarchists was not the *"stark choice"* between *"workers' power"* and *"capitalist power"* but rather the making of the wrong choice in the real dilemma of introducing anarchism (which would, by definition, be based on workers' power, organisation and self-management) or collaborating with other anti-fascist groups in the struggle against the greater enemy of Franco (i.e. fascist reaction). That Stack does not see this suggests that he simply has no appreciation of the dynamics of the Spanish Revolution and prefers abstract sloganeering to a serious analysis of the problems facing it. He ends by summarising:

> *"The most important lesson ... is that whatever ideals and gut instincts individual anarchists may have, anarchism, both in word and deed, fails to provide a roadworthy vehicle for human liberation. Only Marxism, which sees the centrality of the working class under the leadership of a political party, is capable of leading the working class to victory."* [**Op. Cit.**]

As a useful antidote to these claims, we need simply quote Trotsky on what the Spanish anarchists should have done. In his words: *"Because the leaders of the CNT renounced dictatorship **for themselves** they left the place open for the Stalinist dictatorship."* Hardly an example of "workers' power"! Or, as he put it earlier in the same year, a *"revolutionary party, even having seized power (of which the anarchist leaders were incapable in spite of the heroism of the anarchist workers), is still by no means the sovereign ruler of society."* Ultimately, it was the case that the failure of the Spanish Revolution confirmed for Trotsky the truism that the *"revolutionary dictatorship of a proletarian party ... is an objective necessity ... The revolutionary party (vanguard) which renounces **its own dictatorship** surrenders the masses to the counter-revolution."* Rather than seeing, as anarchist do, workers' councils as being key, Trotsky considered the party, in fact the *"dictatorship of a party"*, as being the decisive factor. [our emphasis, **Writings of Leon Trotsky 1936–37**, p. 514, p. 488 and pp. 513–4] At best, such organs would be used to achieve party power and would simply be a fig-leaf for its rule (see section H.3.8).

Clearly, the leading Marxist at the time was not arguing for the *"centrality of the working class under the leadership of a political party."* He was arguing for the dictatorship of a "revolutionary" party ***over*** the working class. Rather than the working class being "central" to the running of a revolutionary regime, Trotsky saw the party taking that position. What sort of *"victory"* is possible when the party has dictatorial power over the working class and the *"sovereign ruler"* of society? Simply the kind of "victory" that leads to Stalinism. Rather than seeing working class organisations as the means by which working people run society, Leninists see them purely in instrumental terms — the means by which the party can seize power. As the Russian Revolution proved beyond doubt, in a conflict between workers' power and party power Leninists will suppress the former to ensure the latter.

To paraphrase Stack, the most important lesson from both the Russian and Spanish revolutions is that whatever ideals and gut instincts individual Leninists may have, Leninism, both in word and deed, fails to provide a roadworthy vehicle for human liberation. Only Anarchism, which sees the centrality of the working class self-management of the class struggle and revolution, is capable of ensuring the creation of a real, free, socialist society.

Lastly, it could be argued that our critique of the standard Leninist attack on Spanish anarchism is similar to that presented by Leninists to justify Bolshevik authoritarianism during the Russian Revolution. After all, Leninists like Stack point to the objective circumstances facing Lenin's

regime — its isolation, civil war and economic problems — as explaining its repressive actions. Yet any similarity is superficial as the defeat of the Revolution in Spain was due to anarchists **not** applying our ideas whole, while, in Russia, it was due to the Bolsheviks **applying** their ideology. The difficulties that faced the Russian Revolution pushed the Bolsheviks further down the road they where already travelling down (not to mention that Bolshevik ideology significantly contributed to making many of these problem worse). As we discuss in section H.6, the notion that "objective circumstances" explains Bolshevik tyranny is simply unconvincing, particularly given the role Bolshevik ideology played in this process.

So, to conclude, rather than show the failure of anarchism, the experience of the Spanish Revolution indicates the failure of anarchists to apply their ideas in practice. Faced with extremely difficult circumstances, they compromised their ideas in the name of anti-fascist unity. Their compromises **confirmed** rather than refuted anarchist theory as they led to the defeat of both the revolution **and** the civil war.

I.8.12 Was the decision to collaborate imposed on the CNT's membership?

A few words have to be said about the development of the CNT and FAI after the 19th of July, 1936. It is clear that both changed in nature and were the not same organisations as they were **before** that date. Both organisations became more centralised and bureaucratic, with the membership excluded from many major decisions. As Peirats suggested:

> *"In the CNT and among militant anarchists there had been a tradition of the most scrupulous respect for the deliberations and decisions of the assemblies, the grassroots of the federalist organisation. Those who held administrative office had been merely the mandatories of those decisions. The regular motions adopted by the National congresses spelled out to the Confederation and its representative committees ineluctable obligations of a basic and general nature incumbent upon very affiliated member regardless of locality or region. And the forming of such general motions was the direct responsibility of all of the unions by means of motions adopted at their respective general assemblies. Similarly, the Regional or Local Congresses would establish the guidelines of requirement and problems that obtained only at regional or local levels. In both instances, sovereignty resided always with the assemblies of workers whether in their unions or in their groups.*
>
> *"This sense of rigorous, everyday federalist procedure was abruptly amended from the very outset of the revolutionary phase... This amendment of the norms of the organisation was explained away by reference to the exceptional turn of events, which required a greater agility of decisions and resolutions, which is to say a necessary departure from the circuitous procedures of federalist practice which operated from the bottom upwards."* [**The CNT in the Spanish Revolution**, vol. 1, p. 213]

In other words, the CNT had become increasingly hierarchical, with the higher committees becoming transformed into executive bodies rather than administrative ones as *"it is safe to assert that the significant resolutions in the organisation were adopted by the committees, very rarely*

by the mass constituency. Certainly, circumstances required quick decisions from the organisation, and it was necessary to take precautions to prevent damaging leaks. These necessities tempted the committees to abandon the federalist procedures of the organisation." [Jose Peirats, **Anarchists in the Spanish Revolution**, p. 188]

Ironically, rather than the *"anarchist leaders"* of the CNT failing to *"seize power"* as Trotsky and his followers lament (see last section), they did — **in their own organisations.** Such a development proved to be a disaster and re-enforced the anarchist critique against hierarchical and centralised organisations. The CNT higher committees became isolated from the membership, pursued their own policies and compromised and paralysed the creative work being done by the rank and file — as predicted in anarchist theory. However, be that as it may, as we will indicate below, it would be false to assert that these higher committees simply imposed the decision to collaborate on their memberships (as, for example, Vernon Richards seems to imply in his **Lessons of the Spanish Revolution**). While it **is** true that the committees presented many decisions as a **fait accompli** the rank-and-file of the CNT and FAI did not simply follow orders nor ratify all of the decisions blindly.

In any revolutionary situation decisions have to be made quickly and sometimes without consulting the base of the organisation. However, such decisions must be accountable to the membership who must discuss and ratify them (this was the policy within the CNT militias, for example). The experience of the CNT and FAI in countless strikes, insurrections and campaigns had proven the decentralised, federal structure was more than capable of pursuing the class war — revolution is no exception as it is the class war in its most concentrated form. In other words, the organisational principles of the CNT and FAI were more than adequate for a revolutionary situation.

The centralising tendencies, therefore, cannot be blamed on the exceptional circumstances of the war. Rather, it was the policy of collaboration which explains them. Unlike the numerous strikes and revolts that occurred before July 19th, 1936, the CNT higher committees had started to work within the state structure. This, by its very nature, must generate hierarchical and centralising tendencies as those involved must adapt to the states basic structure and form. The violations of CNT policy flowed from the initial decision to compromise in the name of *"anti-fascist unity"* and a vicious circle developed — each compromise pushed the CNT leadership further into the arms of the state, which increased hierarchical tendencies, which in turn isolated these higher committees from the membership, which in turn encouraged a conciliatory policy by those committees.

This centralising and hierarchical tendency did not mean that the higher committees of the CNT simply imposed their will on the rest of the organisation. It is very clear that the decision to collaborate had, initially, the passive support of the majority of the CNT and FAI (probably because they thought the war would be over after a few weeks or months). As visiting French anarchist Sebastian Faure noted, while *"effective participation in central authority has had the approval of the majority within the unions and in the groups affiliated to the FAI, that decision has in many places encountered the opposition of a fairly substantial minority. Thus there has been no unanimity."* [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 183] In the words of Peirats:

> *"Were all of the militants of the same mind? ... Excepting some vocal minorities which expressed their protests in their press organs and through committees, gatherings,*

> *plenums and assemblies, the dismal truth is that the bulk of the membership was in thrall to a certain fatalism which was itself a direct consequence of the tragic realities of the war.*" [**Op. Cit.**, p. 181]

And:

> *"We have already seen how, on the economic plane, militant anarchism forged ahead, undaunted, with its work of transforming the economy. It is not to be doubted — for to do so would have been to display ignorance of the psychology of the libertarian rank and file of the CNT – that a muffled contest, occasionally erupting at plenums and assemblies and manifest in some press organs broke out as soon as the backsliding began. In this connection, the body of opinion hostile to any possible deviation in tactics and principles was able to count throughout upon spirited champions."* [**Op. Cit.**, p. 210]

Thus, within the libertarian movement, there was a substantial minority who opposed the policy of collaboration and made their opinions known in various publications and meetings. While many (if not most) revolutionary anarchists volunteered for the militias and so were not active in their unions as before, there were various groups (such as Catalan Libertarian Youth, the Friends of Durruti, other FAI groups, and so on) which were opposed to collaboration and argued their case openly in the streets, collectives, organisational meetings and so on. Moreover, outside the libertarian movement the two tiny Trotskyist groups also argued against collaboration, as did sections of the POUM. Therefore it is impossible to state that the CNT membership were unaware of the arguments against the dominant policy. Also the Catalan CNT's higher committees, for example, after the May Days of 1937 could not get union assemblies or plenums to expel the Friends of Durruti nor to get them to withhold financial support for the Libertarian Youth, who opposed collaboration vigorously in their publications, nor get them to call upon various groups of workers to stop distributing opposition publications in the public transit system or with the daily milk. [Abe Bluestein, *"Translator's Note"*, Juan Gomez Casas, **Anarchist Organisation: The History of the FAI**, p. 10]

This suggests that in spite of centralising tendencies, the higher committees of the CNT were still subject to some degree of popular influence and control and should not be seen as having dictatorial powers over the organisation. While many decisions **were** presented as **fait accompli** to the union plenums (often called by the committees at short notice), in violation of past CNT procedures, the plenums could not be railroaded into ratifying **any** decision the committees wanted. The objective circumstances associated with the war against Franco and fascism convinced most CNT members and libertarian activists that working with other parties and unions within the state was the only feasible option. Also to do otherwise, they thought, was to weaken the war effort by provoking another Civil War in the anti-Franco camp. While such a policy did not work (when it was strong enough the Republican state did start a civil war against the CNT which gutted the struggle against fascism) it cannot be argued that it was imposed upon the membership nor that they did not hear opposing positions. Sadly, the call for anti-fascist unity dominated the minds of the libertarian movement.

In the early stages, the majority of rank-and-file militants believed that the war would be over in a matter of weeks. After all, a few days had been sufficient to rout the army in Barcelona and other industrial centres. This inclined them to, firstly, tolerate (indeed, support) the collaboration

of the CNT with the *"Central Committee of Anti-Fascist Militias"* and, secondly, to start expropriating capitalism in the belief that the revolution would soon be back on track (the opportunity to start introducing anarchist ideas was simply too good to waste, regardless of the wishes of the CNT leadership). They believed that the revolution and libertarian communism, as debated and adopted by the CNT's Zaragoza Congress of May that year, was an inseparable aspect of the struggle against fascism and proceeded appropriately. The ignoring of the state, rather than its destruction, was seen as a short-term compromise, soon to be corrected. Sadly, there were wrong — collaboration had a logic all its own, one which got worse as the war dragged on (and soon it was too late).

Which, we must note indicates the superficial nature of most Marxist attacks on anarchism using the CNT as the key evidence. After all, it was the anarchists and anarchist influenced members of the CNT who organised the collectives, militias and started the transformation of Spanish society. They did so inspired by anarchism and in an anarchist way. To praise their actions, while attacking "anarchism", shows a lack of logic. Indeed, these actions have more in common with anarchist ideas than the actions and rationales of the CNT leadership. Thus, to attack "anarchism" by pointing to the anti-anarchist actions of a few leaders while ignoring the anarchist actions of the majority is flawed.

Therefore, to summarise, it is clear that while the internal structure of the CNT was undermined and authoritarian tendencies increased by its collaboration with the state, the CNT was not transformed into a mere appendage to the higher committees of the organisation. The union plenums could and did reject the calls made by the leadership of the CNT. Support for "anti-fascist unity" was widespread among the CNT membership (in spite of the activities and arguments of large minority of anarchists) and was reflected in the policy of collaboration pursued by the organisation. While the CNT higher committees were transformed into a bureaucratic leadership, increasingly isolated from the rank and file, it cannot be argued that their power was absolute nor totally at odds with the wishes of the membership. Ironically, but unsurprisingly, the divergences from the CNT's previous libertarian organisational principles confirmed anarchist theory, becoming a drag on the revolution and a factor in its defeat.

As we argued in section I.8.11, the initial compromise with the state, the initial betrayal of anarchist theory and CNT policy, contained all the rest. Moreover, rather than refute anarchism, the experience of the CNT after it had rejected anarchist theory confirmed it — centralised, hierarchical organisations hindered and ultimately destroyed the revolution. The experience of the CNT and FAI suggests that those, like Leninists, who argue for **more** centralisation and for "democratic" hierarchical structures have refused to understand, let alone learn from, history. The increased centralisation within the CNT aided and empowered the leadership (a minority) and disempowered the membership (the majority). Rather than federalism hindering the revolution, it, as always, was centralism which did so.

Therefore, in spite of a sizeable minority of anarchists **within** the CNT and FAI arguing against the dominant policy of "anti-fascist unity" and political collaboration, this policy was basically agreed to by the CNT membership and was not imposed upon them. The membership of the CNT could, and did, reject suggestions of the leadership and so, in spite of the centralisation of power that occurred in the CNT due to the policy of collaboration, it cannot be argued that this policy was alien to the wishes of the rank-and-file however lamentable the results of that position were.

I.8.13 What political lessons were learned from the revolution?

The most important political lesson learned from the Spanish Revolution is that a revolution cannot compromise with existing power structures. In this, it just confirmed anarchist theory and the basic libertarian position that a social revolution will only succeed if it follows an anarchist path and does not seek to compromise in the name of fighting a "greater evil." As Kropotkin put it, a *"revolution that stops half-way is sure to be soon defeated."* [**The Great French Revolution**, vol. 2, p. 553]

On the 20th of July, after the fascist coup had been defeated in Barcelona, the CNT sent a delegation of its members to meet the leader of the Catalan Government. A plenum of CNT union shop stewards, in the light of the fascist coup, agreed that libertarian communism would be postpone until Franco had been defeated (the rank and file ignored them and collectivised their workplaces). They organised a delegation to visit the Catalan president to discuss the situation:

> *"The delegation ... was intransigent ... Either Companys [the Catalan president] must accept the creation of a Central Committee [of Anti-Fascist Militias] as the ruling organisation or the CNT would* ***consult the rank and file and expose the real situation to the workers.*** *Companys backed down."* [our emphasis, Abel Paz, **Durruti: The People Armed**, p. 216]

The CNT committee members used their new-found influence in the eyes of Spain to unite with the leaders of other organisations/parties but not the rank and file. This process lead to the creation of the **Central Committee of Anti-Fascist Militias**, in which political parties as well as labour unions were represented. This committee was not made up of mandated delegates from workplaces, communities or barricades, but of representatives of existing organisations, nominated by committees. Instead of a genuine confederal body (made up of mandated delegates from workplace, militia and neighbourhood assemblies) the CNT created a body which was not accountable to, nor could reflect the ideas of, working class people expressed in their assemblies. The state and government was not abolished by self-management, only ignored. This was a mistake and many soon came *"to realise that once they went into the so-called united-front, they could do nothing else but go further. In other words, the one mistake, the one wrong step inevitably led to others as it always does. I am more than ever convinced that if the comrades had remained firm on their own grounds they would have remained stronger than they are now. But I repeat, once they had made common cause for the period of the anti-Fascist war, they were driven by the logic of events to go further."* [Emma Goldman, **Vision on Fire**, pp. 100–1]

The most obvious problem, of course, was that collaboration with the state ensured that a federation of workers' associations could not be created to co-ordinate the struggle against fascism and the social revolution. As Stuart Christie argues: *"By imposing their leadership from above, these partisan committees suffocated the mushrooming popular autonomous revolutionary centres — the grass-roots factory and local revolutionary committees — and prevented them from proving themselves as an efficient and viable means of co-ordinating communications, defence and provisioning. They also prevented the Local Revolutionary committees from integrating with each other to form a regional, provincial and national federal network which would facilitate the revolutionary task of social and economic reconstruction."* [**We, the Anarchists!**, pp. 99–100] Without such a federation, it was only a matter of time before the CNT joined the bourgeois government.

Rather than being *"a regime of **dual power**"* and the *"most important"* of the *"new organs of power"* as many Trotskyists, following Felix Morrow, maintain, the **Central Committee of Anti-Fascist Militias** created on July 20th, 1936, was, in fact, an organ of class collaboration and a handicap to the revolution. [**Revolution and Counter-Revolution in Spain**, p. 85 and p. 83] Stuart Christie was correct to call it an *"artificial and hybrid creation,"* a *"compromise, an artificial political solution, an officially sanctioned appendage of the Generalidad government"* which *"drew the CNT-FAI leadership inexorably into the State apparatus, until then its principal enemy."* [**Op. Cit.**, p. 105] Only a true federation of delegates from the fields, factories and workplaces could have been the framework of a true organisation of (to use Bakunin's expression) *"the social (and, by consequence, anti-political) power of the working masses."* [**Michael Bakunin: Selected Writings**, pp. 197–8]

Therefore, the CNT forgot a basic principle of anarchism, namely *"the destruction ... of the States."* Instead, like the Paris Commune, the CNT thought that *"in order to combat ... reaction, they had to organise themselves in reactionary Jacobin fashion, forgetting or sacrificing what they themselves knew were the first conditions of revolutionary socialism."* The real basis of the revolution, the basic principle of anarchism, was that the *"future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in communes, regions, nations and finally in a great federation, international and universal."* [Bakunin, **Op. Cit.**, p. 198, p. 202 and p. 204] By not doing this, by working in a top-down compromise body rather than creating a federation of workers' councils, the CNT leadership could not help eventually sacrificing the revolution in favour of the war.

Of course, if a full plenum of CNT unions and **barrios** defence committees, with delegates invited from UGT and unorganised workplaces, had taken place there is no guarantee that the decision reached would have been in line with anarchist theory. The feelings for antifascist unity were strong. However, the decision would have been fully discussed by the rank and file of the union, under the influence of the revolutionary anarchists who were later to join the militias and leave for the front. It is likely, given the wave of collectivisation and what happened in Aragón, that the decision would have been different and the first step would have made to turn this plenum into the basis of a free federation of workers associations — i.e. the framework of a self-managed society — which could have smashed the state and ensured no other appeared to take its place.

So the basic idea of anarchism, the need to create a federation of workers councils, was ignored. In the name of "antifascist" unity, the CNT worked with parties and classes which hated both them and the revolution. In the words of Sam Dolgoff *"both before and after July 19th, an unwavering determination to crush the revolutionary movement was the leitmotif behind the policies of the Republican government; irrespective of the party in power."* [**The Anarchist Collectives**, p. 40] Without creating a means to organise the *"social power"* of the working class, the CNT was defenceless against these parties once the state had re-organised itself.

To justify their collaboration, the leaders of the CNT-FAI argued that not to do so would have lead to a civil war within the civil war, so allowing Franco easy victory. In practice, while paying lip service to the revolution, the Communists and republicans attacked the collectives, murdered anarchists, restricted supplies to collectivised industries (even **war** industries) and disbanded the anarchist militias after refusing to give them weapons and ammunition (preferring to arm the Civil Guard in the rearguard in order to crush the CNT and the revolution). By collaborating, a

civil war was not avoided. One occurred anyway, with the working class as its victims, as soon as the state felt strong enough.

Garcia Oliver (the first ever, and hopefully last, "anarchist" minister of justice) stated in 1937 that collaboration was necessary and that the CNT had *"renounc[ed] revolutionary totalitarianism, which would lead to the strangulation of the revolution by anarchist and Confederal [CNT] dictatorship. We had confidence in the word and in the person of a Catalan democrat"* Companys (who had in the past jailed anarchists). [quoted by Vernon Richards, **Lessons of the Spanish Revolution**, p. 34] Which means that only by working with the state, politicians and capitalists can an anarchist revolution be truly libertarian! Furthermore:

> *"This argument contains ... two fundamental mistakes, which many of the leaders of the CNT-FAI have since recognised, but for which there can be no excuse, since they were not mistakes of judgement but the deliberate abandonment of the principles of the CNT. Firstly, that an armed struggle against fascism or any other form of reaction could be waged more successfully within the framework of the State and subordinating all else, including the transformation of the economic and social structure of the country, to winning the war. Secondly, that it was essential, and possible, to collaborate with political parties — that is politicians — honestly and sincerely, and at a time when power was in the hands of the two workers organisations ...*
>
> *"All the initiative ... was in the hands of the workers. The politicians were like generals without armies floundering in a desert of futility. Collaboration with them could not, by any stretch of the imagination, strengthen resistance to Franco. On the contrary, it was clear that collaboration with political parties meant the recreation of governmental institutions and the transferring of initiative from the armed workers to a central body with executive powers. By removing the initiative from the workers, the responsibility for the conduct of the struggle and its objectives were also transferred to a governing hierarchy, and this could not have other than an adverse effect on the morale of the revolutionary fighters."* [Richards, **Op. Cit.**, p. 42]

The dilemma of *"anarchist dictatorship"* or *"collaboration"* raised in 1937 was fundamentally wrong. It was never a case of banning parties, and other organisations under an anarchist system, far from it. Full rights of free speech, organisation and so on should have existed for all but the parties would only have as much influence as they exerted in union, workplace, community and militia assemblies, as should be the case! "Collaboration" yes, but within the rank and file and within organisations organised in an anarchist manner. Anarchism does not respect the "freedom" to be a boss or politician. In his history of the FAI, Juan Gomaz Casas (an active FAI member in 1936) made this clear:

> *"How else could libertarian communism be brought about? It would always signify dissolution of the old parties dedicated to the idea of power, or at least make it impossible for them to pursue their politics aimed at seizure of power. There will always be pockets of opposition to new experiences and therefore resistance to joining 'the spontaneity of the unanimous masses.' In addition, the masses would have complete freedom of expression in the unions and in the economic organisations of the revolution as well as their political organisations in the district and communities."* [**Anarchist Organisation: the History of the FAI**, p. 188f]

Instead of this "collaboration" from the bottom up, by means of a federation of workers' associations, community assemblies and militia columns as argued for by anarchists from Bakunin onwards, the CNT and FAI committees favoured "collaboration" from the top down. The leaders ignored the state and co-operated with other trade unions officials as well as political parties in the **Central Committee of Anti-Fascist Militias**. In other words, they ignored their political ideas in favour of a united front against what they considered the greater evil, namely fascism. This inevitably lead the way to counter-revolution, the destruction of the militias and collectives, as they was no means by which these groups could co-ordinate their activities independently of the state. The continued existence of the state ensured that economic confederalism between collectives (i.e. extending the revolution under the direction of the syndicates) could not develop naturally nor be developed far enough in all places. Due to the political compromises of the CNT the tendencies to co-ordination and mutual aid could not develop freely (see next section).

It is clear that the defeat in Spain was due to a failure not of anarchist theory and tactics but a failure of anarchists to **apply** their theory and tactics. Instead of destroying the state, the CNT-FAI ignored it. For a revolution to be successful it needs to create organisations which can effectively replace the state and the market; that is, to create a widespread libertarian organisation for social and economic decision-making through which working class people can start to set their own agendas. Only by going down this route can the state and capitalism be effectively smashed.

In building the new world we must destroy the old one. Revolutions may be, as Engels suggested, "authoritarian" by their very nature, but only in respect to institutions, structures and social relations which promote injustice, hierarchy and inequality. As discussed in section H.7.4, it is not "authoritarian" to destroy authority and not tyrannical to dethrone tyrants! Revolutions, above all else, must be libertarian in respect to the oppressed. That is, they must develop structures that involve the great majority of the population, who have previously been excluded from decision-making on social and economic issues. In fact, a revolution is the most **libertarian** thing ever.

As the **Friends of Durruti** argued a *"revolution requires the absolute domination of the workers' organisations."* [*"The Friends of Durruti accuse"*, **Class War on the Home Front**, Wildcat Group (ed.), p. 34] Only this, the creation of viable anarchist social organisations, can ensure that the state and capitalism can be destroyed and replaced with a just system based on liberty, equality and solidarity. Just as Bakunin, Kropotkin and a host of other anarchist thinkers had argued decades previously (see section H.1.4). Thus the most important lesson gained from the Spanish Revolution is simply the correctness of anarchist theory on the need to organise the social and economic power of the working class by a free federation of workers associations to destroy the state. Without this, no revolution can be lasting. As Gomez Casas correctly argued, *"if instead of condemning that experience [of collaboration], the movement continues to look for excuses for it, the same course will be repeated in the future ... exceptional circumstances will again put ... anarchism on [its] knees before the State."* [**Op. Cit.**, p. 251]

The second important lesson is on the nature of anti-fascism. The CNT leadership, along with many (if not most) of the rank-and-file, were totally blinded by the question of anti-fascist unity, leading them to support a "democratic" state against a "fascist" one. While the basis of a new world was being created around them by the working class, inspiring the fight against fascism, the CNT leaders collaborated with the system that spawns fascism. While the anti-fascist feelings of the CNT leadership were sincere, the same cannot be said of their "allies" (who seemed happier

attacking the gains of the semi-revolution than fighting fascism). As the Friends of Durruti make clear: *"Democracy defeated the Spanish people, not Fascism."* [**Op. Cit.**, p. 30] To be opposed to fascism is not enough, you also have to be anti-capitalist. As Durruti stressed, *"[n]o government in the world fights fascism to the death. When the bourgeoisie sees power slipping from its grasp, it has recourse to fascism to maintain itself."* [quoted by Vernon Richards, **Op. Cit.**, p. 193f] In Spain, anti-fascism destroyed the revolution, not fascism. As the Scottish Anarchist Ethel McDonald argued at the time: *"Fascism is not something new, some new force of evil opposed to society, but is only the old enemy, Capitalism, under a new and fearful sounding name ... Anti-Fascism is the new slogan by which the working class is being betrayed."* [**Workers Free Press**, October 1937]

Thirdly, the argument of the CNT that Libertarian Communism had to wait until after the war was a false one. Fascism can only be defeated by ending the system that spawned it (i.e. capitalism). In addition, in terms of morale and inspiration, the struggle against fascism could only be effective if it were also a struggle **for** something better — namely a free society. To fight fascism for a capitalist democracy which had repressed the working class would hardly inspire those at the front. Similarly, the only hope for workers' self-management was to push the revolution as far as possible, i.e. to introduce libertarian communism while fighting fascism. The idea of waiting for libertarian communism ultimately meant sacrificing it for the war effort. This would, by necessity, mean the end of the revolutionary spirit and hope which could inspire and sustain the war effort. Why would people fight for a return to the status quo? A status quo that they had rebelled against before the start of the civil war and which had provoked the fascist coup in the first place.

Fourthly, the role of anarchists in a social revolution is to always encourage organisation *"from below"* (to use one of Bakunin's favourite expressions), revolutionary organisations which can effectively smash the state. Bakunin himself argued (see section I.8.11) in favour of workers' councils, complemented by community assemblies (the federation of the barricades) and a self-managed militia. This model is still applicable today and was successfully applied in Aragón by the CNT.

Therefore, the political lessons gained from the experience of the CNT come as no surprise. They simply repeat long standing positions within anarchist theory. As anarchists have argued since Bakunin, no revolution is possible unless the state is smashed, capital expropriated and a free federation of workers' associations created as the framework of libertarian socialism. Rather than refuting anarchism, the experience of the Spanish Revolution confirms it.

I.8.14 What economic lessons were learned from the revolution?

The most important economic lesson from the revolution is the fact that working class people took over the management of industry and did an amazing job of keeping (and improving!) production in the face of the direst circumstances (a factor often overlooked by the opponents of anarchism and the revolution). Not only did workers create a war industry from almost nothing in Catalonia, they also improved working conditions and innovated with new techniques and processes. The Spanish Revolution shows that self-management is possible and that the constructive powers of people inspired by an ideal can transform society.

Self-management allowed a massive increase in innovation and new ideas. The Spanish Revolution is clear proof of the anarchist case against hierarchy and validates Isaac Puente words

that in *"a free collective each benefits from accumulated knowledge and specialised experiences of all, and vice versa. There is a reciprocal relationship wherein information is in continuous circulation."* [**The Anarchist Collectives**, p. 32] The workers, freed from economic autocracy, started to transform their workplaces and how the produced goods.

From the point of view of individual freedom, it is clear that self-management allowed previously marginalised people to take an active part in the decisions that affected them. Egalitarian organisations provided the framework for a massive increase in participation and individual self-government, which expressed itself in the extensive innovations carried out by the Collectives. The Collectives indicate, in Stirner's words, that *"[o]nly in the union can you assert yourself as unique, because the union does not possess you, but you possess it or make it of use to you."* [**The Ego and Its Own**, p. 312] A fact Emma Goldman confirmed from her visits to collectives and discussions with their members:

> *"I was especially impressed with the replies to my questions as to what actually had the workers gained by the collectivisation ... the answer always was, first, greater freedom. And only secondly, more wages and less time of work. In two years in Russia [1920–21] I never heard any workers express this idea of greater freedom."* [**Vision on Fire**, p. 62]

As predicted in anarchist theory, and borne out by actual experience, there exists large untapped reserves of energy and initiative in the ordinary person which self-management can call forth. The collectives proved Kropotkin's argument that co-operative work is more productive and that if the economists wish to prove *"their thesis in favour of **private property** against all other forms of **possession**, should not the economists demonstrate that under the form of communal property land never produces such rich harvests as when the possession is private. But this they could not prove; in fact, it is the contrary that has been observed."* [**The Conquest of Bread**, p. 146]

Beyond this five important lessons can be derived from the actual experience of a libertarian socialist economy:

Firstly, that an anarchist society cannot be created overnight, but is a product of many different influences as well as the objective conditions. In this the anarchist collectives confirmed the ideas of anarchist thinkers like Bakunin and Kropotkin (see section I.2.2). The collectives although, as mentioned in section I.8.3, based on key libertarian principles they were a somewhat unexpected development. They reflected objective circumstances facing the revolution as well as libertarian theory and, with regards the latter, were somewhat limited. However, they were organisations created from below by the revolution and so capable of development and progress.

The lesson from every revolution is that the mistakes made in the process of liberation by people themselves are always minor compared to the results of a self-proclaimed vanguard creating institutions **for** people. The Spanish Revolution is a clear example of this, with the Catalan state's *"collectivisation decree"* causing more harm than good (as intended, it controlled and so limited the economic transformation of the economy). Luckily, the Spanish anarchists recognised the importance of having the freedom to make mistakes, as can be seen by the many different forms of collectives and federations tried. The actual process in Spain towards industrial co-ordination and so socialisation was dependent on the wishes of the workers involved — as would be expected in a true social revolution. As Bakunin argued, the *"revolution should not only be made for the people's sake; it should also be made by the people."* [**No Gods, No Masters**, vol. 1, p.

141] The problems faced by a social revolution will be solved in the interests of the working class only if working class people solve them themselves. For this to happen it requires working class people to manage their own affairs directly — and this implies anarchism, not centralisation or state control/ownership. The experience of the collectives in Spain supports.

Secondly, the importance of decentralisation of management. As discussed in section I.8.4, different areas and industries tried different forms of federation. The woodworkers' union experience indicates that a collectivised industry can became centralised, with even a democratically elected administration leading to rank-and-file workers becoming marginalised which could soon result in apathy developing within it. This was predicted by Kropotkin and other anarchist theorists (and by many anarchists in Spain at the time). While undoubtedly better than capitalist hierarchy, such democratically run industries are only close approximations to anarchist ideas of self-management. Importantly, however, the collectivisation experiments also indicate that co-operation need not imply centralisation (as can be seen from the Badelona collectives).

Thirdly, the importance of building links of solidarity between workplaces as soon as possible. While the importance of starting production after the fascist uprising made attempts at co-ordination seem of secondary importance to the collectives, the competition that initially occurred between workplaces helped the state to undermine self-management (for example, the state *"was actively using its control of finances to contain and stifle radical change"* [Graham Kesley, **Anarchosyndicalism, Libertarian Communism and the State**, p. 172]). As there was no People's Bank or federal body to co-ordinate credit and production, state control of credit and the gold reserves made it easier for the Republican state to undermine the revolution by controlling the collectives and (effectively) nationalising them in time (Durruti and a few others planned to seize the gold reserves but were advised not to by Abad de Santillán).

This attack on the revolution started when the Catalan State issued a decree legalising (and so controlling) the collectives in October 1936 (the infamous *"Collectivisation Decree"*). The counter-revolution also withheld funds for collectivised industries, even war industries, until they agreed to come under state control. The industrial organisation created by this decree was a compromise between anarchist ideas and those of other parties (particularly the communists) and in the words of Gaston Leval, *"the decree had the baneful effect of preventing the workers' syndicates from extending their gains. It set back the revolution in industry."* [**The Anarchist Collectives**, p. 54]

And lastly, that an economic revolution can only succeed if the existing state is destroyed. As Kropotkin argued, *"a new form of economic organisation will necessarily require a new form of political structure."* [**Anarchism**, p. 181] Capitalism needs the state, socialism needs anarchy. Without the new political structure, the new economic organisation cannot develop to its full potential. Due to the failure to consolidate the revolution **politically**, it was lost **economically**. The decree *"legalising"* collectivisation *"distorted everything right from the start."* [Leval, **Collectives in the Spanish Revolution**, p. 227] This helped undermine the revolution by ensuring that the mutualism of the collectives did not develop freely into libertarian communism (*"The collectives lost the economic freedom they had won at the beginning"* due to the decree, as one participant put it). Collectives, of course, tried to ignore the state. As an eyewitness pointed out, the CNT's *"policy was thus not the same as that pursued by the decree."* [quoted by Ronald Fraser, **Blood of Spain**, p. 230 and p. 213] Indeed, leading anarchists like Abad de Santillán opposed it:

> *"I was an enemy of the decree because I considered it premature ... when I became councillor, I had no intention of taking into account or carrying out the decree: I intended*

to allow our great people to carry on the task as they best saw fit, according to their own inspiration." [quoted by Fraser, **Op. Cit.**, p. 212fn]

However, with the revolution lost politically, the CNT was soon forced to compromise and support the decree (the CNT did propose more libertarian forms of co-ordination between workplaces but these were undermined by the state). A lack of effective mutual aid organisations allowed the state to gain power over the collectives and so undermine and destroy self-management. Working class control over the economy (important as it is) does not automatically destroy the state. In other words, the economic aspects of the revolution cannot be considered in isolation from its political ones.

Yet these points do not diminish the successes of the Spanish revolution. As Gaston Leval argued, *"in spite of these shortcomings"* caused lack of complete socialisation *"the important fact is that the factories went on working, the workshops and works produced without the owners, capitalists, shareholders and without high management executives."* [**Collectives in the Spanish Revolution**, p. 228] Beyond doubt, these months of economic liberty in Spain show not only that libertarian socialism **works** and that working class people can manage and run society but also that we can improve the quality of life and increase freedom. Given the time and breathing space, the experiment would undoubtedly have ironed out its problems. Even in the very difficult environment of a civil war (and with resistance of almost all other parties and unions) the workers and peasants of Spain showed that a better society is possible. They gave a concrete example of what was previously just a vision, a world which was more humane, more free, more equitable and more civilised than that run by capitalists, managers, politicians and bureaucrats.

Section J — What do anarchists do?

This section discusses what anarchists get up to. There is little point thinking about the world unless you also want to change it for the better. And by trying to change it, you change yourself and others, making radical change more of a possibility. Therefore anarchists give their whole-hearted support to attempts by ordinary people to improve their lives by their own actions. We urge *"**emancipation through practical action**"* recognising that the *"collective experience"* gained in *"the collective struggle of the workers against the bosses"* will transform how they see the world and the world itself. [Bakunin, **The Basic Bakunin**, p. 103] Ultimately, *"[t]he true man does not lie in the future, an object of longing, but lies, existent and real, in the present."* [Stirner, **The Ego and Its Own**, p. 327]

Anarchism is more than just a critique of statism and capitalism or a vision of a freer, better way of life. It is first and foremost a movement, the movement of working class people attempting to change the world. Therefore the kind of activity we discuss in this section of the FAQ forms the bridge between capitalism and anarchy. By self-activity and direct action, people can change both themselves and their surroundings. They develop within themselves the mental, ethical and spiritual qualities which can make an anarchist society a viable option. As Noam Chomsky argues:

> *"Only through their own struggle for liberation will ordinary people come to comprehend their true nature, suppressed and distorted within institutional structures designed to assure obedience and subordination. Only in this way will people develop more humane ethical standards, 'a new sense of right', 'the consciousness of their strength and their importance as a social factor in the life of their time' and their capacity to realise the strivings of their 'inmost nature.' Such direct engagement in the work of social reconstruction is a prerequisite for coming to perceive this 'inmost nature' and is the indispensable foundations upon which it can flourish"* [*"preface"*, Rudolf Rocker, **Anarcho-Syndicalism**, p. iii]

In other words, anarchism is not primarily a vision of a better future, but the actual social movement which is fighting within the current unjust and unfree society for that better future and to improve things in the here and now. Without standing up for yourself and what you believe is right, nothing will change. Thus anarchy can be found *"wherever free thought breaks loose from the chains of dogma; wherever the spirit of inquiry rejects the old formulas, wherver the human will asserts itself through independent actions; wherever honest people, rebelling against all enforced discipline, join freely together in order to educate themselves, and to reclaim, without any master, their share of life, and the complete satisfaction of their needs."* [Elisée Reclus, quoted by John P. Clark and Camille Martin (ed.), **Anarchy, Geography, Modernity**, p. 62]

For anarchists, the future is **already appearing in the present** and is expressed by the creativity of working class self-activity. Anarchy is not some-day-to-be-achieved utopia, it is a living reality whose growth only needs to be freed from constraint. As such anarchist activity is about discovering and aiding emerging trends of mutual aid which work against capitalist domination, so the Anarchist *"studies society and tries to discover its **tendencies**, past and present, its growing needs, intellectual and economic, and in his [or her] ideal he merely points out in which direction evolution goes."* [Peter Kropotkin, **Anarchism**, p. 47] Indeed, as we discussed in section I.2.3, the future structures of a free society are created in the struggles against oppression today.

The kinds of activity outlined in this section are a general overview of anarchist work. It is by no means exclusive — we are sure to have left something out. However, the key aspect of

real anarchist activity is ***direct action*** — self-activity, self-help, self-liberation and solidarity (*"We wish,"* as French syndicalist Fernand Pelloutier wrote, *"that the emancipation of the people might be the work of the people themselves."* [quoted by Jeremy Jennings, **Syndicalism in France**, p. 18]). Such activity may be done by individuals (for example, propaganda work), but usually anarchists emphasise collective activity. This is because most of our problems are of a social nature, meaning that their solutions can only be worked on collectively. Individual solutions to social problems are doomed to failure, at best slowing down what they are opposed to (most obviously, ethical consumerism as discussed in section E.5). In addition, collective action gets us used to working together, promoting the experience of self-management and building organisations that will allow us to actively manage our own affairs. Also, and we would like to emphasise this, it can be **fun** to get together with other people and work with them, it can be fulfilling and empowering.

Anarchists do not ask those in power to give up that power. No, we promote forms of activity and organisation by which all the oppressed can liberate themselves by their own hands. In other words, we do not think that those in power will altruistically renounce that power or their privileges. Instead, the oppressed must take the power **back** into their own hands by their own actions. We must free ourselves, no one else can do it for use.

Here we will discuss anarchist ideas on struggle, what anarchists actually (and, almost as importantly, do not) do in the here and now and the sort of alternatives anarchists try to build within statism and capitalism in order to destroy them. As well as a struggle against oppression, anarchist activity is also struggle for freedom. As well as fighting against material poverty, anarchists combat spiritual poverty. By resisting hierarchy we emphasis the importance of **living** and of **life as art.** By proclaiming ***"Neither Master nor Slave"*** we urge an ethical transformation, a transformation that will help create the possibility of a truly free society. This point was stressed by Emma Goldman after she saw the defeat of the Russian Revolution by a combination of Leninist politics and capitalist armed intervention:

> *"revolution is in vain unless inspired by its ultimate ideal. Revolutionary methods must be in tune with revolutionary aims ... In short, the ethical values which the revolution is to establish must be initiated with the revolutionary activities ... The latter can only serve as a real and dependable bridge to the better life if built of the same material as the life to be achieved."* [**Red Emma Speaks**, p. 404]

In other words, anarchist activity is more than creating libertarian alternatives and resisting hierarchy, it is about building the new world in the shell of the old not only with regards to organisations and self-activity, but also within the individual. It is about transforming yourself while transforming the world (both processes obviously interacting and supporting each other) for while *"we associate ourselves with others in working for ... social revolution, which for us means the destruction of all monopoly and all government, and the direct seizure by the workers of the means of production"* we do not forget that *"the first aim of Anarchism is to assert and make good the dignity of the individual human being."* [Charlotte Wilson, **Anarchist Essays**, p. 43 and p. 51]

By direct action, self-management and self-activity we can make the words first heard in Paris, 1968 a living reality:

"All power to the imagination!" Words, we are sure, previous generations of anarchists would have whole-heartedly agreed with. There is a power in humans, a creative power, a power

to alter *what is* into *what should be*. Anarchists try to create alternatives that will allow that power to be expressed, the power of imagination.

Such a social movement will change how we act as individuals, with anarchists seeking to apply our principles in our daily lives as much as our daily struggles. This means that libertarians must change how we relate to our comrades and fellow workers by applying our egalitarian ideals everywhere. Part of the task of anarchists is to challenge social hierarchies everywhere, including in the home. As Durruti put it:

> *"When will you stop thinking like the bourgeoisie, that women are men's servants? It's enough that society is divided into classes. We're not going to make even more classes by creating differences between men and women in our own homes!"* [quoted by Abel Paz, **Durruti in the Spanish Revolution**, p. 341]

So we have a interactive process of struggle and transformation of both society and the individuals within it. In the sections that follow we will discuss the forms of self-activity and self-organisation which anarchists think will stimulate and develop the imagination of those oppressed by hierarchy, build anarchy in action and help create a free society.

J.1 Are anarchists involved in social struggles?

Yes. Anarchism, above all else, is a movement which aims to not only analyse the world but also to change it. Therefore anarchists aim to participate in and encourage social struggle. Social struggle includes strikes, marches, protests, demonstrations, boycotts, occupations and so on. Such activities show that the ***"spirit of revolt"*** is alive and well, that people are thinking and acting for themselves and against what authorities want them to do. This, in the eyes of anarchists, plays a key role in helping create the seeds of anarchy within capitalism.

Anarchists consider socialistic tendencies to develop within society as people see the benefits of co-operation and particularly when mutual aid develops within the struggle against authority, oppression and exploitation. Anarchism, as Kropotkin argued, *"originated in everyday struggles."* [**Environment and Revolution**, p.58] Therefore, anarchists do not place anarchy abstractly against capitalism but see it as a tendency within and against the system — a tendency created by struggle and which can be developed to such a degree that it can **replace** the dominant structures and social relationships with new, more liberatory and humane ones. This perspective indicates why anarchists are involved in social struggles — they are an expression of these tendencies within but against capitalism which can ultimately replace it.

However, there is another reason why anarchists are involved in social struggle — namely the fact that we are part of the oppressed and, like other oppressed people, fight for our freedom and to make our life better in the here and now. It is not in some distant tomorrow that we want to see the end of oppression, exploitation and hierarchy. It is today, in our own life, that the anarchist wants to win our freedom, or at the very least, to improve our situation, reduce oppression, domination and exploitation as well as increasing individual liberty for *"every blow given to the institutions of private property and to the government, every exaltation of the conscience of man, disruption of the present conditions, every lie unmasked, every part of human activity taken away from the control of the authorities, every augmentation of the spirit of solidarity and initiative is a step towards Anarchism."* [Errico Malatesta, **Towards Anarchism**, p. 75] We are aware that we often fail to do so, but the very process of struggle can help create a more libertarian aspect to society:

> *"Whatever may be the practical results of the struggle for immediate gains, the greatest value lies in the struggle itself. For thereby workers [and other oppressed sections of society] learn that the bosses interests are opposed to theirs and that they cannot improve their conditions, and much less emancipate themselves, except by uniting and becoming stronger than the bosses. If they succeed in getting what they demand, they will be better off: they will earn more, work fewer hours and will have more time and energy to reflect on the things that matter to them, and will immediately make greater demands and have greater needs. If they do not succeed they will be led to study the reasons of*

> *their failure and recognise the need for closer unity and greater activity and they will in the end understand that to make victory secure and definite, it is necessary to destroy capitalism. The revolutionary cause, the cause of moral elevation and emancipation of the workers [and other oppressed sections of society] must benefit by the fact that workers [and other oppressed people] unite and struggle for their interests."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 191]

Therefore, *"we as anarchists and workers, must incite and encourage"* workers and other oppressed people *"to struggle, and join them in their struggle."* [Malatesta, **Op. Cit.**, p. 190] This is for three reasons. Firstly, struggle helps generate libertarian ideas and movements which could help make existing society more anarchistic and less oppressive. Secondly, struggle creates people, movements and organisations which are libertarian in nature and which, potentially, can replace capitalism with a more humane society. Thirdly, because anarchists are part of the oppressed and so have an interest in taking part in and showing solidarity with struggles and movements that can improve our life in the here and now (*"an injury to one is an injury to all"*).

As we will see in section J.2 anarchists encourage direct action within social struggles as well as arguing for anarchist ideas and theories. However, what is important to note here is that social struggle is a sign that people are thinking and acting for themselves and working together to change things. Howard Zinn is completely correct:

> *"civil disobedience ... is **not** our problem. Our problem is civil **obedience.** Our problem is that numbers of people all over the world have obeyed the dictates of the leaders of their government and have gone to war, and millions have been killed because of this obedience .. . Our problem is that people are obedient all over the world in the face of poverty and starvation and stupidity, and war, and cruelty. Our problem is that people are obedient while the jails are full of petty thieves, and all the while the grand thieves are running the country. That's our problem."* [**Failure to Quit**, p. 45]

Therefore, social struggle is an important thing for anarchists and we take part in it as much as we can. Moreover, anarchists do more than just take part. We are fighting to get rid of the system that causes the problems which people fight against. We explain anarchism to those who are involved in struggle with us and seek to show the relevance of anarchism to people's everyday lives through such struggles and the popular organisations which they create. By so doing we try to popularise the ideas and methods of anarchism, namely solidarity, self-management and direct action.

Anarchists do not engage in abstract propaganda (become an anarchist, wait for the revolution — if we did that, in Malatesta's words, *"that day would never come."* [**Op. Cit.**, p. 195]). We know that our ideas will only win a hearing and respect when we can show both their relevance to people's lives in the here and now and show that an anarchist world is both possible and desirable. In other words, social struggle is the "school" of anarchism, the means by which people become anarchists and anarchist ideas are applied in action. Hence the importance of social struggle and anarchist participation within it.

Before discussing issues related to social struggle, it is important to point out here that anarchists are interested in struggles against all forms of oppression and do not limit ourselves to purely economic issues. The hierarchical and exploitative nature of the capitalist economy

is only part of the story — other forms of oppression are needed in order to keep it going (not to mention those associated with the state) and have resulted from its workings (in addition to those inherited from previous hierarchical and class systems). Domination, exploitation, hierarchy and oppression do not remain in the workplace. They infest our homes, our friendships and our communities. They need to be fought everywhere, not just in work.

Therefore, anarchists are convinced that human life and the struggle against oppression cannot be reduced to mere money and, indeed, the *"proclivity for economic reductionism is now actually obscurantist. It not only shares in the bourgeois tendency to render material egotism and class interest the centrepieces of history it also denigrates all attempts to transcend this image of humanity as a mere economic being . .. by depicting them as mere 'marginalia' at best, as 'well-intentioned middle-class ideology' at worse, or sneeringly, as 'diversionary,' 'utopian,' and 'unrealistic' ... Capitalism, to be sure, did not create the 'economy' or 'class interest,' but it subverted all human traits — be they speculative thought, love, community, friendship, art, or self-governance — with the authority of economic calculation and the rule of quantity. Its 'bottom line' is the balance sheet's sum and its basic vocabulary consists of simple numbers."* [Murray Bookchin, **The Modern Crisis**, pp. 125–126]

In other words, issues such as freedom, justice, individual dignity, quality of life and so on cannot be reduced to the categories of capitalist economics. Anarchists think that any radical movement which does so fails to understand the nature of the system it is fighting against (indeed, economic reductionism plays into the hands of capitalist ideology). So, when anarchists take part in and encourage social struggle they do not aim to restrict or reduce them to economic issues (however important these are). The anarchist knows that the individual has more interests than just material ones and we consider it essential to take into account the needs of the emotions, mind and spirit just as much as those of the belly:

> *"The class struggle does not centre around material exploitation alone but also around spiritual exploitation. In addition, entirely new issues emerge: coercive attitudes, the quality of work, ecology (or stated in more general terms, psychological and environmental oppression) ... Terms like 'classes' and 'class struggle,' conceived of almost entirely as economic categories and relations, are too one-sided to express the* ***universalisation*** *of the struggle. Use these limited expressions if you like (the target is still a ruling class and a class society), but this terminology, with its traditional connotations, does not reflect the sweep and the multi-dimensional nature of the struggle ... [and] fail to encompass the cultural and spiritual revolt that is taking place along with the economic struggle."* [**Post-Scarcity Anarchism**, pp. 151–2]

For anarchists, exploitation and class rule are just part of a wider system of domination and hierarchy. Material gains, therefore, can never completely make-up for oppressive social relationships. As the anarchist character created by anarchist science-fiction writer Ursula Le Guin put it, capitalists *"think if people have enough things they will be content to live in prison."* [**The Dispossessed**, p. 120] Anarchists disagree — and the experience of social revolt in the "affluent" 1960s proves their case.

This is unsurprising for, ultimately, the *"antagonism [between classes] is spiritual rather than material. There will never be a sincere understanding between bosses and workers... because the bosses above all want to remain bosses and secure always more power at the expense of the workers,*

as well as by competition with other bosses, whereas the workers have had their fill of bosses and don't want any more." [Malatesta, **Op. Cit.**, p. 79]

J.1.1 Why are social struggles important?

Social struggle is an expression of the class struggle, namely the struggle of working class people **against** their exploitation, oppression and alienation and **for** their liberty from capitalist and state. It is what happens when one group of people have hierarchical power over another: where there is oppression, there is resistance and where there is resistance to authority you will see anarchy in action. For this reason anarchists are in favour of, and are involved within, social struggles. Ultimately they are a sign of individuals asserting their autonomy and disgust at an unfair system. As Howard Zinn stresses:

> *"Both the source and the solution of our civil liberties problems are in the situations of every day: where we live, where we work, where we go to school, where we spend most of our hours. Our actual freedom is not determined by the Constitution or by [the Supreme] Court, but by the power the policeman has over us in the street or that of the local judge behind him; by the authority of our employers [if we are working]; by the power of teachers, principals, university president, and boards of trustees if we are students; by the welfare bureaucracy if we are poor [or unemployed]; by prison guards if we are in jail; by landlords if we are tenants; by the medical profession or hospital administration if we are physically or mentally ill.*
>
> *"Freedom and justice are local things, at hand, immediate. They are determined by power and money, whose authority over our daily lives is much less ambiguous than decisions of the Supreme Court. Whatever claim we ... can make to liberty on the national level ... on the local level we live at different times in different feudal fiefdoms where our subordination is clear."* [**Failure to Quit**, pp. 53–4]

These realities of wealth and power will remain unshaken unless counter-forces appear on the very ground our liberty is restricted — on the street, in workplaces, at home, at school, in hospitals and so on. For the *"only limit to the oppression of government is the power with which people show themselves capable of opposing it."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 196]

Social struggles for improvements are also important indications of the spirit of revolt and of people supporting each other in the continual assertion of their (and our) freedom. They show people standing up for what they consider right and just, building alternative organisations, creating their own solutions to their problems — and are a slap in the face of all the paternal authorities which dare govern us. Hence their importance to anarchists and all people interested in extending freedom.

In addition, social struggle helps break people from their hierarchical conditioning. Anarchists view people not as fixed objects to be classified and labelled, but as human beings engaged in making their own lives. We live, love, think, feel, hope, dream, and can change ourselves, our environment and social relationships. Social struggle is the way this is done collectively. Such struggle promotes attributes within people which are crushed by hierarchy (attributes such as imagination, organisational skills, self-assertion, self-management, critical thought, self-confidence and

so on) as people come up against practical problems in their struggles and have to solve them themselves. This builds self-confidence and an awareness of individual and collective power. By seeing that their boss, the state and so on are against them they begin to realise that they live in a class ridden, hierarchical society that depends upon their submission to work. As such, social struggle is a politicising experience.

Struggle allows those involved to develop their abilities for self-rule through practice and so begins the process by which individuals assert their ability to control their own lives and to participate in social life directly. These are all key elements of anarchism and are required for an anarchist society to work (*"Self-management of the struggle comes first, then comes self-management of work and society"* [Alfredo Bonnano, *"Self-Management"*, pp. 35–37, **Anarchy: A Journal of Desire Armed**, no. 48, p. 35]). So self-activity is a key factor in self-liberation, self-education and the creating of anarchists. In a nutshell, people learn in struggle:

> *"In our opinion all action which is directed toward the destruction of economic and political oppression, which serves to raise the moral and intellectual level of the people; which gives them an awareness of their individual rights and their power, and persuades them themselves to act on their own behalf ... brings us closer to our ends and is therefore a good thing. On the other hand all activity which tends to preserve the present state of affairs, that tends to sacrifice man against his will for the triumph of a principle, is bad because it is a denial of our ends.* [Malatesta, **Op. Cit.**, p. 69]

A confident working class is an essential factor in making successful and libertarian improvements within the current system and, ultimately, in making a revolution. Without that self-confidence people tend to just follow "leaders" and we end up changing rulers rather than changing society. So part of our job as anarchists is to encourage people to fight for whatever small reforms are possible at present, to improve our/their conditions, to give people confidence in their ability to start taking control of their lives, and to point out that there is a limit to whatever (sometimes temporary) gains capitalism will or can concede. Hence the need for a revolutionary change.

Only this can ensure that anarchist ideas are the most popular ones for if we think a movement is, all things considered, a positive or progressive one then we should not abstain but should seek to popularise anarchist ideas and strategies within it. In this way we create ***"schools of anarchy"*** within the current system and lay the foundations of something better. Revolutionary tendencies and movements, in other words, must create the organisations that contain, in embryo, the society of the future (see section H.1.6). These organisations, in turn, further the progress of radical change by providing social spaces for the transformation of individuals (via the use of direct action, practising self-management and solidarity, and so on). Therefore, social struggle aids the creation of a free society by accustoming people to govern themselves within self-managed organisations and empowering the (officially) disempowered via the use of direct action and mutual aid.

Hence the importance of social (or class) struggle for anarchists (which, we may add, goes on all the time and is a two-sided affair). Social struggle is the means of breaking the normality of capitalist and statist life, a means of developing the awareness for social change and the means of making life better under the current system. The moment that people refuse to bow to authority, its days are numbered. Social struggle indicates that some of the oppressed see that by using their power of disobedience they can challenge, perhaps eventually end, hierarchical power.

Ultimately, anarchy is not just something you believe in, it is not a cool label you affix to yourself, it is something you do. You participate. If you stop doing it, anarchy crumbles. Social struggle is the means by which we ensure that anarchy becomes stronger and grows.

J.1.2 Are anarchists against reforms?

No, we are not. While most anarchists are against reformism (namely the notion that we can somehow reform capitalism and the state away) we are most definitely in favour of reforms (i.e. improvements in the here and now). Anarchists are radicals; as such, we seek the root causes of societal problems. Reformists seek to ameliorate the symptoms of societal problems, while anarchists focus on the causes.

This does not mean, however, that we ignore struggles for reforms in the here and now. The claim that anarchists are against such improvements are often put forth by opponents of anarchism in an effort to paint us as irrelevant extremists with no practical outlet for our ideas beyond abstract calls for revolution. This is not true. Libertarians are well aware that we can act to make our lives better while, at the same time, seeking to remove the root causes of the problems we face. (see, for example, Emma Goldman's account of her recognition of how false it was deny the need for short-term reforms in favour of revolution. [**Living My Life**, vol. 1, p. 52]). In the words of the revolutionary syndicalist Emile Pouget:

> *"Trade union endeavour has a double aim: with tireless persistence, it must pursue betterment of the working class's current conditions. But, without letting themselves become obsessed with this passing concern, the workers should take care to make possible and imminent the essential act of comprehensive emancipation: the expropriation of capital.*
>
> *"At present, trade union action is designed to win partial and gradual improvements which, far from constituting a goal, can only be considered as a means of stepping up demands and wresting further improvements from capitalism ...*
>
> *"This question of partial improvements served as the pretext for attempts to sow discord in the trades associations. Politicians ... have tried to ... stir up ill-feeling and to split the unions into two camps, by categorising workers as reformists and as revolutionaries. The better to discredit the latter, they have dubbed them 'the advocates of all or nothing' and they have falsely represented them as supposed adversaries of improvements achievable right now.*
>
> *"The most that can be said about this nonsense is that it is witless. There is not a worker ... who, on grounds of principle or for reasons of tactics, would insist upon working ten hours for an employer instead of eight hours, while earning six francs instead of seven ...*
>
> *"What appears to afford some credence to such chicanery is the fact that the unions, cured by the cruel lessons of experience from all hope in government intervention, are justifiably mistrustful of it. They know that the State, whose function is to act as capital's gendarme, is, by its very nature, inclined to tip the scales in favour of the employer side. So, whenever a reform is brought about by legal avenues, they do not fall upon*

it with the relish of a frog devouring the red rag that conceals the hook, they greet it with all due caution, especially as this reform is made effective only if the workers are organised to insist forcefully upon its implementation.

"The trade unions are even more wary of gifts from the government because they have often found these to be poison gifts ... Wanting real improvements ... instead of waiting until the government is generous enough to bestow them, they wrest them in open battle, through direct action.

"If, as sometimes is the case, the improvement they seek is subject to the law, the trade unions strive to obtain it through outside pressure brought to bear upon the authorities and not by trying to return specially mandated deputies to Parliament, a puerile pursuit that might drag on for centuries before there was a majority in favour of the yearned-for reform.

"When the desired improvement is to be wrestled directly from the capitalist, the trades associations resort to vigorous pressure to convey their wishes. Their methods may well vary, although the direct action principle underlies them all ...

"But, whatever the improvement won, it must always represent a reduction in capitalist privileges and be a partial expropriation. So . .. the fine distinction between 'reformist' and 'revolutionary' evaporates and one is led to the conclusion that the only really reformist workers are the revolutionary syndicalists." [**No Gods, No Masters**, vol. 2, pp. 71–3]

Pouget was referring to revolutionary unions but his argument can be generalised to all social movements.

By seeking improvements from below by direct action, solidarity and the organisation of those who directly suffer the injustice, anarchists can make reforms more substantial, effective and long lasting than "reforms" made from above by reformists. By recognising that the effectiveness of a reform is dependent on the power of the oppressed to resist those who would dominate them, anarchists seek change from the bottom-up and so make reforms real rather than just words gathering dust in the law books.

For example, a reformist sees poverty and looks at ways to lessen the destructive and debilitating effects of it: this produced things like the minimum wage, affirmative action, the projects in the USA and similar reforms in other countries. An anarchist looks at poverty and says, "what causes this?" and attacks that source of poverty, rather than the symptoms. While reformists may succeed in the short run with their institutional panaceas, the festering problems remain untreated, dooming reform to eventual costly, inevitable failure — measured in human lives, no less. Like a quack that treats the symptoms of a disease without getting rid of what causes it, all the reformist can promise is short-term improvements for a condition that never goes away and may ultimately kill the sufferer. The anarchist, like a real doctor, investigates the causes of the illness and treats them while fighting the symptoms.

Therefore, anarchists are of the opinion that *"[w]hile preaching against every kind of government, and demanding complete freedom, we must support all struggles for partial freedom, because we are convinced that one learns through struggle, and that once one begins to enjoy a little freedom one ends by wanting it all. We must always be with the people ... [and] get them to understand ... [what] they may demand should be obtained by their own efforts and that they should despise and*

detest whoever is part of, or aspires to, government." [Malatesta, **Errico Malatesta: His Life and Ideas** p. 195]

So, anarchists are not opposed to struggles for reforms and improvements in the here and now. Indeed, few anarchists think that an anarchist society will occur without a long period of anarchist activity encouraging and working within social struggle against injustice. Thus Malatesta's words:

> *"the subject is not whether we accomplish Anarchism today, tomorrow or within ten centuries, but that we walk towards Anarchism today, tomorrow and always."* [**Towards Anarchism**, p. 75]

So, when fighting for improvements anarchists do so in an anarchist way, one that encourages self-management, direct action and the creation of libertarian solutions and alternatives to both capitalism and the state.

J.1.3 Why are anarchists against reformism?

Firstly, it must be pointed out that the struggle for reforms within capitalism is **not** the same as reformism. Reformism is the idea that reforms within capitalism are enough in themselves and attempts to change the system are impossible (and not desirable). As such all anarchists are against this form of reformism — we think that the system can be (and should be) changed and until that happens any reforms, no matter how essential, will not get to the root of social problems.

In addition, particularly in the old social democratic labour movement, reformism also meant the belief that social reforms could be used to **transform** capitalism into socialism. In this sense, only Individualist anarchists and Mutualists can be considered reformist as they think their system of mutual banking can reform capitalism into a free system. However, in contrast to Social Democracy, such anarchists think that such reforms cannot come about via government action, but only by people creating their own alternatives and solutions by their own actions:

> *"But experience testifies and philosophy demonstrates, contrary to that prejudice, that any revolution, to be effective, must be spontaneous and emanate, not from the heads of the authorities but from the bowels of the people: that government is reactionary rather than revolutionary: that it could not have any expertise in revolutions, given that society, to which that secret is alone revealed, does not show itself through legislative decree but rather through the spontaneity of its manifestations: that, ultimately, the only connection between government and labour is that labour, in organising itself, has the abrogation of government as its mission."* [Proudhon, **No Gods, No Master**, vol. 1, p. 52]

So, anarchists oppose reformism because it takes the steam out of revolutionary movements by providing easy, decidedly short-term "solutions" to deep social problems. In this way, reformists can present the public with they've done and say "look, all is better now. The system worked." Trouble is that over time, the problems will only continue to grow because the reforms did not tackle them in the first place. To use Alexander Berkman's excellent analogy:

> *"If you should carry out [the reformers'] ideas in your personal life, you would not have a rotten tooth that aches pulled out all at once. You would have it pulled out a little today, some more next week, for several months or years, and by then you would be ready to pull it out altogether, so it should not hurt so much. That is the logic of the reformer. Don't be 'too hasty,' don't pull a bad tooth out all at once."* [**What is Anarchism?**, p. 64]

Rather than seek to change the root cause of the problems (namely in a hierarchical, oppressive and exploitative system), reformists try to make the symptoms better. In the words of Berkman again:

> *"Suppose a pipe burst in your house. You can put a bucket under the break to catch the escaping water. You can keep on putting buckets there, but as long as you do not mend the broken pipe, the leakage will continue, no matter how much you may swear about it ... until you repair the broken social pipe."* [**Op. Cit.**, pp. 67–8]

What reformism fails to do is fix the underlying root causes of the real problems society faces. Therefore, reformists try to pass laws which reduce the level of pollution rather than work to end a system in which it makes economic sense to pollute. Or they pass laws to improve working conditions and safety while failing to get rid of the wage slavery which creates the bosses whose interests are served by them ignoring those laws and regulations. The list is endless. Ultimately, reformism fails because reformists *"believe in good faith that it is possible to eliminate the existing social evils by recognising and respecting, in practice if not in theory, the basic political and economic institutions which are the cause of, as well as the prop that supports these evils."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 82]

Revolutionaries, in contrast to reformists, fight both symptoms **and** the root causes. They recognise that as long as the cause of the evil remains, any attempts to fight the symptoms, however necessary, will never get to the root of the problem. There is no doubt that we have to fight the symptoms, however revolutionaries recognise that this struggle is not an end in itself and should be considered purely as a means of increasing working class strength and social power within society until such time as capitalism and the state (i.e. the root causes of most problems) can be abolished.

Reformists also tend to objectify the people whom they are "helping": they envision them as helpless, formless masses who need the wisdom and guidance of the "best and the brightest" to lead them to the Promised Land. Reformists mean well, but this is altruism borne of ignorance, which is destructive over the long run. Freedom cannot be given and so any attempt to impose reforms from above cannot help but ensure that people are treated as children, incapable of making their own decisions and, ultimately, dependent on bureaucrats to govern them. This can be seen from public housing. As Colin Ward argues, the *"whole tragedy of publicly provided non-profit housing for rent and the evolution of this form of tenure in Britain is that the local authorities have simply taken over, though less flexibly, the role of the landlord, together with all the dependency and resentment that it engenders."* [**Housing: An Anarchist Approach**, p. 184] This feature of reformism was skilfully used by the right-wing to undermine publicly supported housing and other aspects of the welfare state. The reformist social-democrats reaped what they had sown.

Reformism often amounts to little more than an altruistic contempt for the masses, who are considered as little more than victims who need to be provided for by state. The idea that we may

have our own visions of what we want is ignored and replaced by the vision of the reformists who enact legislation **for** us and make "reforms" from the top-down. Little wonder such reforms can be counter-productive — they cannot grasp the complexity of life and the needs of those subject to them. Reformists effectively say, *"don't do anything, we'll do it for you."* You can see why anarchists would loathe this sentiment; anarchists are the consummate do-it-yourselfers, and there's nothing reformists hate more than people who can take care of themselves, who will not let them "help" them.

Reformists may mean well, but they do not grasp the larger picture — by focusing exclusively on narrow aspects of a problem, they choose to believe that is the whole problem. In this wilfully narrow examination of pressing social ills, reformists are, more often than not, counter-productive. The disaster of the urban rebuilding projects in the United States (and similar projects in Britain which moved inter-city working class communities into edge of town developments during the 1950s and 1960s) are an example of reformism at work: upset at the growing slums, reformists supported projects that destroyed the ghettos and built brand-new housing for working class people to live in. They looked nice (initially), but they did nothing to address the problem of poverty and indeed created more problems by breaking up communities and neighbourhoods.

Logically, it makes no sense. Why dance around a problem when you can attack it directly? Reformists dilute social movements, softening and weakening them over time. The AFL-CIO labour unions in the USA, like the ones in Western Europe, killed the labour movement by narrowing and channelling labour activity and taking power from the workers themselves, where it belongs, and placing it the hands of a bureaucracy. The British Labour Party, after over 100 years of reformist practice, has done little more than manage capitalism, seen most of its reforms undermined by right-wing governments (and by the following Labour governments!) and the creation of a leadership of the party (in the shape of New Labour) which was in most ways as right-wing as the Conservative Party (if not more so, as shown once they were in power). Bakunin would not have been surprised.

Also, it is funny to hear left-wing "revolutionaries" and "radicals" put forward the reformist line that the capitalist state can help working people (indeed be used to abolish itself!). Despite the fact that leftists blame the state and capitalism for most of the problems we face, they usually turn to the **capitalist** state to remedy the situation, not by leaving people alone, but by becoming more involved in people's lives. They support government housing, government jobs, welfare, government-funded and regulated child care, government-funded drug "treatment," and other government-centred programmes and activities. If a capitalist (and racist/sexist/authoritarian) government is the problem, how can it be depended upon to change things to the benefit of working class people or other oppressed sections of the population? Surely any reforms passed by the state will not solve the problem? As Malatesta suggested:

> *"Governments and the privileged classes are naturally always guided by instincts of self-preservation, of consolidation and the development of their powers and privileges; and when they consent to reforms it is either because they consider that they will serve their ends or because they do not feel strong enough to resist, and give in, fearing what might otherwise be a worse alternative."* [**Op. Cit.**, p. 81]

Therefore, reforms gained by direct action are of a different quality and nature than those passed by reformist politicians — these latter will only serve the interests of the ruling class as they do not threaten their privileges while the former have the potential for real change.

This is not to say that Anarchists oppose **all** state-based reforms nor that we join with the right in seeking to destroy them (or, for that matter, with "left" politicians in seeking to "reform" them, i.e., reduce them). Without a popular social movement creating alternatives to state welfare, so-called "reform" by the state almost always means attacks on the most vulnerable elements in society in the interests of capital. As anarchists are against both state and capitalism, we can oppose such reforms without contradiction while, at the same time, arguing that welfare for the rich should be abolished long before welfare for the many is even thought about. See section J.5.15 for more discussion on the welfare state and anarchist perspectives on it.

Instead of encouraging working class people to organise themselves and create their own alternatives and solutions to their problem (which can supplement, and ultimately replace, whatever welfare state activity which is actually useful), reformists and other radicals urge people to get the state to act for them. However, the state is not the community and so whatever the state does for people you can be sure it will be in **its** interests, not theirs. As Kropotkin put it:

> *"We maintain that the State organisation, having been the force to which the minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges ... the economic and political liberation of man will have to create new forms for its expression in life, instead of those established by the State.*
>
> *"Consequently, the chief aim of Anarchism is to awaken those constructive powers of the labouring masses of the people which at all great moments of history came forward to accomplish the necessary changes ...*
>
> *"This is also why the Anarchists refuse to accept the functions of legislators or servants of the State. We know that the social revolution will not be accomplished by means of **laws.** Laws only **follow** the accomplished facts ... a law remains a dead letter so long as there are not on the spot the living forces required for making of the **tendencies** expressed in the law an accomplished **fact**.*
>
> *"On the other hand ... the Anarchists have always advised taking an active part in those workers' organisations which carry on the **direct** struggle of Labour against Capital and its protector, — the State.*
>
> *"Such a struggle ... better than any other indirect means, permits the worker to obtain some temporary improvements in the present conditions of work [and life in general], while it opens his [or her] eyes to the evil that is done by Capitalism and the State that supports it, and wakes up his [or her] thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State."* [**Environment and Evolution**, pp. 82–3]

Therefore, while seeking reforms, anarchists are against reformism and reformists. Reforms are not seen as an end in themselves but rather a means of changing society from the bottom-up and a step in that direction:

> *"Each step towards economic freedom, each victory won over Capitalism will be at the same time a step towards political liberty — towards liberation from the yoke of the State ... And each step towards taking from the State any one of its powers and attributes will be helping the masses to win a victory over Capitalism."* [Kropotkin, **Op. Cit.**, p. 95]

However, no matter what, anarchists *"will never recognise the institutions; we will take or win all possible reforms with the same spirit that one tears occupied territory from the enemy's grasp in order to keep advancing, and we will always remain enemies of every government."* Therefore, it is *"not true to say"* that anarchists *"are systematically opposed to improvements, to reforms. They oppose the reformists on the one hand because their methods are less effective for securing reforms from government and employers, who only give in through fear, and because very often the reforms they prefer are those which not only bring doubtful immediate benefits, but also serve to consolidate the existing regime and to give the workers a vested interest in its continued existence."* [Malatesta, **Op. Cit.**, p. 81 and p. 83]

Only working class people, by our own actions and organisations, getting the state and capital out of the way can produce an improvement in our lives, indeed it is the only thing that will lead to **real** changes for the better. Encouraging people to rely on themselves instead of the state or capital can lead to self-sufficient, independent, and, hopefully, more rebellious people. Working class people, despite having fewer options in a number of areas in our lives, due both to hierarchy and restrictive laws, still are capable of making choices about our actions, organising our own lives and are responsible for the consequences of our decisions. We are also more than able to determine what is and is not a good reform to existing institutions and do not need politicians informing us what is in our best interests (particularly when it is the right seeking to abolish those parts of the state not geared purely to defending property). To think otherwise is to infantilise us, to consider us less fully human than other people and reproduce the classic capitalist vision of working class people as means of production, to be used, abused, and discarded as required. Such thinking lays the basis for paternalistic interventions in our lives by the state, ensuring our continued dependence and inequality — and the continued existence of capitalism and the state. Ultimately, there are two options:

> *"The oppressed either ask for and welcome improvements as a benefit graciously conceded, recognise the legitimacy of the power which is over them, and so do more harm than good by helping to slow down, or divert . .. the processes of emancipation. Or instead they demand and impose improvements by their action, and welcome them as partial victories over the class enemy, using them as a spur to greater achievements, and thus a valid help and a preparation to the total overthrow of privilege, that is, for the revolution."* [Malatesta, **Op. Cit.**, p. 81]

Reformism encourages the first attitude within people and so ensures the impoverishment of the human spirit. Anarchism encourages the second attitude and so ensures the enrichment of humanity and the possibility of meaningful change. Why think that ordinary people cannot arrange their lives for themselves as well as Government people can arrange it not for themselves but for others?

J.1.4 What attitude do anarchists take to "single-issue" campaigns?

Firstly, we must note that anarchists do take part in "single-issue" campaigns, but do not nourish false hopes in them. This section explains what anarchists think of such campaigns.

A "single-issue" campaign are usually run by a pressure group which concentrates on tackling issues one at a time. For example, C.N.D. (The Campaign for Nuclear Disarmament) is a classic example of "single-issue" campaigning with the aim of getting rid of nuclear weapons as the be-all and end-all of its activity. For anarchists, however, single-issue campaigning can be seen as a source of false hopes. The possibilities of changing one aspect of a totally inter-related system and the belief that pressure groups can compete fairly with transnational corporations, the military and so forth, in their influence over decision making bodies can both be seen to be optimistic at best.

In addition, many "single-issue" campaigns desire to be "apolitical", concentrating purely on the one issue which unites the campaign and so refuse to analyse or discuss wider issues and the root causes of the issue in question (almost always, the system we live under). This means that they end up accepting the system which causes the problems they are fighting against. At best, any changes achieved by the campaign must be acceptable to the establishment or be so watered down in content that no practical long-term good is done. This can be seen from the green movement, where groups like **Greenpeace** and **Friends of the Earth** accept the status quo as a given and limit themselves to working within it. This often leads to them tailoring their "solutions" to be "practical" within a fundamentally anti-ecological political and economic system, so slowing down (at best) ecological disruption.

For anarchists these problems all stem from the fact that social problems cannot be solved as single issues. As Larry Law argued:

> *"single issue politics ... deals with the issue or problem in isolation. When one problem is separated from all other problems, a solution really is impossible. The more campaigning on an issue there is, the narrower its perspectives become ... As the perspective of each issue narrows, the contradictions turn into absurdities ... What single issue politics does is attend to 'symptoms' but does not attack the 'disease' itself. It presents such issues as nuclear war, racial and sexual discrimination, poverty, starvation, pornography, etc., as if they were aberrations or faults in the system. In reality such problems are the inevitable consequence of a social order based on exploitation and hierarchical power ... single issue campaigns lay their appeal for relief at the feet of the very system which oppresses them. By petitioning they acknowledge the right of those in power to exercise that power as they choose."* [**Bigger Cages, Longer Chains**, pp. 17–20].

Single issue politics often prolong the struggle for a free society by fostering illusions that it is just parts of the capitalist system which are wrong, not the whole of it, and that those at the top of the system can, and will, act in our interests. While such campaigns can do some good, practical, work and increase knowledge and education about social problems, they are limited by their very nature and can not lead to extensive improvements in the here and now, never mind a free society.

Therefore, anarchists often support and work within single-issue campaigns, trying to get them to use effective methods of activity (such as direct action), work in an anarchistic manner (i.e. from the bottom up) and to try to "politicise" them into questioning the whole of the system. However, anarchists do not let themselves be limited to such activity as a social revolution or movement is not a group of single-issue campaigns but a mass movement which understands the inter-related nature of social problems and so the need to change every aspect of life.

J.1.5 Why do anarchists try to generalise social struggles?

Basically, we do it in order to encourage and promote solidarity. This is **the** key to winning struggles in the here and now as well as creating the class consciousness necessary to create an anarchist society. At its most simple, generalising different struggles means increasing the chances of winning them. Take, for example, when one trade or one workplace goes on strike while the others continue to work:

> *"Consider yourself how foolish and inefficient is the present form of labour organisation in which one trade or craft may be on strike while the other branches of the same industry continue to work. Is it not ridiculous that when the street car workers of New York, for instance, quit work, the employees of the subway, the cab and omnibus drivers remain on the job? ... It is clear, then, that you compel compliance [from your bosses] only when you are determined, when your union is strong, when you are well organised, when you are united in such a manner that the boss cannot run his factory against your will. But the employer is usually some big ... company that has mills or mines in various places... If it cannot operate ... in Pennsylvania because of a strike, it will try to make good its losses by continuing ... and increasing production [elsewhere] ... In that way the company ... breaks the strike."* [Alexander Berkman, **What is Anarchism?**, pp. 199–200]

By organising all workers in one union (after all they all have the same boss) it increases the power of each trade considerably. It may be easy for a boss to replace a few workers, but a whole workforce would be far more difficult. By organising all workers in the same industry, the power of each workplace is correspondingly increased. Extending this example to outside the workplace, its clear that by mutual support between different groups increases the chances of each group winning its fight. As the I.W.W. put it: ***"An injury to one is an injury to all."*** By generalising struggles, by practising mutual aid we can ensure that when we are fighting for our rights and against injustice we will not be isolated and alone. If we don't support each other, groups will be picked off one by one. and if we go into struggle, there will be no one there to support us and we are more likely to be defeated.

Therefore, from an anarchist point of view, the best thing about generalising struggles is that as well as increasing the likilihood of success (*"Solidarity is Strength"*) it leads to an increased spirit of solidarity, responsibility and class consciousness. This is because by working together and showing solidarity those involved get to understand their common interests and that the struggle is not against **this** injustice or **that** boss but against **all** injustice and **all** bosses.

This sense of increased social awareness and solidarity can be seen from the experience of the C.N.T in Spain during the 1930s. The C.N.T. organised all workers in a given area into one big union. Each workplace was a union branch and were joined together in a local area confederation. The result was that the territorial basis of the unions brought all the workers from one area together and fomented **class** solidarity over and before industry-loyalties and interests. This can also be seen from the experiences of the syndicalist unions in Italy and France as well. The structure of such local federations also situates the workplace in the community where it really belongs.

Also, by uniting struggles together, we can see that there are really no "single issues" — that all various different problems are inter-linked. For example, ecological problems are not just that,

but have a political and economic basis and that economic and social domination and exploitation spills into the environment. Inter-linking struggles means that they can be seen to be related to other struggles against capitalist exploitation and oppression and so encourage solidarity and mutual aid. What goes on in the environment, for instance, is directly related to questions of domination and inequality within human society, that pollution is often directly related to companies cutting corners to survive in the market or increase profits. Similarly, struggles against sexism or racism can be seen as part of a wider struggle against hierarchy, exploitation and oppression in all their forms. As such, uniting struggles has an important educational effect above and beyond the benefits in terms of winning struggles.

Murray Bookchin presents a concrete example of this process of linking issues and widening the struggle:

> "Assume there is a struggle by welfare mothers to increase their allotments ... Without losing sight of the concrete issues that initially motivated the struggle, revolutionaries would try to catalyse an order of relationships between the mothers entirely different from [existing ones] ... They would try to foster a deep sense of community, a rounded human relationship that would transform the very subjectivity of the people involved ... Personal relationships would be intimate, not merely issue-orientated. People would get to **know** each other, to **confront** each other; they would **explore** each other with a view of achieving the most complete, unalienated relationships. Women would discuss sexism, as well as their welfare allotments, child-rearing as well as harassment by landlords, their dreams and hopes as human beings as well as the cost of living.
>
> "From this intimacy there would grow, hopefully, a supportive system of kinship, mutual aid, sympathy and solidarity in daily life. The women might collaborate to establish a rotating system of baby sitters and child-care attendants, the co-operative buying of good food at greatly reduced prices, the common cooking and partaking of meals, the mutual learning of survival skills and the new social ideas, the fostering of creative talents, and many other shared experiences. Every aspect of life that could be explored and changed would be one part of the kind of relationships ...
>
> "The struggle for increased allotments would expand beyond the welfare system to the schools, the hospitals, the police, the physical, cultural, aesthetic and recreational resources of the neighbourhood, the stores, the houses, the doctors and lawyers in the area, and so on — into the very ecology of the district.
>
> "What I have said on this issue could be applied to every issue — unemployment, bad housing, racism, work conditions — in which an insidious assimilation of bourgeois modes of functioning is masked as 'realism' and 'actuality.' The new order of relationships that could be developed from a welfare struggle ... [can ensure that the] future penetrates the present; it recasts the way people 'organise' and the goals for which they strive." [**Post-Scarcity Anarchism**, pp. 153–4]

As the anarchist slogan puts it: ***"Resistance is Fertile."*** Planting the seed of autonomy, direct action and self-liberation can result, potentially, in the blossoming of free individuals due to the nature of struggle itself (see section A.2.7) Therefore, the generalisation of social struggle is not

only a key way of winning a specific fight, it can (and should) also spread into different aspects of life and society and play a key part in developing free individuals who reject hierarchy in all aspects of their life.

Social problems are not isolated from each other and so struggles against them cannot be. The nature of struggle is such that once people start questioning one aspect of society, the questioning of the rest soon follows. So, anarchists seek to generalise struggles for these three reasons — firstly, to ensure the solidarity required to win; secondly, to combat the many social problems we face as **people** and to show how they are inter-related; and, thirdly, to encourage the transformation of those involved into unique individuals in touch with their humanity, a humanity eroded by hierarchical society and domination.

J.2 What is direct action?

Direct action, to use Rudolf Rocker's words, is *"every method of immediate warfare by the workers [or other sections of society] against their economic and political oppressors. Among these the outstanding are: the strike, in all its graduations from the simple wage struggle to the general strike; the boycott; sabotage in all its countless forms; anti-militarist propaganda, and in particularly critical cases ... armed resistance of the people for the protection of life and liberty."* [**Anarcho-Syndicalism**, p. 78]

Not that anarchists think that direct action is only applicable within the workplace. Far from it. Direct action must occur everywhere! So, in non-workplace situations, direct action includes rent strikes, consumer boycotts, occupations (which, of course, can include sit-down strikes by workers), eco-tage, individual and collective non-payment of taxes, blocking roads and holding up construction work of an anti-social nature and so forth. Also direct action, in a workplace setting, includes strikes and protests on social issues, not directly related to working conditions and pay. Such activity aims to ensure the *"protection of the community against the most pernicious outgrowths of the present system. The social strike seeks to force upon the employers a responsibility to the public. Primarily it has in view the protection of the customers, of whom the workers themselves [and their families] constitute the great majority"* [**Op. Cit.**, p. 86]

Basically, direct action means that instead of getting someone else to act for you (e.g. a politician), you act for yourself. Its essential feature is an organised protest by ordinary people to make a change by their own efforts. Thus Voltairine De Cleyre's excellent statement on this topic:

> *"Every person who ever thought he had a right to assert, and went boldly and asserted it, himself, or jointly with others that shared his convictions, was a direct actionist. Some thirty years ago I recall that the Salvation Army was vigorously practicing direct action in the maintenance of the freedom of its members to speak, assemble, and pray. Over and over they were arrested, fined, and imprisoned; but they kept right on singing, praying, and marching, till they finally compelled their persecutors to let them alone. The Industrial Workers [of the World] are now conducting the same fight, and have, in a number of cases, compelled the officials to let them alone by the same direct tactics.*
>
> *"Every person who ever had a plan to do anything, and went and did it, or who laid his plan before others, and won their co-operation to do it with him, without going to external authorities to please do the thing for them, was a direct actionist. All co-operative experiments are essentially direct action.*
>
> *"Every person who ever in his life had a difference with anyone to settle, and went straight to the other persons involved to settle it, either by a peaceable plan or otherwise, was a direct actionist. Examples of such action are strikes and boycotts; many persons will recall the action of the housewives of New York who boycotted the butchers, and lowered the price of meat; at the present moment a butter boycott seems looming up, as a direct reply to the price-makers for butter.*

> *"These actions are generally not due to any one's reasoning overmuch on the respective merits of directness or indirectness, but are the spontaneous retorts of those who feel oppressed by a situation. In other words, all people are, most of the time, believers in the principle of direct action, and practisers of it."* [**The Voltairine De Cleyre Reader**, pp. 47–8]

So direct action means acting for yourself against injustice and oppression. It can, sometimes, involve putting pressure on politicians or companies, for example, to ensure a change in an oppressive law or destructive practices. However, such appeals are direct action simply because they do not assume that the parties in question we will act for us — indeed the assumption is that change only occurs when we act to create it. Regardless of what it is, *"if such actions are to have the desired empowerment effect, they must be largely self-generated, rather than being devised and directed from above"* and be *"ways in which people could take control of their lives"* so that it *"empowered those who participated in it."* [Martha Ackelsberg, **Free Women of Spain**, p. 55]

So, in a nutshell, direct action is any form of activity which people themselves decide upon and organise themselves which is based on their own collective strength and does not involve getting intermediates to act for them. As such direct action is a natural expression of liberty, of self-government, for direct action *"against the authority in the shop, direct action against the authority of the law, direct action against the invasive, meddlesome authority of our moral code, is the logical, consistent method of Anarchism."* [Emma Goldman, **Red Emma Speaks**, pp. 76–7] It is clear that by acting for yourself you are expressing the ability to govern yourself. Thus it is a means by which people can take control of their own lives. It is a means of self-empowerment and self-liberation.

Anarchists reject the view that society is static and that people's consciousness, values, ideas and ideals cannot be changed. Far from it and anarchists support direct action **because** it actively encourages the transformation of those who use it. Direct action is the means of creating a new consciousness, a means of self-liberation from the chains placed around our minds, emotions and spirits by hierarchy and oppression.

As direct action is the expression of liberty, the powers that be are vitally concerned only when the oppressed use direct action to win its demands, for it is a method which is not easy or cheap to combat. Any hierarchical system is placed into danger when those at the bottom start to act for themselves and, historically, people have invariably gained more by acting directly than could have been won by playing ring around the rosy with indirect means. Direct action tore the chains of open slavery from humanity. Over the centuries it has established individual rights and modified the life and death power of the master class. Direct action won political liberties such as the vote and free speech. Used fully, used wisely and well, direct action can forever end injustice and the mastery of humans by other humans.

In the sections that follow, we will indicate why anarchists are in favour of direct action and why they are against electioneering as a means of change.

J.2.1 Why do anarchists favour using direct action to change things?

Simply because it is effective and it has a radicalising impact on those who practice it. As it is based on people acting for themselves, it shatters the dependency and marginalisation created by hierarchy. This is key:

"What is even more important about direct action is that it forms a decisive step toward recovering the personal power over social life that the centralised, over-bearing bureaucracies have usurped from the people ... we not only gain a sense that we can control the course of social events again; we recover a new sense of selfhood and personality without which a truly free society, based in self-activity and self-management, is utterly impossible." [Murray Bookchin, **Toward an Ecological Society**, p. 47]

By acting for themselves, people gain a sense of their own power and abilities. This is essential if people are to run their own lives. As such, direct action is **the** means by which individuals empower themselves, to assert their individuality, to make themselves count as individuals by organising and acting collectively. It is the opposite of hierarchy, within which individuals are told again and again that they are nothing, are insignificant and must dissolve themselves into a higher power (the state, the company, the party, the people, etc.) and feel proud in participating in the strength and glory of this higher power. Direct action, in contrast, is the means of asserting your individual opinion, interests and happiness, of fighting against self-negation:

> *"man has as much liberty as he is willing to take. Anarchism therefore stands for direct action, the open defiance of, and resistance to, all laws and restrictions, economic, social and moral. But defiance and resistance are illegal. Therein lies the salvation of man. Everything illegal necessitates integrity, self-reliance, and courage. In short, it calls for free independent spirits, for men who are men, and who have a bone in their back which you cannot pass your hand through."* [Emma Goldman, **Red Emma Speaks**, pp. 75–6]

In addition, because direct action is based around individuals solving their own problems, by their own action, it awakens those aspects of individuals crushed by hierarchy and oppression — such as initiative, solidarity, imagination, self-confidence and a sense of individual and collective power, that what you do matters and that you with others like you **can** change the world. Direct action is the means by which people can liberate themselves and educate themselves in the ways of and skills required for self-management and liberty:

> *"Direct action meant that the goal of ... these activities was to provide ways for people to get in touch with their own powers and capacities, to take back the power of naming themselves and their lives ... we learn to think and act for ourselves by joining together in organisations in which our experience, our perception, and our activity can guide and make the change. Knowledge does not precede experience, it flows from it ... People learn to be free only by exercising freedom. [As one Spanish Anarchist put it] 'We are not going to find ourselves . .. with people ready-made for the future ... Without continued exercise of their faculties, there will be no free people ... The external revolution and the internal revolution presuppose one another, and they must be simultaneous in order to be successful.'"* [Martha Ackelsberg, **Free Women of Spain**, pp. 54–5]

So direct action, to use Bookchin's words, is *"the means whereby each individual awakens to the hidden powers within herself and himself, to a new sense of self-confidence and self-competence; it is the means whereby individuals take control of society directly."* [**Op. Cit.**, p. 48]

In addition, direct action creates the need for new forms of social organisation. These new forms of organisation will be informed and shaped by the process of self-liberation, so be more anarchistic and based upon self-management. Direct action, as well as liberating individuals, can also create the free, self-managed organisations which can replace the current hierarchical ones (see section I.2.3). For example, for Kropotkin, unions were *"natural organs for the direct struggle with capitalism and for the composition of the future order."* [quoted by Paul Avrich, **The Russian Anarchists**, p. 81] In other words, direct action helps create the new world in the shell of the old:

> *"direct action not only empowered those who participated in it, it also had effects on others ... [it includes] exemplary action that attracted adherents by the power of the positive example it set. Contemporary examples ... include food or day-care co-ops, collectively run businesses, sweat equity housing programmes, women's self-help health collectives, urban squats or women's peace camps [as well as traditional examples as industrial unions, social centres, etc.]. While such activities empower those who engage in them, they also demonstrate to others that non-hierarchical forms of organisation can and do exist — and that they can function effectively."* [Ackelsberg, **Op. Cit.**, p. 55]

Also, direct action such as strikes encourage and promote class consciousness and class solidarity. According to Kropotkin, *"the strike develops the sentiment of solidarity"* while, for Bakunin, it *"is the beginnings of the social war of the proletariat against the bourgeoisie ... Strikes are a valuable instrument from two points of view. Firstly, they electrify the masses, invigorate their moral energy and awaken in them the feeling of the deep antagonism which exists between their interests and those of the bourgeoisie ... secondly they help immensely to provoke and establish between the workers of all trades, localities and countries the consciousness and very fact of solidarity: a twofold action, both negative and positive, which tends to constitute directly the new world of the proletariat, opposing it almost in an absolute way to the bourgeois world."* [quoted by Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism 1872–1886**, p. 256 and pp. 216–217]

Direct action, therefore, helps to create anarchists and anarchist alternatives within capitalism and statism. As such, it plays an essential role in anarchist theory and activity. For anarchists, direct action *"is not a 'tactic' ... it is a moral principle, an ideal, a sensibility. It should imbue every aspect of our lives and behaviour and outlook."* [Bookchin, **Op. Cit.**, p. 48]

J.2.2 Why do anarchists reject voting as a means for change?

Simply because electioneering does not work. History is littered with examples of radicals being voted into office only to become as, or even more, conservative than the politicians they replaced.

As we have discussed previously (see section B.2) any government is under pressure from two sources of power, the state bureaucracy and big business. This ensures that any attempts at social change would be undermined and made hollow by vested interests, assuming they even reached

that level to begin with (the de-radicalising effects of electioneering is discussed in section J.2.6). Here we will highlight the power of vested interests within democratic government.

For anarchists, the general nature of the state and its role within society is to ensure *"the preservation of the economic 'status quo,' the protection of the economic privileges of the ruling class, whose agent and **gendarme** it is"*. [Luigi Galleani, **The End of Anarchism?**, p. 28] As such, the state and capital restricts and controls the outcome of political action of the so-called sovereign people as expressed by voting.

Taking capital to begin with, if we assume that a relatively reformist government were elected it would soon find itself facing various economic pressures. Either capital would disinvest, so forcing the government to back down in the face of economic collapse, or the government in question would control capital leaving the country and so would soon be isolated from new investment and its currency would become worthless. Either is an effective weapon to control democratically elected governments as before ensure that the economy would be severely damaged and the promised "reforms" would be dead letters. Far fetched? No, not really. As discussed in section D.2.1 such pressures were inflicted on the 1974 Labour Government in Britain and we see the threat reported everyday when the media reports on what *"the markets"* think of government policies or when loans are given only guarantee that the country is structurally adjusted in-line with corporate interests and bourgeous economic dogma.

As far as political pressures go, we must remember that there is a difference between the state and government. The state is the permanent collection of institutions that have entrenched power structures and interests. The government is made up of various politicians. It is the institutions that have power in the state due to their permanence, not the representatives who come and go. In other words, the state bureaucracy has vested interests and elected politicians cannot effectively control them:

> *"Such a bureaucracy consists of armed forces, police forces, and a civil service. These are largely autonomous bodies. Theoretically they are subordinate to a democratically elected Parliament, but the Army, Navy, and Air Forces are controlled by specially trained officers who from their schooldays onwards are brought up in a narrow caste tradition, and who always, in dealing with Parliament, can dominate that body by their superior technical knowledge, professional secrecy, and strategic bluff. As for the bureaucracy proper, the Civil Service, anyone who has had any experience of its inner workings knows the extent to which it controls the Cabinet, and through the Cabinet, Parliament itself. We are really ruled by a secret shadow cabinet ... All these worthy servants of the State are completely out of touch with the normal life of the nation."* [Herbert Read, **Anarchy and Order**, p. 100]

As an aside, it should be noted that while *"in a society of rich and poor nothing is more necessary"* than a bureaucracy as it is *"necessary to protect an unfair distribution of property"* it would be wrong to think that it does not have its own class interests: *"Even if you abolish all other classes and distinctions and retain a bureaucracy you are still far from the classless society, for the bureaucracy is itself the nucleus of a class whose interests are totally opposed to the people it supposedly serves."* [**Op. Cit.**, p. 99 and p. 100]

In addition to the official bureaucracies and their power, there is also the network of behind the scenes agencies which are its arm. This can be termed *"the permanent government"* and *"the secret*

state", respectively. The latter, in Britain, is *"the security services, MI5, Special Branch and the secret intelligence service, MI6."* Other states have their equivalents (the FBI, CIA, and so on in the USA). By the former, it is meant *"the secret state plus the Cabinet Office and upper echelons of Home and Foreign and Commonwealth Offices, the Armed Forces and Ministry of Defence ... and the so-called 'Permanent Secretaries Club,' the network of very senior civil servants — the 'Mandarins.'"* In short, the upper-echelons of the bureaucracy and state apparatus. Add to this *"its satellites"*, including M.P.s (particularly right-wing ones), *"agents of influence"* in the media, former security services personnel, think tanks and opinion forming bodies, front companies of the security services, and so on. [Stephen Dorril and Robin Ramsay, **Smear! Wilson and the Secret State**, pp. X-XI]

These bodies, while theoretically under the control of the elected government, can effectively (via disinformation, black operations, bureaucratic slowdowns, media attacks, etc.) ensure that any government trying to introduce policies which the powers that be disagree with will be stopped. In other words the state is **not** a neutral body, somehow rising above vested interests and politics. It is, and always will be, a institution which aims to protect specific sections of society as well as its own.

An example of this "secret state" at work can be seen in the campaign against Harold Wilson, the Labour Prime Minister of Britain in the 1970s, which resulted in his resignation (as documented by Stephen Dorril and Robin Ramsay). Left-wing Labour M.P. Tony Benn was subjected to intense pressure by "his" Whitehall advisers during the same period:

> *"In early 1975, the campaign against Benn by the media was joined by the secret state. The timing is interesting. In January, his Permanent Secretary had 'declared war' and the following month began the most extraordinary campaign of harassment any major British politician has experienced. While this is not provable by any means, it does look as though there is a clear causal connection between withdrawal of Prime Ministerial support, the open hostility from the Whitehall mandarins and the onset of covert operations."* [Dorril and Ramsay, **Op. Cit.**, p. 279]

This is not to forget the role of the secret state in undermining reformist and radical organisations and movements. This involvement goes from pure information gathering on "subversives", to disruption and repression. Taking the example of the US secret state, Howard Zinn notes that in 1975:

> *"congressional committees ... began investigations of the FBI and CIA.*
>
> *"The CIA inquiry disclosed that the CIA had gone beyond its original mission of gathering intelligence and was conducting secret operations of all kinds ... [for example] the CIA — with the collusion of a secret Committee of Forty headed by Henry Kissinger — had worked to 'destabilize' the [democratically elected, left-wing] Chilean government ...*
>
> *"The investigation of the FBI disclosed many years of illegal actions to disrupt and destroy radical groups and left-wing groups of all kinds. The FBI had sent forged letters, engaged in burglaries ... opened mail illegally, and in the case of Black Panther leader Fred Hampton, seems to have conspired in murder ...*
>
> *"The investigations themselves revealed the limits of government willingness to probe into such activities ... [and they] submitted its findings on the CIA to the CIA to see if*

there was material the Agency wanted omitted." [**A People's History of the United States**, pp. 542–3]

Also, the CIA secretly employs several hundred American academics to write books and other materials to be used for propaganda purposes, an important weapon in the battle for hearts and minds. In other words, the CIA, FBI (and their equivalents in other countries) and other state bodies can hardly be considered neutral bodies, who just follow orders. They are a network of vested interests, with specific ideological viewpoints and aims which usually place the wishes of the voting population below maintaining the state-capital power structure in place.

Therefore we cannot expect a different group of politicians to react in different ways to the same economic and institutional influences and interests. Its no coincidence that left-wing, reformist parties have introduced right-wing, pro-capitalist ("Thatcherite/Reaganite") policies similiar to those right-wing, explicitly pro-capitalist parties have. This is to be expected as the basic function of any political system is to manage the existing state and economic structures and a society's power relationships. It is **not** to alter them radically, The great illusion of politics is the notion that politicians have the power to make whatever changes they like. Looking at the international picture, the question obviously arises as to what real control do the politicians have over the international economy and its institutions or the pattern of world trade and investment. These institutions have great power and, moreover, have a driving force (the profit motive) which is essentially out of control (as can be seen by the regular financial crises during the neo-liberal era).

This can be seen most dramatically in the military coup in Chile against the democratically re-elected (left-wing) Allende government by the military, aided by the CIA, US based corporations and the US government to make it harder for the Allende regime. The coup resulted in thousands murdered and years of terror and dictatorship, but the danger of a pro-labour government was ended and the business environment was made healthy for profits (see section C.11). An extreme example, we know, but an important one for any believer in freedom or the idea that the state machine is somehow neutral and can be captured and used by left-wing parties — particularly as the fate of Chile has been suffered by many other reformist governments across the world.

Of course there have been examples of quite extensive reforms which did benefit working class people in major countries. The New Deal in the USA and the 1945–51 Labour Governments spring to mind. Surely these indicate that our claims are false? Simply put, no, they do not. Reforms can be won from the state when the dangers of not giving in outweigh any weakening of ruling class power implied in the reforms. In the face of economic crisis and working class protest, the ruling elite often tolerates changes it would otherwise fight tooth-and-nail in other circumstances. Reforms will be allowed if they can be used to save the capitalist system and the state from its own excesses and even improve their operation or if not bending will mean being broke in the storm of social protest. After all, the possibility of getting rid of the reforms when they are no longer required will always exist as long as class society remains.

This can be seen from the reformist governments of 1930s USA and 1940s UK. Both faced substantial economic problems and both were under pressure from below, by waves of militant working class struggle which could have developed beyond mere reformism. The waves of sit-down strikes in the 1930s ensured the passing of pro-union laws which allowed workers to organise without fear of being fired. This measure also partly integrated the unions into the capitalist-state machine by making them responsible for controlling "unofficial" workplace ac-

tion (and so ensuring profits). The nationalisation of roughly 20% of the UK economy during the Labour administration of 1945 (the most unprofitable sections of it as well) was also the direct result of ruling class fear. As Conservative M.P. Quintin Hogg acknowledged in the House of Commons on the 17th February 1943: *"If you do not give the people reform they are going to give you revolution"*. Memories of the near revolutions across Europe after the First World War were obviously in many minds, on both sides. Not that nationalisation was particularly feared as "socialism." Indeed it was argued that it was the best means of improving the performance of the British economy. As anarchists at the time noted *"the real opinions of capitalists can be seen from Stock Exchange conditions and statements of industrialists than the Tory Front bench"* and from these it be seen *"that the owning class is not at all displeased with the record and tendency of the Labour Party."* [**Neither Nationalisation nor Privatisation**, Vernon Richards (ed.), p. 9]

History confirms Proudhon's argument that the state *"can only turn into something and do the work of the revolution insofar as it will be so invited, provoked or compelled by some power outside of itself that seizes the initiative and sets things rolling,"* namely by *"a body representative of the proletariat be formed in Paris ... in opposition to the bourgeoisie's representation."* [**Le Représentant du Peuple**, 5th May 1848] So, if extensive reforms have implemented by the state, just remember what they were in response to militant pressure from below and that we could have got so much more. In general, things have little changed since this anarchist argument against electioneering was put forward in the 1880s:

> *"in the electoral process, the working class will always be cheated and deceived ... if they did manage to send, one, or ten, or fifty of them[selves to Parliament], they would become spoiled and powerless. Furthermore, even if the majority of Parliament were composed of workers, they could do nothing. Not only is there the senate ... the chiefs of the armed forces, the heads of the judiciary and of the police, who would be against the parliamentary bills advanced by such a chamber and would refuse to enforce laws favouring the workers (it has happened); but furthermore laws are not miraculous; no law can prevent the capitalists from exploiting the workers; no law can force them to keep their factories open and employ workers at such and such conditions, nor force shopkeepers to sell as a certain price, and so on."* [S. Merlino, quoted by Galleani, **Op. Cit.**, p. 13]

As any worker will tell you, just because there are laws on such things as health and safety, union organising, working hours or whatever, it does not mean that bosses will pay any attention to them. While firing people for joining a union is illegal in America, it does not stop bosses doing so. Similarly, many would be surprised to discover that the 8 hour working day was legally created in many US states by the 1870s but workers had to strike for it in 1886 as it as not enforced. Ultimately, political action is dependent on direct action to be enforced where it counts (in the workplace and streets). And if only direct action can enforce a political decision once it is made, then it can do so beforehand so showing the limitations in waiting for politicians to act.

Anarchists reject voting for other reasons. The fact is that electoral procedures are the opposite of direct action. They are **based** on getting someone else to act on your behalf. Therefore, far from empowering people and giving them a sense of confidence and ability, electioneering **dis**empowers them by creating a "leader" figure from which changes are expected to flow. As Brian Martin observes:

> *"all the historical evidence suggests that parties are more a drag than an impetus to radical change. One obvious problem is that parties can be voted out. All the policy changes they brought in can simply be reversed later.*
>
> *"More important, though, is the pacifying influence of the radical party itself. On a number of occasions, radical parties have been elected to power as a result of popular upsurges. Time after time, the 'radical' parties have become chains to hold back the process of radical change."* [*"Democracy without Elections"*, pp. 123–36, **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 124]

This can easily be seen from the history of various left-wing parties. Labour or socialist parties, elected in periods of social turbulence, have often acted to reassure the ruling elite by dampening popular action that could have threatened capitalist interests. For example, the first action undertaken by the Popular Front elected in France in 1936 was to put an end to strikes and occupations and generally to cool popular militancy, which was the Front's strongest ally in coming to power. The Labour government elected in Britain in 1945 got by with as few reforms as it could, refusing to consider changing basic social structures and simply replaced wage-labour to a boss with wage-labour to the state via nationalisation of certain industries. It did, however, manage to find time within the first days of taking office to send troops in to break a dockers' strike (this was no isolated event: Labour has used troops to break strikes far more often than the Conservatives have).

These points indicate why existing power structures cannot effectively be challenged through elections. For one thing, elected representatives are not **mandated,** which is to say they are not tied in any binding way to particular policies, no matter what promises they have made or what voters may prefer. Around election time, the public's influence on politicians is strongest, but after the election, representatives can do practically whatever they want, because there is no procedure for **instant recall.** In practice it is impossible to recall politicians before the next election, and between elections they are continually exposed to pressure from powerful special-interest groups — especially business lobbyists, state bureaucracies and political party power brokers.

Under such pressure, the tendency of politicians to break campaign promises has become legendary. Generally, such promise breaking is blamed on bad character, leading to periodic "throw-the-bastards-out" fervour — after which a new set of representatives is elected, who also mysteriously turn out to be bastards! In reality it is the system itself that produces "bastards," the sell-outs and shady dealing we have come to expect from politicians. In light of modern "democracy", it is amazing that anyone takes the system seriously enough to vote at all. In fact, voter turnout in the US and other nations where "democracy" is practiced in this fashion is typically low. Nevertheless, some voters continue to participate, pinning their hopes on new parties or trying to reform a major party. For anarchists this activity is pointless as it does not get at the root of the problem, it is the system which shapes politicians and parties in its own image and marginalises and alienates people due to its hierarchical and centralised nature. No amount of party politics can change that.

However, we should make it clear that most anarchists recognise there is a difference between voting for a government and voting in a referendum. Here we are discussing the former, electioneering, as a means of social change. Referenda are closer to anarchist ideas of direct democracy and are, while flawed, far better than electing a politician to office once every four years or so.

In addition, Anarchists are not necessarily against **all** involvement in electoral politics. Some advocate voting when the possible outcome of an election could be disastrous (for example, if a fascist or quasi-fascist party looks likely to win the election). Some Social Ecologists, following Murray Bookchin's arguments, support actual standing in elections and think anarchists by taking part in local elections can use them to create self-governing community assemblies. However, few anarchists support such means to create community assemblies (see section J.5.14 for a discussion on this).

The problem of elections in a statist system, even on a local scale, means that the vast majority of anarchists reject voting as a means of change. Instead we wholeheartedly support direct action as the means of getting improvements in the here and now as well as the means of creating an alternative to the current system.

J.2.3 What are the political implications of voting?

At its most basic, voting implies agreement with the status quo. It is worth quoting the Scottish libertarian socialist James Kelman at length on this:

> *"State propaganda insists that the reason why at least 40 percent of the voting public don't vote at all is because they have no feelings one way or the other. They say the same thing in the USA, where some 85 percent of the population are apparently 'apolitical' since they don't bother registering a vote. Rejection of the political system is inadmissible as far as the state is concerned ... Of course the one thing that does happen when you vote is that someone else has endorsed an unfair political system ... A vote for any party or any individual is always a vote for the political system. You can interpret your vote in whichever way you like but it remains an endorsement of the apparatus ... If there was any possibility that the apparatus could effect a change in the system then they would dismantle it immediately. In other words the political system is an integral state institution, designed and refined to perpetuate its own existence. Ruling authority fixes the agenda by which the public are allowed 'to enter the political arena' and that's the fix they've settled on."* [**Some Recent Attacks**, p. 87]

We are taught from an early age that voting in elections is right and a duty. In US schools, for example, children elect class presidents and other officers. Often mini-general elections are held to "educate" children in "democracy." Periodically, election coverage monopolises the media. We are made to feel guilty about shirking our "civic responsibility" if we do not vote. Countries that have no elections, or only rigged elections, are regarded as failures. As a result, elections have become a quasi-religious ritual. Yet, in reality, *"elections in practice have served well to maintain dominant power structures such as private property, the military, male domination, and economic inequality. None of these has been seriously threatened through voting. It is from the point of view of radical critics that elections are most limiting."* [*"Democracy without Elections"*, pp. 123–36, **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 124]

Elections serve the interests of state power in other ways. First, voting helps to legitimate government; hence suffrage has often been expanded at times when there was little popular demand for it but when mass support of government was crucial, as during a war or revolution. Second, it comes to be seen as the only legitimate form of political participation, thus making

it likely that any revolts by oppressed or marginalised groups will be viewed by the general public as illegitimate. It helps focus attention away from direct action and building new social structures back into institutions which the ruling class can easily control. The general election during the May '68 revolt in France, for example, helped diffuse the revolutionary situation, as did the elections during the Argentine revolt against neo-liberalism in the early 2000s.

So by turning political participation into the "safe" activities of campaigning and voting, elections have reduced the risk of more radical direct action as well as building a false sense of power and sovereignty among the general population. Voting disempowers the grassroots by diverting energy from grassroots action. After all, the goal of electoral politics is to elect a representative who will act **for** us. Therefore, instead of taking direct action to solve problems ourselves, action becomes indirect, though the government. This is an insidiously easy trap to fall into, as we have been conditioned in hierarchical society from day one into attitudes of passivity and obedience, which gives most of us a deep-seated tendency to leave important matters to the "experts" and "authorities." Kropotkin described well the net effect:

> *"Vote! Greater men that you will tell you the moment when the self-annihilation of capital has been accomplished. They will then expropriate the few usurpers left ... and you will be freed without having taken any more trouble than that of writing on a bit of paper the name of the man whom the heads of your faction of the party told you to vote for!"* [quoted by Ruth Kinna, *"Kropotkin's theory of Mutual Aid in Historical Context"*, pp. 259–283, **International Review of Social History**, No. 40, pp. 265–6]

Anarchists also criticise elections for giving citizens the false impression that the government serves, or can serve, the people. As Martin remains us *"the founding of the modern state a few centuries ago was met with great resistance: people would refuse to pay taxes, to be conscripted or to obey laws passed by national governments. The introduction of voting and the expanded suffrage have greatly aided the expansion of state power. Rather than seeing the system as one of ruler and ruled, people see at least the possibility of using state power to serve themselves. As electoral participation has increased, the degree of resistance to taxation, military service, and the immense variety of laws regulating behaviour, has been greatly attenuated"* [**Op. Cit.**, p. 126]

Ironically, voting has legitimated the growth of state power to such an extent that the state is now beyond any real popular control by the form of participation that made that growth possible. Nevertheless, the idea that electoral participation means popular control of government is so deeply implanted in people's psyches that even the most overtly sceptical radical often cannot fully free themselves from it.

Therefore, voting has the important political implication of encouraging people to identify with state power and to justify the status quo. In addition, it feeds the illusion that the state is neutral and that electing parties to office means that people have control over their own lives. Moreover, elections have a tendency to make people passive, to look for salvation from above and not from their own self-activity. As such it produces a division between leaders and led, with the voters turned into spectators of activity, not the participants within it.

All this does not mean, obviously, that anarchists prefer dictatorship or an "enlightened" monarchy. Far from it, democratising state power can be an important step towards abolishing it. All anarchists agree with Bakunin when he argued that *"the most imperfect republic is a thousand times better that even the most enlightened monarchy."* [quoted by Daniel Guerin, **Anarchism**, p. 20] It simply means that anarchists refuse to join in with the farce of electioneering,

particularly when there are more effective means available for changing things for the better. Anarchists reject the idea that our problems can be solved by the very institutions that cause them in the first place!

J.2.4 Surely voting for radical parties will be effective?

There is no doubt that voting can lead to changes in policies, which can be a good thing as far as it goes. However, such policies are formulated and implemented within the authoritarian framework of the hierarchical capitalist state — a framework which itself is never open to challenge by voting. On the contrary, voting legitimates the state framework ensuring that social change will be (at best) mild, gradual, and reformist rather than rapid and radical. Indeed, the "democratic" process has resulted in all successful political parties becoming committed to "more of the same" or tinkering with the details at best (which is usually the limits of any policy changes). This seems unlikely to change.

Given the need for radical systemic changes as soon as possible due to the exponentially accelerating crises of modern civilisation, working for gradual reforms within the electoral system must be seen as a potentially deadly tactical error. Electioneering has always been the death of radicalism. Political parties are only radical when they do not stand a chance of election. However, many social activists continue to try to use elections, so participating in the system which disempowers the majority and so helps create the social problems they are protesting against. It should be a widely recognised truism in radical circles that elections empower the politicians and not the voters. Thus elections focus attention to a few leaders, urging them to act **for** rather than acting for ourselves (see section H.1.5). If genuine social change needs mass participation then, by definition, using elections will undermine that. This applies to within the party as well, for working "within the system" disempowers grassroots activists, as can be seen by the Green party in Germany during the early eighties. The coalitions into which the Greens entered with Social Democrats in the German legislature often had the effect of strengthening the status quo by co-opting those whose energies might otherwise have gone into more radical and effective forms of activism. Principles were ignored in favour of having some influence, so producing watered-down legislation which tinkered with the system rather than transforming it.

As discussed in section H.3.9, the state is more complicated than the simple organ of the economically dominant class pictured by Marxists. There are continual struggles both inside and outside the state bureaucracies, struggles that influence policies and empower different groups of people. This can produce clashes with the ruling elite, while the need of the state to defend the system **as a whole** causes conflict with the interests of sections of the capitalist class. Due to this, many radical parties believe that the state is neutral and so it makes sense to work within it — for example, to obtain labour, consumer, and environmental protection laws. However, this reasoning ignores the fact that the organisational structure of the state is not neutral. To quote Brian Martin:

> *"The basic anarchist insight is that the structure of the state, as a centralised administrative apparatus, is inherently flawed from the point of view of human freedom and equality. Even though the state can be used occasionally for valuable ends, as a means the state is flawed and impossible to reform. The non-reformable aspects of the state include, centrally, its monopoly over 'legitimate' violence and its consequent power to*

coerce for the purpose of war, internal control, taxation and the protection of property and bureaucratic privilege.

"The problem with voting is that the basic premises of the state are never considered open for debate, much less challenge. The state's monopoly over the use of violence for war is never at issue. Neither is the state's use of violence against revolt from within. The state's right to extract economic resources from the population is never questioned. Neither is the state's guarantee of either private property (under capitalism) or bureaucratic prerogative (under state socialism) – or both." ["*Democracy without Elections*", pp. 123–36, **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 127]

It may be argued that if a new political group is radical enough it will be able to use state power for good purposes. While we discuss this in more detail in section J.2.6, let us consider a specific case, that of the Greens as many of them believe that the best way to achieve their aims is to work within the current political system.

By pledging to use the electoral system to achieve change, Green parties necessarily commit themselves to formulating their proposals as legislative agendas. But once legislation is passed, the coercive mechanisms of the state will be needed to enforce it. Therefore, Green parties are committed to upholding state power. However, our analysis in section B.2 indicated that the state is a set of hierarchical institutions through which a ruling elite dominates society and individuals. And, as we have seen in section E, ecologists, feminists, and peace activists – who are key constituencies of the Green movement — all need to **dismantle** hierarchies and domination in order to achieve their respective aims. Therefore, since the state is not only the largest and most powerful hierarchy but also serves to maintain the hierarchical form of all major institutions in society (since this form is the most suitable for achieving ruling-class interests), the state itself is the main obstacle to the success of key constituencies of the Green movement. Hence it is impossible **in principle** for a parliamentary Green party to achieve the essential objectives of the Green movement. A similar argument would apply to any radical party whose main emphasis was social justice, which like the goals of feminists, radical ecologists, and peace activists, depends on dismantling hierarchies.

As we argued in the previous section, radical parties are under pressure from economic and state bureaucracies that ensure that even a sincere radical party would be powerless to introduce significant reforms. The only real response to the problems of representative democracy is to urge people not to vote. Such anti-election campaigns can be a valuable way of making others aware of the limitations of the current system, which is a necessary condition for their seriously considering the anarchist alternative of using direct action and build alternative social and economic organisations. The implications of abstentionism are discussed in the next section.

J.2.5 Why do anarchists support abstentionism and what are its implications?

At its most basic, anarchists support abstentionism because *"participation in elections means the transfer of one's will and decisions to another, which is contrary to the fundamental principles of anarchism."* [Emma Goldman, **Vision on Fire**, p. 89] For, as Proudhon stressed, in a statist

democracy, the people *"is limited to choosing, every three or four years, its chiefs and its imposters."* [quoted by George Woodcock, **Pierre-Joseph Proudhon**, p. 152]

If you reject hierarchy then participating in a system by which you elect those who will govern you is almost like adding insult to injury! For, as Luigi Galleani pointed out, *"whoever has the political competence to choose his own rulers is, by implication, also competent to do without them."* [**The End of Anarchism?**, p. 37] In other words, because anarchists reject the idea of authority, we reject the idea that picking the authority (be it bosses or politicians) makes us free. Therefore, anarchists reject governmental elections in the name of self-government and free association. We refuse to vote as voting is endorsing authoritarian social structures. We are (in effect) being asked to make obligations to the state, not our fellow citizens, and so anarchists reject the symbolic process by which our liberty is alienated from us.

Anarchists are aware that elections serve to legitimate government. We have always warned that since the state is an integral part of the system that perpetuates poverty, inequality, racism, imperialism, sexism, environmental destruction, and war, we should not expect to solve any of these problems by changing a few nominal state leaders every four or five years. Therefore anarchists (usually) advocate abstentionism at election time as a means of exposing the farce of "democracy", the disempowering nature of elections and the real role of the state.

For anarchists, then, when you vote, you are choosing between rulers. Instead of urging people to vote we raise the option of choosing to rule yourself, to organise freely with others — in your workplace, in your community, everywhere — as equals. The option of something you cannot vote for, a new society. Instead of waiting for others to make some changes for you, anarchists urge that you do it yourself. In this way, you cannot but build an alternative to the state which can reduce its power now and, in the long run, replace it. This is the core of the anarchist support for abstentionism.

In addition, beyond this basic anarchist rejection of elections from an anti-statist position, anarchists also support abstentionism as it allows us to put across our ideas at election time. It is a fact that at such times people are often more interested in politics than usual. So, by arguing for abstentionism we can get our ideas across about the nature of the current system, how elected politicians do not control the state bureaucracy, now the state acts to protect capitalism and so on. In addition, it allows us to present the ideas of direct action and encourage those disillusioned with political parties and the current system to become anarchists by presenting a viable alternative to the farce of politics. For, after all, a sizeable percentage of non-voters and voters are disillusioned with the current set-up. Many who vote do so simply against the other candidate, seeking the least-worse option. Many who do not vote do so for essentially political reasons, such as being fed up with the political system, failing to see any major differences between the parties, or recognition that the candidates were not interested in people like them. These non-voters are often disproportionately left-leaning, compared with those who did vote. So, anarchist abstentionism is a means of turning this negative reaction to an unjust system into positive activity.

So, anarchist opposition to electioneering has deep political implications which Luigi Galleani addressed when he wrote:

> *"The anarchists' electoral abstentionism implies not only a conception that is opposed to the principle of representation (which is totally rejected by anarchism), it implies above all an absolute lack of confidence in the State ... Furthermore, anarchist abstentionism*

has consequences which are much less superficial than the inert apathy ascribed to it by the sneering careerists of 'scientific socialism' [i.e. Marxism]. It strips the State of the constitutional fraud with which it presents itself to the gullible as the true representative of the whole nation, and, in so doing, exposes its essential character as representative, procurer and policeman of the ruling classes.

"Distrust of reforms, of public power and of delegated authority, can lead to direct action [in the class struggle] ... It can determine the revolutionary character of this ... action; and, accordingly, anarchists regard it as the best available means for preparing the masses to manage their own personal and collective interests; and, besides, anarchists feel that even now the working people are fully capable of handling their own political and administrative interests." [**Op. Cit.**, pp. 13–14]

Therefore abstentionism stresses the importance of self-activity and self-libertarian as well as having an important educational effect in highlighting that the state is not neutral but serves to protect class rule and that meaningful change only comes from below, by direct action. For the dominant ideas within any class society reflect the opinions of the ruling elite of that society and so any campaign at election times which argues for abstentionism and indicates why voting is a farce will obviously challenge them. In other words, abstentionism combined with direct action and the building of libertarian alternatives is a very effective means of changing people's ideas and encouraging a process of self-education and, ultimately, self-liberation.

In summary, anarchists urge abstentionism in order to **encourage** activity, not apathy. Not voting is **not** enough, and anarchists urge people to **organise** and **resist** as well. Abstentionism must be the political counterpart of class struggle, self-activity and self-management in order to be effective — otherwise it is as pointless as voting is.

J.2.6 What are the effects of radicals using electioneering?

While many radicals would be tempted to agree with our analysis of the limitations of electioneering and voting, few would automatically agree with anarchist abstentionist arguments. Instead, they argue that we should combine direct action with electioneering. In that way (it is argued) we can overcome the limitations of electioneering by invigorating it with self-activity. In addition, they suggest, the state is too powerful to leave in the hands of the enemies of the working class. A radical politician will refuse to give the orders to crush social protest that a right-wing, pro-capitalist one would.

While these are important arguments in favour of radicals using elections, they ultimately fail to take into account the nature of the state and the corrupting effect it has on radicals. This reformist idea has met a nasty end. If history is anything to go by, the net effect of radicals using elections is that by the time they are elected to office the radicals will happily do what they claimed the right-wing would have done. In 1899, for example, the Socialist Alexandre Millerand joined the French Government. Nothing changed. During industrial disputes strikers *"appealed to Millerand for help, confident that, with him in the government, the state would be on their side. Much of this confidence was dispelled within a few years. The government did little more for workers than its predecessors had done; soldiers and police were still sent in to repress serious strikes."* [Peter N. Stearns, **Revolutionary Syndicalism and French Labour**, p. 16] Aristide

Briand, another socialist politician was the Minister of the Interior in 1910 and *"broke a general strike of railwaymen by use of the most draconian methods. Having declared a military emergency he threatened all strikers with court martial."* [Jeremy Jennings, **Syndicalism in France** p. 36] These events occurred, it should be noted, during the period when social democratic parties were self-proclaimed revolutionaries and arguing against anarcho-syndicalism by using the argument that working people needed their own representatives in office to stop troops being used against them during strikes!

Looking at the British Labour government of 1945 to 1951 we find the same actions. What is often considered the most left-wing Labour government ever used troops to break strikes in every year it was in office, starting with a dockers' strike days after it became the new government. Again, in the 1970s, Labour used troops to break strikes. Indeed, the Labour Party has used troops to break strikes more often than the Conservative Party.

Many blame the individuals elected to office for these betrayals, arguing that we need to elect **better** politicians, select **better** leaders. For anarchists nothing could be more wrong as its the means used, not the individuals involved, which is the problem. Writing of his personal experience as a member of Parliament, Proudhon recounted that *"[a]s soon as I set foot in the parliamentary Sinai, I ceased to be in touch with the masses; because I was absorbed by my legislative work, I entirely lost sight of the current events ... One must have lived in that isolator which is called a National Assembly to realise how the men who are most completely ignorant of the state of the country are almost always those who represent it."* There was *"ignorance of daily facts"* and *"fear of the people"* (*"the sickness of all those who belong to authority"*) for *"the people, for those in power, are the enemy."* [**The Anarchist Reader**, p. 111] Ultimately, as syndicalist Emile Pouget argued, this fate was inevitable as any socialist politician *"could not break the mould; he is only a cog in the machine of oppression and whether he wishes it or not he must, as minister, participate in the job of crushing the proletariat."* [quoted by Jennings, **Op. Cit.**, p. 36]

These days, few enter Parliament as radicals like Proudhon. The notion of using elections for radical change is rare. Such a development in itself shows the correctness of the anarchist critique of electioneering. At its most basic, electioneering results in the party using it becoming more moderate and reformist — it becomes the victim of its own success. In order to gain votes, the party must appear "moderate" and "practical" and that means working within the system:

> *"Participation in the politics of the bourgeois States has not brought the labour movement a hair's-breadth nearer to Socialism, but thanks to this method, Socialism has almost been completely crushed and condemned to insignificance ... Participation in parliamentary politics has affected the Socialist Labour movement like an insidious poison. It destroyed the belief in the necessity of constructive Socialist activity, and, worse of all, the impulse to self-help, by inoculating people with the ruinous delusion that salvation always comes from above."* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 54]

This corruption does not happen overnight. Alexander Berkman indicated how it slowly developed:

> *"In former days the Socialists ... claimed that they meant to use politics only for the purpose of propaganda ... and took part in elections on order to have an opportunity to advocate Socialism*

"It may seem a harmless thing but it proved the undoing of Socialism. Because nothing is truer than the means you use to attain your object soon themselves become your object ... Little by little they changed their attitude. Instead of electioneering being merely an educational method, it gradually became their only method to secure political office, to get elected to legislative bodies and other government positions. The change naturally led the Socialists to tone down their revolutionary ardour; it compelled them to soften their criticism of capitalism and government in order to avoid persecution and secure more votes ... they have ceased to be revolutionists; they have become reformers who want to change things by law ... And everywhere, without exception, they have followed the same course, everywhere they have forsworn their ideals, have duped the masses ... There is a deeper reason for this constant and regular betrayal [than individual scoundrels being elected] ... no man turns scoundrel or traitor overnight.

*"It is **power** which corrupts ... The filth and contamination of politics everywhere proves that. Moreover, even with the best intentions Socialists in legislative bodies or in governments find themselves entirely powerless to accomplishing anything of a socialistic nature .. . The demoralisation and vitiation take place little by little, so gradually that one hardly notices it himself ... [The elected Socialist] finds himself in a strange and unfriendly atmosphere ... and he must participate in the business that is being transacted. Most of that business ... has no bearing whatever on the things the Socialist believes in, no connection with the interests of the working class voters who elected him ... when a bill of some bearing upon labour ... comes up ... he is ignored or laughed at for his impractical ideas on the matter ...*

"Our Socialist perceives that he is regarded as a laughing stock [by the other politicians] ... and finds more and more difficulty in securing the floor... he knows that neither by his talk nor by his vote can he influence the proceedings ... His speeches don't even reach the public ... He appeals to the voters to elect more comrades. .. Years pass ... [and a] number ... are elected. Each of them goes through the same experience ... [and] quickly come to the conclusion . .. [that they] must show that they are practical men ... that they are doing something for their constituency ... In this manner the situation compels them to take a 'practical' part in the proceedings, to 'talk business,' to fall in line with the matters actually dealt with in the legislative body ... Spending years in that atmosphere, enjoying good jobs and pay, the elected Socialists have themselves become part and parcel of the political machinery ... With growing success in elections and securing political power they turn more and more conservative and content with existing conditions. Removal from the life and suffering of the working class, living in the atmosphere of the bourgeoisie ... they have become what they call 'practical' ... Power and position have gradually stifled their conscience and they have not the strength and honesty to swim against the current ... They have become the strongest bulwark of capitalism." [**What is Anarchism?**, pp. 92–8]

So the *"political power which they had wanted to conquer had gradually conquered their Socialism until there was scarcely anything left of it."* [Rocker, **Op. Cit.**, p. 55]

Not that these arguments are the result of hindsight, we must add. Bakunin was arguing in the early 1870s that the *"inevitable result [of using elections] will be that workers' deputies, transferred*

to a purely bourgeois environment, and into an atmosphere of purely bourgeois political ideas ... will become middle class in their outlook, perhaps even more so than the bourgeois themselves." As long as universal suffrage *"is exercised in a society where the people, the mass of workers, are **economically** dominated by a minority holding exclusive possession the property and capital of the country"* elections *"can only be illusory, anti-democratic in their results."* [**The Political Philosophy of Bakunin**, p. 216 and p. 213] This meant that *"the election to the German parliament of one or two workers ... from the Social Democratic Party"* was *"not dangerous"* and, in fact, was *"highly useful to the German state as a lightning-rod, or a safety-valve."* Unlike the *"political and social theory"* of the anarchists, which *"leads them directly and inexorably to a complete break with all governments and all forms of bourgeois politics, leaving no alternative but social revolution,"* Marxism, he argued, *"inexorably enmeshes and entangles its adherents, under the pretext of political tactics, in endless accommodation with governments and the various bourgeois political parties — that is, it thrusts them directly into reaction."* [Bakunin, **Statism and Anarchy**, p. 193 and pp. 179–80] In the case of the German Social Democrats, this became obvious in 1914, when they supported their state in the First World war, and after 1918, when they crushed the German Revolution.

So history proved Bakunin's prediction correct (as it did with his prediction that Marxism would result in elite rule). Simply put, for anarchists, the net effect of socialists using bourgeois elections would be to put them (and the movements they represent) into the quagmire of bourgeois politics and influences. In other words, the parties involved will be shaped by the environment they are working within and not vice versa.

History is littered with examples of radical parties becoming a part of the system. From Marxian Social Democracy at the turn of the 19th century to the German Green Party in the 1980s, we have seen radical parties, initially proclaiming the need for direct action and extra-parliamentary activity denouncing these activities once in power. From only using parliament as a means of spreading their message, the parties involved end up considering votes as more important than the message. Janet Biehl sums up the effects on the German Green Party of trying to combine radical electioneering with direct action:

> *"the German Greens, once a flagship for the Green movement worldwide, should now be considered stink normal, as their **de facto** boss himself declares. Now a repository of careerists, the Greens stand out only for the rapidity with which the old cadre of careerism, party politics, and business-as-usual once again played itself out in their saga of compromise and betrayal of principle. Under the superficial veil of their old values — a very thin veil indeed, now — they can seek positions and make compromises to their heart's content ... They have become 'practical,' 'realistic' and 'power-orientated.' This former New Left ages badly, not only in Germany but everywhere else. But then, it happened with the S.P.D. [The German Social Democratic Party] in August 1914, then why not with Die Grunen in 1991? So it did."* [*"Party or Movement?"*, **Greenline**, no. 89, p. 14]

This, sadly, is the end result of all such attempts. Ultimately, supporters of using political action can only appeal to the good intentions and character of their candidates. Anarchists, however, present an analysis of state structures and other influences that will determine how the character of the successful candidates will change. In other words, in contrast to Marxists and other radicals, anarchists present a materialist, scientific analysis of the dynamics of electioneer-

ing and its effects on radicals. Like most forms of idealism, the arguments of Marxists and other radicals flounder on the rocks of reality.

However, many radicals refuse to learn this lesson of history and keep trying to create a new party which will not repeat the saga of compromise and betrayal which all other radical parties have suffered. And they say that anarchists are utopian! *"You cannot dive into a swamp and remain clean."* [Berkman, **Op. Cit.**, p. 99] Such is the result of rejecting (or "supplementing" with electioneering) direct action as the means to change things, for any social movement *"to ever surrender their commitment to direct action for 'working within the system' is to destroy their personality as socially innovative movements. It is to dissolve back into the hopeless morass of 'mass organisations' that seek respectability rather than change."* [Murray Bookchin, **Toward an Ecological Society**, p. 47]

Moreover, the use of electioneering has a centralising effect on the movements that use it. Political actions become considered as parliamentary activities made **for** the population by their representatives, with the 'rank and file' left with no other role than that of passive support. Only the leaders are actively involved and the main emphasis falls upon them and it soon becomes taken for granted that they should determine policy. Conferences become little more than rallies with politicians freely admitting that they will ignore any conference decisions as and when required. Not to mention the all-too-common sight of politicians turning round and doing the exact opposite of what they promised. In the end, party conferences become simply like parliamentary elections, with party members supporting this leader against another.

Soon the party reflects the division between manual and mental labour so necessary for the capitalist system. Instead of working class self-activity and self-determination, there is a substitution of a non-working class leadership acting **for** people. This replaces self-management in social struggle and within the party itself. Electoralism strengthens the leaders dominance over the party and the party over the people it claims to represent. The real causes and solutions to the problems we face are mystified by the leadership and rarely discussed in order to concentrate on the popular issues that will get them elected. Ultimately, radicals *"instead of weakening the false and enslaving belief in law and government ... actually work to **strengthen** the people's faith in forcible authority and government."* [Berkman, **Op. Cit.**, p. 100] Which has always proved deadly to encouraging a spirit of revolt, self-management and self-help – the very keys to creating change in a society. Thus this 1870 resolution of the Spanish section of the First International seems to have been proven to be correct:

> *"Any participation of the working class in the middle class political government would merely consolidate the present state of affairs and necessarily paralyse the socialist revolutionary action of the proletariat. The Federation [of unions] is the true representative of labour, and should work outside the political system."* [quoted by Jose Pierats, **Anarchists in the Spanish Revolution**, p. 169]

Instead of trying to gain control of the state, for whatever reasons, anarchists try to promote a culture of resistance within society that makes the state subject to pressure from outside (see section J.2.9). And, we feel, history has proven us right time and time again.

J.2.7 Surely we should vote for reformist parties in order to expose them?

Some Leninist socialists (like the British **Socialist Workers Party** and its offshoots) argue that we should urge people to vote for Labour and other social democratic parties. In this they follow Lenin's 1920 argument against the anti-Parliamentarian left that revolutionaries *"help"* elect such parties as many workers still follow their lead so that they will be *"convinced by their own experience that we are right,"* that such parties *"are absolutely good for nothing, that they are petty-bourgeois and treacherous by nature, and that their bankruptcy is inevitable."* If we *"want the **masses** to follow us"*, we need to *"support"* such parties *"in the same way as the rope supports a hanged man."* In this way, by experiencing the reformists in official, *"the majority will soon become disappointed in their leaders and will begin to support communism."* [**The Lenin Anthology**, p. 603, p. 605 and p. 602]

This tactic is suggested for two reasons. The first is that revolutionaries will be able to reach more people by being seen to support popular, trade union based, parties. If they do not, then they are in danger of alienating sizeable sections of the working class by arguing that such parties will be no better than explicitly pro-capitalist ones. The second, and the more important one, is that by electing reformist parties into office the experience of living under such a government will shatter whatever illusions its supporters had in them. The reformist parties will be given the test of experience and when they betray their supporters to protect the status quo it will radicalise those who voted for them, who will then seek out **real** socialist parties (namely the likes of the SWP and ISO).

Libertarians reject these arguments for three reasons.

Firstly, it is deeply dishonest as it hides the true thoughts of those who support the tactic. To tell the truth is a revolutionary act. Radicals should not follow the capitalist media by telling half-truths, distorting the facts, hiding what they believe or supporting a party they are opposed to. If this means being less popular in the short run, then so be it. Attacking nationalism, capitalism, religion, or a host of other things can alienate people but few revolutionaries would be so opportunistic as to hold their tongues on these. In the long run being honest about your ideas is the best way of producing a movement which aims to get rid of a corrupt social system. Starting such a movement with half-truths is doomed to failure.

Secondly, anarchists reject the basis of this argument. The logic underlying it is that by being disillusioned by their reformist leaders and party, voters will look for **new,** "better" leaders and parties. However, this fails to go to the root of the problem, namely the dependence on leaders which hierarchical society creates within people. Anarchists do not want people to follow the "best" leadership, they want them to govern themselves, to be **self**-active, manage their own affairs and not follow **any** would-be leaders. If you seriously think that the liberation of the oppressed is the task of the oppressed themselves (as Leninists claim to do) then you **must** reject this tactic in favour of ones that promote working class self-activity.

The third reason we reject this tactic is that it has been proven to fail time and time again. What most of its supporters seem to fail to notice is that voters have indeed put reformist parties into office many times. Lenin suggested this tactic in 1920 and there has been no general radicalisation of the voting population by this method, nor even in reformist party militants in spite of the many Labour Party governments in Britain which all attacked the working class. Moreover, the

disillusionment associated with the experience of reformist parties often expresses itself as a demoralisation with socialism **as such**, rather than with the reformist's watered down version of it. If Lenin's position could be persuasive to some in 1920 when it was untried, the experience of subsequent decades should show its weakness.

This failure, for anarchists, is not surprising, considering the reasons why we reject this tactic. Given that this tactic does not attack hierarchy or dependence on leaders, does not attack the ideology and process of voting, it will obviously fail to present a real alternative to the voting population (who will turn to other alternatives available at election time and not embrace direct action). Also the sight of a so-called "socialist" or "radical" government managing capitalism, imposing cuts, breaking strikes and generally attacking its supporters will damage the credibility of any form of socialism and discredit all socialist and radical ideas in the eyes of the population. If the experience of the Labour Government in Britain during the 1970s and New Labour after 1997 are anything to go by, it may result in the rise of the far-right who will capitalise on this disillusionment.

By refusing to argue that no government is "on our side," radicals who urge us to vote reformist "without illusions" help to disarm theoretically the people who listen to them. Working class people, surprised, confused and disorientated by the constant "betrayals" of left-wing parties may turn to right wing parties (who can be elected) to stop the attacks rather than turn to direct action as the radical minority within the working class did not attack voting as part of the problem. How many times must we elect the same party, go through the same process, the same betrayals before we realise this tactic does not work? Moreover, if it **is** a case of having to experience something before people reject it, few state socialists take this argument to its logical conclusion. We rarely hear them argue we must experience the hell of fascism or Stalinism or the nightmare of free market capitalism in order to ensure working class people "see through" them.

Anarchists, in contrast, say that we can argue against reformist politics without having to associate ourselves with them by urging people to vote for them. By arguing for abstentionism we can help to theoretically arm the people who will come into conflict with these parties once they are in office. By arguing that all governments will be forced to attack us (due to the pressure from capital and state) and that we have to rely on our own organisations and power to defend ourselves, we can promote working class self-confidence in its own abilities, and encourage the rejection of capitalism, the state and hierarchical leadership as well as the use of direct action.

Finally, we must add, it is not required for radicals to associate themselves with the farce of parliamentary propaganda in order to win people over to our ideas. Non-anarchists will see us use **direct action,** see us **act,** see the anarchistic alternatives we create and see our propaganda. Non-anarchists can be reached quite well without taking part in, or associating ourselves with, parliamentary action.

J.2.8 Will abstentionism lead to the right winning elections?

Possibly. However anarchists don't just say "don't vote", we say "organise" as well. Apathy is something anarchists have no interest in encouraging.

The reasons **why** people abstain is more important than the act. The idea that the USA is closer to anarchy because around 50% of people do not vote is nonsense. Abstentionism in this case is the product of apathy and cynicism, not political ideas. So anarchists recognise that apathetic

abstentionism is **not** revolutionary or an indication of anarchist sympathies. It is produced by apathy and a general level of cynicism at **all** forms of political ideas and the possibility of change.

That is why anarchist abstentionism always stresses the need for direct action and organising economically and socially to change things, to resist oppression and exploitation. In such circumstances, the effect of an electoral strike would be fundamentally different than an apathy induced lack of voting. *"If the anarchists"*, Vernon Richards argued, *"could persuade half the electorate to abstain from voting this would, from an electoral point of view, contribute to the victory of the Right. But it would be a hollow victory, for what government could rule when half the electorate by not voting had expressed its lack of confidence in all governments?"* The party in office would have to rule over a country in which a sizeable minority, even a majority, had rejected government as such. This would mean that the politicians *"would be subjected to real pressures from people who believed in their own power"* and acted accordingly. So anarchists call on people **not** to vote, but instead organise themselves and be conscious of their own power. Only this *"can command the respect of governments, can curb the power of government as millions of crosses on bits of paper never will."* [**The Impossibilities of Social Democracy**, p. 142]

For, as Emma Goldman pointed out, *"if the Anarchists were strong enough to swing the elections to the Left, they must also have been strong enough to rally the workers to a general strike, or even a series of strikes ... In the last analysis, the capitalist class knows too well that officials, whether they belong to the Right or the Left, can be bought. Or they are of no consequence to their pledge."* [**Vision on Fire**, p. 90] The mass of the population, however, cannot be bought off and if they are willing and able to resist then they can become a power second to none. Only by organising, fighting back and practicing solidarity where we live and work can we **really** change things. That is where **our** power lies, that is where we can create a **real** alternative. By creating a network of self-managed, pro-active community and workplace organisations we can impose by direct action that which politicians can never give us from Parliament. Only such a movement can stop the attacks upon us by whoever gets into office. A government (left or right) which faces a mass movement based upon direct action and solidarity will always think twice before proposing cuts or introducing authoritarian laws. Howard Zinn expressed it well:

> *"I think a way to behave is to think not in terms of representative government, not in terms of voting, not in terms of electoral politics, but thinking in terms of organising social movements, organising in the workplace, organising in the neighborhood, organising collectives that can become strong enough to eventually take over — first to become strong enough to resist what has been done to them by authority, and second, later, to become strong enough to actually take over the institutions ... the crucial question is not who is in office, but what kind of social movement do you have. Because we have seen historically that if you have a powerful social movement, it doesn't matter who is in office. Whoever is in office, they could be Republican or Democrat, if you have a powerful social movement, the person in office will have to yield, will have to in some ways respect the power of social movements ... voting is not crucial, and organising is the important thing."* [**An Interview with Howard Zinn on Anarchism: Rebels Against Tyranny**]

Of course, all the parties claim that they are better than the others and this is the logic of this question — namely, we must vote for the lesser evil as the right-wing in office will be terrible.

But what this forgets is that the lesser evil is still an evil. What happens is that instead of the greater evil attacking us, we get the lesser evil doing what the right-wing was going to do. Let us not forget it was the "lesser evil" of the Democrats (in the USA) and Labour (in the UK) who first introduced, in the 1970s, the monetarist and other policies that Reagan and Thatcher made their own in the 1980s.

This is important to remember. The central fallacy in this kind of argument is the underlying assumption that "the left" will **not** implement the same kind of policies as the right. History does not support such a perspective and it is a weak hope to place a political strategy on. As such, when people worry that a right-wing government will come into power and seek to abolish previous social gains (such as abortion rights, welfare programmes, union rights, and so forth) they seem to forget that so-called left-wing administrations have also undermined such reforms. In response to queries by the left on how anarchists would seek to defend such reforms if their abstentionism aided the victory of the right, anarchists reply by asking the left how they seek to defend such reforms when their "left-wing" government starts to attack them.

Ultimately, voting for other politicians will make little difference. The reality is that politicians are puppets. As we argued in section J.2.2, real power in the state does not lie with politicians, but instead within the state bureaucracy and big business. Faced with these powers, we have seen left-wing governments from Spain to New Zealand introduce right-wing policies. So even if we elected a radical party, they would be powerless to change anything important and soon be forced to attack us in the interests of capitalism. Politicians come and go, but the state bureaucracy and big business remain forever! Simply put, we cannot expect a different group of politicians to react that differently to the same economic and political pressures and influences.

Therefore we cannot rely on voting for the lesser evil to safe us from the possible dangers of a right-wing election victory. All we can hope for is that no matter who gets in, the population will resist the government because it knows and can use its real power: **direct action**. For the *"only limit to the oppression of government is the power with which the people show themselves capable of opposing it."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 196] Hence Vernon Richards:

> *"If the anarchist movement has a role to play in practical politics it is surely that of suggesting to, and persuading, as many people as possible that their freedom from the Hitlers, Francos and the rest, depends not on the right to vote or securing a majority of votes 'for the candidate of ones choice,' but on evolving new forms of political and social organisation which aim at the direct participation of the people, with the consequent weakening of the power, as well of the social role, of government in the life of the community."* [*"Anarchists and Voting"*, pp. 176–87, **The Raven**, no. 14, pp. 177–8]

We discuss what this could involve in the next section.

J.2.9 What do anarchists do instead of voting?

While anarchists reject electioneering and voting, it does not mean that we are politically apathetic. Indeed, part of the reason why anarchists reject voting is because we think that voting is not part of the solution, it is part of the problem. This is because it endorses an unjust and unfree political system and makes us look to others to fight our battles for us. It **blocks** construc-

tive self-activity and direct action. It **stops** the building of alternatives in our communities and workplaces. Voting breeds apathy and apathy is our worse enemy.

Given that we have had universal suffrage for some time in the West and we have seen the rise of Labour and Radical parties aiming to use that system to effect change in a socialistic direction, it seems strange that we are probably further away from socialism than when they started. The simple fact is that these parties have spent so much time trying to win elections that they have stopped even thinking about creating socialist alternatives in our communities and workplaces. That is in itself enough to prove that electioneering, far from eliminating apathy, in fact helps to create it.

So, because of this, anarchists argue that the only way to not waste your vote is to spoil it! We are the only political movement which argues that nothing will change unless you act for yourself, take back the power and fight the system **directly.** Only direct action breaks down apathy and gets results. It is the first steps towards real freedom, towards a free and just society. Unsurprisingly, then, anarchists are the first to point out that not voting is not enough: we need to actively struggle for an alternative to both voting **and** the current system. Just as the right to vote was won after a long series of struggles, so the creation of a free, decentralised, self-managed, libertarian socialist society will be the product of social struggle.

Anarchists are the last people to deny the importance of political liberties or the importance in wining the right to vote. The question we must ask is whether it is a more a fitting tribute to the millions of people who used direct action, fought and suffered for the right to vote to use that victory to endorse a deeply unfair and undemocratic system or to use other means (indeed the means they used to win the vote) to create a system based upon true popular self-government? If we are true to our (and their) desire for a real, meaningful democracy, we would have to reject political action in favour of direct action.

This obviously gives an idea of what anarchists do instead of voting, we agitate, organise and educate. Or, to quote Proudhon, the *"problem before the labouring classes ... consists not in capturing, but in subduing both power and monopoly, — that is, in generating from the bowels of the people, from the depths of labour, a greater authority, a more potent fact, which shall envelop capital and the state and subjugate them."* For, *"to combat and reduce power, to put it in its proper place in society, it is of no use to change the holders of power or introduce some variation into its workings: an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave."* [**System of Economical Contradictions**, p. 398 and p. 397]

We do this by organising what Bakunin called *"antipolitical social power of the working classes."* [**Bakunin on Anarchism**, p. 263] This activity which bases itself on the two broad strategies of encouraging direct action and building alternatives where we live and work.

Taking the first strategy, anarchists say that by using direct action we can force politicians to respect the wishes of the people. For example, if a government or boss tries to limit free speech, then anarchists would try to encourage a free speech fight to break the laws in question until such time as they are revoked. If a government or landlord refuses to limit rent increases or improve safety requirements for accommodation, anarchists would organise squats and rent strikes. In the case of environmental destruction, anarchists would support and encourage attempts at halting the damage by mass trespassing on sites, blocking the routes of developments, organising strikes and so on. If a boss refuses to introduce an 8 hour day, then workers should form a union and go on strike or simply stop working after 8 hours. Unlike laws, the boss cannot ignore direct action. Similarly, strikes combined with social protest would be effective means of stopping

authoritarian laws being passed. For example, anti-union laws would be best fought by strike action and community boycotts (and given the utterly ineffectual defence pursued by pro-labour parties using political action to stop anti-union laws who can seriously say that the anarchist way would be any worse?). Collective non-payment of taxes would ensure the end of unpopular government decisions. The example of the poll tax rebellion in the UK in the late in 1980s shows the power of such direct action. The government could happily handle hours of speeches by opposition politicians but they could not ignore social protest (and we must add that the Labour Party which claimed to oppose the tax happily let the councils controlled by them introduce the tax and arrest non-payers).

The aim would be to spread struggles and involve as many people as possible, for it is *"merely stupid for a group of workers — even for the workers organised as a national group — to invite the making of a distinction between themselves and the community. The real protagonists in this struggle are the community and the State — the community as an organic and inclusive body and the State as the representatives of a tyrannical minority ... The General Strike of the future must be organised as a strike of the community against the State. The result of that strike will not be in doubt."* [Herbert Read, **Anarchy and Order**, p. 52]

Such a counter-power would focus the attention of those in power far more than a ballot in a few years time (particularly as the state bureaucracy is not subject to even that weak form of accountability). As Noam Chomsky argues, *"[w]ithin the constraints of existing state institutions, policies will be determined by people representing centres of concentrated power in the private economy, people who, in their institutional roles, will not be swayed by moral appeals but by the costs consequent upon the decisions they make — not because they are 'bad people,' but because that is what the institutional roles demands."* He continues: *"Those who own and manage the society want a disciplined, apathetic and submissive public that will not challenge their privilege and the orderly world in which it thrives. The ordinary citizen need not grant them this gift. Enhancing the Crisis of Democracy by organisation and political engagement is itself a threat to power, a reason to undertake it quite apart from its crucial importance in itself as an essential step towards social change."* [**Turning the Tide**, pp. 251–2]

In this way, by encouraging social protest, any government would think twice before pursuing authoritarian, destructive and unpopular policies. In the final analysis, governments can and will ignore the talk of opposition politicians, but they cannot ignore social action for very long. In the words of a Spanish anarchosyndicalist, anarchists *"do not ask for any concessions from the government. Our mission and our duty is to impose from the streets that which ministers and deputies are incapable of realising in parliament."* [quoted by Graham Kelsey, **Anarchosyndicalism, Libertarian Communism and the State**, p. 79] This was seen after the Popular Front was elected February 1936 and the Spanish landless workers, sick and tired of waiting for the politicians to act, started to occupy the land. The government *"resorted to the time-tested procedure of expelling the peasants with the Civil Guard."* The peasants responded with a *"dramatic rebellion"* which forced the politicians to *"legalise the occupied farms. This proved once again that the only effective reforms are those imposed by force from below. Indeed, direct action was infinitely more successful than all the parliamentary debates that took place between 1931 and 1933 about whether to institute the approved Agrarian Reform law."* [Abel Paz, **Durruti in the Spanish Revolution**, p. 391]

The second strategy of building alternatives flows naturally from the first. Any form of campaign requires organisation and by organising in an anarchist manner we build organisations that *"bear in them the living seed of the new society which is replace the old world."* [Bakunin, **Op.**

Cit., p. 255] In organising strikes in the workplace and community we can create a network of activists and union members who can encourage a spirit of revolt against authority. By creating assemblies where we live and work we can create an effective countering power to the state and capital. Such a union, as the anarchists in Spain and Italy proved, can be the focal point for recreating self-managed schools, social centres and so on. In this way the local community can ensure that it has sufficient independent, self-managed resources available to educate its members. Also, combined with credit unions (or mutual banks), cooperative workplaces and stores, a self-managed infrastructure could be created which would ensure that people can directly provide for their own needs without having to rely on capitalists or governments. In the words of a C.N.T. militant:

> *"We must create that part of libertarian communism which can be created within bourgeois society and do so precisely to combat that society with our own special weapons."* [quoted by Kelsey, **Op. Cit.**, p. 79]

So, far from doing nothing, by not voting the anarchist actively encourages alternatives. As the British anarchist John Turner argued, we *"have a line to work upon, to teach the people self-reliance, to urge them to take part in non-political [i.e. non-electoral] movements directly started by themselves for themselves ... as soon as people learn to rely upon themselves they will act for themselves ... We teach the people to place their faith in themselves, we go on the lines of self-help. We teach them to form their own committees of management, to repudiate their masters, to despise the laws of the country."* [quoted by John Quail, **The Slow Burning Fuse**, p. 87] In this way we encourage self-activity, self-organisation and self-help — the opposite of apathy and doing nothing.

Ultimately, what the state and capital gives, they can also take away. What we build by our own self-activity can last as long as we want it to and act to protect it:

> *"The future belongs to those who continue daringly, consistently, to fight power and governmental authority. The future belongs to us and to our social philosophy. For it is the only social ideal that teaches independent thinking and direct participation of the workers in their economic struggle. For it is only through the organised economic strength of the masses that they can and will do away with the capitalist system and all the wrongs and injustices it contains. Any diversion from this stand will only retard our movement and make it a stepping stone for political climbers."* [Emma Goldman, **Vision on Fire**, p. 92]

In short, what happens in our communities, workplaces and environment is too important to be left to politicians — or the ruling elite who control governments. Anarchists need to persuade *"as many people as possible that their freedom ... depends not on the right to vote or securing a majority of votes ... but on evolving new forms of political and social organisation which aim at the direct participation of the people, with the consequent weakening of the power, as well as of the social role, of government in the life of the community."* [*"Anarchists and Voting"*, pp. 176–87, **The Raven**, No. 14, pp. 177–8] We discuss what new forms of economic and social organisations that this could involve in section J.5.

J.2.10 Does rejecting electioneering mean that anarchists are apolitical?

No. Far from it. The "apolitical" nature of anarchism is Marxist nonsense. As it desires to fundamentally change society, anarchism can be nothing but political. However, anarchism does reject (as we have seen) "normal" political activity as ineffectual and corrupting. However, many (particularly Marxists) imply this rejection of the con of capitalist politics means that anarchists concentrate on purely "economic" issues like wages, working conditions and so forth. By so doing, Marxists claim that anarchists leave the political agenda to be dominated by capitalist ideology, with disastrous results for the working class.

This view, however, is **utterly** wrong. Indeed, Bakunin explicitly rejected the idea that working people could ignore politics and actually agreed with the Marxists that political indifference only led to capitalist control of the labour movement:

> *"[some of] the workers in Germany ... [were organised in] a kind of federation of small associations ... 'Self-help' ... was its slogan, in the sense that labouring people were persistently advised not to anticipate either deliverance or help from the state and the government, but only from their own efforts. This advice would have been excellent had it not been accompanied by the false assurance that liberation for the labouring people is possible under* ***current conditions of social organisation*** *... Under this delusion ... the workers subject to [this] influence were supposed to disengage themselves systematically from all political and social concerns and questions about the state, property, and so forth ... [This] completely subordinated the proletariat to the bourgeoisie which exploits it and for which it was to remain an obedient and mindless tool."* [**Statism and Anarchy**, p. 174]

In addition, Bakunin argued that the labour movement (and so the anarchist movement) would have to take into account political ideas and struggles but to do so in a working class way:

> *"The International does not reject politics of a general kind; it will be compelled to intervene in politics so long as it is forced to struggle against the bourgeoisie. It rejects only bourgeois politics."* [**The Political Philosophy of Bakunin**, p. 313]

To state the obvious, anarchists only reject working class *"political action"* if you equate (as did the early Marxists) "political action" with electioneering, standing candidates for Parliament, local town councils and so on — what Bakunin termed bourgeois politics. We do not reject "political action" in the sense of direct action to effect political changes and reforms. As two American syndicalists argued, libertarians use *"the term 'political action' ... in its ordinary and correct sense. Parliamentary action resulting from the exercise of the franchise is political action. Parliamentary action caused by the influence of direct action tactics ... is not political action. It is simply a registration of direct action."* They also noted that syndicalists *"have proven time and again that they can solve the many so-called political questions by direct action."* [Earl C. Ford and William Z. Foster, **Syndicalism**, p. 19f and p. 23]

So, anarchists reject capitalist politics (i.e. electioneering), but we do not ignore politics, wider political discussion or political struggles. Anarchists have always recognised the importance of

political debate and ideas in social movements. Bakunin asked should a workers organisation *"cease to concern itself with political and philosophical questions? Would [it] ... ignore progress in the world of thought as well as the events which accompany or arise from the political struggle in and between states, concerning itself only with the economic problem?"* He rejected such a position: *"We hasten to say that it is absolutely impossible to ignore political and philosophical questions. An exclusive pre-occupation with economic questions would be fatal for the proletariat. Doubtless the defence and organisation of its economic interests ... must be the principle task of the proletariat. But is impossible for the workers to stop there without renouncing their humanity and depriving themselves of the intellectual and moral power which is so necessary for the conquest of their economic rights."* [**Bakunin on Anarchism**, p. 301]

Nor do anarchists ignore elections. As Vernon Richards suggested, anarchists *"cannot be uninterested in ... election results, whatever their view about the demerits of the contending Parties. The fact that the anarchist movement has campaigned to persuade people not to use their vote is proof of our commitment and interest. If there is, say, a 60 per cent. poll we will not assume that the 40 per cent. abstentions are anarchists, but we would surely be justified in drawing the conclusion that among the 40 per cent. there are a sizeable minority who have lost faith in political parties and were looking for other instruments, other values."* [**The Impossibilities of Social Democracy**, p. 141] Nor, needless to say, are anarchists indifferent to struggles for political reforms and the need to stop the state pursuing authoritarian policies, imperialist adventures and such like.

Thus the charge anarchists are apolitical or indifferent to politics (even capitalist politics) is a myth. Rather, *"we are not concerned with choosing between governments but with creating the situation where government can no longer operate, because only then will we organise locally, regionally, nationally and internationally to satisfy real needs and common aspirations."* For *"so long as we have capitalism and government, the job of anarchists is to fight both, and at the same time encourage people to take what steps they can to run their own lives."* [*"Anarchists and Voting"*, pp. 176–87, **The Raven**, No. 14, p. 179]

Part of this process will be the discussion of political, social and economic issues in whatever self-managed organisations people create in their communities and workplaces (as Bakunin argued) and the use of these organisations to fight for (political, social and economic) improvements and reforms in the here and now using direct action and solidarity. This means, as Rudolf Rocker pointed out, anarchists desire a unification of political and economic struggles as the two as inseparable:

> *"Within the socialist movement itself the Anarchists represent the viewpoint that the war against capitalism must be at the same time a war against all institutions of political power, for in history economic exploitation has always gone hand in hand with political and social oppression. The exploitation of man by man and the domination of man over man are inseparable, and each is the condition of the other."* [**Anarcho-Syndicalism**, p. 11]

Such a unification must take place on the social and economic field, not the political, as that is where the working class is strongest. So anarchists are well aware of the need to fight for political issues and reforms, and so are *"not in any way opposed to the political struggle, but in their opinion this struggle ... must take the form of direct action, in which the instruments of economic [and social] power which the working class has at its command are the most effective. The most trivial wage-fight*

shows clearly that, whenever the employers find themselves in difficulties, the state steps in with the police, and even in some cases with the militia, to protect the threatened interests of the possessing classes. It would, therefore, be absurd for them to overlook the importance of the political struggle. Every event that affects the life of the community is of a political nature. In this sense every important economic action ... is also a political action and, moreover, one of incomparably greater importance than any parliamentary proceeding." In other words, *"just as the worker cannot be indifferent to the economic conditions of his life in existing society, so he cannot remain indifferent to the political structure of his country. Both in the struggle for his daily bread and for every kind of propaganda looking towards his social liberation he needs political rights and liberties, and he must fight for these himself with all his strength whenever the attempt is made to wrest them from him."* So the *"focal point of the political struggle lies, then, not in the political parties, but in the economic [and social] fighting organisations of the workers."* [Rocker, **Op. Cit.**, p. 77, p. 74 and p. 77] Hence the comments in the CNT's newspaper **Solidaridad Obrera**:

> *"Does anyone not know that we want to participate in public life? Does anyone not know that we have always done so? Yes, we want to participate. With our organisations. With our papers. Without intermediaries, delegates or representatives. No. We will not go to the Town Hall, to the Provincial Capitol, to Parliament."* [quoted by Jose Pierats, **Anarchists in the Spanish Revolution**, p. 173]

Indeed, Rudolf Rocker makes the point very clear. *"It has often been charged against Anarcho-Syndicalism,"* he wrote, *"that it has no interest in the political structure of the different countries, and consequently no interest in the political struggles of the time, and confines its activities entirely to the fight for purely economic demands. This idea is altogether erroneous and springs either from outright ignorance or wilful distortion of the facts. It is not the political struggle as such which distinguishes the Anarcho-Syndicalist from the modern labour parties, both in principle and tactics, but the form of this struggle and the aims which it has in view ... their efforts are also directed, even today, at restricting the activities of the state ... The attitude of Anarcho-Syndicalism towards the political power of the present-day state is exactly the same as it takes towards the system of capitalist exploitation"* and *"pursue the same tactics in their fight against ... the state."* [**Op. Cit.**, pp. 73–4]

As historian Bob Holton suggests, the notion that syndicalism is apolitical *"is certainly a deeply embedded article of faith among those marxists who have taken Lenin's strictures against syndicalism at face value. Yet it bears little relation to the actual nature of revolutionary industrial movements ... Nor did syndicalists neglect politics and the state. Revolutionary industrial movements were on the contrary highly 'political' in that they sought to understand, challenge and destroy the structure of capitalist power in society, They quite clearly perceived the oppressive role of the state whose periodic intervention in industrial unrest could hardly have been missed."* For example, the *"vigorous campaign against the 'servile state' certainly disproves the notion that syndicalists ignored the role of the state in society. On the contrary, their analysis of bureaucratic state capitalism helped to make considerable inroads into prevailing Labourist and state socialist assumptions that the existing state could be captured by electoral means and used as an agent of through-going social reform."* [**British Syndicalism, 1900–1914**, pp. 21–2 and p. 204]

Thus anarchism is not indifferent to or ignores political struggles and issues. Rather, it fights for political change and reforms as it fights for economic ones — by direct action and solidarity. If anarchists *"reject any participation in the works of bourgeois parliaments, it is not because*

they have no sympathy with political struggles in general, but because they are firmly convinced that parliamentary activity is for the workers the very weakest and most hopeless form of the political struggle." [Rocker, **Op. Cit.**, p. 76] Anarchists reject the idea that political and economic struggles can be divided. Such an argument just reproduces the artificially created division of labour between mental and physical activity of capitalism within working class organisations and within anti-capitalist movements. We say that we should not separate out politics into some form of specialised activity that only certain people (i.e. our "representatives") can do. Instead, anarchists argue that political struggles, ideas and debates must be brought into the **social** and **economic** organisations of our class where they must be debated freely by all members as they see fit and that political and economic struggle and change must go hand in hand. Rather than being something other people discuss on behalf of working class people, anarchists, argue that politics must no longer be in the hands of so-called experts (i.e. politicians) but instead lie in the hands of those directly affected by it. Also, in this way the social struggle encourages the political development of its members by the process of participation and self-management.

In other words, political issues must be raised in economic and social organisations and discussed there, where working class people have real power. As Bakunin put it, *"the proletariat itself will pose"* political and philosophical questions in their own organisations and so the political struggle (in the widest scene) will come from the class struggle, for *"[w]ho can entertain any doubt that out of this ever-growing organisation of the militant solidarity of the proletariat against bourgeois exploitation there will issue forth the political struggle of the proletariat against the bourgeoisie?"* Anarchists simply think that the *"policy of the proletariat"* should be *"the destruction of the State"* rather than working within it and we argue for a union of political ideas and social organisation and activity. This is essential for promoting radical politics as it *"digs a chasm between the bourgeoisie and the proletariat and places the proletariat outside the activity and political conniving of all parties within the State ... in placing itself outside all bourgeois politics, the proletariat necessarily turns against it."* So, by *"placing the proletariat outside the politics in the State and of the bourgeois world, [the working class movement] thereby constructed a new world, the world of the united proletarians of all lands."* [**Op. Cit.**, p. 302 p. 276, p. 303 and p. 305]

History supports Bakunin's arguments, as it indicates that any attempt at taking social and economic issues into political parties has resulting in wasted energy and their watering down into, at best, reformism and, at worse, the simple ignoring of them by politicians once in office (see section J.2.6). Only by rejecting the artificial divisions of capitalist society can we remain true to our ideals of liberty, equality and solidarity. Every example of radicals using electioneering has resulted in them being changed by the system instead of them changing it. They have become dominated by capitalist ideas and activity (what is usually termed "realistic" and "practical") and by working within capitalist institutions they have, to use Bakunin's words, *"filled in at a single stroke the abyss ... between the proletariat and the bourgeoisie"* that economic and social struggle creates and, worse, *"have tied the proletariat to the bourgeois towline."* [**Op. Cit.**, p. 290]

In addition, so-called "economic" struggles do not occur in a vacuum. They take place in a social and political context and so, necessarily, there can exist an separation of political and economic struggles only in the mind. Strikers or eco-warriors, for example, face the power of the state enforcing laws which protect the power of employers and polluters. This necessarily has a "political" impact on those involved in struggle. By channelling any "political" conclusions drawn by those involved in struggle into electoral politics, this development of political ideas and discussion will be distorted into discussions of what is possible in the current system, and

so the radical impact of direct action and social struggle is weakened. Given this, is it surprising that anarchists argue that the people *"must organise their powers apart from and against the State."* [Bakunin, **The Political Philosophy of Bakunin**, p. 376]

To conclude, anarchists are only "apolitical" about bourgeois elections and the dubious liberty and benefits associated with picking who will rule us and maintain capitalism for the next four or five years as well as the usefulness of socialists participating in them. We feel that our predictions have been confirmed time and time again. Anarchists reject electioneering not because they are "apolitical" but because they do not desire to see politics remain a thing purely for politicians and bureucrats. Political issues are far too important to leave to such people. Anarchists desire to see political discussion and change develop from the bottom up, this is hardly "apolitical" — in fact with our desire to see ordinary people directly discuss the issues that affect them, act to change things by their own action and draw their own conclusions from their own activity anarchists are very "political." The process of individual and social liberation is the most political activity we can think of!

J.3 What kinds of organisation do anarchists build?

Anarchists are well aware of the importance of building organisations. Organisations allow those within them to multiply their strength and activity, becoming the means by which an individual can see their ideas, hopes and dreams realised. This is as true for getting the anarchist message across as for building a home, running a hospital or creating some useful product. Anarchists support two types of organisation — organisations of anarchists and popular organisations which are not made up exclusively of anarchists such as industrial unions, co-operatives and community assemblies.

Here we will discuss the kinds, nature and role of the first type of organisation, namely explicitly anarchist organisations. In addition, we discuss anarcho-syndicalism, a revolutionary unionism which aims to create an anarchist society by anarchist tactics, as well as why many anarchists are not anarcho-syndicalists. The second type of organisations, popular ones, are discussed in section J.5. Both forms of organisation, however, share the anarchist commitment to confederalism, decentralisation, self-management and decision making from the bottom up. In such organisations the membership plays the decisive role in running them and ensuring that power remains in their hands. They express the anarchist vision of the power and creative efficacy people have when they are self-reliant, when they act for themselves and manage their own lives directly. Only by organising in this way can we create a new world, a world worthy of human beings and unique individuals.

Anarchist organisation in all its forms reflects our desire to *"build the new world in the shell of the old"* and to empower the individual. We reject the notion that it does not really matter how we organise to change society. Indeed, nothing could be further from the truth. We are all the products of the influences and social relationships in our lives, this is a basic idea of (philosophical) materialism. Thus the way our organisations are structured has an impact on us. If the organisation is centralised and hierarchical (no matter how "democratically" controlled officials or leaders are) then those subject to it will, as in any hierarchical organisation, see their abilities to manage their own lives, their creative thought and imagination eroded under the constant stream of orders from above. This in turn justifies the pretensions to power of those at the top, as the capacity of self-management of the rank and file is weakened by authoritarian social relationships. This means anarchist organisations are structured so that they allow everyone the maximum potential to participate. Such participation is the key for a free organisation. As Malatesta argued:

> *"The real being is man, the individual. Society or the collectivity .. . if it is not a hollow abstraction, must be made up of individuals. And it is in the organism of every individual that all thoughts and human actions inevitably have their origin, and from being individual they become collective thoughts and acts when they are or become*

accepted by many individuals. Social action, therefore, is neither the negation nor the complement of individual initiative, but is the resultant of initiatives, thoughts and actions of all individuals who make up society." [**Anarchy**, p. 36]

Anarchist organisations exist to allow this development and expression of individual initiatives. This empowering of the individual is an important aspect of creating viable solidarity for sheep cannot express solidarity, they only follow the shepherd. Therefore, *"to achieve their ends, anarchist organisations must, in their constitution and operation, remain in harmony with the principles of anarchism; that is, they must know how to blend the free action of individuals with the necessity and the joy of co-operation which serve to develop the awareness and initiative of their members and a means of education for the environment in which they operate and of a moral and material preparation for the future we desire."* [Malatesta, **The Anarchist Revolution**, p. 95]

As such, anarchist organisations reflect the sort of society anarchists desire. We reject as ridiculous the claim of Leninists that the form of organisation we build is irrelevant and therefore we must create highly centralised parties which aim to become the leadership of the working class. No matter how "democratic" such organisations are, they just reflect the capitalist division of labour between brain and manual work and the Liberal ideology of surrendering our ability to govern ourselves to an elected elite. In other words, they just mirror the very society we are opposed to and so will soon produce the very problems **within** so-called anti-capitalist organisations which originally motivated us to oppose capitalism in the first place (see section H.5). Given this, anarchists regard *"the Marxist party as another statist form that, if it succeeded in 'seizing power,' would preserve the power of one human being over another, the authority of the leader over the led. The Marxist party ... was a mirror image of the very society it professed to oppose, an invasion of the camp of revolutionaries by bourgeois values, methods, and structures."* [**The Spanish Anarchists**, pp. 179–80] As can be seen from the history of the Russian Revolution, this was the case with the Bolsheviks soon taking the lead in undermining workers' self-management, soviet democracy and, finally, democracy within the ruling party itself (see section H.6).

From an anarchist (i.e. materialist) point of view, this was highly predictable — after all, *"facts are before ideas; yes, the ideal, as Proudhon said, is but a flower whose root lies in the material conditions of existence."* [Bakunin, **God and the State**, p. 9] So it is unsurprising that hierarchical parties helped to maintain a hierarchical society. In the words of the famous Sonvillier Circular: *"How could one want an egalitarian and free society to issue from an authoritarian organisation? It is impossible."* [quoted in **Bakunin on Anarchism**, p. 45]

We must stress here that anarchists are **not** opposed to organisation and are **not** opposed to organisations of anarchists (i.e. **political** organisations, although anarchists generally reject the term "party" due to its statist and hierarchical associations). Murray Bookchin made it clear when he wrote that the *"real question at issue here is not organisation versus non-organisation, but rather what **kind** of organisation"* Anarchist organisations are *"organic developments from below ... They are social movements, combing a creative revolutionary lifestyle with a creative revolutionary theory . .. As much as is humanly possibly, they try to reflect the liberated society they seek to achieve"* and *"co-ordination between groups ... discipline, planning, and unity in action ... achieved **voluntarily**, by means of a self-discipline nourished by conviction and understanding."* [**Post-Scarcity Anarchism**, pp. 138–9]

Ultimately, centralised organisations are undemocratic and, equally as important, **ineffective.** Hierarchical organisations kill people's enthusiasm and creativity, where plans and ideas are not

adopted because they are the best but simply because they are what a handful of leaders **think** are best for everyone else. Really effective organisations are those which make decisions based frank and open co-operation and debate, where dissent is **not** stifled and ideas are adopted because of their merit and not imposed from the top-down by a few party leaders. This is why anarchists stress federalist organisation. It ensures that co-ordination flows from below and there is no institutionalised leadership. By organising in a way that reflects the kind of society we want, we train ourselves in the skills and decision making processes required to make a free and classless society work. Means and ends are united and this ensures that the means used will result in the desired ends. Simply put, libertarian means must be used if you want libertarian ends (see section H.1.6 for further discussion).

In the sections that follow, we discuss the nature and role of anarchist organisation. Anarchists would agree with Situationist Guy Debord that a *"revolutionary organisation must always remember that its objective is not getting people to listen to speeches by expert leaders, but getting them to speak for themselves."* We organise their groups accordingly. In section J.3.1 we discuss the basic building block of specifically anarchist organisations, the ***"affinity group."*** Sections J.3.2, J.3.3, J.3.4 and J.3.5, we discuss the main types of federations of ***affinity groups*** anarchist create to help spread our message and influence. Then section J.3.6 highlights the role these organisations play in our struggles to create an anarchist society. In section J.3.7, we analyse Bakunin's unfortunate expression *"Invisible Dictatorship"* in order to show how many Marxists distort Bakunin's ideas on this matter. Finally, in sections J.3.8 and J.3.9 we discuss anarcho-syndicalism and other anarchists attitudes to it.

Anarchist organisations, therefore, aim to enrich social struggle by their ideas and suggestions but also, far more importantly, enrich the libertarian idea by practical experience and activity. In other words, a two way process by which life informs theory and theory aids life. The means by which this social dynamic is created and developed is the underlying aim of anarchist organisation and is reflected in its theoretical role. The power of ideas cannot be under estimated, for *"if you have an idea you can communicate it to a million people and lose nothing in the process, and the more the idea is propagated the more it acquires in power and effectiveness."* [Malatesta, **Op. Cit.**, p. 46] The right idea at the right time, one that reflects the needs of individuals and of required social change, can have a transforming effect on society. That is why organisations that anarchists create to spread their message are so important and why we devote a whole section to them.

J.3.1 What are affinity groups?

Affinity groups are the basic organisation which anarchists create to spread the anarchist idea. The term *"affinity group"* comes from the Spanish F.A.I. (**Iberian Anarchist Federation**) and refers to the organisational form devised in their struggles for freedom (from *"grupo de afinidad"*). At its most basic, it is a (usually small) group of anarchists who work together to spread their ideas to the wider public, using propaganda, initiating or working with campaigns and spreading their ideas **within** popular organisations (such as unions) and communities. It aims not to be a "leadership" but to give a lead, to act as a catalyst within popular movements. Unsurprisingly it reflects basic anarchist ideas:

> *"Autonomous, communal and directly democratic, the group combines revolutionary theory with revolutionary lifestyle in its everyday behaviour. It creates a free space in which revolutionaries can remake themselves individually, and also as social beings."* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 144]

The reason for this is simple, for a *"movement that sought to promote a liberatory revolution had to develop liberatory and revolutionary forms. This meant ... that it had to mirror the free society it was trying to achieve, not the repressive one it was trying to overthrow. If a movement sought to achieve a world united by solidarity and mutual aid, it had to be guided by these precepts; if it sought to achieve a decentralised, stateless, non-authoritarian society, it had to be structured in accordance with these goals."* [Bookchin, **The Spanish Anarchists**, p. 180]

The aim of an anarchist organisation is to promote a sense of community, of confidence in ones own abilities, to enable all to be involved in the identification, initiation and management of group needs, decisions and activities. They must ensure that individuals are in a position (both physically, as part of a group, and mentally, as an individual) to manage their own lives and take direct action in the pursuit of individual and communal needs and desires. Anarchist organisation is about empowering all, to develop "integral" or whole individuals and a community that encourages individuality (not abstract "individualism") and solidarity. It is about collective decision making from the bottom up, that empowers those at the "base" of the structure and only delegates the work of co-ordinating and implementing the members decisions (and not the power of making decisions for people). In this way the initiative and power of the few (government) is replaced by the initiative and empowerment of all (anarchy). Affinity groups exist to achieve these aims and are structured to encourage them.

The local affinity group is the means by which anarchists co-ordinate their activities in a community, workplace, social movement and so on. Within these groups, anarchists discuss their ideas, politics and hopes, what they plan to do, organise propaganda work, discuss how they are going to work within wider organisations like unions, how their strategies fit into their long term plans and goals and so on. It is the basic way that anarchists work out their ideas, pull their resources and get their message across to others. There can be affinity groups for different interests and activities (for example a workplace affinity group, a community affinity group, an anarcha-feminist affinity group, etc., could all exist within the same area, with overlapping members). Moreover, as well as these more "political" activities, the "affinity group" also stresses the *"importance of education and the need to live by Anarchist precepts — the need ... to create a counter-society that could provide the space for people to begin to remake themselves."* [Bookchin, **Op. Cit.**, p. 180] In other words, "affinity groups" aim to be the *"living germs"* of the new society in **all** aspects, not purely in a structurally way.

So affinity groups are self-managed, autonomous groupings of anarchists who unite and work on specific activities and interests. This means that *"[i]n an anarchist organisation the individual members can express any opinion and use any tactic which is not in contradiction with accepted principles and which does not harm the activities of others."* [Errico Malatesta, **The Anarchist Revolution**, p. 102] Such groups are a key way for anarchists to co-ordinate their activity and spread their message of individual freedom and voluntary co-operation. However, the description of what an "affinity group" is does not explain **why** anarchists organise in that way. Essentially, these affinity groups are the means by which anarchists actually intervene in social movements and struggles in order to win people to the anarchist idea and so help transform them from strug-

gles **against** injustice into struggles **for** a free society. We will discuss the role these groups play in anarchist theory in section J.3.6.

These basic affinity groups are not seen as being enough in themselves. Most anarchists see the need for local groups to work together with others in a confederation. Such co-operation aims to pull resources and expand the options for the individuals and groups who are part of the federation. As with the basic affinity group, the anarchist federation is a self-managed organisation:

> *"Full autonomy, full independence and therefore full responsibility of individuals and groups; free accord between those who believe it is useful to unite in co-operating for a common aim; moral duty to see through commitments undertaken and to do nothing that would contradict the accepted programme. It is on these bases that the practical structures, and the right tools to give life to the organisation should be built and designed. Then the groups, the federations of groups, the federations of federations, the meetings, the congresses, the correspondence committees and so forth. But all this must be done freely, in such a way that the thought and initiative of individuals is not obstructed, and with the sole view of giving greater effect to efforts which, in isolation, would be either impossible or ineffective."* [Malatesta, **Op. Cit.**, p. 101]

To aid in this process of propaganda, agitation, political discussion and development, anarchists organise federations of affinity groups. These take three main forms,

"synthesis" federations (see section J.3.2), ***"Platformist"*** federations (see section J.3.3 while section J.3.4 has criticism of this tendency) and ***"class struggle"*** groups (see section J.3.5). All the various types of federation are based on groups of anarchists organising themselves in a libertarian fashion. This is because anarchists try to live by the values of the future to the extent that this is possible under capitalism and try to develop organisations based upon mutual aid, in which control would be exercised from below upward, not downward from above. We must also note here that these types of federation are not mutually exclusive. Synthesis type federations often have "class struggle" and "Platformist" groups within them (although, as will become clear, Platformist federations do not have synthesis groups within them) and most countries have different federations representing the different perspectives within the movement. Moreover, it should also be noted that no federation will be a totally "pure" expression of each tendency. "Synthesis" groups merge into "class struggle" ones, Platformist groups do not subscribe totally to the Platform and so on. We isolate each tendency to show its essential features. In real life few, if any, federations will exactly fit the types we highlight. It would be more precise to speak of organisations which are descended from a given tendency, for example the French **Anarchist Federation** is mostly influenced by the synthesis tradition but it is not, strictly speaking, 100% synthesis. Lastly, we must also note that the term "class struggle" anarchist group in no way implies that "synthesis" and "Platformist" groups do not support the class struggle or take part in it, they most definitely do — it is simply a technical term to differentiate between types of organisation!

It must be stressed anarchists do not reduce the complex issue of political organisation and ideas into **one** organisation but instead recognise that different threads within anarchism will express themselves in different political organisations (and even within the same organisation). A diversity of anarchist groups and federations is a good sign and expresses the diversity of

political and individual thought to be expected in a movement aiming for a society based upon freedom. All we aim to do is to paint a broad picture of the similarities and differences between the various perspectives on organising in the movement and indicate the role these federations play in libertarian theory, namely of an aid in the struggle, not a new leadership seeking power.

J.3.2 What are "synthesis" federations?

The "synthesis" federation acquired its name from the work of Voline (a Russian exile) and leading French anarchist Sebastien Faure in the 1920s. Voline published in 1924 a paper calling for *"the anarchist synthesis"* and was also the author of the article in Faure's **Encyclopedie Anarchiste** on the very same topic. Its roots lie in the Russian revolution and the **Nabat** federation created in the Ukraine during 1918 whose aim was *"organising all of the life forces of anarchism; bringing together through a common endeavour all anarchists seriously desiring of playing an active part in the social revolution which is defined as a process (of greater or lesser duration) giving rise to a new form of social existence for the organised masses."* [**No Gods, No Masters**, vol. 2, p. 117]

The "synthesis" organisation is based on uniting all kinds of anarchists in one federation as there is, to use the words of the **Nabat**, *"validity in all anarchist schools of thought. We must consider all diverse tendencies and accept them."* The synthesis organisation attempts to get different kinds of anarchists *"joined together on a number of basic positions and with the awareness of the need for planned, organised collective effort on the basis of federation."* [quoted in *"The Reply by Several Russian Anarchists"*, pp. 32–6, **Constructive Anarchism**, G. P. Maximoff (ed.), p. 32] These basic positions would be based on a synthesis of the viewpoints of the members of the organisation, but each tendency would be free to agree their own ideas due to the federal nature of the organisation.

An example of this synthesis approach is provided by the differing assertions that anarchism is a theory of classes (as stated by the Platform, among others), that anarchism is a humanitarian ideal for all people and that anarchism is purely about individuals (and so essentially individualist and having nothing to do with humanity or with a class). The synthesis of these positions would be to *"state that anarchism contains class elements as well as humanism and individualist principles ... Its class element is above all its means of fighting for liberation; its humanitarian character is its ethical aspect, the foundation of society; its individualism is the goal of humanity."* [**Op. Cit.**, p. 32]

So, as can be seen, the "synthesis" tendency aims to unite all anarchists (be they individualist, mutualist, syndicalist or communist) into one common federation. Thus the "synthesis" viewpoint is "inclusive" and obviously has affinities with the *"anarchism without adjectives"* approach favoured by many anarchists (see section A.3.8). However, in practice many "synthesis" organisations are more restrictive (for example, they could aim to unite all **social** anarchists) and so there can be a difference between the general idea of the synthesis and how it is concretely applied.

The basic idea behind the synthesis is that the anarchist movement (in most countries, at most times, including France in the 1920s and Russia during the revolution and at this time) is divided into three main tendencies: communist anarchism, anarcho-syndicalism, and individualist anarchism. This division can cause severe damage to the movement simply because of the many (and often redundant) arguments and diatribes on why "my anarchism is best" can get in the way of working in common in order to fight our common enemies (state, capitalism and authority). The

"synthesis" federations are defined by agreeing what is the common denominator of the various tendencies within anarchism and agreeing a minimum programme based on this for the federation. This would allow a *"certain ideological and tactical unity among organisations"* within the "synthesis" federation. [**Op. Cit.**, p. 35] Moreover, as well as saving time and energy for more important tasks, there are technical and efficiency reasons for unifying into one organisation, namely allowing the movement to have access to more resources and being able to co-ordinate them so as to maximise their use and impact.

The "synthesis" federation, like all anarchist groups, aims to spread anarchist ideas within society as a whole. They believe that their role is to *"assist the masses only when they need such assistance ... the anarchists are part of the membership in the economic and social mass organisations [such as trade unions]. They act and build as part of the whole. An immense field of action is opened to them for ideological [sic!], social and creative activity without assuming a position of superiority over the masses. Above all they must fulfil their ideological and ethical influence in a free and natural manner ... [they] offer ideological assistance, but not in the role of leaders."* [**Op. Cit.**, p. 33] This, as we shall see in section J.3.6, is the common anarchist position as regards the role of an anarchist group.

The great strength of "synthesis" federations, obviously, is that they allow a wide and diverse range of viewpoints to be expressed within the organisation which can allow the development of political ideas and theories by constant discussion and debate. They allow the maximum amount of resources to be made available to individuals and groups within the organisation by increasing the number of members. This is why we find the original promoters of the "synthesis" arguing that *"that first step toward achieving unity in the anarchist movement which can lead to serious organisation is collective ideological work on a series of important problems that seek the clearest possible collective solution,"* discussing *"concrete questions"* rather than *"philosophical problems and abstract dissertations"* and *"suggest that there be a publication for discussion in every country where the problems in our ideology [sic!] and tactics can be fully discussed, regardless of how 'acute' or even 'taboo' it may be. The need for such a printed organ, as well as oral discussion, seems to us to be a 'must' because it is the practical way to try to achieve 'ideological unity', 'tactical unity', and possibly organisation ... A full and tolerant discussion of our problems ... will create a basis for understanding, not only among anarchists, but among different conceptions of anarchism."* [**Op. Cit.**, p. 35]

The "synthesis" idea for anarchist organisation was taken up by those who opposed the Platform (see next section). For both Faure and Voline, the basic idea was the same, namely that the various tendencies in anarchism must co-operate and work in the same organisation. However, there are differences between Voline's and Faure's points of view. The latter saw these various tendencies as a wealth in themselves and advocated that each tendency would gain from working together in a common organisation. From Voline's point of view, the emergence of these various tendencies was historically needed to discover the in-depth implications of anarchism in various settings (such as the economical, the social and individual life). However, it was the time to go back to anarchism as a whole, an anarchism considerably empowered by what each tendency could give it, and in which tendencies as such should dissolve. Moreover, these tendencies coexisted in every anarchist at various levels, so all anarchists should aggregate in an organisation where these tendencies would disappear (both individually and organisationally, i.e. there would not be an "anarcho-syndicalist" specific tendency inside the organisation, and so forth).

The "synthesis" federation would be based on complete autonomy (within the basic principles of the Federation and Congress decisions, of course) for groups and individuals, so allowing all the different trends to work together and express their differences in a common front. The various groups would be organised in a federal structure, combining to share resources in the struggle against state, capitalism and other forms of oppression. This federal structure is organised at the local level through a "local union" (i.e. the groups in a town or city), at the regional level (i.e. all groups in, say, Strathclyde are members of the same regional union) up to the "national" level (i.e. all groups in Scotland, say) and beyond.

As every group in the federation is autonomous, it can discuss, plan and initiate an action (such as campaign for a reform, against a social evil, and so on) without having to wait for others in the federation (or have to wait for instructions). This means that the local groups can respond quickly to issues and developments. This does not mean that each group works in isolation. These initiatives may gain federal support if local groups see the need. The federation can adopt an issue if it is raised at a federal conference and other groups agree to co-operate on that issue. Moreover, each group has the freedom **not** to participate on a specific issue while leaving others to do so. Thus groups can concentrate on what they are interested in most.

The programme and policies of the federation would be agreed at regular delegate meetings and congresses. The "synthesis" federation is managed at the federal level by "relations committees" made up of people elected and mandated at the federation congresses. These committees would have a purely administrative role, spreading information, suggestions and proposals coming from groups and individuals within the organisation, looking after the finances of the federation and so on. They do not have any more rights than any other member of the federation (i.e. they could not make a proposal as a committee, just as members of their local group or as individuals). These administrative committees are accountable to the federation and subject to both mandates and recall.

Most national sections of the **International Anarchist Federation** (IFA) are good examples of successful federations which are heavily influenced by "synthesis" ideas (such as the French and Italian federations). Obviously, though, how effective a "synthesis" federation is depends upon how tolerant members are of each other and how seriously they take their responsibilities towards their federations and the agreements they make.

Of course, there are problems with most forms of organisation, and the "synthesis" federation is no exception. While diversity can strengthen an organisation by provoking debate, a too diverse grouping can often make it difficult to get things done. Platformist and other critics of the "synthesis" federation argue that it can be turned into a talking shop and any common programme difficult to agree, never mind apply. For example, how can mutualists and communists agree on the ends, never mind the means, their organisation supports? One believes in co-operation within a (modified) market system and reforming capitalism away, while the other believes in the abolition of commodity production and money, seeing revolution as the means of so doing. Ultimately, all they could do would be to agree to disagree and thus any joint programmes and activity would be somewhat limited. It could, indeed, be argued that both Voline and Faure forgot essential points, namely what is this common denominator between the different kinds of anarchism, how do we achieve it and what is in it? For without this agreed common position, many synthesist organisations do end up becoming little more than talking shops, escaping from any social or organisational perspective. This seems to have been the fate of many groups in Britain and America during the 1960s and 1970s, for example.

It is this (potential) disunity that lead the authors of the Platform to argue that *"[s]uch an organisation having incorporated heterogeneous theoretical and practical elements, would only be a mechanical assembly of individuals each having a different conception of all the questions of the anarchist movement, an assembly which would inevitably disintegrate on encountering reality."* [**The Organisational Platform of the Libertarian Communists**, p. 12] The Platform suggested *"Theoretical and Tactical Unity"* as a means of overcoming this problem, but that term provoked massive disagreement in anarchist circles (see section J.3.4). In reply to the Platform, supporters of the "synthesis" counter by pointing to the fact that "Platformist" groups are usually very small, far smaller that "synthesis" federations (for example, compare the size of the **French Anarchist Federation** with, say, the Irish **Workers Solidarity Movement** or the French-language **Alternative Libertaire**). This means, they argue, that the Platform does not, in fact, lead to a more effective organisation, regardless of the claims of its supporters. Moreover, they argue that the requirements for *"Theoretical and Tactical Unity"* help ensure a small organisation as differences would express themselves in splits rather than constructive activity. Needless to say, the discussion continues within the movement on this issue!

What can be said is that this potential problem within "synthesisism" has been the cause of some organisations failing or becoming little more than talking shops, with each group doing its own thing and so making co-ordination pointless as any agreements made would be ignored. Most supporters of the synthesis would argue that this is not what the theory aims for and that the problem lies in misunderstanding it rather than in the theory itself (as can be seen from mainland European, "synthesis" inspired federations can be **very** successful). Non-supporters are more critical, with some supporting the "Platform" as a more effective means of organising to spread anarchist ideas and influence (see the next section). Other social anarchists create the "class struggle" type of federation (this is a common organisational form in Britain, for example) as discussed in section J.3.5.

J.3.3 What is the "Platform"?

The Platform is a current within anarcho-communism which has specific suggestions on the nature and form which an anarchist federation should take. Its roots lie in the Russian anarchist movement, a section of which, in 1926, published

"The Organisational Platform of the Libertarian Communists" when in exile from the Bolshevik dictatorship. The authors of the work included Nestor Makhno, Peter Arshinov and Ida Mett. At the time it provoked intense debate (and still does in many anarchist circles) between supporters of the Platform (usually called "Platformists") and those who oppose it (which includes other communist-anarchists, anarcho-syndicalists and supporters of the "synthesis"). We will discuss why many anarchists oppose the Platform in the next section. Here we discuss what the Platform argued for.

Like the "synthesis" federation (see last section), the Platform was created in response to the experiences of the Russian Revolution. The authors of the Platform (like Voline and other supporters of the "synthesis") had participated in that Revolution and saw all their work, hopes and dreams fail as the Bolshevik state triumphed and destroyed any chances of socialism by undermining soviet democracy, workers' self-management of production, trade union democracy as well as fundamental individual freedoms and rights (see the section H.6 for details). More-

over, the authors of the Platform had been leading activists in the Makhnovist movement in the Ukraine which had successfully resisted both White and Red armies in the name of working class self-determination and anarchism (see the appendix "Why does the Makhnovist movement show there is an alternative to Bolshevism? "). Facing the same problems of the Bolshevik government, the Makhnovists had actively encouraged popular self-management and organisation, freedom of speech and of association, and so on, whereas the Bolsheviks had not. Thus they were aware that anarchist ideas not only worked in practice, but that the claims of Leninists who maintained that Bolshevism (and the policies it introduced at the time) was the only "practical" response to the problems facing a revolution were false.

They wrote the pamphlet in order to examine why the anarchist movement had failed to build on its successes in gaining influence within the working class. As can be seen from libertarian participation in the factory committee movement, where workers organised self-management in their workplaces and anarchist ideas had proven to be both popular and practical. While repression by the Bolsheviks did play a part in this failure, it did not explain everything. Also important, in the eyes of the Platform authors, was the lack of anarchist organisation **before** the revolution:

> *"It is very significant that, in spite of the strength and incontestably positive character of libertarian ideas, and in spite of the facing up to the social revolution, and finally the heroism and innumerable sacrifices borne by the anarchists in the struggle for anarchist communism, the anarchist movement remains weak despite everything, and has appeared, very often, in the history of working class struggles as a small event, an episode, and not an important factor."* [**Organisational Platform of the Libertarian Communists**, p. 11]

This weakness in the movement derived, they argued, from a number of causes, the main one being *"the absence of organisational principles and practices"* within the anarchist movement. This resulted in an anarchist movement *"represented by several local organisations advocating contradictory theories and practices, having no perspectives for the future, nor of a continuity in militant work, and habitually disappearing, hardly leaving the slightest trace behind them."* This explained the *"contradiction between the positive and incontestable substance of libertarian ideas, and the miserable state in which the anarchist movement vegetates."* [**Op. Cit.**, p. 11] For anyone familiar with the anarchist movement in many countries, these words will still strike home. Thus the Platform still appears to many anarchists a relevant and important document, even if they are not Platformists.

The author's of the Platform proposed a solution to this problem, namely the creation of a new type of anarchist organisation. This organisation would be based upon communist-anarchist ideas exclusively, while recognising syndicalism as a principal method of struggle. Like most anarchists, the Platform placed class and class struggle as the centre of their analysis, recognising that the *"social and political regime of all states is above all the product of class struggle ... The slightest change in the course of the battle of classes, in the relative locations of the forces of the class struggle, produces continuous modifications in the fabric and structure of society."* Again, like most anarchists, the Platform aimed to *"transform the present bourgeois capitalist society into a society which assures the workers the products of the labours, their liberty, independence, and social and political equality"*, one based on a *"workers organisations of production and consumption, united*

federatively and self-administering." The *"birth, the blossoming, and the realisation of anarchist ideas have their roots in the life and the struggle of the working masses and are inseparable bound to their fate.*" [**Op. Cit.**, p. 14, p. 15, p. 19 and p. 15] Again, most anarchists (particularly social anarchists) would agree — anarchist ideas will (and have) wither when isolated from working class life since only working class people, the vast majority, can create a free society and anarchist ideas are expressions of working class experience (remove the experience and the ideas do not develop as they should).

In order to create such a free society it is necessary, argue the Platformists, *"to work in two directions: on the one hand towards the selection and grouping of revolutionary worker and peasant forces on a libertarian communist theoretical basis (a specifically libertarian communist organisation); on the other hand, towards regrouping revolutionary workers and peasants on an economic base of production and consumption (revolutionary workers and peasants organised around production [i.e. syndicalism]; workers and free peasants co-operatives).*" Again, most anarchists would agree with this along with the argument that *"anarchism should become the leading concept of revolution ... The leading position of anarchist ideas in the revolution suggests an orientation of events after anarchist theory. However, this theoretical driving force should not be confused with the political leadership of the statist parties which leads finally to State Power.*" [**Op. Cit.**, p. 20 and p. 21]

This *"leadership of ideas"* (as it has come to be known) would aim at developing and co-ordinating libertarian feelings already existing within social struggle. *"Although the masses,"* explained the Platform, *"express themselves profoundly in social movements in terms of anarchist tendencies and tenets, these ... do however remain dispersed, being uncoordinated, and consequently do not lead to the .. . preserving [of] the anarchist orientation of the social revolution.*" [**Op. Cit.**, p. 21] The Platform argued that a specific anarchist organisation was required to ensure that the libertarian tendencies initially expressed in any social revolution or movement (for example, free federation, self-management in mass assemblies, mandating of delegates, decentralisation, etc.) do not get undermined by statists and authoritarians who have their own agendas. This would be done by actively working in mass organisation and winning people to libertarian ideas and practices by argument (see section J.3.6).

However, these principles do not, in themselves, determine a Platformist organisation. After all, most anarcho-syndicalists and non-Platformist communist-anarchists would agree with these positions. The main point which distinguishes the Platform is its position on how an anarchist organisation should be structured and work. This is sketched in the *"Organisational Section,"* the shortest and most contentious part of the whole work. They called this the **General Union of Anarchists** and where they introduced the concepts of

"Theoretical and Tactical Unity" and ***"Collective Responsibility,"*** concepts which are unique to the Platform. Even today within the anarchist movement these are contentious ideas so it is worth exploring them in a little more detail.

By *"Theoretical Unity"* the Platform meant any anarchist organisation must come to an agreement on the theory upon which it is based. In other words, that members of the organisation must agree on a certain number of basic points, such as class struggle, social revolution and libertarian communism, and so on. An organisation in which half the members thought that union struggles were important and the other half that they were a waste of time would not be effective as the membership would spend all their time arguing with themselves. While most Platformists admit that everyone will not agree on everything, they think it is important to reach as much

agreement as possible, and to translate this into action. Once a theoretical position is reached, the members have to argue it in public (even if they initially opposed it within the organisation but they do have the right to get the decision of the organisation changed by internal discussion). Which brings us to *"Tactical Unity"* by which the Platform meant that the members of an organisation should struggle together **as an organised force** rather than as individuals. Once a strategy has been agreed by the Union, all members would work towards ensuring its success (even if they initially opposed it). In this way resources and time are concentrated in a common direction, towards an agreed objective.

Thus *"Theoretical and Tactical Unity"* means an anarchist organisation that agrees specific ideas and the means of applying them. The Platform's basic assumption is that there is a link between coherency and efficiency. By increasing the coherency of the organisation by making collective decisions and applying them, the Platform argues that this will increase the influence of anarchist ideas. Without this, they argue, more organised groups (such as Leninist ones) would be in a better position to have their arguments heard and listened to than anarchists would. Anarchists cannot be complacent, and rely on the hope that the obvious strength and rightness of our ideas will shine through and win the day. As history shows, this rarely happens and when it does, the authoritarians are usually in positions of power to crush the emerging anarchist influence (this was the case in Russia, for example). Platformists argue that the world we live in is the product of struggles between competing ideas of how society should be organised and if the anarchist voice is weak, quiet and disorganised it will not be heard and other arguments, other perspectives, will win the day.

Which brings us to *"Collective Responsibility,"* which the Platform defines as *"the entire Union will be responsible for the political and revolutionary activity of each member; in the same way, each member will be responsible for the political and revolutionary activity of the Union."* In short, that each member should support the decisions made by the organisation and that each member should take part in the process of collective decision making process. Without this, argue Platformists, any decisions made will be paper ones as individuals and groups would ignore the agreements made by the federation (the Platform calls this *"the tactic of irresponsible individualism"*). [**Op. Cit.**, p. 32] With *"Collective Responsibility,"* the strength of all the individuals that make up the group is magnified and collectively applied.

The last principle in the *"Organisational Section"* of the Platform is *"Federalism,"* which it defined as *"the free agreement of individuals and organisations to work collectively towards a common objective"* and which *"reconciles the independence and initiative of individuals and the organisation with service to the common cause."* However, the Platform argued that this principle has been *"deformed"* within the movement to mean the *"right"* to *"manifest one's 'ego,' without obligation to account for duties as regards the organisation"* one is a member of. In order to overcome this problem, they stress that *"the federalist type of anarchist organisation, while recognising each member's rights to independence, free opinion, individual liberty and initiative, requires each member to undertake fixed organisation duties, and demands execution of communal decisions."* [**Op. Cit.**, p. 33 and pp. 33–4]

As part of their solution to the problem of anarchist organisation, the Platform suggested that each group would have *"its secretariat, executing and guiding theoretically the political and technical work of the organisation."* Moreover, the Platform urged the creation of an ***"executive committee of the Union"*** which would *"be in charge"* of *"the execution of decisions taken by the Union with which it is entrusted; the theoretical and organisational orientation of the activity*

of isolated organisations consistent with the theoretical positions and the general tactical lines of the Union; the monitoring of the general state of the movement; the maintenance of working and organisational links between all the organisations in the Union; and with other organisation." The rights, responsibilities and practical tasks of the executive committee are fixed by the congress of the Union. [**Op. Cit.**, p. 34]

This suggestion, unsurprisingly, meet with strong disapproval by most anarchists, as we will see in the next section, who argued that this would turn the anarchist movement into a centralised, hierarchical party similar to the Bolsheviks. Needless to say, supporters of the Platform reject this argument and point out that the Platform itself is not written in stone and needs to be discussed fully and modified as required. In fact, few, if any, Platformist groups, do have this *"secretariat"* structure (it could, in fact, be argued that there are no actual "Platformist" groups, rather groups influenced by the Platform, namely on the issues of *"Theoretical and Tactical Unity"* and *"Collective Responsibility"*).

Similarly, most modern day Platformists reject the idea of gathering all anarchists into one organisation. The original Platform seemed to imply that the **General Union** would be an umbrella organisation, made up of different groups and individuals. Most Platformists would argue that not only will there never be one organisation which encompasses everyone, they do not think it necessary. Instead they envisage the existence of a number of organisations, each internally unified, each co-operating with each other where possible, a much more amorphous and fluid entity than a **General Union of Anarchists**.

As well as the original Platform, most Platformists place the **Manifesto of Libertarian Communism** by Georges Fontenis and **Towards a Fresh Revolution** by the *"Friends of Durruti"* as landmark texts in the Platformist tradition. A few anarcho-syndicalists question this last claim, arguing that the *"Friends of Durruti"* manifesto has strong similarities with the CNT's pre-1936 position on revolution and thus is an anarcho-syndicalist document, going back to the position the CNT ignored after July 19th, 1936. Alexandre Skirda's book **Facing the Enemy** contains the key documents on the original Platformists (including the original draft Platform, supplementary documents clarifying issues and polemics against critiques). There are numerous Platformist and Platformist influenced organisations in the world today, such as the Irish **Workers Solidarity Movement** and Italian **Federation of Anarchist Communists**.

In the next section we discuss the objections that most anarchists have towards the Platform.

J.3.4 Why do many anarchists oppose the "Platform"?

When the "Platform" was published it provoked a massive amount of debate and comment, the majority of it critical. Most of famous anarchists rejected the Platform. Indeed, only Nestor Makhno (who co-authored the work) supported its proposals, with (among others) Alexander Berkman, Emma Goldman, Voline, G.P. Maximoff, Luigi Fabbri, Camilo Berneri and Errico Malatesta rejecting its suggestions on how anarchists should organise. Some argued that the Platform was trying to *"Bolshevise"* anarchism (*"They are only one step away from bolshevism."* [*"The Reply by Several Russian Anarchists"*, pp. 32–6, **Constructive Anarchism**, G.P. Maximoff (ed.), pp. 36]). Others, such as Malatesta, suggested that the authors were too impressed by the apparent "success" of the Bolsheviks in Russia. Since then, it has continued to provoke a lot of debate in anarchist circles. So why do so many anarchists oppose the Platform?

While many of the anti-Platformists made points about most parts of the Platform (both Maximoff and Voline pointed out that while the Platform denied the need of a *"Transitional Period"* in theory, it accepted it in practice, for example) the main bone of contention was found in the *"Organisational Section"* with its call for *"Tactical and Theoretical Unity," "Collective Responsibility"* and group and executive *"secretariats"* guiding the organisation. Here most anarchists found ideas they considered incompatible with libertarian ideas. We will concentrate on this issue as it is usually considered as the most important.

Today, in some quarters of the libertarian movement, the Platformists are often dismissed as "would-be leaders." Yet this was not where Malatesta and other critics of the Platform took issue. Malatesta and Maximoff both argued that, to use Maximoff's words, anarchists should *"go into the masses... , work[ing] with them, struggle for their soul, and attempt to win it* ***ideologically*** *[sic!] and give it guidance."* So the question was *"not the rejection of* ***leadership,*** *but making certain it is* ***free*** *and* ***natural.***" [**Constructive Anarchism**, p. 19] Moreover, as Maximoff noted, the "synthesis" anarchists came to the same conclusion. Thus all sides of the debate accepted that anarchists should take the lead. The question, as Malatesta and the others saw it, was not whether to lead, but rather **how** you should lead — a fairly important distinction.

Malatesta posed two alternatives, either you *"provide leadership by advice and example leaving people themselves to ... adopt our methods and solutions if these are, or seem to be, better than those suggested and carried out by others"* or you can *"direct by taking over command, that is by becoming a government."* He asked the Platformists: *"In which manner do you wish to direct?"* While he thought, from his knowledge of Makhno and his work, that the answer would be the first option, he was *"assailed by doubt that [Makhno] would also like to see, within the general movement, a central body that would, in an authoritarian manner, dictate the theoretical and practical programme for the revolution."* This was because of the *"Executive Committee"* in the Platform which would *"give ideological and organisational direction to the association."* [**The Anarchist Revolution**, p. 108 and p. 110]

Maximoff made the same point, arguing that the Platform implied that anarchists in the unions are responsible to the anarchist federation, **not** to the union assemblies that elected them. As he put it, according to the Platform anarchists *"are to join the Trades Unions with ready-made recipes and are to carry out their plans, if necessary, against the will of the Unions themselves."* This was just one example of a general problem, namely that the Platform *"places its Party on the same height as the Bolsheviks do, i.e., it places the interests of the Party above the interests of the masses since the Party has the monopoly of understanding these interests."* [**Constructive Anarchism**, p. 19 and p. 18] This flowed from the Platform arguing that anarchists must *"enter into revolutionary trade unions as an organised force, responsible to accomplish work in the union before the general anarchist organisation and orientated by the latter."* However, Maximoff's argument may be considered harsh as the Platform also argued that anarchism *"aspires neither to political power nor dictatorship"* and so they would hardly be urging the opposite principles within the trade union movement. [**The Organisational Platform of the Libertarian Communists**, p. 25 and p. 21] If we take the Platform's comments within a context informed by the *"leadership of ideas"* concept (see section J.3.6) then what they meant was simply that the anarchist group would convince the union members of the validity of their ideas by argument which was something Maximoff did not disagree with. In short, the disagreement becomes one of unclear (or bad) use of language by the Platform's authors.

Despite many efforts and many letters on the subject (in particular between Malatesta and Makhno) the question of "leadership" could not be clarified to either side's satisfaction, in part because there was an additional issue in dispute. This was the related issue of organisational principles (which in themselves make up the defining part of the original Platform). Malatesta argued that this did not conform with anarchist methods and principles, and so could not *"help bring about the triumph of anarchism."* [**The Anarchist Revolution**, p. 97] This was because of two main reasons, the first being the issue of the Platform's "secretariats" and "executive committee" and the issue of "Collective Responsibility." We will take each in turn.

With an structure based round "secretariats" and "executive committees" the *"will of the [General] Union [of Anarchists] can only mean the will of the majority, expressed through congresses which nominate and control the* ***Executive Committee*** *and decide on all important issues. Naturally, the congresses would consist of representatives elected by the majority of member groups ... So, in the best of cases, the decisions would be taken by a majority of a majority, and this could easily, especially when the opposing opinions are more than two, represent only a minority."* This, Malatesta argued, *"comes down to a pure majority system, to pure parliamentarianism"* and so non-anarchist in nature. [**Op. Cit.**, p. 100]

As long as a Platformist federation is based on *"secretariats"* and *"executive committees"* directing the activity and development of the organisation, this critique is valid. In such a system, as these bodies control the organisation and members are expected to follow their decisions (due to *"theoretical and tactical unity"* and *"collective responsibility"*) they are, in effect, the government of the association. While this government may be elected and accountable, it is still a government simply because these bodies have executive power. As Maximoff argued, individual initiative in the Platform *"has a special character ... Each organisation (i.e. association of members with the right to individual initiative) has its secretariat which ...* ***directs*** *the ideological, political and technical activities of the organisation ... In what, then, consists the self-reliant activities of the rank-and-file members? Apparently in one thing: initiative to obey the secretariat and carry out its directives."* [**Op. Cit.**, p. 18] This seems to be the logical conclusion of the structure suggested by the Platform. *"The spirit,"* argued Malatesta, *"the tendency remains authoritarian and the educational effect would remain anti-anarchist."* [**Op. Cit.**, p. 98]

Malatesta, in contrast, argued that an anarchist organisation must be based on the *"[f]ull autonomy, full independence and therefore the full responsibility of individuals and groups"* with all organisational work done *"freely, in such a way that the thought and initiative of individuals is not obstructed."* The individual members of such an organisation *"express any opinion and use any tactic which is not in contradiction with accepted principles and which does not harm the activities of others."* Moreover, the administrative bodies such organisations nominate would *"have no executive powers, have no directive powers"* leaving it up to the groups and their federal meetings to decide their own fates. The congresses of such organisations would be *"free from any kind of authoritarianism, because they do not lay down the law; they do not impose their own resolutions on others .. . and do not become binding and enforceable except on those who accept them."* [**Op. Cit.**, p. 101, p. 102 and p. 101] Such an organisation does not exclude collective decisions and self-assumed obligations, rather it is based upon them.

Most groups inspired by the Platform, however, seem to reject this aspect of its organisational suggestions. Instead of "secretariats" and "executive committees" they have regular conferences and meetings to reach collective decisions on issues and practice unity that way. Thus the **really** important issue is of *"theoretical and tactical unity"* and *"collective responsibility,"* rather than ithe

structure suggested by the Platform. Indeed, this issue was the main topic in Makhno's letter to Malatesta, for example, and so we would be justified in saying that this is the key issue dividing "Platformists" from other anarchists.

So in what way did Malatesta disagree with this concept? As we mentioned in the last section, the Platform defined the idea of "Collective Responsibility" as *"the entire Union will be responsible for the political and revolutionary activity of each member; in the same way, each member will be responsible for the political and revolutionary activity of the Union."* To which Malatesta replied:

> *"But if the Union is responsible for what each member does, how can it leave to its members and to the various groups the freedom to apply the common programme in the way they think best? How can one be responsible for an action if it does not have the means to prevent it? Therefore, the Union and in its name the Executive Committee, would need to monitor the action of the individual member and order them what to do and what not to do; and since disapproval after the event cannot put right a previously accepted responsibility, no-one would be able to do anything at all before having obtained the go-ahead, the permission of the committee. And, on the other hand, can an individual accept responsibility for the actions of a collectivity before knowing what it will do and if he cannot prevent it doing what he disapproves of?"* [**Op. Cit.**, p. 99]

In other words, the term *"collective responsibility"* (if taken literally) implies a highly inefficient and somewhat authoritarian mode of organisation. Before any action could be undertaken, the organisation would have to be consulted and this would crush individual, group and local initiative. The organisation would respond slowly to developing situations, if at all, and this response would not be informed by first hand knowledge and experience. Moreover, this form of organisation implies a surrendering of individual judgement, as members would have to *"submit to the decisions of the majority before they have even heard what those might be."* [Malatesta, **Op. Cit.**, 101] In the end, all a member could do would be to leave the organisation if they disagree with a tactic or position and could not bring themselves to further it by their actions.

This structure also suggests that the Platform's commitment to federalism is in words only. As most anarchists critical of the Platform argued, while its authors affirm federalist principles they, in fact, *"outline a perfectly centralised organisation with an Executive Committee that has responsibility to give ideological and organisational direction to the different anarchist organisations, which in turn will direct the professional organisations of the workers."* [*"The Reply by Several Russian Anarchists"*, **Op. Cit.**, pp. 35–6]

Thus it is likely that "Collective Responsibility" taken to its logical conclusion would actually **hinder** anarchist work by being too bureaucratic and slow. However, let us assume that by applying collective responsibility as well as tactical and theoretical unity, anarchist resources and time will be more efficiently utilised. What is the point of being "efficient" if the collective decision reached is wrong or is inapplicable to many areas? Rather than local groups applying their knowledge of local conditions and developing theories and policies that reflect these conditions (and co-operating from the bottom up), they may be forced to apply inappropriate policies due to the "Unity" of the Platformist organisation. It is true that Makhno argued that the *"activities of local organisations can be adapted, as far as possible, to suit local conditions"* but only if they are *"consonant with the pattern of the overall organisational practice of the Union of anarchists covering the whole country."* [**The Struggle Against the State and Other Essays**, p. 62] Which

still begs the question on the nature of the Platform's unity (however, it does suggest that the Platform's position may be less extreme than might be implied by the text, as we will discuss). That is why anarchists have traditionally supported federalism and free agreement within their organisations, to take into account the real needs of localities.

If we do not take the Platform's definition of "Collective Responsibility" literally or to its logical extreme (as Makhno's comments suggest) then the differences between Platformists and non-Platformists may not be that far. As Malatesta pointed out in his reply to Makhno's letter:

> *"I accept and support the view that anyone who associates and co-operates with others for a common purpose must feel the need to co-ordinate his [or her] actions with those of his [or her] fellow members and do nothing that harms the work of others ... and respect the agreements that have been made ... [Moreover] I maintain that those who do not feel and do not practice that duty should be thrown out of the association.*
>
> *"Perhaps, speaking of collective responsibility, you mean precisely that accord and solidarity that must exist among members of an association. And if that is so, your expression amounts ... to an incorrect use of language, but basically it would only be an unimportant question of wording and agreement would soon be reached."* [**Op. Cit.**, pp. 107–8]

This, indeed, seems to be the way that most Platformist organisations do operate. They have agreed broad theoretical and tactical positions on various subjects (such as, for example, the nature of trade unions and how anarchists relate to them) while leaving it to local groups to act within these guidelines. Moreover, the local groups do not have to report to the organisation before embarking on an activity. In other words, most Platformist groups do not take the Platform literally and so many differences are, to a large degree, a question of wording. As two supporters of the Platform note:

> *"The Platform doesn't go into detail about how collective responsibility works in practice. There are issues it leaves untouched such as the question of people who oppose the majority view. We would argue that obviously people who oppose the view of the majority have a right to express their own views, however in doing so they must make clear that they don't represent the view of the organisation. If a group of people within the organisation oppose the majority decision they have the right to organise and distribute information so that their arguments can be heard within the organisation as a whole. Part of our anarchism is the belief that debate and disagreement, freedom and openness strengthens both the individual and the group to which she or he belongs."* [Aileen O'Carroll and Alan MacSimoin, *"The Platform"*, pp. 29–31, **Red and Black Revolution**, no. 4, p. 30]

While many anarchists are critical of Platformist groups for being too centralised for their liking, it is the case that the Platform has influenced many anarchist organisations, even non-Platformist ones (this can be seen in the "class struggle" groups discussed in the next section). This influence has been both ways, with the criticism the original Platform was subjected to having had an effect on how Platformist groups have developed. This, of course, does not imply that there is little or no difference between Platformists and other anarchists. Platformist groups

tend to stress "collective responsibility" and "theoretical and tactical unity" more than others, which has caused problems when Platformists have worked within "synthesis" organisations (as was the case in France, for example, which resulted in much bad-feeling between Platformists and others).

Constructive Anarchism by the leading Russian anarcho-syndicalist G.P. Maximoff gathers all the relevant documents in one place. As well as Maximoff's critique of the Platform, it includes the "synthesis" reply, Malatesta's review and subssequent exchange of letters between him and Makhno. **The Anarchist Revolution** also contains Malatesta's article and the exchange of letters between him and Makhno.

J.3.5 Are there other kinds of anarchist federation?

Yes. Another type of anarchist federation is what we term the

"class struggle" group. Many local anarchist groups in Britain, for example, organise in this fashion. They use the term "class struggle" to indicate that their anarchism is based on collective working class resistance as opposed to reforming capitalism via lifestyle changes and the support of, say, co-operatives (many "class struggle" anarchists do these things, of course, but they are aware that they cannot create an anarchist society by so doing). We follow this use of the term here. And just to stress the point again, our use of "class struggle" to describe this type of anarchist group does not imply that "synthesis" or "Platformist" do not support the class struggle. They do!

This kind of group is half-way between the "synthesis" and the "Platform." The "class struggle" group agrees with the "synthesis" in so far as it is important to have a diverse viewpoints within a federation and that it would be a mistake to try to impose a common-line on different groups in different circumstances as the Platform does. However, like the "Platform," the class struggle group recognises that there is little point in creating a forced union between totally different strands of anarchism. Thus the "class struggle" group rejects the idea that individualist or mutualist anarchists should be part of the same organisation as anarchist communists or syndicalists or that anarcho-pacifists should join forces with non-pacifists. Thus the "class struggle" group acknowledges that an organisation which contains viewpoints which are dramatically opposed can lead to pointless debates and paralysis of action due to the impossibilities of overcoming those differences.

Instead, the "class struggle" group agrees a common set of ***"aims and principles"*** which are the basic terms of agreement within the federation. If an individual or group does not agree with this statement then they cannot join. If they are members and try to change this statement and cannot get the others to agree its modification, then they are morally bound to leave the organisation. In other words, there is a framework within which individuals and groups apply their own ideas and their interpretation of agreed policies. It means that individuals in a group and the groups within a federation have something to base their local activity on, something which has been agreed collectively. There would be a common thread to activities and a guide to action (particularly in situations were a group or federation meeting cannot be called). In this way individual initiative and co-operation can be reconciled, without hindering either. In addition, the ***"aims and principles"*** shows potential members where the anarchist group was coming from.

In this way the "class struggle" group solves one of the key problems with the "synthesis" grouping, namely that any such basic statement of political ideas would be hard to agree and be so watered down as to be almost useless (for example, a federation combining individualist and communist anarchists would find it impossible to agree on such things as the necessity for revolution, communal ownership, and so on). By clearly stating its ideas, the "class struggle" group ensures a common basis for activity and discussion.

Such a federation, like all anarchist groups, would be based upon regular assemblies locally and in frequent regional, national, etc., conferences to continually re-evaluate policies, tactics, strategies and goals. In addition, such meetings prevent power from collecting in the higher administration committees created to co-ordinate activity. The regular conferences aim to create federation policies on specific topics and agree common strategies. Such policies, once agreed, are morally binding on the membership, who can review and revise them as required at a later stage but cannot take action which would hinder their application (they do not have to apply them, if they consider them as a big mistake).

For example, minorities in such a federation can pursue their own policies as long as they clearly state that theirs is a minority position and does not contradict the federation's aims and principles. In this way the anarchist federation combines united action and dissent, for no general policy will be applicable in all circumstances and it is better for minorities to ignore policies which they know will make even greater problems in their area. As long as their actions and policies do not contradict the federation's basic political ideas, then diversity is an essential means for ensuring that the best tactic and ideas are be identified.

J.3.6 What role do these groups play in anarchist theory?

The aim of anarchist groups and federations is to spread libertarian ideas within society and within social movements. They aim to convince people of the validity of anarchist ideas and analysis, of the need for a libertarian transformation of society and of themselves by working with others as equals. Such groups are convinced that (to use Murray Bookchin's words) *"anarcho-communism cannot remain a mere mood or tendency, wafting in the air like a cultural ambience. It must be organised — indeed **well-organised** — if it is effectively articulate and spread this new sensibility; it must have a coherent theory and extensive literature; it must be capable of duelling with the authoritarian movements that try to denature the intuitive libertarian impulses of our time and channel social unrest into hierarchical forms of organisation."* ["*Looking Back at Spain,*" pp. 53–96, Dimitrios I. Roussopoulos (ed.), **The Radical Papers**, p. 90]

These groups and federations play a key role in anarchist theory. This is because anarchists are well aware that there are different levels of knowledge and consciousness in society. While people learn through struggle and their own experiences, different people develop at different speeds, that each individual is unique and is subject to different influences. As one pamphlet by the British **Anarchist Federation** puts it, the *"experiences of working class life constantly lead to the development of ideas and actions which question the established order ... At the same time, different sections of the working class reach different degrees of consciousness."* [**The Role of the Revolutionary Organisation**, p. 13] This can easily be seen from any group of individuals of the same class or even community. Some are anarchists, others Marxists, some social democrats/

labourites, others conservatives, others liberals, most "apolitical," some support trade unions, others are against and so on.

Because we are aware that we are one tendency among many, anarchists organise as anarchists to influence social struggle. Only when anarchists ideas are accepted by the vast majority will an anarchist society be possible. We wish, in other words, to win the most widespread understanding and influence for anarchist ideas and methods in the working class and in society, primarily because we believe that these alone will ensure a successful revolutionary transformation of society. Hence Malatesta:

> *"anarchists, convinced of the validity of our programme, must strive to acquire overwhelming influence in order to draw the movement towards the realisation of our ideals. But such influence must be won by doing more and better than others, and will be useful if won in that way ... we must deepen, develop and propagate our ideas and co-ordinate our forces in a common action. We must act within the labour movement to prevent it being limited to and corrupted by the exclusive pursuit of small improvements compatible with the capitalist system ... We must work with ... [all the] masses to awaken the spirit of revolt and the desire for a free and happy life. We must initiate and support all movements that tend to weaken the forces of the State and of capitalism and to raise the mental level and material conditions of the workers."* [**The Anarchist Revolution**, p. 109]

Anarchist organisation exists to help the process by which people come to anarchist conclusions. It aims to make explicit the feelings and thoughts that people have (such as, wage slavery is hell, that the state exists to oppress people and so on) by exposing as wrong common justifications for existing society and social relationships by a process of debate and providing a vision of something better. In other words, anarchist organisations seek to explain and clarify what is happening in society and show why anarchism is the only real solution to social problems. As part of this, we also have combat wrong ideas such as Liberalism, Social Democracy, Leninism, right-wing popularism and so on, indicating why these proposed solutions are false. In addition, an anarchist organisation must also be a 'collective memory' for the oppressed, keeping alive and developing the traditions of the labour and radical movements as well as anarchism so that new generations of libertarians have a body of experience to build upon and use in their struggles.

Anarchist organisations see themselves in the role of aiders, **not** leaders. As Voline argued, the minority which is politically aware *"should intervene. But, in every place and under all circumstances, .. . [they] should freely participate in the common work, **as true collaborators, not as dictators.** It is necessary that they especially create an example, and employ themselves ... without dominating, subjugating, or oppressing anyone ... Accordingly to the libertarian thesis, it is the labouring masses themselves, who, by means of the various class organisations, factory committees, industrial and agricultural unions, co-operatives, et cetera, federated ... should apply themselves everywhere, to solving the problems of waging the Revolution ... As for the 'elite' [i.e. the politically aware], their role, according to the libertarians, is to **help** the masses, enlighten them, teach them, give them necessary advice, impel them to take initiative, provide them with an example, and support them in their action — **but not to direct them governmentally.**"* [**The Unknown Revolution**, pp. 177–8]

This role is usually called providing a ***"leadership of ideas"***. Anarchists stress the difference of this concept with authoritarian notions of "leadership" such as Leninist ones. While both

anarchist and Leninist organisations exist to overcome the problem of "uneven development" within the working class, the aims, role and structure of these groups could not be more different (as discussed in section H.5, anarchists reject the assumptions and practice of vanguardism as incompatible with genuine socialism).

Anarchist groups are needed for, no matter how much people change through struggle, it is not enough in itself (if it were, we would be living in an anarchist society now!). So anarchists stress, as well as self-organisation, self-liberation and self-education through struggle developing libertarian socialist thought, the need for anarchist groups to work within popular organisations and in the mass of the population in general. These groups would play an important role in helping to clarify the ideas of those in struggle and undermining the internal and external barriers against these ideas.

The first of these are what Emma Goldman termed the *"internal tyrants,"* the *"ethical and social conventions"* of existing, hierarchical society which accustom people to authoritarian social relationships, injustice, lack of freedom and so on. [**Red Emma Speaks**, pp. 164–5] External barriers are what Chomsky terms *"the Manufacture of Consent,"* the process by which the population at large are influenced to accept the status quo and the dominant elites viewpoint via the education system and media. It is this "manufacture of consent" which helps explain why, relatively speaking, there are so few anarchists even though we argue that anarchism is the natural product of working class life. While, objectively, the experiences of life drives working class people to resist domination and oppression, they enter that struggle with a history behind them, a history of education in capitalist schools, of consuming capitalist media, and so on.

This means that while social struggle is radicalising, it also has to combat years of pro-state and pro-capitalist influences. So even if an anarchist consciousness springs from the real conditions of working class life, because we live in a class society there are numerous counter-tendencies that **inhibit** the development of that consciousness (such as religion, current morality, the media, pro-business and pro-state propaganda, state and business repression and so on). This explains the differences in political opinion within the working class, as people develop at different speeds and are subject to different influences and experiences. However, the numerous internal and external barriers to the development of anarchist opinions created our *"internal tyrants"* and by the process of *"manufacturing consent"* can be, and are, weaken by rational discussion as well as social struggle and self-activity. Indeed, until such time as we have *"learned to defy them all [the internal tyrants], to stand firmly on [our] own ground and to insist upon [our] own unrestricted freedom"* we can never be free or successfully combat the "manufacture of consent." [Goldman, **Op. Cit.**, p. 140] And this is where the anarchist group can play a part, for there is an important role to be played by those who have been through this process already, namely to aid those going through it.

Of course the activity of an anarchist group does not occur in a vacuum. In periods of low class struggle, where there is little collective action, anarchist ideas will seem utopian and so dismissed by most. In these situations, only a few will become anarchists simply because the experiences of working people do not bred confidence that an alternative to the current system is possible. In addition, if anarchist groups are small, many who are looking for an alternative may join other groups which are more visible and express a libertarian sounding rhetoric (such as Leninist groups, who often talk about workers' control, workers' councils and so on while meaning something distinctly different from what anarchists mean by these terms). However, as the class struggle increases and people become more inclined to take collective action, they

can become empowered and radicalised by their own activity and be more open to anarchist ideas and the possibility of changing society. In these situations, anarchist groups grow and the influence in anarchist ideas increases. This explains why anarchist ideas are not as widespread as they could be. It also indicates another important role for the anarchist group, namely to provide an environment and space where those drawn to anarchist ideas can meet and share experiences and ideas during periods of reaction.

The role of the anarchist group, therefore, is **not** to import a foreign ideology into the working class, but rather to help develop and clarify the ideas of those working class people who are moving towards anarchism and so aid those undergoing that development. They would aid this development by providing propaganda which exposes the current social system (and the rationales for it) as bankrupt as well as encouraging resistance to oppression and exploitation. The former, for Bakunin, allowed the *"bringing [of] a more just general expression, a new and more congenial form to the existent instincts of the proletariat ... [which] can sometimes facilitate and precipitate development ... [and] give them an awareness of what they have, of what they feel, of what they already instinctively desire, but never can it give to them what they don't have."* The latter *"is the most popular, the most potent, and the most irresistible form of propaganda"* and *"awake[s] in the masses all the social-revolutionary instincts which reside deeply in the heart of every worker"* so allowing instinct to become transformed into *"reflected socialist thought."* [quoted by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin**, p. 107, p. 108 and p. 141]

To quote the UK **Anarchist Federation**, again *"the [libertarian] organisation is not just a propaganda group: above all it must actively work in all the grassroots organisations of the working class such as rank and file [trade union] groups, tenants associations, squatters and unemployed groups as well as women's, black and gay groups."* It *"respects the independence of working class movements and (unlike] others) does not try to subordinate them to the revolutionary organisation. This does not mean that it does not seek to spread its ideas in these movements."* [**Op. Cit.**, p. 15 and p. 16] Such an organisation is not vanguardist in the Leninist sense as it recognises that socialist politics derive from working class experience, rather than bourgeois intellectuals (as Lenin and Karl Kautsky argued), and that it does not aim to dominate popular movements but rather work within them as equals.

So while we recognise that "advanced" sections do exist within the working class and that anarchists are one such section, we also recognise that **central** characteristic of anarchism is that its politics are derived from the concrete experience of fighting capitalism and statism directly — that is, from the realities of working class life. This means that anarchists must also learn from working class people in struggle. If we recognise that anarchist ideas are the product of working class experience and self-activity and that these constantly change and develop in light of new experiences and struggles then anarchist theory **must be open to change by learning from non-anarchists.** Not to recognise this fact is to open the door to vanguardism and dogma. Because of this fact, anarchists argue that the relationship between anarchists and non-anarchists must be an egalitarian one, based on mutual interaction and the recognition that no one is infallible or have all the answers — including anarchists! With this in mind, while we recognise the presence of "advanced" groups within the working class (which obviously reflects the uneven development within it), anarchists aim to minimise such unevenness by the way anarchist organisations intervene in social struggle, intervention based on involving **all** in the decision making process (as we discuss below).

Thus the general aim of anarchist groups is to spread ideas — such as general anarchist analysis of society and current events, libertarian forms of organisation, direct action and solidarity and so forth — and win people over to anarchism (i.e. to "make" anarchists). This involves both propaganda and participating as equals in social struggle and popular organisation. Anarchists do not think that changing leaders is a solution to the problem of (bad) leadership. Rather, it is a question of making leaders redundant by empowering all. As Malatesta argued, we *"do not want to* ***emancipate*** *the people; we want the people to* ***emancipate themselves.****"* Thus anarchists *"advocate and practise direct action, decentralisation, autonomy and individual initiative; they should make special efforts to help members [of popular organisations] learn to participate directly in the life of the organisation and to dispense with leaders and full-time functionaries."* [**Errico Malatesta: His Life and Ideas**, p. 90 and p. 125]

This means that anarchists reject the idea that anarchist groups and federations must become the "leaders" of organisations. Rather, we desire anarchist ideas to be commonplace in society and in popular organisations, so that leadership by people from positions of power is replaced by the *"natural influence"* (to use Bakunin's term) of activists within the rank and file on the decisions made **by** the rank and file. While we will discuss Bakunin's ideas in more detail in section J.3.7, the concept of *"natural influence"* can be gathered from this comment of Francisco Ascaso (friend of Durruti and an influential anarchist militant in the CNT and FAI in his own right):

> *"There is not a single militant who as a 'FAIista' intervenes in union meetings. I work, therefore I am an exploited person. I pay my dues to the workers' union and when I intervene at union meetings I do it as someone who is exploited, and with the right which is granted me by the card in my possession, as do the other militants, whether they belong to the FAI or not."* [quoted by Abel Paz, **Durruti: The People Armed**, p. 137]

This shows the nature of the "leadership of ideas." Rather than be elected to a position of power or responsibility, the anarchist presents their ideas at mass meetings and argues his or her case. This means obviously implies a two-way learning process, as the anarchist learns from the experiences of others and the others come in contact with anarchist ideas. Moreover, it is an egalitarian relationship, based upon discussion between equals rather than urging people to place someone into power above them. It ensures that everyone in the organisation participants in making, understands and agrees with the decisions reached. This obviously helps the political development of all involved (including, we must stress, the anarchists). As Durruti argued: *"the man [or woman] who alienates his will, can never be free to express himself and follow his own ideas at a union meeting if he feel dominated by the feeblest orator ... As long as a man doesn't think for himself and doesn't assume his own responsibilities, there will be no complete liberation of human beings."* [quoted by Paz, **Op. Cit.**, p. 184]

Because of our support for the "leadership of ideas", anarchists think that all popular organisations must be open, fully self-managed and free from authoritarianism. Only in this way can ideas and discussion play an important role in the life of the organisation. Since anarchists *"do not believe in the good that comes from above and imposed by force"* and *"want the new way of life to emerge from the body of the people and advance as they advance. It matters to us therefore that all interests and opinions find their expression in a conscious organisation and should influence*

communal life in proportion to their importance." [Malatesta, **Op. Cit.**, p. 90] Bakunin's words with regards the first International Workers Association indicate this clearly:

> *"It must be a people's movement, organised from the bottom up by the free, spontaneous action of the masses. There must be no secret governmentalism, the masses must be informed of everything ... All the affairs of the International must be thoroughly and openly discussed without evasions and circumlocutions."* [**Bakunin on Anarchism**, p. 408]

Given this, anarchists reject the idea of turning the organs created in the class struggle and revolutionary process into hierarchical structures. By turning them from organs of self-management into organs for nominating "leaders," the constructive tasks and political development of the revolution will be aborted before they really begin. The active participation of all will become reduced to the picking of new masters and the revolution will falter. For this reason, anarchists *"differ from the Bolshevik type of party in their belief that genuine revolutionaries must function* ***within the framework of the forms created by the revolution,*** *not within forms created by the party."* This means that *"an organisation is needed to propagate ideas systematically — and not ideas alone, but* ***ideas which promote the concept of self-management.***" In other words, there *"is a need for a revolutionary organisation — but its function must always be kept clearly in mind. Its first task is propaganda ... In a revolutionary situation, the revolutionary organisation presents the most advanced demands: it is prepared at every turn of events to formulate — in the most concrete fashion — the immediate task that should be performed to advance the revolutionary process. It provides the boldest elements in action and in the decision-making organs of the revolution."* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 140] What it does **not** do is to supplant those organs or decision-making process by creating institutionalised, hierarchical leadership structures.

Equally as important as **how** anarchists intervene in social struggles and popular organisations and the organisation of those struggles and organisations, there is the question of the nature of that intervention. We would like to quote the following by the British libertarian socialist group **Solidarity** as it sums up the underlying nature of anarchist action and the importance of a libertarian perspective on social struggle and change and how politically aware minorities work within them:

> *"****Meaningful action,*** *for revolutionaries, is whatever increases the confidence, the autonomy, the initiative, the participation, the solidarity, the egalitarian tendencies and the self-activity of the masses and whatever assists in their demystification.* ***Sterile and harmful action*** *is whatever reinforces the passivity of the masses, their apathy, their cynicism, their differentiation through hierarchy, their alienation, their reliance on others to do things for them and the degree to which they can therefore be manipulated by others — even by those allegedly acting on their behalf."* [Maurice Brinton, **For Workers' Power**, p. 154]

Part of this "meaningful action" involves encouraging people to ***"act for yourselves"*** (to use Kropotkin's words). As we noted in section A.2.7, anarchism is based on **self**-liberation and self-activity is key aspect of this. Hence Malatesta's argument:

> *"Our task is that of 'pushing' the people to demand and to seize all the freedom they can and to make themselves responsible for providing their own needs without waiting*

> *for orders from any kind of authority. Our task is that of demonstrating the uselessness and harmfulness of government, provoking and encouraging by propaganda and action, all kinds of individual and collective activities.*
>
> *"It is in fact a question of education for freedom, of making people who are accustomed to obedience and passivity consciously aware of their real power and capabilities. One must encourage people to do things for themselves."* [**Op. Cit.**, pp. 178–9]

This "pushing" people to "do it themselves" is another key role for any anarchist organisation. The encouragement of direct action is just as important as anarchist propaganda and popular participation within social struggle and popular organisations.

As such social struggle developments, the possibility of revolution becomes closer and closer. While we discuss anarchists ideas on social revolution in section J.7, we must note here that the role of the anarchist organisation does not change. As Bookchin argued, anarchists *"seek to persuade the factory committees, assemblies"* and other organisations created by people in struggle *"to make themselves into* ***genuine organs of popular self-management****, not to dominate them, manipulate them, or hitch them to an all-knowing political party."* [**Op. Cit.**, p. 140] In this way, by encouraging self-management in struggle, anarchist lay the foundations of a self-managed society.

J.3.7 Doesn't Bakunin's *"Invisible Dictatorship"* prove that anarchists are secret authoritarians?

No. While Bakunin did use the term *"invisible dictatorship"*, it does not prove that Bakunin or anarchists are secret authoritarians. The claim otherwise, often made by Leninists and other Marxists, expresses a distinct, even wilful, misunderstanding of Bakunin's ideas on the role revolutionaries should play in popular movements.

Marxists quote Bakunin's terms *"invisible dictatorship"* and *"collective dictatorship"* out of context, using it to "prove" that anarchists are secret authoritarians, seeking dictatorship over the masses. More widely, the question of Bakunin and his "invisible dictatorship" finds its way into sympathetic accounts of anarchist ideas. For example, Peter Marshall writes that it is *"not difficult to conclude that Bakunin's invisible dictatorship would be even more tyrannical than a ... Marxist one"* and that it expressed a *"profound authoritarian and dissimulating streak in his life and work."* [**Demanding the Impossible**, p. 287] So, the question of setting the record straight about this aspect of Bakunin's theory is of more importance than just correcting a few Leninists. In addition, to do so will help clarify the concept of *"leadership of ideas"* we discussed in the last section. For both these reasons, this section, while initially appearing somewhat redundant and of interest only to academics, is of a far wider interest.

Anarchists have two responses to claims that Bakunin (and, by implication, all anarchists) seek an *"invisible"* dictatorship and so are not true libertarians. Firstly, and this is the point we will concentrate upon in this section, Bakunin's expression is taken out of context and when placed within context it takes on a radically different meaning than that implied by critics of anarchism. Secondly, even **if** the expression means what the critics claim it does, it does not refute anarchism as a political theory. This is because anarchists are **not** Bakuninists (or Proudhonists or Kropotkinites or any other person-ist). We recognise other anarchists for what they are, human

beings who said lots of important and useful things but, like any other human being, made mistakes and often do not live up to all of their ideas. For anarchists, it is a question of extracting the useful parts from their works and rejecting the useless (as well as the downright nonsense!). Just because Bakunin said something, it does not make it right! This common-sense approach to politics seems to be lost on Marxists. Indeed, if we take the logic of these Marxists to its conclusion, we must reject everything Rousseau wrote (he was sexist), Marx and Engels (their comments against Slavs spring to mind, along with numerous other racist comments) and so on. But, of course, this never happens to non-anarchist thinkers when Marxists write their articles and books.

However, to return to our main argument, that of the importance of context. Significantly, whenever Bakunin uses the term "invisible" or "collective" dictatorship he also explicitly states his opposition to government power and **in particular** the idea that anarchists should seize it. For example, a Leninist quotes the following passage from *"a Bakuninist document"* to show *"the dictatorial ambitions of Bakunin"* and that the *"principle of anti-democracy was to leave Bakunin unchallenged at the apex of power"*: *"It is necessary that in the midst of popular anarchy, which will constitute the very life and energy of the revolution, unity of thought and revolutionary action should find an organ. This organ must be the secret and world-wide association of the international brethren."* [Derek Howl, *"The legacy of Hal Draper"*, pp. 137–49, **International Socialist**, no. 52, p. 147]

However, in the sentence **immediately before** those quoted, Bakunin stated that *"[t]his organisation rules out any idea of dictatorship and custodial control."* Strange that this part of the document was not quoted! Nor is Bakunin quoted when he wrote, in the same document, that *"[w]e are the natural enemies of those revolutionaries — future dictators, regimentors and custodians of revolution — who ... [want] to create new revolutionary States just as centralist and despotic as those we already know."* Not mentioned either is Bakunin's opinion that the *"revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations ... organised from the bottom upwards by means of revolutionary delegations ... [who] will set out to administer public services, not to rule over peoples."* [**Michael Bakunin: Selected Writings**, p. 172, p. 169 and p. 172] Selective quoting is only convincing to those ignorant of the subject.

Similarly, when we look at the situations where Bakunin uses the terms *"invisible"* or *"collective"* dictatorship (usually in letters to comrades) we find the same thing — the explicit denial **in these same letters** that Bakunin thought the revolutionary association should take governmental power. For example, in a letter to Albert Richard (a fellow member of the *"Alliance of Social Democracy"*) Bakunin stated that *"[t]here is only one power and one dictatorship whose organisation is salutary and feasible: it is that collective, invisible dictatorship of those who are allied in the name of our principle."* He then immediately adds that *"this dictatorship will be all the more salutary and effective for not being dressed up in any official power or extrinsic character."* Earlier in the letter he argued that anarchists must be *"like invisible pilots in the thick of the popular tempest... steer[ing] it [the revolution] not by any open power but by the collective dictatorship of all the allies — a dictatorship without insignia, titles or official rights, and all the stronger for having none of the paraphernalia of power."* Explicitly opposing *"Committees of Public Safety and official, overt dictatorship"* he explains his idea of a revolution based on *"workers hav[ing] joined into associations .. . armed and organised by streets and **quartiers**, the federative commune."* [**Op. Cit.**,

p. 181, p. 180 and p. 179] Hardly what would be expected from a would-be dictator. As Sam Dolgoff suggested:

> *"an organisation exercising no overt authority, without a state, without official status, without the machinery of institutionalised power to enforce its policies, cannot be defined as a dictatorship ... Moreover, if it is borne in mind that this passage is part of a letter repudiating in the strongest terms the State and the authoritarian statism of the 'Robespierres, the Dantons, and the Saint-Justs of the revolution,' it is reasonable to conclude that Bakunin used the word 'dictatorship' to denote preponderant influence or guidance exercised largely by example ... In line with this conclusion, Bakunin used the words 'invisible' and 'collective' to denote the underground movement exerting this influence in an organised manner."* [**Bakunin on Anarchism**, p. 182]

This analysis is confirmed by other passages from Bakunin's letters. In a letter to the Nihilist Sergi Nechaev (within which Bakunin indicates exactly how far apart politically they were — which is important as, from Marx onwards, many of Bakunin's opponents quote Nechaev's pamphlets as if they were "Bakuninist," when in fact they were not) we find him arguing that:

> *"These [revolutionary] groups would not seek anything for themselves, neither privilege nor honour nor power ... [but] would be in a position to direct popular movements ... and lead the people towards the most complete realisation of the social-economic ideal and the organisation of the fullest popular freedom. This is what I call* ***the collective dictatorship*** *of a secret organisation.*
>
> *"The dictatorship ... does not reward any of the members that comprise the groups, or the groups themselves, with any profit or honour or official power. It does not threaten the freedom of the people, because, lacking any official character, it does not take the place of State control over the people, and because its whole aim ... consists of the fullest realisation of the liberty of the people.*
>
> *"This sort of dictatorship is not in the least contrary to the free development and the self-development of the people, nor its organisation from the bottom upward ... for it influences the people exclusively through the natural, personal influence of its members, who have not the slightest power, ... and ... try ... to direct the spontaneous revolutionary movement of the people towards ... the organisation of popular liberty ... This secret dictatorship would in the first place, and at the present time, carry out a broadly based popular propaganda . .. and by the power of this propaganda and also by* ***organisation among the people themselves*** *join together separate popular forces into a mighty strength capable of demolishing the State."* [**Michael Bakunin: Selected Writings**, pp. 193–4]

The key aspect of this is the notion of *"natural"* influence. In a letter to a Spanish member of the Alliance we find Bakunin arguing that it *"will promote the Revolution only through the* ***natural but never official influence*** *of all members of the Alliance."* [**Bakunin on Anarchism**, p. 387] This term was also used in his public writings, with Bakunin arguing that the *"very freedom of every individual results from th[e] great number of material, intellectual, and moral influences which every individual around him and which society ... continually exercise on him"* and that

"everything alive ... intervene[s] ... in the life of others ... [so] we hardly wish to abolish the effect of any individual's or any group of individuals' natural influence upon the masses." [**The Basic Bakunin**, p. 140 and p. 141]

Thus *"natural influence"* simply means the effect of communicating which others, discussing your ideas with them and winning them over to your position, nothing more. This is hardly authoritarian, and so Bakunin contrasts this *"natural"* influence with *"official"* influence, which replaced the process of mutual interaction between equals with a fixed hierarchy of command and thereby induced the *"transformation of natural influence, and, as such, the perfectly legitimate influence over man, into a right."* [quoted by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin**, p. 46]

As an example of this difference, consider the case of a union militant (as will become clear, this is the sort of example Bakunin had in mind). As long as they are part of the rank-and-file, arguing their case at union meetings or being delegated to carry out the decisions of these assemblies then their influence is *"natural."* However, if this militant is elected into a position with executive power in the union (i.e. becomes a full-time union official, for example, rather than a shop-steward) then their influence becomes *"official"* and so, potentially, corrupting for both the militant and the rank-and-file who are subject to the rule of the official.

Indeed, this notion of *"natural"* influence was also termed *"invisible"* by Bakunin: *"It is only necessary that one worker in ten join the [International Working-Men's] Association* ***earnestly*** *and* ***with full understanding of the cause*** *for the nine-tenths remaining outside its organisation nevertheless to be influenced invisibly by it."* [**The Basic Bakunin**, p. 139] So, as can be seen, the terms *"invisible"* and *"collective"* dictatorship used by Bakunin in his letters is strongly related to the term *"natural influence"* used in his public works and seems to be used simply to indicate the effects of an organised political group on the masses. To see this, it is worthwhile to quote Bakunin at length about the nature of this *"invisible"* influence:

> *"It may be objected that this ... influence on the popular masses suggests the establishment of a system of authority and a new government ... Such a belief would be a serious blunder. The organised effect of the International on the masses ... is nothing but the entirely natural organisation — neither official nor clothed in any authority or political force whatsoever — of the effect of a rather numerous group of individuals who are inspired by the same thought and headed toward the same goal, first of all on the opinion of the masses and only then, by the intermediary of this opinion (restated by the International's propaganda), on their will and their deeds. But the governments ... impose themselves violently on the masses, who are forced to obey them and to execute their decrees ... The International's influence will never be anything but one of opinion and the International will never be anything but the organisation of the natural effect of individuals on the masses."* [**Op. Cit.**, pp. 139–40]

Therefore, from both the fuller context provided by the works and letters selectively quoted by Marxists **and** his other writings, we find that rather than being a secret authoritarian, Bakunin was, in fact, trying to express how anarchists could *"naturally influence"* the masses and their revolution:

> *"We are the most pronounced enemies of every sort of* ***official power*** *... We are the enemies of any sort of publicly declared dictatorship, we are social revolutionary anar-*

> *chists ... if we are anarchists, by what right do we want to influence the people, and what methods will we use? Denouncing all power, with what sort of power, or rather by what sort of force, shall we direct a people's revolution?* ***By a force that is invisible ... that is not imposed on anyone ... [and] deprived of all official rights and significance.*** *"* [**Michael Bakunin: Selected Writings**, pp. 191–2]

Continually opposing *"official"* power, authority and influence, Bakunin used the term *"invisible, collective dictatorship"* to describe the *"natural influence"* of organised anarchists on mass movements. Rather than express a desire to become a dictator, it in fact expresses the awareness that there is an "uneven" political development within the working class, an unevenness that can only be undermined by discussion within the mass assemblies of popular organisations. Any attempt to by-pass this "unevenness" by seizing or being elected to positions of power (i.e. by *"official influence"*) would be doomed to failure and result in dictatorship by a party — *"triumph of the Jacobins or the Blanquists [or the Bolsheviks, we must add] would be the death of the Revolution."* [**Op. Cit.**, p. 169]

So rather than seek power, the anarchists would seek **influence** based on the soundness of their ideas, what anarchists today term the *"leadership of ideas"* in other words. Thus the anarchist federation *"unleashes their [the peoples] will and gives wider opportunity for their self-determination and their social-economic organisation, which should be created by them alone from the bottom upwards ... The [revolutionary] organisation ... [must] not in any circumstances ... ever be their master ... What is to be the chief aim and pursue of this organisation?* ***To help the people towards self-determination on the lines of the most complete equality and fullest human freedom in every direction, without the least interference from any sort of domination ... that is without any sort of government control.*** *"* [**Op. Cit.**, p. 191]

This analysis can be seen from Bakunin's discussion on union bureaucracy and how anarchists should combat it. Taking the Geneva section of the IWMA, Bakunin notes that the construction workers' section *"simply left all decision-making to their committees ... In this manner power gravitated to the committees, and by a species of fiction characteristic of all governments the committees substituted their own will and their own ideas for that of the membership."* To combat this bureaucracy, the union *"sections could only defend their rights and their autonomy in only one way: the workers called general membership meetings. Nothing arouses the antipathy of the committees more than these popular assemblies ... In these great meetings of the sections, the items on the agenda was amply discussed and the most progressive opinion prevailed."* Given that Bakunin considered *"the federative Alliance of all the workers' associations"* would *"constitute the Commune"* by means of delegates with *"always responsible, and revocable mandates"*, we can easily see that the role of the anarchist federation would be to intervene in general assemblies of these associations and ensure, through debate, that the most progressive opinion prevailed. [**Bakunin on Anarchism**, p. 246, p. 247 and p. 153]

Having shown that the role of Bakunin's revolutionary organisations is drastically different than that suggested by the selective quotations of Marxists, we need to address two more issues. One, the so-called hierarchical nature of Bakunin's organisations and, two, their secret nature. Taking the issue of hierarchy first, we can do no better than quote Richard B. Saltman's summary of the internal organisation of these groups:

> *"The association's 'single will,' Bakunin wrote, would be determined by 'laws' that every member 'helped to create,' or at a minimum 'equally approved' by 'mutual agreement.'*

> *This 'definite set of rules' was to be 'frequently renewed' in plenary sessions wherein each member had the 'duty to try and make his view prevail,' but then he must accept fully the decision of the majority. Thus the revolutionary association's 'rigorously conceived and prescribed plan,' implemented under the 'strictest discipline,' was in reality to be 'nothing more or less than the expression and direct outcome of the reciprocal commitment contracted by each of the members towards the others.'"* [**Op. Cit.**, p. 115]

While many anarchists would not totally agree with this set-up (although we think that most supporters of the "Platform" would) all would agree that it is **not** hierarchical. If anything, it appears quite democratic in nature. Moreover, comments in Bakunin's letters to other Alliance members support the argument that his revolutionary associations were more democratic in nature than Marxists suggest. In a letter to a Spanish comrade we find him suggesting that *"all [Alliance] groups... should... from now on accept new members not by majority vote, but unanimously."* [**Op. Cit.**, p. 386] In a letter to Italian members of the IWMA he argued that in Geneva the Alliance did not resort to *"secret plots and intrigues."* Rather:

> *"Everything was done in broad daylight, openly, for everyone to see .. . The Alliance had regular weekly open meetings and everyone was urged to participate in the discussions ... The old procedure where members sat and passively listened to speakers talking down to them from their pedestal was discarded.*
>
> *"It was established that all meetings be conducted by informal round-table conversational discussions in which everybody felt free to participate: not to be talked **at**, but to exchange views."* [**Op. Cit.**, pp. 405–6]

Moreover, we find Bakunin being out-voted within the Alliance, hardly what we would expect if they **were** top-down dictatorships run by him as Marxists claim. The historian T.R. Ravindranathan indicates that after the Alliance was founded *"Bakunin wanted the Alliance to become a branch of the International [Worker's Association] and at the same time preserve it as a secret society. The Italian and some French members wanted the Alliance to be totally independent of the IWA and objected to Bakunin's secrecy. Bakunin's view prevailed on the first question as he succeeded in convincing the majority of the harmful effects of a rivalry between the Alliance and the International. On the question of secrecy, he gave way to his opponents."* [**Bakunin and the Italians**, p. 83]

Moreover, if Bakunin **did** seek to create a centralised, hierarchical organisation, as Marxists claim, he did not do a good job. We find him complaining that the Madrid Alliance was breaking up (*"The news of the dissolution of the Alliance in Spain saddened Bakunin. he intensified his letter-writing to Alliance members whom he trusted ... He tried to get the Spaniards to reverse their decision"* [Juan Gomez Casa, **Anarchist Organisation**, pp. 37–8]). While the "Bakuninist" Spanish and Swiss sections of the IWMA sent delegates to its infamous Hague congress, the "Bakuninist" Italian section did not. Of course, Marxists could argue that these facts show Bakunin's cunning nature, but the more obvious explanation is that Bakunin did not create a hierarchical organisation with himself at the top.

The evidence suggests that the Alliance *"was not a compulsory or authoritarian body."* In Spain, it *"acted independently and was prompted by purely local situations. The copious correspondence*

between Bakunin and his friends ... was at all times motivated by the idea of offering advice, persuading, and clarifying. It was never written in a spirit of command, because that was not his style, nor would it have been accepted as such by his associates." Moreover, there *"is no trace or shadow or hierarchical organisation in a letter from Bakunin to Mora ... On the contrary, Bakunin advises 'direct' relations between Spanish and Italian Comrades."* The Spanish comrades also wrote a pamphlet which *"ridiculed the fable of orders from abroad."* [Casa, **Op. Cit.**, p. 25 and p. 40] This is confirmed by George R. Esenwein who argues that *"[w]hile it is true that Bakunin's direct intervention during the early days of the International's development in Spain had assured the predominance of his influence in the various federations and sections"* of the organisation, *"it cannot be said that he manipulated it or otherwise used the Spanish Alliance as a tool for his own subversive designs."* Thus, *"though the Alliance did exist in Spain, the society did not bear any resemblance to the nefarious organisation that the Marxists depicted."* [**Anarchist Ideology and the Working Class Movement in Spain**, p. 42] Indeed, as Max Nettlau points out, those Spaniards who did break with the Alliance were persuaded of its *"hierarchical organisation ... not by their own direct observation, but by what they had been told about the conduct of the organisation"* in other countries. [quoted by Casa, **Op. Cit.**, pp. 39–40]. In addition, if Bakunin **did** run the Alliance under his own personal dictatorship we would expect it to change or dissolve upon his death. However, *"the Spanish Alliance survived Bakunin, who died in 1876, yet with few exceptions it continued to function in much the same way it had during Bakunin's lifetime."* [Esenwein, **Op. Cit.**, p. 43]

Moving on to the second issue, the question of why Bakunin favoured secret organisation. At the time many states where despotic monarchies, with little or no civil rights. As he argued, *"nothing but a secret society would want to take this [arousing a revolution] on, for the interests of the government and of the government classes would be bitterly opposed to it."* [**Michael Bakunin: Selected Writings**, p. 188] For survival, Bakunin considered secrecy an essential. As Juan Gomez Casas noted: *"In view of the difficulties of that period, Bakunin believed that secret groups of convinced and absolutely trustworthy men were safer and more effective. They would be able to place themselves at the head of developments at critical moments, but only to inspire and to clarify the issues."* [**Op. Cit.**, p. 22] Even Marxists, faced with dictatorial states, have organised in secret and as George R. Esenwein points out, the *"claim that Bakunin's organisation scheme was not the product of a 'hard-headed realism' cannot be supported in the light of the experiences of the Spanish Alliancists. It is beyond doubt that their adherence to Bakunin's program greatly contributed to the FRE's [Spanish section of the First International] ability to flourish during the early part of the 1870s and to survive the harsh circumstances of repression in the period 1874–1881."* [**Op. Cit.**, p. 224f] So Bakunin's personal experiences in Tsarist Russia and other illiberal states shaped his ideas on how revolutionaries should organise (and let us not forget that he had been imprisoned in the Peter and Paul prison for his activities).

This is not to suggest that all of Bakunin's ideas on the role and nature of anarchist groups are accepted by anarchists today. Most anarchists would reject Bakunin's arguments for secrecy, for example (particularly as secrecy cannot help but generate an atmosphere of deceit and, potentially, manipulation). Anarchists remember that anarchism did not spring fully formed and complete from Bakunin's (or any other individual's) head. Rather it was developed over time and by many individuals, inspired by many different experiences and movements. As such, anarchists recognise that Bakunin was inconsistent in some ways, as would be expected from a theorist breaking new ground, and this applies to his ideas on how anarchist groups should work within and the role they should play in popular movements. Most of his ideas are valid, once we place

them into context, some are not. Anarchists embrace the valid ones and voice their opposition to the others.

In summary, any apparent contradiction between the "public" and "private" Bakunin disappears once we place his comments into context within both the letters he wrote and his overall political theory. As Brian Morris argues, those who argue that Bakunin was in favour of despotism only come to *"these conclusions by an incredible distortion of the substance of what Bakunin was trying to convey in his letters to Richard and Nechaev"* and *"[o]nly the most jaundiced scholar, or one blinded by extreme antipathy towards Bakunin or anarchism, could interpret these words as indicating that Bakunin conception of a secret society implied a revolutionary dictatorship in the Jacobin sense, still less a 'despotism'"* [**Bakunin: The Philosophy of Freedom**, p. 144 and p. 149]

J.3.8 What is anarcho-syndicalism?

Anarcho-syndicalism (as mentioned in section A.3.2) is a form of anarchism which applies itself (primarily) to creating industrial unions organised in an anarchist manner, using anarchist tactics (such as direct action) to create a free society. To quote *"The Principles of Revolutionary Syndicalism"* of the **International Workers Association**:

> *"Revolutionary Syndicalism is that movement of the working classes founded on the basis of class war, which strives for the union of manual and intellectual workers in economic fighting organisations, in order to prepare for and realise in practice their liberation from the yoke of wage-slavery and state oppression. Its goal is the reorganisation of social life on the basis of free communism through the collective revolutionary action of the working classes themselves. It takes the view that only the economic organisations of the proletariat are appropriate for the realisation of this task and turns therefore to the workers in their capacity as producers and generators of social value, in opposition to the modern political labour parties, which for constructive economic purpose do not come into consideration."* [quoted by Wayne Thorpe, **"The Workers Themselves"**, p. 322]

The word *"syndicalism"* is an English rendering of the French for *"revolutionary trade unionism"* (*"syndicalisme revolutionarie"*). In the 1890s many anarchists in France started to work within the trade union movement, radicalising it from within. As the ideas of autonomy, direct action, the general strike and political independence of unions which where associated with the French **Confederation Generale du Travail** (CGT, or General Confederation of Labour) spread across the world (partly through anarchist contacts, partly through word of mouth by non-anarchists who were impressed by the militancy of the CGT), the word "syndicalism" was used to describe movements inspired by the example of the CGT. Thus "syndicalism," "revolutionary syndicalism" and "anarcho-syndicalism" all basically mean "revolutionary unionism" (the term "industrial unionism" used by the IWW essentially means the same thing).

The main difference is between revolutionary syndicalism and anarcho-syndicalism, with anarcho-syndicalism arguing that revolutionary syndicalism concentrates too much on the workplace and, obviously, stressing the anarchist roots and nature of syndicalism more than the

former. In addition, anarcho-syndicalism is often considered compatible with supporting a specific anarchist organisation to complement the work of the revolutionary unions. Revolutionary syndicalism, in contrast, argues that the syndicalist unions are sufficient in themselves to create libertarian socialism and rejects anarchist groups along with political parties. However, the dividing line can be unclear and, just to complicate things even more, **some** syndicalists support political parties and are not anarchists (there have been a few Marxist syndicalists, for example) but we will ignore these in our discussion. We will use the term syndicalism to describe what each branch has in common.

The syndicalist union is a self-managed industrial union (see section J.5.2) which is committed to **direct action** and refuses links with political parties, even labour or "socialist" ones. A key idea of syndicalism is that of union autonomy — the idea that the workers' organisation is capable of changing society by its own efforts, that it must control its own fate and not be controlled by any party or other outside group (including anarchist federations). This is sometimes termed

"workerism" (from the French

"ouverierisme"), i.e. workers' control of the class struggle and their own organisations. Rather than being a cross-class organisation like the political party, the union is a **class** organisation and is so uniquely capable of representing working class aspirations, interests and hopes. *"The **syndicat**,"* Emile Pouget wrote, *"groups together those who work against those who live by human exploitation: it brings together interests and not opinions."* [quoted by Jeremy Jennings, **Syndicalism in France**, pp. 30–1] There is, then, *"no place in it for anybody who was not a worker. Professional middle class intellectuals who provided both the leadership and the ideas of the socialist political movement, were therefore at a discount. As a consequence the syndicalist movement was, and saw itself as, a purely working class form of socialism."* Syndicalism *"appears as the great heroic movement of the proletariat, the first movement which took seriously"* the argument *"that the emancipation of the working class must be the task of labour unaided by middle class intellectuals or by politicians and aimed to establish a genuinely working class socialism and culture, free of all bourgeois taints. For the syndicalists, the workers were to be everything, the rest, nothing."* [Geoffrey Ostergaard, **The Tradition of Workers' Control**, p. 38]

Therefore syndicalism is *"consciously anti-parliamentary and anti-political. It focuses not only on the realities of power but also on the key problem of achieving its disintegration. Real power in syndicalist doctrine is economic power. The way to dissolve economic power is to make every worker powerful, thereby eliminating power as a social privilege. Syndicalism thus ruptures all the ties between the workers and the state. It opposes political action, political parties, and any participant in political elections. Indeed it refuses to operate in the framework of the established order and the state.* It *"turns to direct action — strikes, sabotage, obstruction, and above all, the revolutionary general strike. Direct action not only perpetuates the militancy of the workers and keeps alive the spirit of revolt, but awakens in them a greater sense of individual initiative. By continual pressure, direct action tests the strength of the capitalist system at all times and presumably in its most important arena — the factory, where ruled and ruler seem to confront each other most directly."* [Murray Bookchin, **The Spanish Anarchists**, p. 121]

This does not mean that syndicalism is "apolitical" in the sense of ignoring totally all political issues. This is a Marxist myth. Syndicalists follow other anarchists by being opposed to all forms of authoritarian/capitalist politics but do take a keen interest in "political" questions as they relate to the interests of working people. Thus they do not "ignore" the state, or the role of the state. Indeed, syndicalists (like all libertarians) are well aware that the state exists to protect capitalist

property and power and that we need to combat it as well as fight for economic improvements. In short, syndicalism is deeply political in the widest sense of the word, aiming for a radical change in political, economic and social conditions and institutions. Moreover, it is political in the narrower sense of being aware of political issues and aiming for political reforms along with economic ones. It is only "apolitical" when it comes to supporting political parties and using bourgeois political institutions, a position which is "political" in the wider sense of course! This is obviously identical to the usual anarchist position (see section J.2.10).

Which indicates an importance difference between syndicalism and trade unionism. Syndicalism aims at changing society rather than just working within it. Thus syndicalism is revolutionary while trade unionism is reformist. For syndicalists the union *"has a double aim: with tireless persistence, it must pursue betterment of the working class's current conditions. But, without letting themselves become obsessed with this passing concern, the workers should take care to make possible and imminent the essential act of comprehensive emancipation: the expropriation of capital."* Thus syndicalism aims to win reforms by direct action and by this struggle bring the possibilities of a revolution, via the general strike, closer. Indeed any *"desired improvement is to be wrested directly from the capitalist"* and *"must always represent a reduction in capitalist privileges and be a partial expropriation."* [Emile Pouget, **No Gods, No Masters**, vol. 2, p. 71 and p. 73] Thus Emma Goldman:

> *"Of course Syndicalism, like the old trade unions, fights for immediate gains, but it is not stupid enough to pretend that labour can expect humane conditions from inhumane economic arrangements in society. Thus it merely wrests from the enemy what it can force him to yield; on the whole, however, Syndicalism aims at, and concentrates its energies upon, the complete overthrow of the wage system.*
>
> *"Syndicalism goes further: it aims to liberate labour from every institution that has not for its object the free development of production for the benefit of all humanity. In short, the ultimate purpose of Syndicalism is to reconstruct society from its present centralised, authoritative and brutal state to one based upon the free, federated grouping of the workers along lines of economic and social liberty.*
>
> *"With this object in view, Syndicalism works in two directions: first, by undermining the existing institutions; secondly, by developing and educating the workers and cultivating their spirit of solidarity, to prepare them for a full, free life, when capitalism shall have been abolished.*
>
> *"Syndicalism is, in essence, the economic expression of Anarchism."* [**Red Emma Speaks**, p. 91]

Which, in turn, explains why syndicalist unions are structured in such an obviously libertarian way. It reflects the importance of empowering every worker by creating a union which is decentralised and self-managed, a union which every member plays a key role in determining its policy and activities. Participation ensures that the union becomes a *"school for the will"* (to use Pouget's expression) and allows working people to learn how to govern themselves and so do without the state. After the revolution, the union can easily be transformed into the body by which production is organised. The aim of the union is workers' self-management of production and distribution after the revolution, a self-management which the union is based upon in the

here and now. The syndicalist union is seen as *"the germ of the Socialist economy of the future, the elementary school of Socialism in general"* and we need to *"plant these germs while there is yet time and bring them to the strongest possible development, so as to make the task of the coming social revolution easier and to insure its permanence."* [Rocker, **Op. Cit.**, p. 59]

Thus, as can be seen, syndicalism differs from trade unionism in its structure, its methods and its aims. Its structure, method and aims are distinctly anarchist. Little wonder leading syndicalist theorist Fernand Pelloutier argued that the trade union, *"governing itself along anarchic lines,"* must become *"a practical schooling in anarchism."* [**No Gods, No Masters**, vol. 2, p. 55 and p. 57] In addition, most anarcho-syndicalists support community organisations and struggle alongside the more traditional industry based approach usually associated within syndicalism. While we have concentrated on the industrial side here (simply because this is a key aspect of syndicalism) we must stress that syndicalism can and does lend itself to community struggles. It is a myth that anarcho-syndicalism ignores community struggles and organisation, as can be seen from the history of the Spanish CNT for example (see section J.5.1).

It must be stressed that a syndicalist union is open to all workers regardless of their political opinions (or lack of them). The union exists to defend workers' interests as workers and is organised in an anarchist manner to ensure that their interests are fully expressed. This means that an syndicalist organisation is different from an organisation of syndicalists. What makes the union syndicalist is its structure, aims and methods. Obviously things can change (that is true of any organisation which has a democratic structure) but that is a test revolutionary and anarcho-syndicalists welcome and do not shirk from. As the union is self-managed from below up, its militancy and political content is determined by its membership. As Pouget put it, the union *"offers employers a degree of resistance in geometric proportion with the resistance put up by its members."* [**Op. Cit.**, p. 71] That is why syndicalists ensure that power rests in the members of the union.

Syndicalists have two main approaches to building revolutionary unions –

"dual unionism" and

"boring from within." The former approach involves creating new, syndicalist, unions, in opposition to the existing trade unions. This approach was historically and is currently the favoured way of building syndicalist unions (American, Italian, Spanish, Swedish and numerous other syndicalists built their own union federations in the heyday of syndicalism between 1900 and 1920). "Boring from within" simply means working within the existing trade unions in order to reform them and make them syndicalist. This approach was favoured by French and British syndicalists, plus a few American ones. However, these two approaches are not totally in opposition. Many of the dual unions were created by syndicalists who had first worked within the existing trade unions. Once they got sick of the bureaucratic union machinery and of trying to reform it, they split from the reformist unions and formed new, revolutionary, ones. Similarly, dual unionists will happily support trade unionists in struggle and often be "two carders" (i.e. members of both the trade union and the syndicalist one). See section J.5.3 for more on anarchist perspectives on existing trades unions.

Syndicalists no matter what tactics they prefer, favour autonomous workplace organisations, controlled from below. Both tend to favour syndicalists forming networks of militants to spread anarchist/syndicalist ideas within the workplace. Indeed, such a network (usually called *"Industrial Networks"* — see section J.5.4 for more details) would be an initial stage and essential means for creating syndicalist unions. These groups would encourage syndicalist tactics and rank and

file organisation during struggles and so create the potential for building syndicalist unions as libertarian ideas spread and are seen to work.

Syndicalists think that such an organisation is essential for the successful creation of an anarchist society as it builds the new world in the shell of the old, making a sizeable majority of the population aware of anarchism and the benefits of anarchist forms of organisation and struggle. Moreover, they argue that those who reject syndicalism *"because it believes in a permanent organisation of workers"* and urge *"workers to organise 'spontaneously' at the very moment of revolution"* promote a *"con-trick, designed to leave 'the revolutionary movement,' so called, in the hands of an educated class ... [or] so-called 'revolutionary party' ... [which] means that the workers are only expected to come in the fray when there's any fighting to be done, and in normal times leave theorising to the specialists or students."* [Albert Meltzer, **Anarchism: Arguments for and Against**, pp. 82–3] A self-managed society can only be created by self-managed means, and as only the practice of self-management can ensure its success, the need for libertarian popular organisations is essential. Syndicalism is seen as the key way working people can prepare themselves for revolution and learn to direct their own lives. In this way syndicalism creates a true politics of the people, one that does not create a parasitic class of politicians and bureaucrats (*"We wish to emancipate ourselves, to free ourselves"*, Pelloutier wrote, *"but we do not wish to carry out a revolution, to risk our skin, to put Pierre the socialist in the place of Paul the radical"* [quoted by Jeremy Jennings, **Syndicalism in France**, p. 17]).

This does not mean that syndicalists do not support organisations spontaneously created by workers' in struggle (such as workers' councils, factory committees and so on). Far from it. Syndicalists have played important roles in these kinds of organisation (as can be seen from the Russian Revolution, the factory occupations in Italy in 1920, the British Shop Steward movement and so on). This is because syndicalism acts as a catalyst to militant labour struggles and serves to counteract class-collaborationist tendencies by union bureaucrats and "socialist" politicians. Part of this activity must involve encouraging self-managed organisations where none exist and so syndicalists support and encourage all such spontaneous movements, hoping that they turn into the basis of a syndicalist union movement or a successful revolution. Moreover, most anarcho-syndicalists recognise that it is unlikely that every worker, nor even the majority, will be in syndicalist unions before a revolutionary period starts. This means **new** organisations, created spontaneously by workers in struggle, would have to be the framework of social struggle and the post-capitalist society rather than the syndicalist union as such. All the syndicalist union can do is provide a practical example of how to organise in a libertarian way within capitalism and statism and support spontaneously created organisations.

It should be noted that while the term "syndicalism" dates from the 1890s in France, the ideas associated with these names have a longer history. Anarcho-syndicalist ideas have developed independently in many different countries and times. Indeed, anyone familiar with Bakunin's work will quickly see that much of his ideas prefigure what was latter to become known by these terms. Similarly, we find that the American **International Working People's Association** organised by anarchists in the 1880s *"anticipated by some twenty years the doctrine of anarcho-syndicalism"* and *"[m]ore than merely resembling the 'Chicago Idea' [of the **IWPA**], the IWW's principles of industrial unionism resulted from the conscious efforts of anarchists ... who continued to affirm ... the principles which the Chicago anarchists gave their lives defending."* [Salvatore Salerno, **Red November, Black November**, p. 51 and p. 79] See section H.2.8 for a discussion of why Marxist claims that syndicalism and anarchism are unrelated are obviously false.

(We must stress that we are **not** arguing that Bakunin "invented" syndicalism. Far from it. Rather, we are arguing that Bakunin expressed ideas already developed in working class circles and became, if you like, the "spokesperson" for these libertarian tendencies in the labour movement as well as helping to clarifying these ideas in many ways. As Emma Goldman argued, the *"feature which distinguishes Syndicalism from most philosophies is that it represents the revolutionary philosophy of labour conceived and born in the actual struggle and experience of workers themselves — not in universities, colleges, libraries, or in the brain of some scientists."* [**Op. Cit.**, pp. 88–9] This applies equally to Bakunin and the first International).

Given this, we must also point out here that while syndicalism has anarchist roots, not all syndicalists are anarchists. A few Marxists have been syndicalists, particularly in the USA where the followers of Daniel De Leon supported Industrial Unionism and helped form the **Industrial Workers of the World**. The Irish socialist James Connelly was also a Marxist-syndicalist, as was Big Bill Haywood who was a leader of the IWW and a leading member of the US Socialist Party. Marxist-syndicalists are generally in favour of more centralisation within syndicalist unions (the IWW was by far the most centralised syndicalist union) and often argue that a political party is required to complement the work of the union. Needless to say, anarcho-syndicalists disagree, arguing that centralisation kills the spirit of revolt and weakens a unions real strength and that political parties are both ineffective when compared to militant unionism and a constant source of corruption. [Rocker, **Op. Cit.**, pp. 55–60] So not all syndicalists are anarchists, leading those anarchists who are syndicalists often use the term "anarcho-syndicalism" to indicate that they are both anarchists and syndicalists as well as to stress the libertarian roots and syndicalism. In addition, not all anarchists are syndicalists. We discuss the reasons for this in the next section.

For more information on anarcho-syndicalist ideas, Rudolf Rocker's **Anarcho-Syndicalism** is still the classic introduction to the subject. The collection of articles by British syndicalist Tom Brown entitled **Syndicalism** is also worth reading. Daniel Guerin's **No Gods, No Masters** contains articles by leading French syndicalist thinkers.

J.3.9 Why are many anarchists not anarcho-syndicalists?

Before discussing why many anarchists are not anarcho-syndicalists, we must clarify a few points first. Let us be clear, non-syndicalist anarchists usually support the ideas of workplace organisation and struggle, of direct action, of solidarity and so on. Thus most non-syndicalist anarchists do not disagree with anarcho-syndicalists on these issues. Indeed, many even support the creation of syndicalist unions. Thus many anarcho-communists like Alexander Berkman, Errico Malatesta and Emma Goldman supported anarcho-syndicalist organisations and even, like Malatesta, helped form such revolutionary union federations (namely, the FORA in Argentina) and urged anarchists to take a leading role in organising unions. So when we use the term "non-syndicalist anarchist" we are not suggesting that these anarchists reject all aspects of anarcho-syndicalism. Rather, they are critical of certain aspects of anarcho-syndicalist ideas while supporting the rest.

In the past, a few communist-anarchists **did** oppose the struggle for improvements within capitalism as "reformist." However, these were few and far between and with the rise of anarcho-syndicalism in the 1890s, the vast majority of communist-anarchists recognised that only by encouraging the struggle for reforms would people take them seriously as this showed the bene-

fits of anarchist tactics and organisation in practice so ensuring anarchist ideas grow in influence. Thus syndicalism was a healthy response to the rise of "abstract revolutionarism" that infected the anarchist movement during the 1880s, particularly in France and Italy. Thus communist-anarchists agree with syndicalists on the importance of struggling for and winning reforms and improvements within capitalism by direct action and solidarity.

Similarly, anarchists like Malatesta also recognised the importance of mass organisations like unions. As he argued, *"to encourage popular organisations of all kinds is the logical consequence of our basic ideas ... An authoritarian party, which aims at capturing power to impose its ideas, has an interest in the people remaining an amorphous mass, unable to act for themselves and therefore easily dominated ... But we anarchists do not want to* ***emancipate*** *the people; we want the people to* ***emancipate themselves*** *... we want the new way of life to emerge from the body of the people and correspond to the state of their development and advance as they advance."* [**Errico Malatesta: His Life and Ideas**, p. 90] This can only occur when there are popular organisations, like trade unions, within which people can express themselves, come to common agreements and act. Moreover, these organisations must be autonomous, self-governing, be libertarian in nature **and** be independent of all parties and organisations (including anarchist ones). The similarity with anarcho-syndicalist ideas is striking.

So why, if this is the case, are many anarchists not anarcho-syndicalists? There are two main reasons for this. First, there is the question of whether unions are, by their nature, revolutionary organisations. Second, whether syndicalist unions are sufficient to create anarchy by themselves. We will discuss each in turn.

As can be seen from any country, the vast majority of unions are deeply reformist and bureaucratic in nature. They are centralised, with power resting at the top in the hands of officials. This suggests that in themselves unions are not revolutionary. As Malatesta argued, this is to be expected for *"all movements founded on material and immediate interests (and a mass working class movement cannot be founded on anything else), if the ferment, the drive and the unremitting efforts of men [and women] of ideas struggling and making sacrifices for an ideal future are lacking, tend to adapt themselves to circumstances, foster a conservative spirit, and fear of change in those who manage to improve their conditions, and often end up by creating new privileged classes and serving to support and consolidate the system one would want to destroy."* [**Op. Cit.**, pp. 113–4]

If we look at the **role** of the union within capitalist society we see that in order for it to work, it must offer a reason for the boss to recognise and negotiate with it. This means that the union must be able to offer the boss something in return for any reforms it gets, namely labour discipline. In return for an improvement in wages or conditions, the union must be able to get workers to agree to submit to the contracts the union signs with their boss. In other words, they must be able to control their members — stop them fighting the boss — if they are to have anything with which to bargain with. This results in the union becoming a third force in industry, with interests separate than the workers which it claims to represent. The role of unionism as a seller of labour power means that it often has to make compromises, compromises it has to make its members agree to. This necessities a tendency for power to be taken from the rank and file of the unions and centralised in the hands of officials at the top of the organisation. This ensures that *"the workers organisation becomes what it must perforce be in a capitalist society — a means not of refusing to recognise and overthrowing the bosses, but simply for hedging round and limiting the bosses' power."* [Errico Malatesta, **The Anarchist Revolution**, p. 29]

Anarcho-syndicalists are aware of this problem. That is why their unions are decentralised, self-managed and organised from the bottom up in a federal manner. As Durruti argued:

> *"No anarchists in the union committees unless at the ground level. In these committees, in case of conflict with the boss, the militant is forced to compromise to arrive at an agreement. The contracts and activities which come from being in this position, push the militant towards bureaucracy. Conscious of this risk, we do not wish to run it. Our role is to analyse from the bottom the different dangers which can beset a union organisation like ours. No militant should prolong his job in committees, beyond the time allotted to him. No permanent and indispensable people."* [quoted by Abel Paz, **Durruti: The People Armed**, p. 183]

However, structure is rarely enough in itself to undermine the bureaucratic tendencies created by the role of unions in the capitalist economy. While such libertarian structures can slow down the tendency towards bureaucracy, non-syndicalist anarchists argue that they cannot stop it. They point to the example of the French CGT which had become reformist by 1914 (the majority of other syndicalist unions were crushed by fascism or communism before they had a chance to develop fully). Even the Spanish CNT (by far the most successful anarcho-syndicalist union) suffered from the problem of reformism, causing the anarchists in the union to organise the FAI in 1927 to combat it (which it did, very successfully). According to Jose Peirats, the *"participation of the anarchist group in the mass movement CNT helped to ensure that CNT's revolutionary nature."* This indicates the validity of Malatesta's arguments concerning the need for anarchists to remain distinct of the unions organisationally while working within them — just as Peirat's comment that *"[b]linkered by participation in union committees, the FAI became incapable of a wider vision"* indicates the validity of Malatesta's warnings against anarchists taking positions of responsibility in unions! [**Anarchists in the Spanish Revolution**, p. 241 and pp. 239–40]

Moreover, even the structure of syndicalist unions can cause problems: *"In modelling themselves structurally on the bourgeois economy, the syndicalist unions tended to become the organisational counterparts of the very centralised apparatus they professed to oppose. By pleading the need to deal effectively with the tightly knit bourgeoisie and state machinery, reformist leaders in syndicalist unions often had little difficulty in shifting organisational control from the bottom to the top."* [Murray Bookchin, **The Spanish Anarchists**, p. 123]

In addition, as the syndicalist unions grow in size and influence their initial radicalism is usually watered-down. This is because, *"since the unions must remain open to all those who desire to win from the masters better conditions of life, whatever their opinions may be ..., they are naturally led to moderate their aspirations, first so that they should not frighten away those they wish to have with them, and because, in proportion as numbers increase, those with ideas who have initiated the movement remain buried in a majority that is only occupied with the petty interests of the moment."* [Errico Malatesta, **Anarchism and Syndicalism**, p. 150] Which, ironically given that increased self-management is seen as a way of reducing tendencies towards bureaucracy, means that syndicalist unions have a tendency towards reformism simply because the majority of their members will be non-revolutionary if the union grows in size in non-revolutionary times (as can be seen from the development of the Swedish syndicalist union the SAC).

So, if the union's militant strategy succeeds in winning reforms, more and more workers will join it. This influx of non-libertarians must, in a self-managed organisation, exert a de-

radicalising influence on the unions politics and activities in non-revolutionary times. The syndicalist would argue that the process of struggling for reforms combined with the educational effects of participation and self-management will reduce this influence and, of course, they are right. However, non-syndicalist anarchists would counter this by arguing that the libertarian influences generated by struggle and participation would be strengthened by the work of anarchist groups and, without this work, the de-radicalising influences would outweigh the libertarian ones. In addition, the success of a syndicalist union must be partly determined by the general level of class struggle. In periods of great struggle, the membership will be more radical than in quiet periods and it is quiet periods which cause the most difficulties for syndicalist unions. With a moderate membership the revolutionary aims and tactics of the union will also become moderate. As one academic writer on French syndicalism put it, syndicalism *"was always based on workers acting in the economic arena to better their conditions, build class consciousness, and prepare for revolution. The need to survive and build a working-class movement had always forced syndicalists to adapt themselves to the exigencies of the moment."* [Barbara Mitchell, *"French Syndicalism: An Experiment in Practical Anarchism"*, pp. 25–41, **Revolutionary Syndicalism**, Marcel van der Linden and Wayne Thorpe (eds.), p. 25]

As can be seen from the history of many syndicalist unions (and, obviously, mainstream unions too) this seems to be the case — the libertarian tendencies are outweighed by the de-radicalising ones. This can also be seen from the issue of collective bargaining:

> *"The problem of collective bargaining foreshadowed the difficulty of maintaining syndicalist principles in developed capitalist societies. Many organisations within the international syndicalist movement initially repudiated collective agreements with employers on the grounds that by a collaborative sharing of responsibility for work discipline, such agreements would expand bureaucratisation within the unions, undermine revolutionary spirit, and restrict the freedom of action that workers were always to maintain against the class enemy. From an early date, however, sometimes after a period of suspicion and resistance, many workers gave up this position. In the early decades of the century it became clear that to maintain or gain a mass membership, syndicalist unions had to accept collective bargaining."* [Marcel van der Linden and Wayne Thorpe, **Op. Cit.**, p. 19]

Thus, for most anarchists, *"the Trade Unions are, by their very nature reformist and never revolutionary. The revolutionary spirit must be introduced, developed and maintained by the constant actions of revolutionaries who work from within their ranks as well as from outside, but it cannot be the normal, natural definition of the Trade Unions function."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 117]

This does not mean that anarchists should not work within labour organisations. Nor does it mean rejecting anarcho-syndicalist unions as an anarchist tactic. Far from it. Rather it is a case of recognising these organisations for what they are, reformist organisations which are not an end in themselves but one (albeit, important) means of preparing the way for the achievement of anarchism. Neither does it mean that anarchists should not try to make labour organisations as anarchistic as possible or have anarchist objectives. Working within the labour movement (at the rank and file level, of course) is essential to gain influence for anarchist ideas, just as is working with unorganised workers. But this does not mean that the unions are revolutionary by their

very nature, as syndicalism implies. As history shows, and as syndicalists themselves are aware, the vast majority of unions are reformist. Non-syndicalist anarchists argue there is a reason for that and syndicalist unions are not immune to these tendencies just because they call themselves revolutionary. Due to these tendencies, non-syndicalist anarchists stress the need to organise as anarchists first and foremost in order to influence the class struggle and encourage the creation of autonomous workplace and community organisations to fight that struggle. Rather than fuse the anarchist and working class movement, non-syndicalist anarchists stress the importance of anarchists organising as anarchists to influence the working class movement.

All this does not mean that purely anarchist organisations or individual anarchists cannot become reformist. Of course they can (just look at the Spanish FAI which along with the CNT co-operated with the state during the Spanish Revolution). However, unlike syndicalist unions, the anarchist organisation is not pushed towards reformism due to its role within society. That is an important difference — the institutional factors are not present for the anarchist federation as they are for the syndicalist union federation.

The second reason why many anarchists are not anarcho-syndicalists is the question of whether syndicalist unions are sufficient in themselves to create anarchy. Pierre Monatte, a French syndicalist, argued that *"Syndicalism, as the [CGT's] Congress of Amiens proclaimed in 1906, is sufficient unto itself"* as *"the working class, having at last attained majority, means to be self-sufficient and to rely on no-one else for its emancipation."* [**The Anarchist Reader**, p. 219]

This idea of self-sufficiency means that the anarchist and the syndicalist movement must be fused into one, with syndicalism taking the role of both anarchist group and labour union. Thus a key difference between anarcho-syndicalists and other anarchists is over the question of the need for a specifically anarchist organisation. While most anarchists are sympathetic to anarcho-syndicalism, few totally subscribe to anarcho-syndicalist ideas in their pure form. This is because, in its pure form, syndicalism rejects the idea of anarchist groups and instead considers the union as **the** focal point of social struggle and anarchist activism. However, an anarcho-syndicalist may support a specific anarchist federation to work within the union and outside.

So anarchists critical of anarcho-syndicalism are also active in the labour movement, working with the rank and file while keeping their own identity as anarchists and organising as anarchists. Thus Malatesta: *"In the past I deplored that the comrades isolated themselves from the working-class movement. Today I deplore that many of us, falling into the contrary extreme, let themselves be swallowed up in the same movement."* [**Op. Cit.**, p. 225] In the eyes of other anarchists anarcho-syndicalism in its "pure" (revolutionary syndicalist) form makes the error of confusing the anarchist and union movement and so ensures that the resulting movement can do neither work well: *"Every fusion or confusion between the anarchist movement and the trade union movement ends, either in rendering the later unable to carry out its specific task or by weakening, distorting, or extinguishing the anarchist spirit."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 123]

Most anarchists agree with Malatesta when he argued that *"anarchists must not want the Trade Unions to be anarchist, but they must act within their ranks in favour of anarchist aims, as individuals, as groups and as federations of groups... [I]n the situation as it is, and recognising that the social development of one's workmates is what it is, the anarchist groups should not expect the workers' organisation to act as if they were anarchist, but should make every effort to induce them to approximate as much as possible to the anarchist method."* [**Op. Cit.**, pp. 124–5] Given that it appears to be the case that labour unions **are** by nature reformist, they cannot be expected to be

enough in themselves when creating a free society. Hence the need for anarchists to organise **as anarchists** as well as alongside their fellow workers as workers in order to spread anarchist ideas on tactics and aims. This activity within existing unions does not necessarily mean attempting to "reform" the union in a libertarian manner (although some anarchists would support this approach). Rather it means working with the rank and file of the unions and trying to create autonomous workplace organisations, independent of the trade union bureaucracy and organised in a libertarian way.

This involves creating anarchist organisations separate from but which (in part) work within the labour movement for anarchist ends. Let us not forget that the syndicalist organisation is the union, it organises all workers regardless of their politics. A "union" which just let anarchists join would not be a union, it would be an anarchist group organised in the workplace. As anarcho-syndicalists themselves are aware, an anarcho-syndicalist union is not the same as a union of anarcho-syndicalists. How can we expect an organisation made up of non-anarchists be totally anarchist? Due to this, tendencies always appeared within syndicalist unions that were reformist and because of this most anarchists, including many anarcho-syndicalists we must note, argue that there is a need for anarchists to work within the rank and file of the unions to spread their anarchist ideals and aims, and this implies anarchist organisations separate from the labour movement, even if that movement is based on syndicalist unions.

As Bakunin argued, the anarchist organisation *"is the necessary complement to the International [i.e. the union federation]. But the International and the Alliance [the anarchist federation], while having the same ultimate aims, perform different functions. The International endeavours to unify the working masses ... regardless of nationality or religious and political beliefs, into one compact body: the Alliance, on the other hand, tries to give these masses a really revolutionary direction."* This did not mean that the Alliance was imposing a foreign theory onto the members of the unions, because the *"programs of one and the other ... differ only in the degree of their revolutionary development ... The program of the Alliance represents the fullest unfolding of the International."* [**Bakunin on Anarchism**, p. 157] Nor did it imply that anarchists think that unions and other forms of popular organisations should be controlled by anarchists. Far from it! Anarchists are the strongest supporters of the autonomy of all popular organisations. As we indicated in section J.3.6, anarchists desire to influence popular organisations by the strength of our ideas within the rank and file and **not** by imposing our ideas on them.

In addition to these major points of disagreement, there are minor ones as well. For example, many anarchists dislike the emphasis syndicalists place on the workplace and see *"in syndicalism a shift in focus from the commune to the trade union, from all of the oppressed to the industrial proletariat alone, from the streets to the factories, and, in emphasis at least, from insurrection to the general strike."* [Bookchin, **Op. Cit.**, p. 123] However, most anarcho-syndicalists are well aware that life exists outside the workplace and so this disagreement is largely one of emphasis. Similarly, many anarchists disagreed with the early syndicalist argument that a general strike was enough to create a revolution. They argued, with Malatesta in the forefront, that while a general strike would be *"an excellent means for starting the social revolution"* it would be wrong to think that it made *"armed insurrection unnecessary"* since the *"first to die of hunger during a general strike would not be the bourgeois, who dispose of all the stores, but the workers."* In order for this **not** to occur, the workers would need to *"take over production"* which are protected by the police and armed forces and this meant *"insurrection."* [Malatesta, **The Anarchist Reader**, pp. 223–4] Again, however, most modern syndicalists accept this to be the case and see the *"expropriatory*

general strike," in the words of French syndicalist Pierre Besnard, as *"clearly **insurrectional.**"* [quoted by Vernon Richards, **Errico Malatesta: His Life and Ideas**, p. 288] We mention this purely to counter Leninist claims that syndicalists subscribe to the same ones they did in the 1890s.

Despite our criticisms we should recognise that the difference between anarchists and anarcho-syndicalists are slight and (often) just a case of emphasis. Most anarchists support anarcho-syndicalist unions where they exist and often take a key role in creating and organising them. Similarly, many self-proclaimed anarcho-syndicalists also support specific organisations of anarchists to work within and outwith the syndicalist union. Syndicalist unions, where they exist, are far more progressive than any other union. Not only are they democratic unions and create an atmosphere where anarchist ideas are listened to with respect but they also organise and fight in a way that breaks down the divisions into leaders and led, doers and watchers. On its own this is very good but not good enough. For non-syndicalist anarchists, the missing element is an organisation winning support for anarchist ideas and tactics both within revolutionary unions and everywhere else working class people come together.

For a further information on the anarchist criticism of syndicalism, we can suggest no better source than the writings of Errico Malatesta. The books **Errico Malatesta: His Life and Ideas** and **The Anarchist Revolution** contain Malatesta's viewpoints on anarchism, syndicalism and how anarchists should work within the labour movement. **The Anarchist Reader** contains the famous debate between the syndicalist Pierre Monatte and Malatesta at the International Anarchist conference in Amsterdam in 1907.

J.4 What trends in society aid anarchist activity?

In this section we will examine some modern trends which we regard as being potential openings for anarchists to organise and which point in an anarchist direction. These trends are of a general nature, partly as a product of social struggle, partly as a response to economic and social crisis, partly involving people's attitudes to big government and big business, partly in relation to the communications revolution we are currently living through, and so on.

Of course, looking at modern society we see multiple influences, changes which have certain positive aspects in some directions but negative ones in others. For example, the business-inspired attempts to decentralise or reduce (certain) functions of governments should in the abstract be welcomed by anarchists for they lead to the reduction of government. In practice such a conclusion is deeply suspect simply because these developments are being pursued to increase the power and influence of capital as well as to increase wage-labour to, and exploitation by, the economic master class and to undermine working class power and autonomy. As such, there are as anti-libertarian as the status quo (as Proudhon stressed, anarchism is *"the denial of Government and of Property."* [**General Idea of the Revolution**, p. 100]). Similarly, increases in self-employment can be seen, in the abstract, as reducing wage slavery. However, if, in practice, this increase is due to corporations encouraging "independent" contractors in order to cut wages and worsen working conditions, increase job insecurity and undermine paying for health and other employee packages then it is hardly a positive sign. Obviously increases in self-employment would be different if it were the result of an increase in the number of co-operatives, for example.

Thus few anarchists celebrate many apparently "libertarian" developments as they are not the product of social movements and activism, but are the product of elite lobbying for private profit and power. Decreasing the power of the state in (certain) areas while leaving (or increasing) the power of capital is a retrograde step in most, if not all, ways. Needless to say, this "rolling back" of the state does not bring into question its role as defender of property and the interests of the capitalist class — nor could it, as it is the ruling class who introduces and supports these developments.

In this section, we aim to discuss tendencies from **below**, not above – tendencies which can truly "roll back" the state rather than reduce its functions purely to that of the armed thug of property. The tendencies we discuss here are not the be all nor end all of anarchist activism or tendencies. We discuss many of the more traditionally anarchist "openings" in section J.5 (such as industrial and community unionism, mutual credit, co-operatives, modern schools and so on) and so will not do so here. However, it is important to stress here that such "traditional" openings are not being downplayed – indeed, much of what we discuss here can only become fully libertarian in combination with these more "traditional" forms of

"anarchy in action."

For a lengthy discussion of anarchistic trends in society, we recommend Colin Ward's classic book **Anarchy in Action**. Ward covers many areas in which anarchistic tendencies have been expressed, far more than we can cover here. The libertarian tendencies in society are many. No single work could hope to do them justice.

J.4.1 Why is social struggle a good sign?

Simply because it shows that people are unhappy with the existing society and, more importantly, are trying to change at least some part of it. It suggests that certain parts of the population have reflected on their situation and, potentially at least, seen that **by their own actions** they can influence and change it for the better.

Given that the ruling minority draws its strength by the acceptance and acquiescence of the majority, the fact that a part of that majority no longer accepts and acquiesces is a positive sign. After all, if the majority did not accept the status quo and acted to change it, the class and state system could not survive. Any hierarchical society survives because those at the bottom follow the orders of those above it. Social struggle suggests that some people are considering their own interests, thinking for themselves and saying "no" and this, by its very nature, is an important, indeed, the most important, tendency towards anarchism. It suggests that people are rejecting the old ideas which hold the system up, acting upon this rejection and creating new ways of doing thinks.

"Our social institutions," argued Alexander Berkman, *"are founded on certain ideas; as long as the latter are generally believed, the institutions built upon them are safe. Government remains strong because people think political authority and legal compulsion necessary. Capitalism will continue as long as such an economic system is considered adequate and just. The weakening of the ideas which support the evil and oppressive present-day conditions means the ultimate breakdown of government and capitalism."* [**What is Anarchism?**, p. xii]

Social struggle is the most obvious sign of this change of perspective, this change in ideas, this progress towards freedom.

Social struggle is expressed by direct action. We have discussed both social struggle (section J.1) and direct action (section J.2) before and some readers may wonder why we are covering this again here. We do so as we are discussing what trends in society help anarchist activity, it would be wrong **not** to highlight social struggle and direct action here. This is because these factors are key tendencies towards anarchism as social struggle is the means by which people create the new world in the shell of the old, transforming themselves and society.

So social struggle is a good sign as it suggests that people are thinking for themselves, considering their own interests and working together collectively to change things for the better. As the French syndicalist Emile Pouget argued:

> *"Direct action ... means that the working class, forever bridling at the existing state of affairs, expects nothing from outside people, powers or forces, but rather creates its own conditions of struggle and looks to itself for its methodology ... Direct Action thus implies that the working class subscribes to notions of freedom and autonomy instead of genuflecting before the principle of authority. Now, it is thanks to this authority principle, the pivot of the modern world — democracy being its latest incarnation —*

> *that the human being, tied down by a thousand ropes, moral as well as material, is bereft of any opportunity to display will and initiative."* [**Direct Action**, p. 1]

Social struggle means that people come into opposition with the boss and other authorities such as the state and the dominant morality. This challenge to existing authorities generates two related processes: the tendency of those involved to begin taking over the direction of their own activities and the development of solidarity with each other. Firstly, in the course of a struggle, such as a strike, occupation, boycott, and so on, the ordinary life of people, in which they act under the constant direction of the bosses or state, ceases, and they have to think, act and co-ordinate their actions for themselves. This reinforces the expression towards autonomy that the initial refusal that lead to the struggle indicates. Secondly, in the process of struggle those involved learn the importance of solidarity, of working with others in a similar situation, in order to win. This means the building of links of support, of common interests, of organisation. The practical need for solidarity to help win the struggle is the basis for the solidarity required for a free society to be viable.

Therefore the real issue in social struggle is that it is an attempt by people to wrestle at least part of the power over their own lives away from the managers, state officials and so on who currently have it and exercise it themselves. This is, by its very nature, anarchistic and libertarian. Thus we find politicians and, of course, managers and property owners, often denouncing strikes and other forms of direct action. This is logical. As direct action challenges the real power-holders in society and because, if carried to its logical conclusion, it would remove them, social struggle and direct action can be considered in essence a revolutionary process.

Moreover, the very act of using direct action suggests a transformation within the people using it. *"Direct action's very powers to fertilise,"* argued Pouget, *"reside in such exercises in imbuing the individual with a sense of his own worth and in extolling such worth. It marshals human resourcefulness, tempers characters and focuses energies. It teaches self-confidence! And self-reliance! And self-mastery! And shifting for oneself!"* Moreover, *"direct action has an unmatched educational value: It teaches people to reflect, to make decisions and to act. It is characterised by a culture of autonomy, an exaltation of individuality and is a fillip to initiative, to which it is the leaven. And this superabundance of vitality and burgeoning of 'self' in no way conflicts with the economic fellowship that binds the workers one with another and far from being at odds with their common interests, it reconciles and bolsters these: the individual's independence and activity can only erupt into splendour and intensity by sending its roots deep into the fertile soil of common agreement."* [**Op. Cit.**, p. 2 and p. 5]

Social struggle is the beginning of a transformation of the people involved and their relationships to each other. While its external expression lies in contesting the power of existing authorities, its inner expression is the transformation of people from passive and isolated competitors into empowered, self-directing, self-governing co-operators. Moreover, this process widens considerably what people think is "possible." Through struggle, by collective action, the fact people **can** change things is driven home, that **they** have the power to govern themselves and the society they live in. Thus struggle can change people's conception of "what is possible" and encourage them to try and create a better world. As Kropotkin argued:

> *"since the times of the [first] International Working Men's Association, the anarchists have always advised taking an active part in those workers' organisations which carry on the **direct** struggle of labour against capital and its protector — the State.*

> *"Such a struggle ... permits the worker to obtain some temporary improvements ..., while it opens his [or her] eyes to the evil that is done by capitalism and the State ... , and wakes up his [or her] thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State."* [**Anarchism**, p. 171]

In other words, social struggle has a **radicalising** and **politicising** effect, an effect which brings into a new light existing society and the possibilities of a better world (direct action, in Pouget's words, *"develops the feeling for human personality as well as the spirit of initiative ... it shakes people out of their torpor and steers them to consciousness."* [**Op. Cit.**, p. 5]). The practical need to unite and resist the boss also helps break down divisions within the working class. Those in struggle start to realise that they need each other to give them the power necessary to get improvements, to change things. Thus solidarity spreads and overcomes divisions between black and white, male and female, heterosexual and homosexual, trades, industries, nationalities and so on. The real need for solidarity to win the fight helps to undermine artificial divisions and show that there are only two groups in society, the oppressed and the oppressors. Moreover, struggle as well as transforming those involved is also the basis for transforming society as a whole simply because, as well as producing transformed individuals, it also produces new forms of organisation, organisations created to co-ordinate their struggle and which can, potentially at least, become the framework of a libertarian socialist society (see section I.2.3).

Thus anarchists argue that social struggle opens the eyes of those involved to self-esteem and a sense of their own strength, and the groupings it forms at its prompting are living, vibrant associations where libertarian principles usually come to the fore. We find almost all struggles developing new forms of organisation, forms which are often based on direct democracy, federalism and decentralisation. If we look at every major revolution, we find people creating mass organisations such as workers' councils, factory committees, neighbourhood assemblies and so on as a means of taking back the power to govern their own lives, communities and workplaces. In this way social struggle and direct action lay the foundations for the future. By actively taking part in social life, people are drawn into creating new forms of organisation, new ways of doing things. In this way they educate themselves in participation, in self-government, in initiative and in asserting themselves. They begin to realise that the only alternative to management by others is self-management and organise to achieve it.

Given that remaking society has to begin at the bottom, this finds its expression in direct action, individuals taking the initiative and using the power they have just generated by collective action and organisation to change things by their own efforts. Social struggle is therefore a two way transformation — the external transformation of society by the creation of new organisations and the changing of the power relations within it and the internal transformation of those who take part in the struggle. This is key:

> *"Whatever may be the practical results of the struggle for immediate gains, the greatest value lies in the struggle itself. For thereby workers learn that the bosses interests are opposed to theirs and that they cannot improve their conditions, and much less emancipate themselves, except by uniting and becoming stronger than the bosses. If they succeed in getting what they demand, they will be better off ... and immediately make greater demands and have greater needs. If they do not succeed they will be led to study*

> *the causes of their failure and recognise the need for closer unity and greater activism and they will in the end understand that to make their victory secure and definitive, it is necessary to destroy capitalism. The revolutionary cause, the cause of the moral elevation and emancipation of the workers must benefit by the fact that workers unite and struggle for their interests."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 191]

Hence Nestor Makhno's comment that *"[i]n fact, it is only through that struggle for freedom, equality and solidarity that you reach an understanding of anarchism."* [**The Struggle Against the State and other Essays**, p. 71] The creation of an anarchist society is a **process** and social struggle is the key anarchistic tendency within society which anarchists look for, encourage and support. Its radicalising and transforming nature is the key to the growth of anarchist ideas, the creation of libertarian structures and alternatives within capitalism (structures which may, one day, replace it) and the creation of anarchists and those sympathetic to anarchist ideas. Its importance cannot be underestimated!

J.4.2 Won't social struggle do more harm than good?

It is often argued that social struggle, resisting the powerful and the wealthy, will just do more harm than good. Employers often use this approach in anti-union propaganda, for example, arguing that creating a union will force the company to close and move to less "militant" areas.

There is some truth in this. Yes, social struggle can lead to bosses moving to more compliant workforces — but this also happens in periods lacking social struggle too! If we look at the down-sizing mania that gripped the U.S. in the 1980s and 1990s, we see companies firing tens of thousands of people during a period when unions were weak, workers scared about losing their jobs and class struggle basically becoming mostly informal, atomised and "underground." Moreover, this argument actually indicates the need for anarchism. It is a damning indictment of any social system that it requires people to kow-tow to their masters otherwise they will suffer economic hardship. It boils down to the argument *"do what you are told, otherwise you will regret it."* Any system based on that maxim is an affront to human dignity!

It would, in a similar fashion, be easy to "prove" that slave rebellions are against the long term interests of the slaves. After all, by rebelling the slaves will face the anger of their masters. Only by submitting without question can they avoid this fate and, perhaps, be rewarded by better conditions. Of course, the evil of slavery would continue but by submitting to it they can ensure their life can become better. Needless to say, any thinking and feeling person would quickly dismiss this reasoning as missing the point and being little more than apologetics for an evil social system that treated human beings as things. The same can be said for the argument that social struggles within capitalism do more harm than good. It betrays a slave mentality unfitting for human beings (although fitting for those who desire to live of the backs of workers or desire to serve those who do).

Moreover, this kind of argument ignores a few key points.

Firstly, by resistance the conditions of the oppressed can be maintained or even improved. If the boss knows that their decisions will be resisted they may be less inclined to impose speed-ups, longer hours and so on. If, on the other hand, they know that their employees will agree to anything then there is every reason to expect them to impose all kinds of oppressions, just

as a state will impose draconian laws if it knows that it can get away with it. History is full of examples of non-resistance producing greater evils in the long term and of resistance producing numerous important reforms and improvements (such as higher wages, shorter hours, the right to vote for working class people and women, freedom of speech, the end of slavery, trade union rights and so on).

So social struggle has been proven time and time again to gain successful reforms. For example, before the 8 hour day movement of 1886 in America most companies argued they could not introduce that reform without doing bust. However, after displaying a militant mood and conducting an extensive strike campaign, hundreds of thousands of workers discovered that their bosses had been lying and they got shorter hours. Indeed, the history of the labour movement shows what bosses say they can afford and the reforms workers can get via struggle are somewhat at odds. Given the asymmetry of information between workers and bosses, this is unsurprising as workers can only guess at what is available and bosses like to keep their actual finances hidden. Even the threat of labour struggle can be enough to gain improvements. For example, Henry Ford's $5 day is often used as an example of capitalism rewarding good workers. However, this substantial pay increase was largely motivated by the unionisation drive by the **Industrial Workers of the World** among Ford workers in the summer of 1913. [Harry Braverman, **Labour and Monopoly Capitalism**, p. 144] More recently, it was the mass non-payment campaign against the poll-tax in Britain during the late 1980s and early 1990s which helped ensure its defeat. In the 1990s, France also saw the usefulness of direct action. Two successive prime ministers (Edouard Balladur and Alain Juppe) tried to impose large scale neo-liberal "reform" programmes that swiftly provoked mass demonstrations and general strikes amongst students, workers, farmers and others. Confronted by crippling disruptions, both governments gave in.

Secondly, and in some ways more importantly, the radicalising effect of social struggle can open new doors for those involved, liberate their minds, empower them and create the potential for deep social change. Without resistance to existing forms of authority a free society cannot be created as people adjust themselves to authoritarian structures and accept "what is" as the only possibility. By resisting, people transform and empower themselves as well as transforming society. New possibilities can be seen (possibilities before dismissed as "utopian") and, via the organisation and action required to win reforms, the framework for these possibilities (i.e. of a new, libertarian, society) created. The transforming and empowering effect of social struggle is expressed well by the Nick DiGaetano, a one-time Wobbly who had joined during the 1912 Lawrence strike and then became a UAW-CIO shop floor militant:

> *"the workers of my generation from the early days up to now [1958] had what you might call a labour insurrection in changing from a plain, humble, submissive creature into a man. The union made a man out of him ... I am not talking about the benefits ... I am talking about the working conditions and how they affected the men in the plant ... Before they were submissive. Today they are men."* [quoted by David Brody, *"Workplace Contractualism in comparative perspective"*, pp. 176–205, Helson Lichtenstein and Howell John Harris (eds.), **Industrial Democracy in America**, p. 204]

Other labour historians note the same radicalising process elsewhere (modern day activists could give more examples!):

> *"The contest [over wages and conditions] so pervaded social life that the ideology of acquisitive individualism, which explained and justified a society regulated by market mechanisms and propelled by the accumulation of capital, was challenged by an ideology of mutualism, rooted in working-class bondings and struggles ... Contests over pennies on or off existing piece rates had ignited controversies over the nature and purpose of the American republic itself."* [David Montgomery, **The Fall of the House of Labour**, p. 171]

This radicalising effect is far more dangerous to authoritarian structures than better pay, more liberal laws and so on as they need submissiveness to work. Little wonder that direct action is usually denounced as pointless or harmful by those in power or their spokespersons for direct action will, taken to its logical conclusion, put them out of a job! Struggle, therefore, holds the possibility of a free society as well as of improvements in the here and now. It also changes the perspectives of those involved, creating new ideas and values to replace the ones of capitalism.

Thirdly, it ignores the fact that such arguments do not imply the end of social struggle and working class resistance and organisation, but rather its **extension.** If, for example, your boss argues that they will move to Mexico if you do not "shut up and put up" then the obvious solution is to make sure the workers in Mexico are also organised! Bakunin argued this basic point over one hundred years ago, and it is still true: *"in the long run the relatively tolerable position of workers in one country can be maintained only on condition that it be more or less the same in other countries."* The *"conditions of labour cannot get worse or better in any particular industry without immediately affecting the workers in other industries, and that workers of all trades are inter-linked with real and indissoluble ties of solidarity."* Ultimately, *"in those countries the workers work longer hours for less pay; and the employers there can sell their products cheaper, successfully competing against conditions where workers working less earn more, and thus force the employers in the latter countries to cut wages and increase the hours of their workers."* [**The Political Philosophy of Bakunin**, pp. 306–7] Bakunin's solution was to organise internationally, to stop this undercutting of conditions by solidarity between workers. As history shows, his argument was correct. Thus it is **not** social struggle or militancy which perhaps could have negative results, just **isolated** militancy, struggle which ignores the ties of solidarity required to win, extend and keep reforms and improvements. In other words, our resistance must be as transnational as capitalism is.

The idea that social struggle and working class organisation are harmful was expressed constantly in the 1970s and 80s. With the post-war Keynesian consensus crumbling, the "New Right" argued that trade unions (and strikes) hampered growth and that wealth redistribution (i.e. welfare schemes which returned some of the surplus value workers produced back into our own hands) hindered "wealth creation" (i.e. economic growth). Do not struggle over income, they argued, let the market decide and everyone will be better off.

This argument was dressed up in populist clothes. Thus we find the right-wing guru F.A. von Hayek arguing that, in the case of Britain, the *"legalised powers of the unions have become the biggest obstacle to raising the standards of the working class as a whole. They are the chief cause of the unnecessarily big differences between the best- and worse-paid workers."* He maintained that *"the elite of the British working class ... derive their relative advantages by keeping workers who are **worse off** from improving their position."* Moreover, he *"predict[ed] that the average worker's income would rise fastest in a country where relative wages are flexible, and where the exploitation*

of workers by monopolistic trade union organisations of specialised workers are effectively outlawed." [**1980s Unemployment and the Unions**, p. 107, p. 108 and p. 110]

Now, if von Hayek's claims were true we could expect that in the aftermath of Thatcher government's trade union reforms we would have seen: a rise in economic growth (usually considered as **the** means to improve living standards for workers by the right); that this growth would be more equally distributed; a decrease in the differences between high and low paid workers; a reduction in the percentage of low paid workers as they improved their positions when freed from union *"exploitation"*; and that wages rise fastest in countries with the highest wage flexibility. Unfortunately for von Hayek, the actual trajectory of the British economy exposed his claims as nonsense.

Looking at each of his claims in turn we discover that rather than "exploit" other workers, trade unions are an essential means to shift income from capital to labour (which is why capital fights labour organisers tooth and nail). And, equally important, labour militancy aids **all** workers by providing a floor under which wages cannot drop (non-unionised firms have to offer similar programs to prevent unionisation and be able to hire workers) and by maintaining aggregate demand. This positive role of unions in aiding **all** workers can be seen by comparing Britain before and after Thatcher's von Hayek inspired trade union and labour market reforms.

There has been a steady fall in growth in the UK since the trade union "reforms". In the "bad old days" of the 1970s, with its strikes and "militant unions" growth was 2.4% in Britain. It fell to 2% in the 1980s and fell again to 1.2% in the 1990s. A similar pattern of slowing growth as wage flexibility and market reform has increased can be seen in the US economy (it was 4.4% in the 1960s, 3.2% in the 1970s, 2.8% in the 1980s and 1.9% in the first half of the 1990s). [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 236] Given that the free-market right proclaims higher economic growth is the only way to make workers better off, growth rates have steadily fallen internationally since the domination of their ideology. Thus growth of output per head in the USA, Europe, Japan and the OECD countries between 1979 to 1990 was lower than in 1973–9, and 1990–2004 lower still. The deregulation, privatisation, anti-union laws and other neo-liberal policies have *"failed to bring an increase in the growth rate."* [Andrew Glyn, **Capitalism Unleashed**, p. 131] What growth spurts there have been were associated with speculative bubbles (in the American economy, dot.com stocks in the late 1990s and housing in the 2000s) which burst with disastrous consequences.

So the rate of "wealth creation" (economic growth) has steadily fallen as unions were "reformed" in line with von Hayek's ideology (and lower growth means that the living standards of the working class as a whole do not rise as fast as they did under the "exploitation" of the "monopolistic" trade unions).

If we look at the differences between the highest and lowest paid workers, we find that rather than decrease, they have in fact shown *"a dramatic widening out of the distribution with the best-workers doing much better"* since Thatcher was elected in 1979 [Andrew Glyn and David Miliband (eds.), **Paying for Inequality**, p. 100] This is important, as average figures can hide how badly those in the bottom (80%!) are doing. In an unequal society, the gains of growth are monopolised by the few and we would expect rising inequality over time alongside average growth. In America inequality has dramatically increased since the 1970s, with income and wealth growth in the 1980s going predominately to the top 20% (and, in fact, mostly to the top 1% of the population). The bottom 80% of the population saw their wealth grow by 1.2% and their income by 23.7% in the 1980s, while for the top 20% the respective figures were 98.2% and 66.3% (the figures for the top

1% were 61.6% and 38.9%, respectively). [Edward N. Wolff, *"How the Pie is Sliced"*, **The American Prospect**, no. 22, Summer 1995] There has been a *"fanning out of the pay distribution"* with the gap between the top 10% of wage-earners increasing compared to those in the middle and bottom 10%. Significantly, in the neo-liberal countries the rise in inequality is *"considerably higher"* than in European ones. In America, for example, *"real wages at the top grew by 27.2% between 1979 and 2003 as compared to 10.2% in the middle"* while real wages for the bottom 10% *"did not grow at all between 1979 and 2003."* In fact, most of the gains in the top 10% *"occurred amongst the top 5%, and two-thirds of it within the top 1%."* Unsurprising, the neo-liberal countries of the UK, USA and New Zealand saw the largest increases in inequality. [Glyn, **Op. Cit.**, pp. 116–8 and p. 168]

Given that inequality has increased, the condition of the average worker must have suffered. For example, Ian Gilmore states that *"[i]n the 1980s, for the first time for fifty years ... the poorer half of the population saw its share of total national income shirk."* [**Dancing with Dogma**, p. 113] According to Noam Chomsky, *"[d]uring the Thatcher decade, the income share of the bottom half of the population fell from one-third to one-fourth"* and the between 1979 and 1992, the share of total income of the top 20% grew from 35% to 40% while that of the bottom 20% fell from 10% to 5%. In addition, the number of UK employees with weekly pay below the Council of Europe's *"decency threshold"* increased from 28.3% in 1979 to 37% in 1994. [**World Orders, Old and New**, p. 144 and p. 145] Moreover, *"[b]ack in the early 1960s, the heaviest concentration of incomes fell at 80–90 per cent of the mean .. . But by the early 1990s there had been a dramatic change, with the peak of the distribution falling at just 40–50 per cent of the mean. One-quarter of the population had incomes below half the average by the early 1990s as against 7 per cent in 1977 and 11 per cent in 1961."* [Elliot and Atkinson, **Op. Cit.**, p. 235] *"Overall,"* notes Takis Fotopoulos, *"average incomes increased by 36 per cent during this period [1979-1991/2], but 70 per cent of the population had a below average increase in their income."* [**Towards an Inclusive Democracy**, p. 113]

The reason for this rising inequality is not difficult to determine. When workers organise and strike, they can keep more of what they produce in their own hands. The benefits of productivity growth, therefore, can be spread. With unions weakened, such gains will accumulate in fewer hands and flood upwards. This is precisely what happened. Before (approximately) 1980 and the neo-liberal assault on unions, productivity and wages rose hand-in-hand in America, afterward productivity continued to rise while wages flattened. In fact, the value of the output of an average worker *"has risen almost 50 percent since 1973. Yet the growing concentration of income in the hands of a small minority had proceeded so rapidly that we're not sure whether the typical American has gained* ***anything*** *from rising productivity."* Rather than "trickle down" *"the lion's share of economic growth in America over the past thirty years has gone to a small, wealthy minority."* In short: *"The big winners ... have been members of a very narrow elite: the top 1 percent or less of the population."* [Paul Krugman, **The Conscience of a Liberal**, p. 124, p. 244 and p. 8]

Looking at America, after the Second World War the real income of the typical family ("exploited" by "monopolistic" trade unions) grew by 2.7% per year, with *"incomes all through the income distribution grew at about the same rate."* Since 1980 (i.e., after working people were freed from the tyranny of unions), *"medium family income has risen only about 0.7 percent a year"* Median household income *"grew modestly"* from 1973 to 2005, the total gain was about 16%. Yet this *"modest gain"* may *"overstate"* how well American families were doing, as it *was achieved in part through longer working hours.* For example, *"a gain in family income that occurs because a spouse goes to work isn't the same thing as a wage increase. In particular it may carry hidden costs that offset some of the gains in money."* This stagnation is, of course, being denied by the

right. Yet, as Krugman memorably puts it: *"Modern economists debate whether American median income has risen or fallen since the early 1970s. What's really telling is the fact that we're even having this debate."* So while the average values may have went up, because of *"rising inequality, good performance in overall numbers like GDP hasn't translated into gains for ordinary workers."* [**Op. Cit.**, p. 55, pp. 126–7, p. 124 and p. 201]

Luckily for American capitalism a poll in 2000 found that 39% of Americans believe they are either in the wealthiest 1% or will be there *"soon"*! [Glyn, **Op. Cit.**, p. 179] In fact, as we discussed in section B.7.2, social mobility has **fallen** under neo-liberalism — perhaps unsurprisingly as it is easier to climb a hill than a mountain. This is just as important as the explosion in inequality as the "free-market" right argue that dynamic social mobility makes up for wealth and income inequality. As Krugman notes, Americans *"may believe that anyone can succeed through hard work and determination, but the facts say otherwise."* In reality, mobility is *"highest in the Scandinavian countries, and most results suggest that mobility is lower in the United States than it is in France, Canada, and maybe even in Britain. Not only don't Americans have equal opportunity, opportunity is less equal here than elsewhere in the West."* Without the blinkers of free market capitalist ideology this should be unsurprising: *"A society with highly unequal results is, more or less inevitably, a society with highly unequal opportunity, too."* [**Op. Cit.**, p. 247 and p. 249]

Looking at the claim that trade union members gained their *"relative advantage by keeping workers who are **worse off** from improving their position"* it would be fair to ask whether the percentage of workers in low-paid jobs decreased in Britain after the trade union reforms. In fact, the percentage of workers below the Low Pay Unit's definition of low pay (namely two-thirds of men's median earnings) **increased** — from 16.8% in 1984 to 26.2% in 1991 for men, 44.8% to 44.9% for women. For manual workers it rose by 15% to 38.4%, and for women by 7.7% to 80.7% (for non-manual workers the figures were 5.4% rise to 13.7% for men and a 0.5% rise to 36.6%). [Andrew Glyn and David Miliband (eds.), **Op. Cit.**, p.102] If unions **were** gaining at the expense of the worse off, you would expect a **decrease** in the number in low pay, **not** an increase. An OECD study concluded that *"[t]ypically, countries with high rates of collective bargaining and trade unionisation tend to have low incidence of low paid employment."* [**OECD Employment Outlook**, 1996, p. 94] Within America, we also discover that higher union density is associated with fewer workers earning around the minimum wage and that "right-to-work" states (i.e., those that pass anti-union laws) *"tend to have lower wages, lower standard of living, and more workers earning around the minimum wage."* It is hard not to conclude that states *"passed laws aimed at making unionisation more difficult would imply that they sought to maintain the monopoly power of employers at the expense of workers."* [Oren M. Levin-Waldman, *"The Minimum Wage and Regional Wage Structure: Implications for Income Distribution"*, pp. 635–57, **Journal of Economic Issues**, Vol. XXXVI, No. 3, p. 639 and p. 655]

As far as von Hayek's prediction on wage flexibility leading to the *"average worker's income"* rising fastest in a country where relative wages are flexible, it has been proved totally wrong. Between 1967 and 1971, real wages grew (on average) by 2.95% per year in the UK (nominal wages grew by 8.94%) [P. Armstrong, A. Glyn and J. Harrison, **Capitalism Since World War II**, p. 272]. In comparison, real household disposable income grew by just 0.5 percent between June 2006 and 2007. Average weekly earnings rose 2.9% between April 2006 and 2007 while inflation rose by 3.6% (Retail Prices Index) and 2.8% (Consumer Prices Index). [Elliot and Atkinson, **The Gods That Failed**, p. 163] This is part of a general pattern, with UK Real Wages per employee being an average 3.17% per year between 1960 and 1974, falling to 1.8% between 1980 and 1999.

In America, the equivalent figures are 2.37% and 1.02%. [Eckhard Hein and Thorsten Schulten, **Unemployment, Wages and Collective Bargaining in the European Union**, p. 9] Looking at the wider picture, during the early 1970s when strikes and union membership increased, *"real wage increases rose steadily to reach over 4% per year"* in the West. However, after von Hayek's anti-union views were imposed, *"real wages have grown very slowly."* In anti-union America, the median wage was $13.62 in 2003 compared to $12.36 in 1979 (reckoned in 2003 prices). In Europe and Japan *"average wages have done only a little better, having grown around 1% per year."* [Glyn, **Op. Cit.**, p. 5 and p. 116] It gets worse as these are average figures. Given that inequality soared during this period the limited gains of the neo-liberal era were not distributed as evenly as before (in the UK, for example, wage growth was concentrated at the top end of society. [Elliot and Atkinson, **Fantasy Island**, p. 99]).

Nor can it be said that breaking the unions and lower real wages translated into lower unemployment in the UK as the average unemployment rate between 1996 and 1997 was 7.1% compared to 4.5% between 1975 and 1979 (the year Thatcher took power). The average between 1960 and 1974 was 1.87% compared to 8.7% over the whole Thatcherite period of 1980 to 1999. Perhaps this is not too surprising, given that (capitalist economic theology aside) unemployment *"systematically weakens the bargaining power of trade unions."* In short: *"Neither on the theoretical nor empirical level can a strictly inverse relation between the real wage rate and the level of unemployment be derived."* [Hein and Schulten, **Op. Cit.**, p. 9, p. 3 and p. 2] As we discussed in section C.1.5 this should come as no surprise to anyone with awareness of the real nature of unemployment and the labour market. So unemployment did not fall after the trade union reforms, quite the reverse: *"By the time Blair came to power [in 1997], unemployment in Britain was falling, although it still remained higher than it had been when the [last Labour Government of] Callaghan left office in May 1979."* [Elliot and Atkinson, **Age of Insecurity**, p. 258] To be fair, von Hayek did argue that falls in unemployment would be *"a slow process"* but nearly 20 years of far higher unemployment is moving backwards!

So we have a stark contrast between the assertions of the right and the reality their ideology helped create. The reason for this difference is not hard to discover. As economist Paul Krugman correctly argues unions *"raise average wages for their membership; they also, indirectly and to a lesser extent, raise wages for similar workers ... as nonunionised employers try to diminish the appeal of union drives to their workers . .. unions tend to narrow income gaps among blue-collar workers, by negotiating bigger wage increases for their worse-paid members ... And nonunion employers, seeking to forestall union organisers, tend to echo this effect."* He argues that *"if there's a single reason blue-collar workers did so much better in the fifties than they had in the twenties, it was the rise of unions"* and that unions *"were once an important factor limiting income inequality, both because of their direct effect in raising their members' wages and because the union pattern of wage settlements ... was ... reflected in the labour market as a whole."* With the smashing of the unions came rising inequality, with the *"sharpest increases in wage inequality in the Western world have taken place in the United States and in Britain, both of which experience sharp declines in union membership."* Unions restrict inequality because *"they act as a countervailing force to management."* [**Op. Cit.**, p. 51, p. 49, p. 149 and p. 263]

So under the neo-liberal regime instigated by Thatcher and Reagan the power, influence and size of the unions were reduced considerably and real wage growth fell considerably — which is the **exact** opposite of von Hayek's predictions. Flexible wages and weaker unions have harmed the position of **all** workers (Proudhon: *"Contrary to all expectation! It takes an economist not*

to expect these things" [**System of Economical Contradictions**, p. 203]). So comparing the claims of von Hayek to what actually happened after trade union "reform" and the reduction of class struggle suggests that claims that social struggle is self-defeating are false (and self-serving, considering it is usually bosses, employer supported parties and economists who make these claims). A **lack** of social struggle has been correlated with low economic growth and often stagnant (even declining) wages. So while social struggle **may** make capital flee and other problems, lack of it is no guarantee of prosperity (quite the reverse, if the last quarter of the 20th century is anything to go by). Indeed, a lack of social struggle will make bosses be more likely to cut wages, worsen working conditions and so on — after all, they feel they can get away with it! Which brings home the fact that to make reforms last it is necessary to destroy capitalism.

Of course, no one can **know** that struggle will make things better. It is a guess; no one can predict the future. Not all struggles are successful and many can be very difficult. If the *"military is a role model for the business world"* (in the words of an ex-CEO of Hill & Knowlton Public Relations), and it is, then **any** struggle against it and other concentrations of power may, and often is, difficult and dangerous at times. [quoted by John Stauber and Sheldon Rampton in **Toxic Sludge Is Good For You!**, p. 47] But, as Zapata once said, *"better to die on your feet than live on your knees!"* All we can say is that social struggle can and does improve things and, in terms of its successes and transforming effect on those involved, well worth the potential difficulties it can create. Moreover, without struggle there is little chance of creating a free society, dependent as it is on individuals who refuse to bow to authority and have the ability and desire to govern themselves. In addition, social struggle is always essential, not only to **win** improvements, but to **keep** them as well. In order to fully secure improvements you have to abolish capitalism and the state. Not to do so means that any reforms can and will be taken away (and if social struggle does not exist, they will be taken away sooner rather than later). Ultimately, most anarchists would argue that social struggle is not an option — we either do it or we put up with the all the petty (and not so petty) impositions of authority. If we do not say "no" then the powers that be will walk all over us.

As the history of neo-liberalism shows, a lack of social struggle is fully compatible with worsening conditions. Ultimately, if you want to be treated as a human being you have to stand up for your dignity — and that means thinking and rebelling. As Bakunin argued in **God and the State**, human freedom and development is based on these. Without rebellion, without social struggle, humanity would stagnate beneath authority forever and never be in a position to be free. So anarchists agree wholeheartedly with the Abolitionist Frederick Douglass:

> *"If there is no struggle, there is no progress. Those who profess to favour freedom, and yet depreciate agitation, are men who want crops without ploughing up the ground. They want rain without thunder and lightning. They want the ocean without the awful roar of its many waters.*
>
> *"This struggle may be a moral one; or it may be a physical one; or it may be both moral and physical; but it must be a struggle. Power concedes nothing without a demand. It never did and it never will. Find out just what a people will submit to, and you have found out the exact amount of injustice and wrong which will be imposed upon them; and these will continue till they are resisted with either words or blows, or with both. The limits of tyrants are prescribed by the endurance of those whom they oppress."* [**The Life and Writings of Frederick Douglass**, vol. 2, p. 437]

Of course, being utterly wrong has not dented von Hayek's reputation with the right nor stopped him being quoted in arguments in favour of flexibility and free market reforms (what can we expect? The right still quote Milton Friedman whose track-record was equally impressive). Still, why let the actual development of the economies influenced by von Hayek's ideology get in the way? Perhaps it is fortunate that he once argued that economic theories can *"never be verified or falsified by reference to facts. All that we can and must verify is the presence of our assumptions in the particular case."* [**Individualism and Economic Order**, p. 73] With such a position all is saved — the obvious problem is that capitalism is still not pure enough and the "reforms" must not only continue but be made deeper... As Kropotkin stressed, *"economists who continue to consider economic forces alone ... without taking into account* ***the ideology of the State****, or the forces that each State necessarily places at the service of the rich ... remain completely outside the realities of the economic and social world."* [quoted by Ruth Kinna, *"Fields of Vision: Kropotkin and Revolutionary Change"*, pp. 67–86, **SubStance**, Vol. 36, No. 2, pp. 72–3]

And, needless to say, while three decades of successful capitalist class war goes without mention in polite circles, documenting its results gets you denounced as advocating "class war"! It is more than pass the time when working class people should make that a reality — particularly given the results of not doing so.

J.4.3 Are the new social movements a positive development for anarchists?

When assessing the revolutionary potential of our own era, we must note again that modern civilisation is under constant pressure from the potential catastrophes of social breakdown, ecological destruction, and proliferating weapons of mass destruction. These crises have drawn attention as never before to the inherently counter-evolutionary nature of the authoritarian paradigm, making more and more people aware that the human race is headed for extinction if it persists in outmoded forms of thought and behaviour. This awareness produces a favourable climate for the reception of new ideas, and thus an opening for radical educational efforts aimed at creating the mass transformation of consciousness which must take place alongside the creation of new liberatory institutions.

This receptiveness to new ideas has led to a number of new social movements in recent years. From the point of view of anarchism, the four most important of these are perhaps the feminist, ecology, peace, and social justice movements. Each of these movements contain a great deal of anarchist content, particularly insofar as they imply the need for decentralisation and direct democracy. Since we have already commented on the anarchist aspects of the ecology and feminist movements, here we will limit our remarks to the peace and social justice movements.

It is clear to many members of the peace movement that international disarmament, like the liberation of women, saving the planet's ecosystem, and preventing social breakdown, can never be attained without a shift of mass consciousness involving widespread rejection of hierarchy, which is based on the authoritarian principles of domination and exploitation. As C. George Bennello argued: *"Since peace involves the positive process of replacing violence by other means of settling conflict ... it can be argued that some sort of institutional change is necessary. For if insurgency is satisfied with specific reform goals, and does not seek to transform the institutional structure of society by getting at its centralised make-up, the war system will probably not go away.*

This is really what we should mean by decentralising: making institutions serve human ends again by getting humans to be responsible at every level within them." [**From the Ground Up**, p. 31]

When pursued along gender, class, racial, ethnic, or national lines, domination and exploitation are the primary causes of resentment, hatred, anger, and hostility, which often explode into individual or organised violence. Given this, both domestic and international peace depend on decentralisation, i.e. dismantling hierarchies, thus replacing domination and exploitation by the anarchist principles of co-operation and mutual aid.

Direct democracy is the other side of decentralisation. In order for an organisation to spread power horizontally rather than concentrating it at the apex of a hierarchy, all of its members have to have an equal voice in making the decisions that affect them. Hence decentralisation implies self-management. So, anarchists argue, the peace movement implies anarchism because world peace is impossible without both decentralisation and direct democracy (*"a federated people would be a people organised for peace; what would they do with armies?"* [Proudhon, **Du Principe Fédératif**, pp. 320–1]). As Benello correctly argued, the *"anarchist perspective has an unparalleled relevance today because prevailing nuclear policies can be considered as an ultimate stage in the divergence between the interests of governments and their peoples . .. the implications when revealed serve to raise fundamental questions regarding the advisability of entrusting governments with questions of life and death ... There is thus a pressing impetus to re-think the role, scale, and structure of national governments."* Moreover, *"[s]o long as profits are tied to defence production, speaking truth to the elites involved is not likely to get very far"* as *"it is only within the boundaries of the profit system that the corporate elites would have any space to move."* [**Op. Cit.**, p. 138 and p. 34] Thus the peace movement implicitly contains a libertarian critique of both forms of the power system — the political and economical.

In addition, certain of the practical aspects of the peace movement also suggest anarchistic elements. The use of non-violent direct action to protest against the war machine can only be viewed as a positive development by anarchists. Not only does it use effective, anarchistic methods of struggle it also radicalises those involved, making them more receptive to anarchist ideas and analysis.

If we look at the implications of *"nuclear free zones"* we can detect anarchistic tendencies within them. A nuclear free zone involves a town or region declaring an end of its association with the nuclear military industrial complex. They prohibit the research, production, transportation and deployment of nuclear weapons as well as renouncing the right to be defended by nuclear power. This movement was popular in the 1980s, with many areas in Europe and the Pacific Basin declaring that they were nuclear free zones. As Benello pointed out, *"[t]he development of campaigns for nuclear free zones suggests a strategy which can educate and radicalise local communities. Indeed, by extending the logic of the nuclear free zone idea, we can begin to flesh out a libertarian municipalist perspective which can help move our communities several steps towards autonomy from both the central government and the existing corporate system."* While the later development of these initiatives did not have the radicalising effects that Benello hoped for, they did *"represent a local initiative that does not depend on the federal government for action. Thus it is a step toward local empowerment ... Steps that increase local autonomy change the power relations between the centre and its colonies ... The nuclear free zone movement has a thrust which is clearly congruent with anarchist ideas ... The same motives which go into the declaration of a nuclear free zone would dictate that in other areas where the state and the corporate systems services are dys-*

functional and involve excessive costs, they should be dispensed with." [**Op. Cit.**, p. 137 and pp. 140–1]

The social justice movement is composed of people seeking fair and compassionate solutions to problems such as poverty, unemployment, economic exploitation, discrimination, poor housing, lack of health insurance, wealth and income inequalities, and the like. In the aftermath of decades of especially single-minded pursuit of this priority by neo-liberal administrations, the United States, for example, is reaping the grim harvest: wages stagnate, personal debt soars, homelessness stalks the streets; social welfare budgets are slashed to the bone while poverty, unemployment, and underemployment grow; sweatshops mushrooming in the large cities; millions of Americans without any health insurance while others face rocketing costs; obscene wealth inequalities and falling social mobility; and so on. Britain under the neo-liberal policies of Thatcher, Major and Blair experienced a social deterioration similar to that in the US.

It is not difficult to show that the major problems concerning the social justice movement can all be traced back to the hierarchy and domination. For, given the purpose of hierarchy, the highest priority of the elites who control the state is necessarily to maintain their own power and privileges, regardless of the suffering involved for subordinate classes.

In short, social injustice is inherent in the exploitative functions of the state, which are made possible by the authoritarian form of state institutions. Similarly, the authoritarian structure of capitalist companies gives rise to social injustice due to exploitation producing massive income differentials and wealth disparity between owners/management and labour. Hence the success of the social justice movement, like that of the feminist, ecology, and peace movements, depends on dismantling hierarchies. This means not only that these movements all imply anarchism but that they are related in such a way that it is impossible to conceive one of them achieving its goals in isolation from any of the others. To take just one example, let us consider the relationship between social justice and peace, which can be seen by examining a specific social justice issue: labour rights.

The production of advanced weapons systems is highly profitable for capitalists, which is why more technologically complex and precise weapons keep getting built with government help (with the public paying the tab by way of taxes). Now, we may reasonably argue that it is a fundamental human right to be able to choose freely whether or not one will personally contribute to the production of technologies that could lead to the extinction of the human race. Yet because of the authoritarian form of the capitalist corporation, rank-and-file workers have virtually no say in whether the companies for which they work will produce such technologies. (To the objection that workers can always quit if they don't like company policy, the reply is that they may not be able to find other work and therefore that the choice is not genuinely free). Hence the only way that ordinary workers can obtain the right to be consulted on life-or-death company policies is to control the production process themselves, through self-management as production for need and use will never come from the employer. The owners of production in a capitalist society will never begin to take social priorities into account in the production process. The pursuit of ever greater profits is not compatible with social justice and responsibility.

For these reasons, the peace and social justice movements are fundamentally linked through their shared need for a worker-controlled economy. Moreover, extreme poverty makes military service one of the few legal options open for many individuals to improve their social situation. These considerations illustrate further links between the peace and social justice movements —

and between those movements and anarchism, which is the conceptual "glue" that can potentially unite all the new social movement in a single anti-authoritarian coalition.

J.4.4 What is the *"economic structural crisis"*?

There is an ongoing structural crisis in the global capitalist economy. Compared to the post-war "Golden Age" of 1950 to 1973, the period from 1974 has seen a continual worsening in economic performance in the West and for Japan. For example, growth is lower, unemployment is far higher, labour productivity lower as is investment. Average rates of unemployment in the major industrialised countries have risen sharply since 1973, especially after 1979. Unemployment *"in the advanced capitalist countries ... increased by 56 per cent between 1973 and 1980 (from an average 3.4 per cent to 5.3 per cent of the labour force) and by another 50 per cent since then (from 5.3 per cent of the labour force in 1980 to 8.0 per cent in 1994)."* Job insecurity has increased with, for example, the USA, having the worse job insecurity since the depression of the 1930s. [Takis Fotopoulos, **Towards and Inclusive Democracy**, p. 35 and p. 141] In addition, the world economy have become far less stable with regular financial crises sweeping the world of de-regulated capitalism every few years or so.

This crisis is not confined to the economy. It extends into the ecological and the social, with the quality of life and well-being decreasing as GDP grows (as we noted in section C.10, economic factors cannot, and do not, indicate human happiness). However, here we discuss economic factors. This does not imply that the social and ecological crises are unimportant or are reducible to the economy. Far from it. We concentrate on the economic factor simply because this is the factor usually stressed by the establishment and it is useful to indicate the divergence of reality and hype we are currently being subjected to.

Ironically enough, as Marxist Robert Brenner points out, *"as the neo-classical medicine has been administered in even stronger doses, the economy has performed steadily less well. The 1970s were worse than the 1960s, the 1980s worse than the 1970s, and the 1990s have been worse than the 1980s."* [*"The Economics of Global Turbulence"*, **New Left Review**, no. 229, p. 236] This is ironic because during the crisis of Keynesianism in the 1970s the right argued that too much equality and democracy harmed the economy, and so us all worse-of in the long run (due to lower growth, sluggish investment and so on). However, after decades of pro-capitalist governments, rising inequality, increased freedom for capital and its owners and managers, the weakening of trade unions and so on, economic growth has become worse!

If we look at the USA in the 1990s (usually presented as an economy that "got it right") we find that the *"cyclical upturn of the 1990s has, in terms of the main macro-economic indicators of growth — output, investment, productivity, and real compensation — has been even less dynamic than its relatively weak predecessors of the 1980s and the 1970s (not to mention those of the 1950s and 1960s)."* [Brenner, **Op. Cit.**, p. 5] Of course, the economy is presented as a success — inequality is growing, the rich are getting richer and wealth is concentrating into fewer and fewer hands and so for the rich and finance capital, it can be considered a "Golden Age" and so is presented as such by the media. As economist Paul Krugman summarises, in America while the bulk of the population are working longer and harder to make ends meet *"the really big gains went to the really, really rich."* In fact, *"only the top 1 percent has done better since the 1970s than it did in the generation after World War II. Once you get way up the scale, however, the gains have been spectacular — the*

top tenth of a percent saw its income rise fivefold, and the top .01 percent of American is seven times richer than they were in 1973." Significantly, *the top 0.1% of Americans, a class with a minimum income of about $1.3 million and an average of about $3.5 million, receives more than 7 percent of all income — up from just 2.2 percent in 1979."* [**The Conscience of a Liberal**, p. 129 and p. 259]

So it is for this reason that it may be wrong to term this slow rot a "crisis" as it is hardly one for the ruling elite as their share in social wealth, power and income has steadily increased over this period. However, for the majority it is undoubtedly a crisis (the term *"silent depression"* has been accurately used to describe this). Unsurprisingly, when the chickens came home to roost under the Bush Junta and the elite faced economic collapse, the state bailed them out.

The only countries which saw substantial and dynamic growth after 1973 where those which used state intervention to violate the eternal "laws" of neo-classical economics, namely the South East Asian countries (in this they followed the example of Japan which had used state intervention to grow at massive rates after the war). Of course, before the economic crisis of 1997, capitalist ideologues argued that these countries were classic examples of "free market" economies. Right-wing icon F.A von Hayek asserted that *"South Korea and other newcomers"* had *"discovered the benefits of free markets."* [**1980s Unemployment and the Unions**, p. 113] In 1995, the **Heritage Foundation** (a right-wing think-tank) released its index of economic freedom. Four of the top seven countries were Asian, including Japan and Taiwan. All the Asian countries struggling just a few years later qualified as "free." Yet, as mentioned in section C.10.1, such claims were manifestly false: *"it was not **laissez-faire** policies that induced their spectacular growth. As a number of studies have shown, the expansion of the Asian Tigers was based on massive state intervention that boosted their export sectors, by public policies involving not only heavy protectionism but even deliberate distortion of market prices to stimulate investment and trade."* [Fotopoulos, **Op. Cit.**, p. 115] Moreover, for a long period these countries also banned unions and protest, but then for the right "free markets" always seem compatible with lack of freedom for workers to organise.

Needless to say, **after** the crisis of the late 1990s, the free-marketeers discovered the statism that had always been there and danced happily on the grave of what used to be called *"the Asian miracle"*. It was perverse to see the supporters of "free-market" capitalism concluding that history was rendering its verdict on the Asian model of capitalism while placing into the Memory Hole the awkward fact that until the crisis they themselves had taken great pains to deny that such a model existed! Such hypocrisy is not only truly sickening, it also undermines their own case for the wonders of "the market." For until the crisis appeared, the world's investors — which is to say "the market" — saw nothing but golden opportunities ahead for these "free" economies. They showed their faith by shoving billions into Asian equity markets, while foreign banks contentedly handed out billions in loans. If Asia's problems were systemic and the result of these countries' statist policies, then investors' failure to recognise this earlier is a blow against the market, not for it.

So, as can be seen, the global economy has been marked by an increasing stagnation, the slowing down of growth, weak (and jobless) recoveries, speculative bubbles driving what growth there is and increasing financial instability producing regular and deepening crisis. This is despite (or, more likely, **because of**) the free market reforms imposed and the deregulation of finance capital (we say "because of" simply because neo-classical economics argue that pro-market reforms would increase growth and improve the economy, but as we noted in section C.1 such economics has little basis in reality and so their recommendations are hardly going to produce positive re-

sults). Of course as the ruling class have been doing well this underlying slowdown has been ignored and obviously claims of crisis are only raised when economic distress reach the elite.

Crisis (particularly financial crisis) has become increasingly visible, reflecting the underlying weakness of the global economy (rising inequality, lack of investment in producing real goods in favour of speculation in finance, etc.). This underlying weakness has been hidden by the speculator performance of the world's stock markets, which, ironically enough, has helped create that weakness to begin with! As one expert on Wall Street argues, *"Bond markets ... hate economic strength ... Stocks generally behave badly just as the real economy is at its strongest ... Stocks thrive on a cool economy, and wither in a hot one."* In other words, real economic weakness is reflected in financial strength. Unsurprisingly, then, *"[w]hat might be called the rentier share of the corporate surplus — dividends plus interest as a percentage of pre-tax profits and interest — has risen sharply, from 20–30% in the 1950s to 60% in the 1990s."* [Doug Henwood, **Wall Street**, p. 124 and p. 73]

This helps explain the stagnation which has afflicted the economies of the west. The rich have been placing more of their ever-expanding wealth in stocks, allowing this market to rise in the face of general economic torpor. Rather than being used for investment, surplus is being funnelled into the finance market (retained earnings in the US have decreased as interest and dividend payments have increased [Brenner, **Op. Cit.**, p. 210]). However, such markets do concentrate wealth very successfully even if *"the US financial system performs dismally at its advertised task, that of efficiently directing society's savings towards their optimal investment pursuits. The system is stupefyingly expensive, gives terrible signals for the allocation of capital, and has surprisingly little to do with real investment."* [Henwood, **Op. Cit.**, p. 3] As most investment comes from internal funds, the rise in the rentiers share of the surplus has meant less investment and so the stagnation of the economy. The weakening economy has increased financial strength, which in turn leads to a weakening in the real economy. A vicious circle, and one reflected in the slowing of economic growth over the last 30 years.

The increasing dominance of finance capital has, in effect, created a market for government policies. As finance capital has become increasingly global in nature governments must secure, protect and expand the field of profit-making for financial capital and transnational corporations, otherwise they will be punished by dis-investment by global markets (i.e. finance capital). These policies have been at the expense of the underlying economy in general, and of the working class in particular:

> *"Rentier power was directed at labour, both organised and unorganised ranks of wage earners, because it regarded rising wages as a principal threat to the stable order. For obvious reasons, this goal was never stated very clearly, but financial markets understood the centrality of the struggle: protecting the value of their capital required the suppression of labour incomes."* [William Greider, **One World, Ready or Not**, p. 302]

For example, *"the practical effect of finance capital's hegemony was to lock the advanced economies and their governments in a malignant spiral, restricting them to bad choices. Like bondholders in general, the new governing consensus explicitly assumed that faster economic growth was dangerous — threatening to the stable financial order — so nations were effectively blocked from measures that might reduce permanent unemployment or ameliorate the decline in wages ... The reality of slow growth, in turn, drove the governments into their deepening indebtedness, since*

the disappointing growth inevitably undermined tax revenues while it expanded the public welfare costs. The rentier regime repeatedly instructed governments to reform their spending priorities — that is, withdraw benefits from dependent citizens." [Greider, **Op. Cit.**, pp. 297–8]

Of course, industrial capital **also** hates labour, so there is a basis of an alliance between the two sides of capital, even if they do disagree over the specifics of the economic policies implemented. Given that a key aspect of the neo-liberal reforms was the transformation of the labour market from a post-war sellers' market to a nineteenth century buyers' market with its related effects on workplace discipline, wage claims and proneness to strike, industrial capital could not but be happy even if its members quibbled over details. Doug Henwood correctly argues that *"Liberals and populists often search for potential allies among industrialists, reasoning that even if financial interests suffer in a boom, firms that trade in real, rather than fictitious, products would thrive when growth is strong. In general, industrialists are less sympathetic to these arguments. Employers in any industry like slack in the labour market; it makes for a pliant workforce, one unlikely to make demands or resist speedups."* In addition, *"many non-financial corporations have heavy financial interests."* [**Op. Cit.**, p. 123 and p. 135]

Thus the general stagnation afflicting much of the world, a stagnation which regularly develop into open crisis as the needs of finance undermine the real economy which, ultimately, it is dependent upon. The contradiction between short term profits and long term survival inherent in capitalism strikes again.

Crisis, as we have noted above, has appeared in areas previously considered as strong economies and it has been spreading. An important aspect of this crisis is the tendency for productive capacity to outstrip effective demand, which arises in large part from the imbalance between capitalists' need for a high rate of profit and their simultaneous need to ensure that workers have enough wealth and income so that they can keep buying the products on which those profits depend. Inequality has been increasing particularly in neo-liberal countries like the UK and USA, which means that the economy faces as realisation crisis (see section C.7), a crisis which was avoided in the short-term by deepening debt for working people (debt levels more than doubled between the 1950s to the 1990s, from 25% to over 60%). In 2007, the chickens came hole to roost with a global credit crunch much worse than the previous finance crises of the neo-liberal era.

Over-investment has been magnified due to the East-Asian Tigers and China which, thanks to their intervention in the market (and repressive regimes against labour), ensured they were a more profitable place to invest than elsewhere. Capital flooded into the area, ensuring a relative over-investment was inevitable. As we argued in section C.7.2, crisis is possible simply due to the lack of information provided by the price mechanism — economic agents can react in such a way that the collective result of individually rational decisions is irrational. Thus the desire to reap profits in the Tiger economies resulted in a squeeze in profits as the aggregate investment decisions resulted in over-investment, and so over-production and falling profits.

In effect, the South East Asian economies suffered from the "fallacy of composition." When you are the first Asian export-driven economy, you are competing with high-cost Western producers and so your cheap workers, low taxes and lax environmental laws allow you to under-cut your competitors and make profits. However, as more tigers joined into the market, they end up competing against **each other** and so their profit margins would decrease towards their actual cost price rather than that of Western firms. With the decrease in profits, the capital that flowed into the region flowed back out, thus creating a crisis (and proving, incidentally, that free markets

are destabilising and do not secure the best of all possible outcomes). Thus, the rentier regime, after weakening the Western economies, helped destabilise the Eastern ones too.

So, in the short-run, many large corporations and financial companies solved their profit problems by expanding production into "underdeveloped" countries so as to take advantage of the cheap labour there (and the state repression which ensured that cheapness) along with weaker environmental laws and lower taxes. Yet gradually they are running out of third-world populations to exploit. For the very process of "development" stimulated by the presence of Transnational Corporations in third-world nations increases competition and so, potentially, over-investment and, even more importantly, produces resistance in the form of unions, rebellions and so on, which tend to exert a downward pressure on the level of exploitation and profits.

This process reflects, in many ways, the rise of finance capital in the 1970s. In the 1950s and 1960s, existing industrialised nations experienced increased competition from Japan and Germany. As these nations re-industrialised, they placed increased pressure on the USA and other nations, reducing the global "degree of monopoly" and forcing them to compete with lower cost producers. In addition, full employment produced increasing resistance on the shop floor and in society as a whole (see section C.7.1), squeezing profits even more. Thus a combination of class struggle and global over-capacity resulted in the 1970s crisis. With the inability of the real economy, especially the manufacturing sector, to provide an adequate return, capital shifted into finance. In effect, it ran away from the success of working people asserting their rights at the point of production and elsewhere. This, combined with increased international competition, ensured the rise of finance capital which in return ensured the current stagnationist tendencies in the economy (tendencies made worse by the rise of the Asian Tiger economies in the 1980s).

From the contradictions between finance capital and the real economy, between capitalists' need for profit and human needs, between over-capacity and demand, and others, there has emerged what appears to be a long-term trend toward **permanent** stagnation of the capitalist economy with what growth spurts which do exist being fuelled by speculative bubbles as well as its benefits being monopolised by the few (so refuting the notion of "trickle down" economics). This trend has been apparent for several decades, as evidenced by the continuous upward adjustment of the rate of unemployment officially considered to be "normal" or "acceptable" during those decades, and by other symptoms as well such as falling growth, lower rates of profit and so on.

This stagnation has became even more obvious by the development of deep crisis in many countries at the end of the 2000s. This caused central banks to intervene in order to try and revive the real economies that have suffered under their rentier inspired policies since the 1970s. Such action may just ensure continued stagnation and reflated bubbles rather than a real-up turn. One thing is true, however, and that is the working class will pay the price of any "solution" — unless they organise and get rid of capitalism and the state. Ultimately, capitalism need profits to survive and such profits came from the fact that workers do not have economic liberty. Thus any "solution" within a capitalist framework means the increased oppression and exploitation of working class people.

J.4.5 Why is this *"economic structural crisis"* important to social struggle?

The

"economic structural crisis" we out-lined in the last section has certain implications for anarchists and social struggle. Essentially, as C. George Benello argued, *"[i]f economic conditions worsen ... then we are likely to find an openness to alternatives which have not been thought of since the depression of the 1930s ... It is important to plan for a possible economic crisis, since it is not only practical, but also can serve as a method of mobilising a community in creative ways."* [**From the Ground Up**, p. 149]

In the face of economic stagnation and depression, attempts to generate more profits (i.e., increase exploitation) by increasing the authority of the boss grow. In addition, more people find it harder to make ends meet, running up debts to survive, face homelessness if they are made unemployed, and so on. This makes exploitation ever more visible and tend to push oppressed strata together in movements that seek to mitigate, and even remove, their oppression. As the capitalist era has worn on, these strata have become increasingly able to rebel and gain substantial political and economic improvements, which have, in addition, lead to an increasing willingness to do so because of rising expectations (about what is possible) and frustration (about what actually is). It is true that libertarians, the left and labour have suffered setbacks since the 1970s, but with increasing misery of the working class due to neo-liberal policies (and the *"economic structural crisis"* they create), it is only a matter of time before there is a resurgence of radicalism.

Anarchists will be in the forefront of this resurgence. For, with the discrediting and eventual fall of authoritarian state capitalism ("Communism") in Eastern Europe, the anti-authoritarian faction of the left will increasingly be seen as its only credible one. Thus the ongoing structural crisis of the global capitalist economy, combined with the other developments springing from what Takis Fotopoulos calls (in his book **Towards an Inclusive Democracy**) a *"multidimensional crisis"* (which includes economic, political, social, ecological and ideological aspects), could (potentially) lead to a new **international** anti-authoritarian alliance linking together the new (and not so new) social movements in the West (feminism, the Green movement, rank-and-file labour militancy, etc.) with non-authoritarian liberation movements in the Third World and new movements in formerly Stalinist countries. However, this is only likely to happen if anarchists take the lead in promoting alternatives and working with the mass of the population. Ways in which anarchist can do this are discussed in some detail in section J.5.

Thus the *"economic structural crisis"* can aid social struggle by placing the contrast of *"what is"* with what *"could be"* in a clear light. Any crisis brings forth the contradictions in capitalism, between the production of use values (things people need) and of exchange value (capitalist profits), between capitalism's claims of being based on liberty and the authoritarianism associated with wage labour (*"The general evidence of repression poses an ancient contradiction for capitalism: while it claims to promote human freedom, it profits concretely from the denial of freedom, most especially freedom for the workers employed by capitalist enterprise."* [William Greider, **One World, Ready or Not**, p. 388]) and so on. It shakes to the bone popular faith in capitalism's ability to "deliver the goods" and gets more and more people thinking about alternatives to a system that places profit above and before people and planet. The crisis also, by its very nature, encourages workers and other oppressed sections of the population to resist and fight back, which in turn generates

collective organisation (such as unions or workplace-based assemblies and councils), solidarity and direct action — in other words, collective self-help and the awareness that the problems of working class people can only be solved by ourselves, by our own actions and organisations. The 1930s in the USA is a classic example of this process, with very militant struggles taking place in very difficult situations (see Howard Zinn's **A People's History of the United States** or Jeremy Brecher's **Strike!** for details).

In other words, the "economic structural crisis" gives radicals a lot potential to get their message across, even if the overall environment may make success seem difficult at times!

As well as encouraging workplace organisation due to the intensification of exploitation and authority provoked by the economic stagnant/depression, the "economic structural crisis" can encourage other forms of libertarian alternatives. For example, the *"economic structural crisis"* has resulted in the erosion of the welfare state (at least for the working class, for the elite state aid is never far away). This development has potential libertarian possibilities. *"The decline of the state,"* argues L. Gambone, *"makes necessary a revitalisation of the notions of direct action and mutual aid. Without Mama State to do it for us, we must create our own social services through mutual aid societies."* [**Syndicalism in Myth and Reality**, p. 12] As we argue in more depth in section J.5.16, such a movement of mutual aid has a long history in the working class and, as it is under our control, it cannot be withdrawn from us to enrich and empower the ruling class as state run systems have been. Thus the decline of state run social services could, potentially, see the rise of a network of self-managed, working class alternatives (equally, of course, it could see the end of all services to the weakest sections of our society – which possibility comes about depends on what we do in the here and now. See section J.5.15 for an anarchist analysis of the welfare state).

Food Not Bombs! (FNB) is an excellent example of practical libertarian alternatives being generated by the economic crisis we are facing. FNB is a community-based group which helps the homeless through the direct action of its members. It also involves the homeless in helping themselves. It serves free food in public places to expose the plight of the homeless, the callousness of the system and our capacity to solve social problems through our own actions without government or capitalism. The constant harassment of FNB by the police, middle classes and the government illustrates their callousness to the plight of the poor and the failure of their institutions to build a society which cares for people more than money and property (and the police and prisons to protect them). The fact is that in the US many working and unemployed people have no **feeling** that they are entitled to basic human needs such as medicine, clothes, shelter, and food. FNB encourages poor people to make these demands, provides a space in which these demands can be voiced, and helps to breakdown the wall between hungry and not-hungry. The repression directed towards FNB by local police forces and governments also demonstrates the effectiveness of their activity and the possibility that it may radicalise those who get involved with the organisation. Charity is obviously one thing, mutual aid is something else. FNB is a politicised movement from below, based on solidarity, **not** charity as, in Kropotkin's words, charity *"bears a character of inspiration from above, and, accordingly, implies a certain superiority of the giver upon the receiver."* [**Mutual Aid**, p. 222]

The last example of how economic stagnation can generate libertarian tendencies can be seen from the fact that, *"[h]istorically, at times of severe inflation or capital shortages, communities have been forced to rely on their own resources. During the Great Depression, many cities printed their own currency; this works to the extent that a community is able to maintain a viable internal economy*

which provides the necessities of life, independent of transactions with the outside." [Benello, **Op. Cit.**, p. 150]

These local currencies could be the basis of a mutual bank (see section J.5.5), providing interest-free loans to workers to form co-operatives and so build libertarian alternatives to capitalist firms, so eliminating the profits of capitalists by allowing workers to exchange the product of their labour with other workers. Moreover, *"local exchange systems strength local communities by increasing their self-reliance, empowering community members, and helping to protect them from the excesses of the global market."* [Frank Lindenfield, *"Economics for Anarchists,"* **Social Anarchism**, no. 23, p. 24] In this way self-managing communes could be created, communes that replace hierarchical, top-down, government with collective decision making of community affairs based on directly democratic community assemblies. These self-governing communities and economies could federate together to co-operate on a wider scale and so create a counter-power to that of state and capitalism.

This confederal system of self-managing communities could also protect jobs as the *"globalisation of capital threatens local industries. A way has to be found to keep capital at home and so preserve the jobs and the communities that depend upon them. Protectionism is both undesirable and unworkable. But worker-ownership or workers' co-operatives are alternatives."* [Gambone, **Op. Cit.**, pp. 12–13] Local communities could provide the necessary support structures which could protect co-operatives from the corrupting effects of working in the capitalist market (see section J.5.11). They could also demand that rather than nationalise or bailout failing companies (or, for that matter, privatise state services or public works), they should be turned over (as Proudhon constantly argued) to workers co-operatives by aiding *"the **Labour Unions** to enter into a temporary possession of the industrial concerns"*, anarchists would provide *"an effective means to check the State Nationalisation"* in the period before a social revolution when *"State phases which we are traversing now seems to be unavoidable."* [quoted by Ruth Kinna, *"Fields of Vision: Kropotkin and Revolutionary Change"*, pp. 67–86, **SubStance**, Vol. 36, No. 2, p. 77] In this way, economic liberty (self-management) could replace capitalism (wage slavery) and show that anarchism is a practical alternative to the chaos and authoritarianism of capitalism, even if these examples are initially fragmentally and limited in nature.

However, these developments should **not** be taken in isolation of collective struggle in the workplace or community. It is in the class struggle that the real potential for anarchy is created. The work of such organisations as **Food Not Bombs!** and the creation of local currencies and co-operatives are supplementary to the important task of creating workplace and community organisations that can create effective resistance to both state and capitalists, resistance that can overthrow both (see sections J.5.2 and J.5.1 respectively). *"Volunteer and service credit systems and alternative currencies by themselves may not be enough to replace the corporate capitalist system. Nevertheless, they can help build the economic strength of local currencies, empower local residents, and mitigate some of the consequences of poverty and unemployment ... By the time a majority [of a community are involved it] will be well on its way to becoming a living embodiment of many anarchist ideals."* [Lindenfield, **Op. Cit.**, p. 28] And such a community would be a great aid in any strike or other social struggle which is going on!

The general economic crisis which we are facing has implications for social struggle and anarchist activism. It could be the basic of libertarian alternatives in our workplaces and communities, alternatives based on direct action, solidarity and self-management. These alternatives could

include workplace and community unionism, co-operatives, mutual banks and other forms of anarchistic resistance to capitalism and the state.

Finally, we must stress that we are **not** arguing that working class people need an economic crisis to force them into struggle. Such "objectivism" (i.e. the placing of tendencies towards socialism in the development of capitalism, of objective factors, rather than in the class struggle, i.e. subjective factors) is best left to orthodox Marxists and Leninists as it has authoritarian implications. Rather we are aware that the class struggle, the subjective pressure on capitalism, is not independent of the conditions within which it takes place (and helps to create, we must add). Subjective revolt is always present under capitalism and, in the case of the 1970s, played a role in creating crisis. Faced with an economic crisis we are indicating what we can do in response to it and how it could, potentially, generate libertarian tendencies within society. Economic crisis could, in other words, provoke social struggle, collective action and generate anarchic tendencies in society. Equally, it could cause apathy, rejection of collective struggle and, perhaps, the embracing of **false** "solutions" such as right-wing populism, Leninism, or Fascism. We cannot predict how the future will develop, but it is true that if we do nothing then, obviously, libertarian tendencies will not grow and develop.

J.4.6 What are implications of anti-government and anti-big business feelings?

Public opinion polls show increasing feelings of disappointment and lack of confidence in governments and big business.

Some of the feelings of disappointment with government can be blamed on the anti-big-government rhetoric of conservatives and right-wing populists. Of course the Right would never dream of **really** dismantling the state, as is evident from the fact that government was as bureaucratic and expensive under "conservative" administrations. So this "decentralist" element of right-wing rhetoric is a con (and quickly jettisoned as required by the capitalist class). The "anti-Government" rhetoric is combined with the pro-business, pro-private tyranny, racist, anti-feminist, and homophobic hogwash disseminated by right-wing radio and TV propagandists and the business-backed media which shows that capitalism is not **genuinely** anti-authoritarian (nor could it ever be), as a social system based on liberty must entail.

When a right-wing politician, economist or business "leader" argues that the government is too big, they are rarely thinking of the same government functions you are. You may be thinking of subsidies for tobacco farmers or defence firms; they are thinking about pollution controls. You may be thinking of reforming welfare for the better; their idea is to dismantle the welfare state (for working class people). Moreover, with their support for "family values", "wholesome" television, bans on abortion and so on, their victory would see an increased level of government intrusion in many personal spheres as well as increased state support for the power of the boss over the worker and the landlord over the tenant.

If you look at what the Right has done and is doing, rather than what it is saying, you quickly see the ridiculous of claims of right-wing "libertarianism" (as well as who is really in charge). Obstructing pollution and health regulations; defunding product safety laws; opening national parks to logging and mining, or closing them entirely; reducing taxes for the rich; eliminating the capital gains tax; allowing companies to fire striking workers; making it easier for big telecom-

munications companies to dominate the media; limiting companies' liability for unsafe products — the objective here is obviously to help big business and the wealthy do what they want without government interference, helping the rich get richer and increasing "freedom" for private power combined with a state whose sole role is to protect that "liberty."

Such right-wing tendencies do not have anarchistic elements. The "anti-government" propaganda of big business is hardly anarchistic. What anarchists try to do is point out the hypocritical and contradictory nature of such rhetoric. The arguments against big government are equally applicable to business. **If** people are capable of making their own decisions, then why should this capability be denied in the workplace? As Noam Chomsky points out, while there is a *"leave it alone"* and *"do your own thing"* current within society, it in fact *"tells you that the propaganda system is working full-time, because there is no such ideology in the US. Business, for example, doesn't believe it. It has always insisted upon a powerful interventionist state to support its interests — still does and always has — back to the origins of American society. There's nothing individualistic about corporations. Those are big conglomerate institutions, essentially totalitarian in character, but hardly individualistic. Within them you're a cog in a big machine. There are few institutions in human society that have such strict hierarchy and top-down control as a business organisation. Nothing there about 'Don't tread on me.' You're being tread on all the time. The point of the ideology is to try to get other people, outside of the sectors of co-ordinated power, to fail to associate and enter into decision-making in the political arena themselves. The point is to atomise everyone else while leaving powerful sectors integrated and highly organised and of course dominating resources."* He goes on to note that there is *"a streak of independence and individuality in American culture which I think is a very good thing. This 'Don't tread on me' feeling is in many respects a healthy one. It's healthy up to the point where it atomises and keeps you from working together with other people. So it's got its healthy side and its negative side. It's the negative side that's emphasised naturally in the propaganda and indoctrination."* [**Keeping the Rabble in Line**, pp. 279–80]

As opinion polls show, most people direct their dislike and distrust of institutions equally to Big Business, which shows that people are not stupid. Unfortunately, as Goebbels was well aware, tell a lie often enough and people start to believe it. Given the funds available to big business, its influence in the media, its backing of "think-tanks," the use of Public Relations companies, the support of economic "science," its extensive advertising and so on, it says a lot for the common sense of people that so many see big business for what it is. You simply cannot fool all the people all of the time!

However, these feelings can easily be turned into cynicism as well as a hopelessness that things can change for the better and that you cannot help change society. Or, even worse, they can be twisted into support for right, authoritarian, populism. The job for anarchists is to combat this and help point the healthy distrust people have for government and business towards a real solution to society's problems, namely a decentralised, self-managed anarchist society.

J.4.7 What about the communications revolution?

Another important factor working in favour of anarchists is the existence of a sophisticated global communications network and a high degree of education and literacy among the populations of the core industrialised nations. Together these two developments make possible nearly instantaneous sharing and public dissemination of information by members of various progressive and

radical movements all over the globe – a phenomenon that tends to reduce the effectiveness of repression by central authorities. The electronic-media and personal-computer revolutions also make it more difficult for elitist groups to maintain their previous monopolies of knowledge. Copy-left software and text, user-generated and shared content, file-sharing, all show that information, and its users, reaches its full potential when it is free. In short, the advent of the Information Age is potentially extremely subversive.

The very existence of the Internet provides anarchists with a powerful argument that decentralised structures can function effectively in a highly complex world. For the net has no centralised headquarters and is not subject to regulation by any centralised regulatory agency, yet it still manages to function effectively. Moreover, the net is also an effective way of anarchists and other radicals to communicate their ideas to others, share knowledge, work on common projects and co-ordinate activities and social struggle. By using the Internet, radicals can make their ideas accessible to people who otherwise would not come across anarchist ideas. In addition, and far more important than anarchists putting their ideas across, the fact is that the net allows everyone with access to express themselves freely, to communicate with others and get access (by visiting webpages and joining mailing lists and newsgroups) and give access (by creating webpages and joining in with on-line arguments) to new ideas and viewpoints. This is very anarchistic as it allows people to express themselves and start to consider new ideas, ideas which may change how they think and act.

Obviously we are aware that the vast majority of people in the world do not have access to telephones, never mind computers, but computer access is increasing in many countries, making it available, via work, libraries, schools, universities, and so on to more and more working class people.

Of course there is no denying that the implications of improved communications and information technology are ambiguous, implying Big Brother as well the ability of progressive and radical movements to organise. However, the point is only that the information revolution in combination with the other social developments **could** (but will not **necessarily**) contribute to a social paradigm shift. Obviously such a shift will not happen automatically. Indeed, it will not happen at all unless there is strong resistance to governmental and corporate attempts to limit public access to information, technology (e.g. encryption programs), censor peoples' communications and use of electronic media and track them on-line.

This use of the Internet and computers to spread the anarchist message is ironic. The rapid improvement in price-performance ratios of computers, software, and other technology today is often used to validate the faith in free market capitalism but that requires a monumental failure of historical memory as not just the Internet but also the computer represents a spectacular success of public investment. As late as the 1970s and early 1980s, according to Kenneth Flamm's **Creating the Computer**, the federal government was paying for 40 percent of all computer-related research and 60 to 75 percent of basic research. Even such modern-seeming gadgets as video terminals, the light pen, the drawing tablet, and the mouse evolved from Pentagon-sponsored research in the 1950s, 1960s and 1970s. Even software was not without state influence, with databases having their root in US Air Force and Atomic Energy Commission projects, artificial intelligence in military contracts back in the 1950s and airline reservation systems in 1950s air-defence systems. More than half of IBM's Research and Development budget came from government contracts in the 1950s and 1960s.

The motivation was national security, but the result has been the creation of comparative advantage in information technology for the United States that private firms have happily exploited and extended. When the returns were uncertain and difficult to capture, private firms were unwilling to invest, and government played the decisive role. And not for want of trying, for key players in the military first tried to convince businesses and investment bankers that a new and potentially profitable business opportunity was presenting itself, but they did not succeed and it was only when the market expanded and the returns were more definite that the government receded. While the risks and development costs were socialised, the gains were privatised. All of which make claims that the market would have done it anyway highly unlikely.

Looking beyond state aid to the computer industry we discover a *"do-it-yourself"* (and so self-managed) culture which was essential to its development. The first personal computer, for example, was invented by amateurs who wanted their own cheap machines. The existence of a "gift" economy among these amateurs and hobbyists was a necessary precondition for the development of PCs. Without this free sharing of information and knowledge, the development of computers would have been hindered and so socialistic relations between developers and within the working environment created the necessary conditions for the computer revolution. If this community had been marked by commercial relations, the chances are the necessary breakthroughs and knowledge would have remained monopolised by a few companies or individuals, so hindering the industry as a whole.

Encouragingly, this socialistic "gift economy" is still at the heart of computer/software development and the Internet. For example, the **Free Software Foundation** has developed the **General Public Licence** (GPL). GPL, also know as

"copyleft", uses copyright to ensure that software remains free. Copyleft ensures that a piece of software is made available to everyone to use and modify as they desire. The only restriction is that any used or modified copyleft material must remain under copyleft, ensuring that others have the same rights as you did when you used the original code. It creates a commons which anyone may add to, but no one may subtract from. Placing software under GPL means that every contributor is assured that she, and all other uses, will be able to run, modify and redistribute the code indefinitely. Unlike commercial software, copyleft code ensures an increasing knowledge base from which individuals can draw from and, equally as important, contribute to. In this way everyone benefits as code can be improved by everyone, unlike commercial code.

Many will think that this essentially anarchistic system would be a failure. In fact, code developed in this way is far more reliable and sturdy than commercial software. Linux, for example, is a far superior operating system than DOS precisely **because** it draws on the collective experience, skill and knowledge of thousands of developers. Apache, the most popular web-server, is another freeware product and is acknowledged as the best available. The same can be said of other key web-technologies (most obviously PHP) and projects (Wikipedia springs to mind, although that project while based on co-operative and free activity is owned by a few people who have ultimate control). While non-anarchists may be surprised, anarchists are not. Mutual aid and co-operation are beneficial in the evolution of life, why not in the evolution of software? For anarchists, this "gift economy" at the heart of the communications revolution is an important development. It shows both the superiority of common development as well as the walls built against innovation and decent products by property systems. We hope that such an economy will spread increasingly into the "real" world.

Another example of co-operation being aided by new technologies is Netwar. This refers to the use of the Internet by autonomous groups and social movements to co-ordinate action to influence and change society and fight government or business policy. This use of the Internet has steadily grown over the years, with a Rand corporation researcher, David Ronfeldt, arguing that this has become an important and powerful force (Rand is, and has been since its creation in 1948, a private appendage of the military industrial complex). In other words, activism and activists' power and influence has been fuelled by the advent of the information revolution. Through computer and communication networks, especially via the Internet, grassroots campaigns have flourished, and the most importantly, government elites have taken notice.

Ronfeldt specialises in issues of national security, especially in the areas of Latin American and the impact of new informational technologies. Ronfeldt and another colleague coined the term

"netwar" in a Rand document entitled *"Cyberwar is Coming!"*. Ronfeldt's work became a source of discussion on the Internet in mid-March 1995 when Pacific News Service correspondent Joel Simon wrote an article about Ronfeldt's opinions on the influence of netwars on the political situation in Mexico after the Zapatista uprising. According to Simon, Ronfeldt holds that the work of social activists on the Internet has had a large influence — helping to co-ordinate the large demonstrations in Mexico City in support of the Zapatistas and the proliferation of EZLN communiqués across the world via computer networks. These actions, Ronfeldt argues, have allowed a network of groups that oppose the Mexican Government to muster an international response, often within hours of actions by it. In effect, this has forced the Mexican government to maintain the facade of negotiations with the EZLN and has on many occasions, actually stopped the army from just going in to Chiapas and brutally massacring the Zapatistas.

Given that Ronfeldt was an employee of the Rand Corporation his comments indicate that the U.S. government and its military and intelligence wings are very interested in what the Left is doing on the Internet. Given that they would not be interested in this if it were not effective, we can say that this use of the "Information Super-Highway" is a positive example of the use of technology in ways un-planned of by those who initially developed it (let us not forget that the Internet was originally funded by the U.S. government and military). While the internet is being hyped as the next big marketplace, it is being subverted by activists — an example of anarchistic trends within society worrying the powers that be.

A good example of this powerful tool is the incredible speed and range at which information travels the Internet about events concerning Mexico and the Zapatistas. When Alexander Cockburn wrote an article exposing a Chase Manhattan Bank memo about Chiapas and the Zapatistas in **Counterpunch**, only a small number of people read it because it is only a newsletter with a limited readership. The memo, written by Riordan Roett, argued that *"the [Mexican] government will need to eliminate the Zapatistas to demonstrate their effective control of the national territory and of security policy"*. In other words, if the Mexican government wants investment from Chase, it would have to crush the Zapatistas. This information was relatively ineffective when just confined to print but when it was uploaded to the Internet, it suddenly reached a very large number of people. These people in turn co-ordinated protests against the U.S and Mexican governments and especially Chase Manhattan. Chase was eventually forced to attempt to distance itself from the Roett memo that it commissioned. Since then net-activism has grown.

Ronfeldt's research and opinion should be flattering for the Left. He is basically arguing that the efforts of activists on computers not only has been very effective (or at least has that poten-

tial), but more importantly, argues that the only way to counter this work is to follow the lead of social activists. Activists should understand the important implications of Ronfeldt's work: government elites are not only watching these actions (big surprise) but are also attempting to work against them. Thus Netwars and copyleft are good examples of anarchistic trends within society, using communications technology as a means of co-ordinating activity across the world in a libertarian fashion for libertarian goals.

J.5 What alternative social organisations do anarchists create?

Anarchism is all about ***"do it yourself"***: people helping each other out in order to secure a good society to live within and to protect, extend and enrich their personal freedom. As such anarchists are keenly aware of the importance of building alternatives to both capitalism and the state in the here and now. Only by creating practical alternatives can we show that anarchism is a viable possibility and train ourselves in the techniques and responsibilities of freedom:

> *"If we put into practice the principles of libertarian communism within our organisations, the more advanced and prepared we will be on that day when we come to adopt it completely."* [C.N.T. member, quoted by Graham Kelsey, **Anarchosyndicalism, Libertarian Communism and the State**,p. 79]

This idea (to quote the IWW) of *"building a new world in the shell of the old"* is a long standing one in anarchism. Proudhon during the 1848 revolution *"propose[d] that a provisional committee be set up"* in Paris and *"liaise with similar committees"* elsewhere in France. This would be *"a body representative of the proletariat ..., a state within the state, in opposition to the bourgeois representatives."* He proclaimed to working class people that *"a new society be founded in the heart of the old society"* for *"the government can do nothing for you. But you can do everything for yourselves."* [*"Aux Pariotes"*, **La Représantant du Peuple**, No. 33] This was echoed by Bakunin (see section H.2.8) while for revolutionary syndicalists the aim was *"to constitute within the bourgeois State a veritable socialist (economic and anarchic) State."* [Fernand Pelloutier, quoted by Jeremy Jennings, **Syndicalism in France**, p. 22] By so doing we help create the environment within which individuals can manage their own affairs and develop their abilities to do so. In other words, we create ***"schools of anarchism"*** which lay the foundations for a better society as well as promoting and supporting social struggle against the current system. Make no mistake, the alternatives we discuss in this section are not an alternative to direct action and the need for social struggle — they are an expression of social struggle and a form of direct action. They are the framework by which social struggle can build and strengthen the anarchist tendencies within capitalist society which will ultimately replace it.

Therefore it is wrong to think that libertarians are indifferent to making life more bearable, even more enjoyable, under capitalism. A free society will not just appear from nowhere, it will be created be individuals and communities with a long history of social struggle and organisation. For as Wilheim Reich so correctly pointed out:

> *"Quite obviously, a society that is to consist of 'free individuals,' to constitute a 'free community' and to administer itself, i.e. to 'govern itself,' cannot be suddenly created by decrees. It has to **evolve** organically."* [**The Mass Psychology of Fascism**, p. 241]

It is this organic evolution that anarchists promote when they create libertarian alternatives within capitalist society. These alternatives (be they workplace or community unions, co-operatives, mutual banks, and so on) are marked by certain common features such as being self-managed, being based upon equality, decentralised and working with other groups and associations within a confederal network based upon mutual aid and solidarity. In other words, they are **anarchist** in both spirit and structure and so create a practical bridge between now and the future free society.

Anarchists consider the building of alternatives as a key aspect of their activity under capitalism. This is because they, like all forms of direct action, are ***"schools of anarchy"*** and also because they make the transition to a free society easier. *"Through the organisations set up for the defence of their interests,"* in Malatesta's words, *"the workers develop an awareness of the oppression they suffer and the antagonism that divides them from the bosses and as a result begin to aspire to a better life, become accustomed to collective struggle and solidarity and win those improvements that are possible within the capitalist and state regime."* [**The Anarchist Revolution**, p. 95] By creating viable examples of

"anarchy in action" we can show that our ideas are practical and convince people that they are not utopian. Therefore this section of the FAQ will indicate the alternatives anarchists support and **why** we support them.

The approach anarchists take to this activity could be termed ***"social unionism"*** — the collective action of groups to change certain aspects (and, ultimately, all aspects) of their lives. This takes many different forms in many different areas (some of which, not all, are discussed here) — but they share the same basic aspects of collective direct action, self-organisation, self-management, solidarity and mutual aid. These are a means *"of raising the morale of the workers, accustom them to free initiative and solidarity in a struggle for the good of everyone and render them capable of imagining, desiring and putting into practice an anarchist life."* [Malatesta, **Op. Cit.**, p. 28] Kropotkin summed up the anarchist perspective well when he argued that working class people had *"to form their own organisations for a direct struggle against capitalism"* and to *"take possession of the necessaries for production, and to control production."* [**Memiors of a Revolutionist**, p. 359] As historian J. Romero Maura correctly summarised, the *"anarchist revolution, when it came, would be essentially brought about by the working class. Revolutionaries needed to gather great strength and must beware of underestimating the strength of reaction"* and so anarchists *"logically decided that revolutionaries had better organise along the lines of labour organisations."* [*"The Spanish case"*, pp. 60–83, **Anarchism Today**, D. Apter and J. Joll (eds.), p. 66]

As will quickly become obvious in this discussion (as if it had not been so before!) anarchists are firm supporters of ***"self-help,"*** an expression that has been sadly corrupted (like freedom) by the right in recent times. Like freedom, self-help should be saved from the clutches of the right who have no real claim to that expression. Indeed, anarchism was created from and based itself upon working class self-help – for what other interpretation can be gathered from Proudhon's 1848 statement that *"the proletariat must emancipate itself"*? [quoted by George Woodcock, **Pierre-Joseph Proudhon**, p. 125] So Anarchists have great faith in the abilities of working class people to work out for themselves what their problems are and act to solve them.

Anarchist support and promotion of alternatives is a **key** aspect of this process of self-liberation, and so a key aspect of anarchism. While strikes, boycotts, and other forms of high profile direct action may be more "sexy" than the long and hard task of creating and building so-

cial alternatives, these are the nuts and bolts of creating a new world as well as the infrastructure which supports the other activities. These alternatives involve both combative organisations (such as community and workplace unions) as well as more defensive and supportive ones (such as co-operatives and mutual banks). Both have their part to play in the class struggle, although the combative ones are the most important in creating the spirit of revolt and the possibility of creating an anarchist society.

We must also stress that anarchists look to organic tendencies within social struggle as the basis of any alternatives we try to create. As Kropotkin put it, anarchism is based *"on an analysis of **tendencies of an evolution that is already going on in society**, and on **induction** therefrom as to the future."* It is *"representative ... of the creative, instructive power of the people themselves who aimed at developing institutions of common law in order to protect them from the power-seeking minority."* Anarchism bases itself on those tendencies that are created by the self-activity of working class people and while developing within capitalism are **in opposition** to it — such tendencies are expressed in organisational form as unions and other forms of workplace struggle, co-operatives (both productive and credit), libertarian schools, and so on. For anarchism was *"born among the people — in the struggles of real life and not in the philosopher's studio"* and owes its *"origin to the constructive, creative activity of the people ... and to a protest — a revolt against the external force which had thrust itself upon"* social institutions. [**Anarchism**, p. 158, p. 147, p. 150 and p. 149] This *"creative activity"* is expressed in the organisations created in the class struggle by working people, some of which we discuss in this section of the FAQ. Therefore, the alternatives anarchists support should not be viewed in isolation of social struggle and working class resistance to hierarchy — the reverse in fact, as these alternatives are almost always expressions of that struggle.

Lastly, we should note we do not list all the forms of organisation anarchists create. For example, we have ignored solidarity groups (for workers on strike or in defence of struggles in other countries) and organisations which are created to campaign against or for certain issues or reforms. Anarchists are in favour of such organisations and work within them to spread anarchist ideas, tactics and organisational forms. However, these interest groups (while very useful) do not provide a framework for lasting change as do the ones we highlight below (see section J.1.4 for more details on anarchist opinions on such "single issue" campaigns). We have also ignored what have been called *"intentional communities."* This is when a group of individuals squat or buy land and other resources within capitalism and create their own anarchist commune in it. Most anarchists reject this idea as capitalism and the state must be fought, not ignored. In addition, due to their small size, they are rarely viable experiments in communal living and nearly always fail after a short time (for a good summary of Kropotkin's attitude to such communities, which can be taken as typical, see Graham Purchase's **Evolution & Revolution** [pp. 122–125]). Dropping out will not stop capitalism and the state and while such communities may try to ignore the system, they will find that the system will not ignore them — they will come under competitive and ecological pressures from capitalism whether they like it or not assuming they avoid direct political interference.

So the alternatives we discuss here are attempts to create anarchist alternatives within capitalism and which aim to **change** it (either by revolutionary or evolutionary means). They are based upon **challenging** capitalism and the state, not ignoring them by dropping out. Only by a process of direct action and building alternatives which are relevant to our daily lives can we revolutionise and change both ourselves and society.

J.5.1 What is community unionism?

Community unionism is our term for the process of creating participatory communities (called "communes" in classical anarchism) within the current society in order to transform it.

Basically, a community union is the creation of interested members of a community who decide to form an organisation to fight against injustice and improvements locally. It is a forum by which inhabitants can raise issues that affect themselves and others and provide a means of solving these problems. As such, it is a means of directly involving local people in the life of their own communities and collectively solving the problems facing them as both individuals and as part of a wider society. In this way, local people take part in deciding what effects them and their community and create a self-managed "dual power" to the local and national state. They also, by taking part in self-managed community assemblies, develop their ability to participate and manage their own affairs, so showing that the state is unnecessary and harmful to their interests. Politics, therefore, is not separated into a specialised activity that only certain people do (i.e. politicians). Instead, it becomes communalised and part of everyday life and in the hands of all.

As would be imagined, like the participatory communities that would exist in an anarchist society (see section I.5), the community union would be based upon a mass assembly of its members. Here would be discussed the issues that effect the membership and how to solve them. Thus issues like rent increases, school closures, rising cost of living, taxation, cuts and state-imposed "reforms" to the nature and quality of public services, utilities and resources, repressive laws and so on could be debated and action taken to combat them. Like the communes of a future anarchy, these community unions would be confederated with other unions in different areas in order to co-ordinate joint activity and solve common problems. These confederations would be based upon self-management, mandated and recallable delegates and the creation of administrative action committees to see that the memberships decisions are carried out.

The community union could also raise funds for strikes and other social protests, organise pickets, boycotts and generally aid others in struggle. By organising their own forms of direct action (such as tax and rent strikes, environmental protests and so on) they can weaken the state while building an self-managed infrastructure of co-operatives to replace the useful functions the state or capitalist firms currently provide. So, in addition to organising resistance to the state and capitalist firms, these community unions could play an important role in creating an alternative economy within capitalism. For example, such unions could have a mutual bank or credit union associated with them which could allow funds to be gathered for the creation of self-managed co-operatives and social services and centres. In this way a communalised co-operative sector could develop, along with a communal confederation of community unions and their co-operative banks.

Such community unions have been formed in many different countries in recent years to fight against numerous attacks on the working class. In the late 1980s and early 1990s groups were created in neighbourhoods across Britain to organise non-payment of the Conservative government's Community Charge (popularly known as the poll tax, this tax was independent on income and was based on the electoral register). Federations of these groups were created to co-ordinate the struggle and pull resources and, in the end, ensured that the government withdrew the hated tax and helped push Thatcher out of government. In Ireland, similar groups were formed to defeat the privatisation of the water industry by a similar non-payment campaign in the mid-1990s.

However, few of these groups have been taken as part of a wider strategy to empower the local community but the few that have indicate the potential of such a strategy. This potential can be seen from two examples of libertarian community organising in Europe, one in Italy and another in Spain, while the neighbourhood assemblies in Argentina show that such popular self-government can and does develop spontaneously in struggle.

In Southern Italy, anarchists organised a very successful **Municipal Federation of the Base** (FMB) in Spezzano Albanese. This organisation, in the words of one activist, is *"an alternative to the power of the town hall"* and provides a *"glimpse of what a future libertarian society could be."* Its aim is *"the bringing together of all interests within the district. In intervening at a municipal level, we become involved not only in the world of work but also the life of the community ... the FMB make counter proposals [to Town Hall decisions], which aren't presented to the Council but proposed for discussion in the area to raise people's level of consciousness. Whether they like it or not the Town Hall is obliged to take account of these proposals."* In addition, the FMB also supports co-operatives within it, so creating a communalised, self-managed economic sector within capitalism. Such a development helps to reduce the problems facing isolated co-operatives in a capitalist economy — see section J.5.11 – and was actively done in order to *"seek to bring together all the currents, all the problems and contradictions, to seek solutions"* to such problems facing co-operatives. [*"Community Organising in Southern Italy"*, pp. 16–19, **Black Flag**, no. 210, p. 17 and p. 18]

Elsewhere in Europe, the long, hard work of the C.N.T. in Spain has also resulted in mass village assemblies being created in the Puerto Real area, near Cadiz. These community assemblies came about to support an industrial struggle by shipyard workers. One C.N.T. member explains: *"Every Thursday of every week, in the towns and villages in the area, we had all-village assemblies where anyone connected with the particular issue [of the rationalisation of the shipyards], whether they were actually workers in the shipyard itself, or women or children or grandparents, could go along ... and actually vote and take part in the decision making process of what was going to take place."* With such popular input and support, the shipyard workers won their struggle. However, the assembly continued after the strike and *"managed to link together twelve different organisations within the local area that are all interested in fighting ... various aspects"* of capitalism including health, taxation, economic, ecological and cultural issues. Moreover, the struggle *"created a structure which was very different from the kind of structure of political parties, where the decisions are made at the top and they filter down. What we managed to do in Puerto Real was make decisions at the base and take them upwards."* [**Anarcho-Syndicalism in Puerto Real: from shipyard resistance to direct democracy and community control**, p. 6]

More recently, the December 2001 revolt against neo-liberalism in Argentina saw hundreds of neighbourhood assemblies created across the country. These quickly federated into *inter-barrial* assemblies to co-ordinate struggles. The assemblies occupied buildings, created communal projects like popular kitchens, community centres, day-care centres and built links with occupied workplaces. As one participant put it: *"The initial vocabulary was simply: Let's do things for ourselves, and do them right. Let's decide for ourselves. Let's decide democratically, and if we do, then let's explicitly agree that we're all equals here, that there are no bosses ... We lead ourselves. We lead together. We lead and decide amongst ourselves ... no one invented it ... It just happened. We met one another on the corner and decided, enough! ... Let's invent new organisational forms and reinvent society."* Another notes that this was people who *"begin to solve problems themselves, without turning to the institutions that caused the problems in the first place."* The neighbourhood

assemblies ended a system in which *"we elected people to make our decisions for us ... now we will make our own decisions."* While the *"anarchist movement has been talking about these ideas for years"* the movement took them up *"from necessity."* [Marina Sitrin (ed.), **Horizontalism: Voices of Popular Power in Argentina**, p. 41 and pp. 38–9]

The idea of community organising has long existed within anarchism. Kropotkin pointed to the directly democratic assemblies of Paris during the French Revolution> These were *"constituted as so many mediums of popular administration, it remained of the people, and this is what made the revolutionary power of these organisations."* This ensured that the local revolutionary councils *"which sprang from the popular movement was not separated from the people."* In this popular self-organisation *"the masses, accustoming themselves to act without receiving orders from the national representatives, were practising what was described later on as Direct Self-Government."* These assemblies federated to co-ordinate joint activity but it was based on their permanence: *"that is, the possibility of calling the general assembly whenever it was wanted by the members of the section and of discussing everything in the general assembly."* In short, *"the Commune of Paris was not to be a governed State, but a people governing itself directly — when possible – without intermediaries, without masters"* and so *"the principles of anarchism ... had their origin, not in theoretic speculations, but in the **deeds** of the Great French Revolution."* This *"laid the foundations of a new, free, social organisation"*and Kropotkin predicted that *"the libertarians would no doubt do the same to-day."* [**Great French Revolution**, vol. 1, p. 201, p. 203, pp. 210–1, p. 210, p. 204 and p. 206]

In Chile during 1925 *"a grass roots movement of great significance emerged,"* the tenant leagues (*ligas do arrendatarios*). The movement pledged to pay half their rent beginning the 1st of February, 1925, at huge public rallies (it should also be noted that *"Anarchist labour unionists had formed previous ligas do arrendatarios in 1907 and 1914."*). The tenants leagues were organised by ward and federated into a city-wide council. It was a vast organisation, with 12,000 tenants in just one ward of Santiago alone. The movement also *"press[ed] for a law which would legally recognise the lower rents they had begun paying .. . the leagues voted to declare a general strike ... should a rent law not be passed."* The government gave in, although the landlords tried to get around it and, in response, on April 8th *"the anarchists in Santiago led a general strike in support of the universal rent reduction of 50 percent."* Official figures showed that rents *"fell sharply during 1915, due in part to the rent strikes"* and for the anarchists *"the tenant league movement had been the first step toward a new social order in Chile."* [Peter DeShazo, **Urban Workers and Labor Unions in Chile 1902–1927**, p. 223, p. 327, p. 223, p. 225 and p. 226] As one Anarchist newspaper put it:

> *"This movement since its first moments had been essentially revolutionary. The tactics of direct action were preached by libertarians with highly successful results, because they managed to instil in the working classes the idea that if landlords would not accept the 50 percent lowering of rents, they should pay nothing at all. In libertarian terms, this is the same as taking possession of common property. It completes the first stage of what will become a social revolution."* [quoted by DeShazo, **Op. Cit.**, p. 226]

A similar concern for community organising and struggle was expressed in Spain. While the collectives during the revolution are well known, the CNT had long organised in the community and around non-workplace issues. As well as neighbourhood based defence committees to organise and co-ordinate struggles and insurrections, the CNT organised various community based struggles. The most famous example of this must be the rent strikes during the early 1930s in

Barcelona. In 1931, the CNT's Construction Union organised a **"Economic Defence Commission"** to organise against high rents and lack of affordable housing. Its basic demand was for a 40% rent decrease but it also addressed unemployment and the cost of food. The campaign was launched by a mass meeting on May 1st, 1931. A series of meetings were held in the various working class neighbourhoods of Barcelona and in surrounding suburbs. This culminated in a mass meeting held at the Palace of Fine Arts on July 5th which raised a series of demands for the movement. By July, 45,000 people were taking part in the rent strike and this rose to over 100,000 by August. As well as refusing to pay rent, families were placed back into their homes from which they had been evicted. The movement spread to a number of the outlying towns which set up their own Economic Defence Commissions. The local groups co-ordinated actions their actions out of CNT union halls or local libertarian community centres. The movement faced increased state repression but in many parts of Barcelona landlords had been forced to come to terms with their tenants, agreeing to reduced rents rather than facing the prospect of having no income for an extended period or the landlord simply agreed to forget the unpaid rents from the period of the rent strike. [Nick Rider, *"The Practice of Direct Action: the Barcelona rent strike of 1931"*, **For Anarchism**, David Goodway (ed.), pp. 79–105] As Abel Paz summarised:

> *"Unemployed workers did not receive or ask for state aid ... The workers' first response to the economic crisis was the rent, gas, and electricity strike in mid-1933, which the CNT and FAI's Economic Defence Committee had been laying the foundations for since 1931. Likewise, house, street, and neighbourhood groups began to turn out en masse to stop evictions and other coercive acts ordered by the landlords (always with police support). The people were constantly mobilised. Women and youngsters were particularly active; it was they who challenged the police and stopped the endless evictions."* [**Durrutu in the Spanish Revolution**, p. 308]

In Gijon, the CNT *"reinforced its populist image by ... its direct consumer campaigns. Some of these were organised through the federation's Anti-Unemployment Committee, which sponsored numerous rallies and marches in favour of 'bread and work.' While they focused on the issue of jobs, they also addressed more general concerns about the cost of living for poor families. In a May 1933 rally, for example, demonstrators asked that families of unemployed workers not be evicted from their homes, even if they fell behind on the rent."* The *"organisers made the connections between home and work and tried to draw the entire family into the struggle."* However, the CNT's *"most concerted attempt to bring in the larger community was the formation of a new syndicate, in the spring of 1932, for the Defence of Public Interests (SDIP). In contrast to a conventional union, which comprised groups of workers, the SDIP was organised through neighbourhood committees. Its specific purpose was to enforce a generous renters' rights law of December 1931 that had not been vigorously implemented. Following anarchosyndicalist strategy, the SDIP utilised various forms of direct action, from rent strikes, to mass demonstrations, to the reversal of evictions."* This last action involved the local SDIP group going to a home, breaking the judge's official eviction seal and carrying the furniture back in from the street. They left their own sign: *"**opened by order** of the CNT."* The CNT's direct action strategies *"helped keep political discourse in the street, and encouraged people to pursue the same extra-legal channels of activism that they had developed under the monarchy."* [Pamela Beth Radcliff, **From mobilization to civil war**, pp. 287–288 and p. 289]

In these ways, grassroots movements from below were created, with direct democracy and participation becoming an inherent part of a local political culture of resistance, with people

deciding things for themselves directly and without hierarchy. Such developments are the embryonic structures of a world based around participation and self-management, with a strong and dynamic community life. For, as Martin Buber argued, *"[t]he more a human group lets itself be represented in the management of its common affairs ... the less communal life there is in it and the more impoverished it becomes as a community."* [**Paths in Utopia**, p. 133]

Anarchist support and encouragement of community unionism, by creating the means for communal self-management, helps to enrich the community as well as creating the organisational forms required to resist the state and capitalism. In this way we build the anti-state which will (hopefully) replace the state. Moreover, the combination of community unionism with workplace assemblies (as in Puerto Real), provides a mutual support network which can be very effective in helping winning struggles. For example, in Glasgow, Scotland in 1916, a massive rent strike was finally won when workers came out in strike in support of the rent strikers who been arrested for non-payment. Such developments indicate that Isaac Puente was correct:

> *"Libertarian Communism is a society organised without the state and without private ownership. And there is no need to invent anything or conjure up some new organisation for the purpose. The centres about which life in the future will be organised are already with us in the society of today: the free union and the free municipality [or Commune].*
>
> *"**The union**: in it combine spontaneously the workers from factories and all places of collective exploitation.*
>
> *"And **the free municipality**: an assembly ... where, again in spontaneity, inhabitants ... combine together, and which points the way to the solution of problems in social life ...*
>
> *"Both kinds of organisation, run on federal and democratic principles, will be sovereign in their decision making, without being beholden to any higher body, their only obligation being to federate one with another as dictated by the economic requirement for liaison and communications bodies organised in industrial federations.*
>
> *"The **union and the free municipality** will assume the collective or common ownership of everything which is under private ownership at present [but collectively used] and will regulate production and consumption (in a word, the economy) in each locality.*

"The very bringing together of the two terms (communism and libertarian) is indicative in itself of the fusion of two ideas: one of them is collectivist, tending to bring about harmony in the whole through the contributions and co-operation of individuals, without undermining their independence in any way; while the other is individualist, seeking to reassure the individual that his independence will be respected." [**Libertarian Communism**, pp. 6–7]

The combination of community unionism, along with industrial unionism (see next section), will be the key to creating an anarchist society, Community unionism, by creating the free commune within the state, allows us to become accustomed to managing our own affairs and seeing that an injury to one is an injury to all. In this way a social power is created in opposition to the state. The town council may still be in the hands of politicians, but neither they nor the central government would be able to move without worrying about what the people's reaction might be, as expressed and organised in their community assemblies and federations.

J.5.2 Why do anarchists support industrial unionism?

Simply because it is effective in resisting capitalist exploitation and winning reforms, ending capitalist oppression and expresses our ideas on how industry will be organised in an anarchist society. For workers *"have the most enormous power in their hands, and, if they once become thoroughly conscious of it and used it, nothing could withstand them; they would only have to stop labour, regard the product of labour as theirs, and enjoy it. This is the sense of the labour disturbances which show themselves here and there."* [Max Stirner, **The Ego and Its Own**, p. 116] Industrial unionism is simply libertarian workplace organisation and is the best way of organising and exercising this power.

Before discussing why anarchists support industrial unionism, we must point out that the type of unionism anarchists support has very little in common with that associated with reformist unions like the TUC in Britain or the AFL-CIO in the USA (see next section). In such unions, as Alexander Berkman pointed out, the *"rank and file have little say. They have delegated their power to leaders, and these have become the boss ... Once you do that, the power you have delegated will be used against you and your interests every time."* [**What is Anarchism?**, p. 205] Reformist unions, even if they do organise by industry rather than by trade or craft, are top-heavy and bureaucratic. Thus they are organised in the same manner as capitalist firms or the state — and like both of these, the officials at the top have different interests than those at the bottom. Little wonder anarchists oppose such forms of unionism as being counter to the interests of their members. The long history of union officials betraying their members is proof enough of this.

Anarchists propose a different kind of workplace organisation, one that is organised in a different manner than the mainstream unions. We will call this new kind of organisation ***"industrial unionism"*** (although perhaps industrial syndicalism, or just syndicalism, might be a better name for it). Some anarchists (particularly communist-anarchists) reject calling these workplace organisations "unions" and instead prefer such terms as workplace resistance groups, workplace assemblies and workers councils. No matter what they are called, all class struggle anarchists support the same organisational structure we are going to outline. It is purely for convenience that we term this industrial unionism.

An industrial union is a union which organises all workers in a given workplace and so regardless of their actual trade everyone would be in the one union. On a building site, for example, brick-layers, plumbers, carpenters and so on would all be a member of the Building Workers Union. Each trade may have its own sections within the union (so that plumbers can discuss issues relating to their trade for example) but the core decision making focus would be an assembly of all workers employed in a workplace. As they all have the same employer, the same exploiter, it is logical for them to have the same union.

It is organised by the guiding principle that workers should directly control their own organisations and struggles. It is based upon workplace assemblies because workers have *"tremendous power"* as the *"creator of all wealth"* but *"the strength of the worker is not in the union meeting-hall; it is in the shop and factory, in the mill and mine. It is **there** that he [or she] must organise; there, on the job."* It is there that workers *"decide the matters at issue and carry their decisions out through the shop committees"* (whose members are *"under the direction and supervision of the workers"* and can be *"recalled at will"*). These committees are *"associated locally, regionally and nationally"* to produce *"a power tremendous in its scope and potentialities."* [Berkman, **Op. Cit.**, pp. 205–6] This

confederation is usually organised on two directions, between different workplaces in the same industry as well as between different workplaces in the same locality.

So industrial unionism is different from ordinary trade unionism (usually called business unionism by anarchists and syndicalists as it treats the union's job purely as the seller of its members' labour power). It is based on unions managed directly by the rank and file membership rather than by elected officials and bureaucrats. The industrial union is not based on where the worker lives (as is the case with many trade unions). Instead, the union is based and run from the workplace. It is there that union meetings are held, where workers are exploited and oppressed and where their economic power lies. Industrial unionism is based on local branch autonomy, with each branch managing its own affairs. No union officials have the power to declare strikes "unofficial" as every strike is decided upon by the membership is automatically "official" simply because the branch decided it in a mass meeting.

Power in such an organisation would be decentralised into the hands of the membership, as expressed in local workplace assemblies. To co-ordinate strikes and other forms of action, these autonomous branches are part of a federal structure. The mass meeting in the workplace mandates delegates to express the wishes of the membership at "labour councils" and "industrial federations." The labour council (*"Brouse du Travail"*, in French) is the federation of all workplace branches of all industries in a geographical area (say, for example, in a city or region) and it has the tasks of, among other things, education, propaganda and the promotion of solidarity between the different workplaces in its area. Due to the fact it combines all workers into one organisation, regardless of industry or union, the labour council plays a key role in increasing **class** consciousness and solidarity. The industrial federation organises all workplaces in the same industry so ensuring that workers in one part of the country or world are not producing goods so that the bosses *"can supply the market and lose nothing by the strike"*. So these federations are *"organised not by craft or trade but by industries, so that the whole industry — and if necessary the whole working class — could strike as one man."* If that were done *"would any strike be lost?"* [Berkman, **Op. Cit.**, p. 82] In practice, of course, the activities of these dual federations would overlap: labour councils would support an industry wide strike or action while industrial unions would support action conducted by its member unions called by labour councils.

However, industrial unionism should **not** be confused with a closed shop situation where workers are forced to join a union when they become a wage slave in a workplace. While anarchists do desire to see all workers unite in one organisation, it is vitally important that workers can leave a union and join another. The closed shop only empowers union bureaucrats and gives them even more power to control (and/or ignore) their members. As anarchist unionism has no bureaucrats, there is no need for the closed shop and its voluntary nature is essential in order to ensure that a union be subject to "exit" as well as "voice" for it to be responsive to its members wishes. As Albert Meltzer argued, the closed shop means that *"the [trade union] leadership becomes all-powerful since once it exerts its right to expel a member, that person is not only out of the union, but out of a job."* Anarcho-syndicalism, therefore, *"rejects the closed shop and relies on voluntary membership, and so avoids any leadership or bureaucracy."* [**Anarchism: Arguments for and against**, p. 56] Without voluntary membership even the most libertarian union may become bureaucratic and unresponsive to the needs of its members and the class struggle (also see Tom Wetzel's excellent article *"The Origins of the Union Shop"*, [**Ideas & Action** no. 11]). Needless to say, if the union membership refuses to work with non-union members then that is a different situation. Then this is an issue of free association (as free association clearly implies

the right **not** to associate). This issue rarely arises and most syndicalist unions operate in workplaces with other unions (the excepts arise, as happened frequently in Spanish labour history with the Marxist UGT, when the other union scabs when workers are on strike).

In industrial unionism, the membership, assembled in their place of work, are the ones to decide when to strike, when to pay strike pay, what tactics to use, what demands to make, what issues to fight over and whether an action is "official" or "unofficial". In this way the rank and file is in control of their union and, by confederating with other assemblies, they co-ordinate their forces with their fellow workers. As syndicalist activist Tom Brown made clear:

> *"The basis of the Syndicate is the mass meeting of workers assembled at their place of work ... The meeting elects its factory committee and delegates. The factory Syndicate is federated to all other such committees in the locality ... In the other direction, the factory, let us say engineering factory, is affiliated to the District Federation of Engineers. In turn the District Federation is affiliated to the National Federation of Engineers ... Then, each industrial federation is affiliated to the National Federation of Labour ... how the members of such committees are elected is most important. They are, first of all, not representatives like Members of Parliament who air their own views; they are delegates who carry the message of the workers who elect them. They do not tell the workers what the 'official' policy is; the workers tell them.*
>
> *"Delegates are subject to instant recall by the persons who elected them. None may sit for longer than two successive years, and four years must elapse before his [or her] next nomination. Very few will receive wages as delegates, and then only the district rate of wages for the industry ...*
>
> *"It will be seen that in the Syndicate the members control the organisation — not the bureaucrats controlling the members. In a trade union the higher up the pyramid a man is the more power he wields; in a Syndicate the higher he is the less power he has.*
>
> *"The factory Syndicate has full autonomy over its own affairs."* [**Syndicalism**, pp. 35–36]

Such federalism exists to co-ordinate struggle, to ensure that solidarity becomes more than a word written on banners. We are sure that many radicals will argue that such decentralised, confederal organisations would produce confusion and disunity. However, anarchists maintain that the statist, centralised form of organisation of the trades unions would produce indifference instead of involvement, heartlessness instead of solidarity, uniformity instead of unity, and elites instead of equality. The centralised form of organisation has been tried and tried again — it has always failed. This is why the industrial union rejects centralisation, for it *"takes control too far away from the place of struggle to be effective on the workers' side."* [Brown, **Op. Cit.**, p. 34] Centralisation leads to disempowerment, which in turn leads to indifference, **not** solidarity. Rudolf Rocker reminds us of the evil effects of centralism when he wrote:

> *"For the state centralisation is the appropriate form of organisation, since it aims at the greatest possible uniformity in social life for the maintenance of political and social equilibrium. But for a movement whose very existence depends on prompt action at any favourable moment and on the independent thought and action of its supporters,*

> *centralism could but be a curse by weakening its power of decision and systematically repressing all immediate action. If, for example, as was the case in Germany, every local strike had first to be approved by the Central, which was often hundreds of miles away and was not usually in a position to pass a correct judgement on the local conditions, one cannot wonder that the inertia of the apparatus of organisation renders a quick attack quite impossible, and there thus arises a state of affairs where the energetic and intellectually alert groups no longer serve as patterns for the less active, but are condemned by these to inactivity, inevitably bringing the whole movement to stagnation. Organisation is, after all, only a means to an end. When it becomes an end in itself, it kills the spirit and the vital initiative of its members and sets up that domination by mediocrity which is the characteristic of all bureaucracies."* [**Anarcho-Syndicalism**, p. 61]

Centralised unions ensure that it is the highest level of union officialdom which decides when workers are allowed to strike. Instead of those affected acting, *"the dispute must be reported to the district office of the union (and in some cases to an area office) then to head office, then back again ... The worker is not allowed any direct approach to, or control of the problem."* [Brown, **Op. Cit.**, p. 34] The end result is that *"through the innate conservatism of officialdom"* officials in centralised unions *"ordinarily use their great powers to prevent strikes or to drive their unions' members back to work after they have struck in concert with other workers."* The notion that a centralised organisation will be more radical *"has not developed in practice"* and the key problem *"is due not to the autonomy of the unions, but to the lack of it."* [Earl C. Ford and William Z. Foster, **Syndicalism**, p. 38] So the industrial union *"is based on the principles of Federalism, on free combination from below upwards, putting the right of self-determination ... above everything else"* and so rejects centralism as an *"artifical organisation from above downwards which turns over the affairs of everybody in a lump to a small minority"* and is *"always attended by barren official routine"* as well as *"lifeless discipline and bureaucratic ossification."* [Rocker, **Op. Cit.**, p. 60]

This implies that as well as being decentralised and organised from the bottom up, the industrial union differs from the normal trade union by having no full-time officials. All union business is conducted by elected fellow workers who do their union activities after work or, if it has to be done during work hours, they get the wages they lost while on union business. In this way no bureaucracy of well paid officials is created and all union militants remain in direct contact with their fellow workers. Given that it is **their** wages, working conditions and so on that are effected by their union activity they have a real interest in making the union an effective organisation and ensuring that it reflects the interests of the rank and file. In addition, all part-time union "officials" are elected, mandated and recallable delegates. If the fellow worker who is elected to the local labour council or other union committee is not reflecting the opinions of those who mandated him or her then the union assembly can countermand their decision, recall them and replace them with someone who **will** reflect these decisions. In short, *"the Syndicalist stands firmly by these things — mass meetings, delegates not bosses, the right of recall ... Syndicalism is organised from the bottom upwards ... all power comes from below and is controlled from below. This is a revolutionary principle."* [Brown, **Op. Cit.**, p. 85]

As can be seen, industrial unionism reflects anarchist ideas of organisation — it is organised from the bottom up, it is decentralised and based upon federation and it is directly managed by its members in mass assemblies. It is anarchism applied to industry and the needs of the class

struggle. By supporting such forms of organisations, anarchists are not only seeing *"anarchy in action"*, they are forming effective tools which can win the class war. By organising in this manner, workers are building the framework of a co-operative society within capitalism:

> *"the syndicate ... has for its purpose the defence of the interests of the producers within existing society and the preparing for and the practical carrying out of the reconstruction of social life ... It has, therefore, a double purpose: 1. As the fighting organisation of the workers against their employers to enforce the demands of the workers for the safeguarding of their standard of living; 2. As the school for the intellectual training of the workers to make them acquainted with the technical management of production and economic life in general, so that when a revolutionary situation arises they will be capable of taking the socio-economic organism into their own hands and remaking it according to Socialist principles."* [Rocker, **Op. Cit.**, pp. 56–7]

So *"[a]t the same time that syndicalism exerts this unrelenting pressure on capitalism, it tries to build the new social order within the old. The unions and the 'labour councils' are not merely means of struggle and instruments of social revolution; they are also the very structure around which to build a free society. The workers are to be educated in the job of destroying the old propertied order and in the task of reconstructing a stateless, libertarian society. The two go together."* [Murray Bookchin, **The Spanish Anarchists**, p. 121] The industrial union is seen as prefiguring the future society, a society which (like the union) is decentralised and self-managed in all aspects.

Given the fact that workers wages have been stagnating (or, at best, falling behind productivity increases) across the world as the trade unions have been weakened and marginalised (partly because of their own tactics, structure and politics) it is clear that there exists a great need for working people to organise to defend themselves. The centralised, top-down trade unions we are accustomed to have proved themselves incapable of effective struggle (and, indeed, the number of times they have sabotaged such struggle are countless — a result not of "bad" leaders but of the way these unions organise and their role within capitalism). Hence anarchists support industrial unionism as an effective alternative to the malaise of official trade unionism. How anarchists aim to encourage such new forms of workplace organisation and struggle will be discussed in the section J.5.4.

One last point. We noted that many anarchists, particularly communist-anarchists, consider unions, even anarchosyndicalist ones, as having a strong reformist tendency (as discussed in section J.3.9). However, all anarchists recognise the importance of autonomous class struggle and the need for organisations to help fight that struggle. Thus anarchist-communists, instead of trying to organise industrial unions, apply the ideas of industrial unionism to workplace struggles. They would agree with the need to organise all workers into a mass assembly and to have elected, recallable administration committees to carry out the strikers wishes. This means that while such anarchists do not call their practical ideas "anarcho-syndicalism" nor the workplace assemblies they desire to create "unions," there are **extremely** similar in nature and so we can discuss both using the term "industrial unionism". The key difference is that many (if not most) anarcho-communists consider that permanent workplace organisations that aim to organise **all** workers would become reformist. Because of this they also see the need for anarchist to organise **as anarchists** in order to spread the anarchist message within them and keep their revolutionary aspects at the forefront.

Spontaneously created organisations of workers in struggle play an important role in both communist-anarchist and anarcho-syndicalist theory. Since both advocate that it is the workers, using their own organisations who will control their own struggles (and, eventually, their own revolution) in their own interests, not a vanguard party of elite political theorists, this is unsurprising. It matters little if the specific organisations are revolutionary industrial unions, factory committees, workers councils, or other labour formations. The important thing is that they are created and run by workers themselves. Meanwhile, anarchists are industrial guerrillas waging class war at the point of production in order to win improvements in the here and now and strengthen tendencies towards anarchism by showing that direct action and libertarian organisation is effective and can win partial expropriations of capitalist and state power. So while there are slight differences in terminology and practice, all anarchists would support the ideas of industrial organisation and struggle we have outlined above.

J.5.3 What attitude do anarchists take to existing unions?

As noted in the last section, anarchists desire to create organisations in the workplace radically different from the existing unions. The question now arises, what attitude do anarchists take to trade unions?

Before answering that question, we must stress that anarchists, no matter how hostile to trade unions as bureaucratic, reformist institutions, **are** in favour of working class struggle. This means that when trade union members or other workers are on strike anarchists will support them (unless the strike is reactionary — for example, no anarchist would support a strike which is racist in nature). This is because anarchists consider it basic to their politics that you do not scab and you do not crawl. So, when reading anarchist criticisms of trade unions do not for an instant think we do not support industrial struggles — we do, we are just very critical of the unions that are sometimes involved.

So, what do anarchists think of the trade unions?

For the most part, one could call the typical anarchist opinion toward them as one of "hostile support." It is hostile insofar as anarchists are well aware of how bureaucratic these unions are and how they continually betray their members. Given that they are usually little more than "business" organisations, trying to sell their members labour-power for the best deal possible, it is unsurprising that they are bureaucratic and that the interests of the bureaucracy are at odds with those of its membership. However, our attitude is "supportive" in that even the worse trade union represents an attempt at working class solidarity and self-help, even if the organisation is now far removed from the initial protests and ideas that set the union up. For a worker to join a trade union means recognising, to some degree, that he or she has different interests from their boss (*"If the interests of labour and capital are the same, why the union?"* [Alexander Berkman, **What is Anarchism?**, p. 76]).

There is no way to explain the survival of unions other than the fact that there are different class interests and workers have understood that to promote their own interests they have to organise collectively. No amount of conservatism, bureaucracy or backwardness within the unions can obliterate this. The very existence of trade unions testifies to the existence of some level of basic class consciousness and the recognition that workers and capitalists do not have the same interests. Claims by trade union officials that the interests of workers and bosses are the same

theoretically disarms both the union and its members and so weakens their struggles (after all, if bosses and workers have similar interests then any conflict is bad and the decisions of the boss must be in workers' interests!). That kind of nonsense is best left to the apologists of capitalism (see section F.3.2).

It is no surprise, then, the *"extreme opposition to the existing political and economic power"* to unions as they *"not only suspected every labour organisation of aiming to improve the condition of its members within the limits of the wage system, but they also looked upon the trade union as the deeply enemy of wage-slavery — and they were right. Every labour organisation of sincere character must needs wage war upon the existing economic conditions, since the continuation of the same is synonymous with the exploitation and enslavement of labour."* [Max Baginski, *"Aim and Tactics of the Trade-Union Movement"*, pp. 297–306, **Anarchy! An Anthology of Emma Goldman's Mother Earth**, Peter Glassgold (ed.), pp. 302–3] Thus anarchist viewpoints on this issue reflect the contradictory nature of trade unions — on the one hand they are products of workers' struggle, but on the other they are bureaucratic, unresponsive, centralised and their full-time officials have no real interest in fighting against wage labour as it would put them out of a job. Indeed, the very nature of trade unionism ensures that the interests of the union (i.e. the full-time officials) come into conflict with the people they claim to represent.

This can best be seen from the disgraceful activities of the TGWU with respect to the Liverpool dockers in Britain. The union officials (and the TUC itself) refused to support their members after they had been sacked in 1995 for refusing to cross a picket line. The dockers organised their own struggle, contacting dockers' unions across the world and organised global solidarity actions. Moreover, a network of support groups sprung up across Britain to gather funds for their struggle (and, we are proud to note, anarchists have played their role in supporting the strikers). Many trade unionists could tell similar stories of betrayal by "their" union.

This occurs because trade unions, in order to get recognition from a company, must be able to promise industrial peace. They need to enforce the contracts they sign with the bosses, even if this goes against the will of its members. Thus trade unions become a third force in industry, somewhere between management and the workers and pursuing its own interests. This need to enforce contracts soon ensures that the union becomes top-down and centralised — otherwise its members would violate the unions agreements. They have to be able to control their members — which usually means stopping them fighting the boss — if they are to have anything to bargain with at the negotiation table. This may sound odd, but the point is that the union official has to sell the employer labour discipline and freedom from unofficial strikes as part of its side of the bargain otherwise the employer will ignore them.

The nature of trade unionism, then, is to take power away from out of local members and centralise it into the hands of officials at the top of the organisation. Thus union officials sell out their members because of the role trade unions play within society, not because they are nasty individuals (although some are). They behave as they do because they have too much power and, being full-time and highly paid, are unaccountable, in any real way, to their members. Power — and wealth — corrupts, no matter who you are (see *Chapter XI* of Alexander Berkman's **What is Anarchism?** for an excellent introduction to anarchist viewpoints on trade unions).

While, in normal times, most workers will not really question the nature of the trade union bureaucracy, this changes when workers face some threat. Then they are brought face to face with the fact that the trade union has interests separate from theirs. Hence we see trade unions agreeing to wage cuts, redundancies and so on — after all, the full-time trade union official's job

is not on the line! But, of course, while such a policy is in the short term interests of the officials, in the longer term it goes against their interests — who wants to join a union which rolls over and presents no effective resistance to employers? Little wonder Michael Moore had a chapter entitled *"Why are Union Leaders So F#!@ing Stupid?"* in his book **Downsize This!** — essential reading on how moronic trade union bureaucrats can actually be. Sadly trade union bureaucracy seems to afflict all who enter it with short-sightedness — although the chickens do, finally, come home to roost, as the bureaucrats of the AFL, TUC and other trade unions are finding out in this era of global capital and falling membership. So while the activities of trade union leaders may seem crazy and short-sighted, these activities are forced upon them by their position and role within society — which explains why they are so commonplace and why even radical leaders end up doing exactly the same thing in time.

However, few anarchists would call upon members of a trade union to tear-up their membership cards. While some anarchists have nothing but contempt (and rightly so) for trade unions (and so do not work within them — but will support trade union members in struggle), the majority of anarchists take a more pragmatic viewpoint. If no alternative syndicalist union exists, anarchists will work within the existing unions (perhaps becoming shop-stewards — few anarchists would agree to be elected to positions above this in any trade union, particularly if the post were full-time), spreading the anarchist message and trying to create a libertarian undercurrent which would hopefully blossom into a more anarchistic labour movement. So most anarchists "support" the trade unions only until we have created a viable libertarian alternative. Thus we will become trade union members while trying to spread anarchist ideas within and outwith them. This means that anarchists are flexible in terms of our activity in the unions. For example, many IWW members were "two-carders" which meant they were also in the local AFL branch in their place of work and turned to the IWW when the AFL hierarchy refused to back strikes or other forms of direct action.

Anarchist activity within trade unions reflects our ideas on hierarchy and its corrupting effects. We reject the response of left-wing social democrats, Stalinists and mainstream Trotskyists to the problem of trade union betrayal, which is to try and elect 'better' officials. They see the problem primarily in terms of the individuals who hold the posts so ignoring the fact that individuals are shaped by the environment they live in and the role they play in society. Thus even the most left-wing and progressive individual will become a bureaucrat if they are placed within a bureaucracy.

We must note that the problem of corruption does not spring from the high-wages officials are paid (although this is a factor), but from the power they have over their members (which partly expresses itself in high pay). Any claim that electing "radical" full-time officials who refuse to take the high wages associated with the position will be better is false. The hierarchical nature of the trade union structure has to be changed, not side-effects of it. As the left has no problem with hierarchy as such, this explains why they support this form of "reform." They do not actually want to undercut whatever dependency the members have on leadership, they want to replace the leaders with "better" ones (i.e. themselves or members of their party) and so endlessly call upon the trade union bureaucracy to act **for** its members. In this way, they hope, trade unionists will see the need to support a "better" leadership — namely themselves. Anarchists, in stark contrast, think that the problem is not that the leadership of the trade unions is weak, right-wing or does not act but that the union's membership follows them. Thus anarchists aim at undercutting reliance on leaders (be they left or right) by encouraging self-activity by the rank and file and

awareness that hierarchical leadership as such is bad, not individual leaders. Anarchists encourage rank and file self-activity, **not** endless calls for trade union bureaucrats to act for us (as is unfortunately far too common on the left).

Instead of "reform" from above (which is doomed to failure), anarchists work at the bottom and attempt to empower the rank and file of the trade unions. It is self-evident that the more power, initiative and control that lies on the shop floor, the less the bureaucracy has. Thus anarchists work within and outwith the trade unions in order to increase the power of workers where it actually lies: at the point of production. This is usually done by creating networks of activists who spread anarchist ideas to their fellow workers (see next section). Hence Malatesta:

> *"The anarchists within the unions should strive to ensure that they remain open to all workers of whatever opinion or party on the sole condition that there is solidarity in the struggle against the bosses. They should oppose the corporatist spirit and any attempt to monopolise labour or organisation. They should prevent the Unions from becoming the tools of the politicians for electoral or other authoritarian ends; they should preach and practice direct action, decentralisation, autonomy and free initiative. They should strive to help members learn how to participate directly in the life of the organisation and to do without leaders and permanent officials.*
>
> *"They must, in short, remain anarchists, remain always in close touch with anarchists and remember that the workers' organisation is not the end but just one of the means, however important, of preparing the way for the achievement of anarchism."* [**The Anarchist Revolution**, pp. 26–7]

As part of this activity anarchists promote the ideas of Industrial Unionism we highlighted in the last section — namely direct workers control of struggle via workplace assemblies and recallable committees — during times of struggle. However, anarchists are aware that economic struggle (and trade unionism as such) *"cannot be an end in itself, since the struggle must also be waged at a political level to distinguish the role of the State."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p, 115] Thus, as well as encouraging worker self-organisation and self-activity, anarchist groups also seek to politicise struggles and those involved in them. Only this process of self-activity and political discussion between equals **within** social struggles can ensure the process of working class self-liberation and the creation of new, more libertarian, forms of workplace organisation.

The result of such activity may be a new form of workplace organisation (either workplace assemblies or an anarcho-syndicalist union) or a reformed, more democratic version of the existing trade union (although few anarchists believe that the current trade unions can be reformed). Either way, the aim is to get as many members of the current labour movement to become anarchists as possible or, at the very least, take a more libertarian and radical approach to their unions and workplace struggle.

J.5.4 What are industrial networks?

Industrial networks are the means by which revolutionary industrial unions and other forms of libertarian workplace organisation can be created. The idea of Industrial Networks originated

with the British section of the anarcho-syndicalist **International Workers Association** in the late 1980s. It was developed as a means of promoting libertarian ideas within the workplace, so creating the basis on which a workplace movement based upon the ideas of industrial unionism (see section J.5.2) could grow and expand.

The idea is very simple. An Industrial Network is a federation of militants in a given industry who support the ideas of anarchism and/or anarcho-syndicalism, namely direct action, solidarity and organisation from the bottom up (the difference between purely anarchist networks and anarcho-syndicalist ones will be highlighted later). It would *"initially be a political grouping in the economic sphere, aiming to build a less reactive but positive organisation within the industry. The long term aim ... is, obviously, the creation of an anarcho-syndicalist union."* [**Winning the Class War**, p. 18]

The Industrial Network would be an organisation of groups of libertarians within a workplace united on an industrial basis. They would pull their resources together to fund a regular bulletin and other forms of propaganda which they would distribute within their workplaces. These bulletins and leaflets would raise and discuss issues related to work, how to fight back and win as well as placing workplace issues in a social and political context. This propaganda would present anarchist ideas of workplace organisation and resistance as well as general anarchist ideas and analysis. In this way anarchist ideas and tactics would be able to get a wider hearing and anarchists can have an input **as anarchists** into workplace struggles.

Traditionally, many syndicalists and anarcho-syndicalists advocated the ***One Big Union*** strategy, the aim of which was to organise all workers into one organisation representing the whole working class. Today, however, most anarcho-syndicalists, like other revolutionary anarchists, advocate workers assemblies for decision making during struggles which are open to all workers (union members or not) as they recognise that they face dual unionism (which means there are more than one union within a given workplace or country). This was the case, historically, in all countries with a large syndicalist union movement there were also socialist unions. Therefore most anarcho-syndicalists do not expect to ever get a majority of the working class into a revolutionary union before a revolutionary situation develops. In addition, revolutionary unions do not simply appear, they develop from previous struggles and require a lot of work and experience of which the Industrial Networks are but one aspect. The most significant revolutionary unions (such as the IWW, USI and CNT) were originally formed by unions and union militants with substantial experience of struggle behind them, some of whom were part of existing trade union bodies.

Thus industrial networks are intended to deal with the actual situation that confronts us, and provide a strategy for moving from our present reality toward out ultimate goals. The role of the anarchist group or syndicalist union would be to call workplace assemblies and their federation into councils, argue for direct workers control of struggle by these mass assemblies, promote direct action and solidarity, put across anarchist ideas and politics and keep things on the boil, so to speak. When one has only a handful of anarchists and syndicalists in a workplace or scattered across several workplaces there is a clear need for developing ways for these fellow workers to effectively act in union, rather than be isolated and relegated to more general agitation. A handful of anarchists cannot meaningfully call a general strike but we can agitate around specific industrial issues and organise our fellow workers to do something about them. Through such campaigns we demonstrate the advantages of rank-and-file unionism and direct action, show our fellow workers that our ideas are not mere abstract theory but can be implemented here and now,

attract new members and supporters, and further develop our capacity to develop revolutionary unions in our workplaces. Thus the creation of Industrial Networks and the calling for workplace assemblies is a recognition of where we are now — with anarchist ideas very much in the minority. Calling for workers assemblies is not an anarchist tactic per se, we must add, but a working class one developed and used plenty of times by workers in struggle (indeed, it was how the current trade unions were created). It also puts the onus on the reformists unions by appealing directly to their members as workers and exposing their bureaucrat organisations and reformist politics by creating an effective alternative to them.

A few anarchists reject the idea of Industrial Networks and instead support the idea of ***"rank and file"*** groups which aim to put pressure on the current trade unions to become more militant and democratic. Some even think that such groups can be used to reform the trade-unions into libertarian, revolutionary organisations — called *"boring from within"* — but most reject this as utopian, viewing the trade union bureaucracy as unreformable as the state's (and it is likely that rather than change the trade union, "boring from within" would change the syndicalists by watering down their ideas). Moreover, opponents of "rank and file" groups argue that they direct time and energy **away** from practical and constructive activity and instead waste them *"[b]y constantly arguing for changes to the union structure ... the need for the leadership to be more accountable, etc., [and so] they not only [offer] false hope but [channel] energy and discontent away from the real problem — the social democratic nature of reformist trade unions."* [**Op. Cit.**, p. 11]

Supporters of the "rank and file" approach fear that the Industrial Networks will isolate anarchists from the mass of trade union members by creating tiny "pure" syndicalist groups. Such a claim is rejected by supporters of Industrial Networks who argue that rather than being isolated from the majority of trade unionists they would be in contact with them where it counts, in the workplace and in struggle rather than in trade union meetings which many workers do not even attend:

> *"We have no intention of isolating ourselves from the many workers who make up the rest of the rank and file membership of the unions. We recognise that a large proportion of trade union members are only nominally so as the main activity of social democratic unions is outside the workplace ... **We aim to unite and not divide workers.***
>
> *"It has been argued that social democratic unions will not tolerate this kind of activity, and that we would be all expelled and thus isolated. So be it. We, however, don't think that this will happen until ... workplace militants had found a voice independent of the trade unions and so they become less useful to us anyway. Our aim is not to support social democracy, but to show it up as irrelevant to the working class."* [**Op. Cit.**, p. 19]

Whatever the merits and disadvantages of both approaches are, it seems likely that the activity of both will overlap in practice with Industrial Networks operating within trade union branches and "rank and file" groups providing alternative structures for struggle.

As noted above, there is a slight difference between anarcho-syndicalist supporters of Industrial Networks and communist-anarchist ones. This is to do with how they see the function and aim of these networks. In the short run, both agree that such networks should agitate in their industry and call mass assemblies to organise resistance to capitalist exploitation and oppression.

They disagree on who can join the network groups and what their medium term aims should be. Anarcho-syndicalists aim for the Industrial Networks to be the focal point for the building of permanent syndicalist unions and so aim for the Industrial Networks to be open to all workers who accept the general aims of the organisation. Anarcho-communists, however, view Industrial Networks as a means of increasing anarchist ideas within the working class and are not primarily concerned about building syndicalist unions (while many anarcho-communists would support such a development, some do not). In the long term, they both aim for social revolution and workers' self-management of production.

These anarchists, therefore, see the need for workplace-based branches of an anarchist group along with the need for networks of militant 'rank and file' workers, but reject the idea of something that is one but pretends to be the other. They argue that, far from avoiding the problems of classical anarcho-syndicalism, such networks seem to emphasise one of the worst problems — namely that of how the organisation remains anarchist but is open to non-anarchists. However, the similarities between the two positions are greater than the differences and so can be summarised together, as we have done here.

J.5.5 What forms of co-operative credit do anarchists support?

Anarchists tend to support must forms of co-operation, including those associated with credit and money. This co-operative banking takes many forms, such as credit unions, LETS schemes and so on. In this section we discuss two main forms of co-operative credit, ***mutualism*** and **LETS**.

Mutualism is the name for the ideas associated with Proudhon and his **Bank of the People**. Essentially, it is a confederation of credit unions in which working class people pool their funds and savings so allowing credit to be supplied at cost (no interest), so increasing the options available to them. LETS stands for **Local Exchange Trading Schemes** and is a similar idea in many ways (see **Bringing the Economy Home from the Market** by Ross V.G. Dobson on LETS). From its start in Canada, LETS has spread across the world and there are now hundreds of schemes involving hundreds of thousands of people.

Both schemes revolve around creating an alternative form of currency and credit within capitalism in order to allow working class people to work outwith the capitalist money system by creating a new circulating medium. In this way, it is hoped, workers would be able to improve their living and working conditions by having a source of community-based (very low interest) credit and so be less dependent on capitalists and the capitalist banking system. Supporters of mutualism considered it as the ideal way of reforming capitalism away for by making credit available to the ordinary worker at very cheap rates, the end of wage slavery could occur as workers would work for themselves by either purchasing the necessary tools required for their work or by buying the capitalists out.

Mutual credit, in short, is a form of credit co-operation, in which individuals pull their resources together in order to benefit themselves as individuals and as part of a community. It has the following key aspects:

<quote> – **Co-operation**: No-one owns the network. It is controlled by its members democratically.

– **Non-exploitative**: No interest is charged on account balances or credit. At most administrative costs are charged, a result of it being commonly owned and managed.

– **Consent**: Nothing happens without it, there is no compulsion to trade.

– **Labour-Notes**: They use their own type of money as a means of aiding "honest exchange."

It is hoped, by organising credit, working class people will be able to work for themselves and slowly but surely replace capitalism with a co-operative system based upon self-management. While LETS schemes do not have such grand schemes, historically mutualism aimed at working within and transforming capitalism to socialism. At the very least, LETS schemes reduce the power and influence of banks and finance capital within society as mutualism ensures that working people have a viable alternative to such parasites.

These ideas have had a long history within the socialist movement, originating in Britain in the early 19th century when Robert Owen and other Socialists raised the idea of labour notes and labour-exchanges as both a means of improving working class conditions within capitalism and of reforming capitalism into a society of confederated, self-governing communities. Such *"Equitable Labour Exchanges"* were *"founded at London and Birmingham in 1832"* with *"Labour notes and the exchange of small products."* [E. P. Thompson, **The Making of the English Working Class**, p. 870] Apparently independently of these attempts in Britain at what would later be called mutualism, Proudhon arrived at the same ideas decades later in France: *"The People's Bank quite simply embodies the financial and economic aspects of the principle of modern democracy, that is, the sovereignty of the People, and of the republican motto, 'Liberty, Equality, Fraternity.'"* [**Selected Writings of P-J Proudhon**, p. 75] Similarly, in the USA (partly as a result of Joshua Warren's activities, who got the idea from Robert Owen) there was extensive discussion on labour notes, exchanges and free credit as a means of protecting workers from the evils of capitalism and ensuring their independence and freedom from wage slavery. When Proudhon's works appeared in North America, the basic arguments were well known and they were quickly adopted by radicals there.

Therefore the idea that mutual banking using labour money as a means to improve working class living conditions, even, perhaps, to achieve industrial democracy, self-management and the end of capitalism has a long history in Socialist thought. Unfortunately this aspect of socialism became less important with the rise of Marxism (which called these early socialists *"utopian"*). Attempts at such credit unions and alternative exchange schemes were generally replaced with attempts to build working class political parties and so constructive socialistic experiments and collective working class self-help was replaced by working within the capitalist state. Fortunately, history has had the last laugh on Marxism with working class people yet again creating anew the ideas of mutualism (as can be seen by the growth of LETS and other schemes of community money).

J.5.6 Why are mutual credit schemes important?

Mutual credit schemes are important because they are a way to improve working class life under capitalism and ensure that what money we do have is used to benefit ourselves rather than the elite. By organising credit, we retain control over it and so rather than being used to invest in capitalist schemes it can be used for socialist alternatives.

For example, rather than allow the poorest to be at the mercy of loan sharks a community, by organising credit, can ensure its members receive cheap credit. Rather than give capitalist banks bundles of cash to invest in capitalist firms seeking to extract profits from a locality, it can be used to fund a co-operative instead. Rather than invest pension schemes into the stock market and so help undermine workers pay and living standards by increasing rentier power, it can be used to invest in schemes to improve the community and its economy. In short, rather than bolster capitalist power and so control, mutual credit aims to undermine the power of capitalist banks and finance by placing as much money as much possible in working class hands.

This point is important, as the banking system is often considered "neutral" (particularly in capitalist economics). However, as Malatesta correctly argued, it would be *"a mistake to believe ... that the banks are, or are in the main, a means to facilitate exchange; they are a means to speculate on exchange and currencies, to invest capital and to make it produce interest, and to fulfil other typically capitalist operations."* [**Errico Malatesta: His Life and Ideas**, p. 100] Within capitalism, money is still to a large degree a commodity which is more than a convenient measure of work done in the production of goods and services. It can and does go anywhere in the world where it can get the best return for its owners, and so it tends to drain out of those communities that need it most (why else would a large company invest in a community unless the money it takes out of the area handsomely exceeds that put it?). It is the means by which capitalists can buy the liberty of working people and get them to produce a surplus for them (wealth is, after all, *"a power invested in certain individuals by the institutions of society, to compel others to labour for their benefit."* [William Godwin, **The Anarchist Writings of William Godwin**, p. 130]). From this consideration alone, working class control of credit and money is an important part of the class struggle as having access to alternative sources of credit can increase working class options and power.

As we discussed in section B.3.2, credit is also an important form of social control — people who have to pay their mortgage or visa bill are more pliable, less likely to strike or make other forms of political trouble. Credit also expands the consumption of the masses in the face of stagnant or falling wages so blunting the impact of increasing exploitation. Moreover, as an added bonus, there is a profit to be made as the *"rich need a place to earn interest on their surplus funds, and the rest of the population makes a juicy lending target."* [Doug Henwood, **Wall Street**, p. 65]

Little wonder that the state (and the capitalists who run it) is so concerned to keep control of money in its own hands or the hands of its agents. With an increase in mutual credit, interest rates would drop, wealth would stay more in working class communities, and the social power of working people would increase (for people would be more likely to struggle for higher wages and better conditions — as the fear of debt repayments would be less). By the creation of community-based credit unions that do not put their money into "Capital Markets" or into capitalist Banks working class people can control their own credit, their own retirement funds, and find ways of using money as a means of undermining capitalist power and supporting social struggle and change. In this way working people are controlling more and more of the money supply and using it in ways that will stop capital from using it to oppress and exploit them.

An example of why this can be important can be seen from the existing workers' pension fund system which is invested in the stock market in the hope that workers will receive an adequate pension in their old age. However, the only people actually winning are bankers and big companies. Unsurprisingly, the managers of these pension fund companies are investing in those firms with the highest returns, which are usually those who are downsizing or extracting

most surplus value from their workforce (which in turn forces other companies to follow the same strategies to get access to the available funds in order to survive). Basically, if your money is used to downsize your fellow workers or increase the power of capital, then you are not only helping to make things harder for others like you, you are also helping making things worse for yourself. No person is an island, and increasing the clout of capital over the working class is going to affect you directly or indirectly. As such, the whole scheme is counter-productive as it effectively means workers have to experience insecurity, fear of downsizing and stagnating wages during their working lives in order to have slightly more money when they retire (assuming that they are fortunate enough to retire when the stock market is doing well rather than during one of its regular periods of financial instability, of course).

This highlights one of the tricks the capitalists are using against us, namely to get us to buy into the system through our fear of old age. Whether it is going into lifelong debt to buy a home or putting our money in the stock market, we are being encouraged to buy into the system which exploits us and so put its interests above our own. This makes us more easily controlled. We need to get away from living in fear and stop allowing ourselves to be deceived into behaving like "stakeholders" in a Plutocratic system where most shares really are held by an elite. As can be seen from the use of pension funds to buy out firms, increase the size of transnationals and downsize the workforce, such "stakeholding" amounts to sacrificing both the present and the future while others benefit.

The real enemies are **not** working people who take part in such pension schemes. It is the people in power, those who manage the pension schemes and companies, who are trying to squeeze every last penny out of working people to finance higher profits and stock prices — which the unemployment and impoverishment of workers on a world-wide scale aids. They control the governments of the world. They are making the "rules" of the current system. Hence the importance of limiting the money they have available, of creating community-based credit unions and mutual risk insurance co-operatives to increase our control over our money which can be used to empower ourselves, aid our struggles and create our own alternatives (see section B.3.2 for more anarchist views on mutual credit and its uses). Money, representing as it does the power of capital and the authority of the boss, is not "neutral" and control over it plays a role in the class struggle. We ignore such issues at our own peril.

J.5.7 Do most anarchists think mutual credit is sufficient to abolish capitalism?

The short answer is no, they do not. While the Individualist and Mutualist Anarchists do think that mutual banking is the only sure way of abolishing capitalism, most anarchists do not see it as an end in itself. Few think that capitalism can be reformed away in the manner assumed by Proudhon or Tucker.

In terms of the latter, increased access to credit does not address the relations of production and market power which exist within the economy and so any move for financial transformation has to be part of a broader attack on all forms of capitalist social power in order to be both useful and effective. In short, assuming that Individualist Anarchists do manage to organise a mutual banking scheme it cannot be assumed that as long as firms use wage-labour that any spurt in economic activity will have a long term effect of eliminating exploitation. What is more likely

is that an economic crisis would develop as lowering unemployment results in a profits squeeze (as occurred in, say, the 1970s). Without a transformation in the relations of production, the net effect would be the usual capitalist business cycle.

For the former, for mutualists like Proudhon, mutual credit **was** seen as a means of transforming the relations of production (as discussed in section G.4.1, unlike Proudhon, Tucker did not oppose wage-labour and just sought to make it non-exploitative). For Proudhon, mutual credit was seen as the means by which co-operatives could be created to end wage-labour. The organisation of labour would combine with the organisation of credit to end capitalism as workers would fund co-operative firms and their higher efficiency would soon drive capitalist firms out of business. Thus *"the Exchange Bank is the organisation of labour's greatest asset"* as it allowed *"the new form of society to be defined and created among the workers."* [Proudhon, **Correspondance**, vol. 2, pp. 307–8] *"To organise credit and circulation is to increase production,"* Proudhon stressed, *"to determine the new shapes of industrial society."* [**Op. Cit.**, vol. 6, p. 372] So, overtime, co-operative credit would produce co-operative production while associated labour would increase the funds available to associated credit. For Proudhon the *"organisation of credit and organisation of labour amount to one and the same"* and by recognising this the workers *"would soon have wrested alienated capital back again, through their organisation and competition."* [**No Gods, No Masters**, vol. 1, pp. 59–60]

Bakunin, while he was *"convinced that the co-operative will be the preponderant form of social organisation in the future"* and could *"hardly oppose the creation of co-operatives associations"* now as *we find them necessary in many respects,"* argued that Proudhon's hope for gradual change by means of mutual banking and the higher efficiency of workers' co-operatives were unlikely to be realised. This was because such claims *"do not take into account the vast advantage that the bourgeoisie enjoys against the proletariat through its monopoly on wealth, science, and secular custom, as well as through the approval — overt or covert but always active — of States and through the whole organisation of modern society. The fight is too unequal for success reasonably to be expected."* [**The Basic Bakunin**, p. 153 and p. 152] Thus capitalism *"does not fear the competition of workers' associations – neither consumers', producers', nor mutual credit associations — for the simple reason that workers' organisations, left to their own resources, will never be able to accumulate sufficiently strong aggregations of capital capable of waging an effective struggle against bourgeois capital."* [**The Political Philosophy of Bakunin**, p. 293]

So, for most anarchists, it is only in combination with other forms of working class self-activity and self-management that mutualist institutions could play an important role in the class struggle. In other words, few anarchists think that mutualist credit or co-operatives are enough in themselves to end capitalism. Revolutionary action is also required — such as the expropriation of capital by workers associations.

This does not mean anarchists reject co-operation under capitalism. By creating a network of mutual banks to aid in creating co-operatives, union organising drives, supporting strikes (either directly by gifts/loans or funding consumer co-operatives which could supply food and other essentials free or at a reduced cost), mutualism can be used as a means of helping build libertarian alternatives within the capitalist system. Such alternatives, while making life better under the current system, also play a role in overcoming that system by aiding those in struggle. Thus Bakunin:

> *"let us co-operate in our common enterprise to make our lives a little bit more supportable and less difficult. Let us, wherever possible, establish producer-consumer co-operatives and mutual credit societies which, though under the present economic conditions they cannot in any real or adequate way free us, are nevertheless important inasmuch they train the workers in the practices of managing the economy and plant the precious seeds for the organisation of the future."* [**Bakunin on Anarchism**, p. 173]

So while few anarchists think that mutualism would be enough in itself, it can play a role in the class struggle. As a compliment to direct action and workplace and community struggle and organisation, mutualism has an important role in working class self-liberation. For example, community unions (see section J.5.1) could create their own mutual banks and money which could be used to fund co-operatives and support social struggle. In this way a healthy communalised co-operative sector could develop within capitalism, overcoming the problems of isolation facing workplace co-operatives (see section J.5.11) as well as providing solidarity for those in struggle.

Mutual banking can be a way of building upon and strengthening the anarchistic social relations within capitalism. For even under capitalism and statism, there exists extensive mutual aid and, indeed, anarchistic and communistic ways of living. For example, communistic arrangements exist within families, between friends and lovers and within anarchist organisations. Mutual credit could be a means of creating a bridge between this alternative (gift) "economy" and capitalism. The mutualist alternative economy would help strength communities and bonds of trust between individuals, and this would increase the scope of the communistic sector as more and more people help each other without the medium of exchange. In other words, mutualism will help the gift economy that exists within capitalism to grow and develop.

J.5.8 What would a modern system of mutual banking look like?

One scenario for an updated system of mutual banking would be for a community to begin issuing an alternative currency accepted as money by all individuals within it. Let us call this currency-issuing association a "mutual barter clearinghouse," or just "clearinghouse" for short.

The clearinghouse would have a twofold mandate: first, to extend credit at cost to members; second, to manage the circulation of credit-money within the system, charging only a small service fee (one percent or less) sufficient to cover its costs of operation, including labour costs involved in issuing credit and keeping track of transactions, insuring itself against losses from uncollectable debts, and so forth. Some current experiments in community money use labour time worked as their basis (thus notes would be marked one-hour) while others have notes tied to the value of the state currency (thus, say, a Scottish town would issue pounds assumed to be the same as a British pound note).

The clearinghouse would be organised and function as follows. People could join the clearinghouse by pledging a certain amount of property (including savings) as collateral. On the basis of this pledge, an account would be opened for the new member and credited with a sum of mutual pounds equivalent to some fraction of the assessed value of the property pledged. The new member would agree to repay this amount plus the service fee into their account by a certain date. The mutual pounds could then be transferred through the clearinghouse to the accounts

of other members, who have agreed to receive mutual money in payment for all debts or work done.

The opening of this sort of account is, of course, the same as taking out a "loan" in the sense that a commercial bank "lends" by extending credit to a borrower in return for a signed note pledging a certain amount of property as security. The crucial difference is that the clearinghouse does not purport to be "lending" a sum of money that it **already has,** as is fraudulently claimed by commercial banks. Instead it honestly admits that it is creating new money in the form of credit. New accounts can also be opened simply by telling the clearinghouse that one wants an account and then arranging with other people who already have balances to transfer mutual money into one's account in exchange for goods or services.

Another form of mutual credit are LETS systems. In this a number of people get together to form an association. They create a unit of exchange (which is equal in value to a unit of the national currency usually), choose a name for it and offer each other goods and services priced in these units. These offers and wants are listed in a directory which is circulated periodically to members. Members decide who they wish to trade with and how much trading they wish to do. When a transaction is completed, this is acknowledged with a "cheque" made out by the buyer and given to the seller. These are passed on to the system accounts administration which keeps a record of all transactions and periodically sends members a statement of their accounts. The accounts administration is elected by, and accountable to, the membership and information about balances is available to all members.

Unlike the first system described, members do not have to present property as collateral. Members of a LETS scheme can go into "debt" without it, although "debt" is the wrong word as members are not so much going into debt as committing themselves to do some work within the system in the future and by so doing they are creating spending power. The willingness of members to incur such a commitment could be described as a service to the community as others are free to use the units so created to trade themselves. Indeed, the number of units in existence exactly matches the amount of real wealth being exchanged. The system only works if members are willing to spend. It runs on trust and builds up trust as the system is used.

It is likely that a fully functioning mutual banking system would incorporate aspects of both these systems. The need for collateral may be used when members require very large loans while the LETS system of negative credit as a commitment to future work would be the normal function of the system. If the mutual bank agrees a maximum limit for negative balances, it may agree to take collateral for transactions that exceed this limit. However, it is obvious that any mutual banking system will find the best means of working in the circumstances it finds itself.

J.5.9 How does mutual credit work?

Let us consider an example of how business would be transacted using mutual credit within capitalism. There are two possibilities, depending on whether the mutual credit is based upon whether the creditor can provide collateral or not. We will take the case with collateral first.

Suppose that A, an organic farmer, pledges as collateral a certain plot of land that she owns and on which she wishes to build a house. The land is valued at, say, £40,000 in the capitalist market and by pledging the land, A is able to open a credit account at the clearinghouse for, say, £30,000 in mutual money. She does so knowing that there are many other members of the system who

are carpenters, electricians, plumbers, hardware suppliers, and so on who are willing to accept mutual pounds in payment for their products or services.

It is easy to see why other subscriber-members, who have also obtained mutual credit and are therefore in debt to the clearinghouse, would be willing to accept such notes in return for their goods and services. They need to collect mutual currency to repay their debts. Why would someone who is not in debt for mutual currency be willing to accept it as money?

To see why, let us suppose that B, an underemployed carpenter, currently has no account at the clearinghouse but that he knows about it and the people who operate and use it. After examining its list of members and becoming familiar with the policies of the new organisation, he is convinced that it does not extend credit frivolously to untrustworthy recipients who are likely to default. He also knows that if he contracts to do the carpentry on A's new house and agrees to be paid for his work in mutual money, he will then be able to use it to buy groceries, clothes, and other goods and services from various people in the community who already belong to the system.

Thus B will be willing, and perhaps even eager (especially if the economy is in recession and regular money is tight) to work for A and receive payment in mutual credit. For he knows that if he is paid, say, £8,000 in mutual money for his labour on A's house, this payment constitutes, in effect, 20 percent of a mortgage on her land, the value of which is represented by her mutual credit. B also understands that A has promised to repay this mortgage by producing new value — that is, by growing organic fruits and vegetables and selling them to other members of the system — and that it is this promise to produce new wealth which gives her mutual credit its value as a medium of exchange.

To put this point slightly differently, A's mutual credit can be thought of as a lien against goods or services which she will create in the future. As security of this guarantee, she agrees that if she is unable for some reason to fulfil her obligation, the land she has pledged will be sold to other members. In this way, a value sufficient to cancel her debt (and probably then some) will be returned to the system. This provision insures that the clearinghouse is able to balance its books and gives members confidence that mutual money is sound.

It should be noticed that since new wealth is continually being created, the basis for new mutual credit is also being created at the same time. Thus, suppose that after A's new house has been built, her daughter, C, along with a group of friends D, E, F, ... , decide that they want to start a co-operative restaurant but that C and her friends do not have enough collateral to obtain a start-up loan. A, however, is willing to co-sign a note for them, pledging her new house (valued at say, £80,000) as security. On this basis, C and her partners are able to obtain £60,000 worth of mutual credit, which they then use to buy equipment, supplies, furniture, advertising, etc. to start their restaurant.

This example illustrates one way in which people without property are able to obtain credit in the new system. Another way — for those who cannot find (or perhaps do not wish to ask) someone with property to co-sign for them — is to make a down payment and then use the property which is to be purchased on credit as security, as in the current method of obtaining a home or other loan. With mutual credit, however, this form of financing can be used to purchase anything, including the means of production and other equipment required for workers to work for themselves instead of a boss.

Which brings us to the case of an individual without means for providing collateral — say, for example Z, a plumber, who currently does not own the land she uses. In such a case, Z, who still

desires work done, would contact other members of the mutual bank with the skills she requires. Those members with the appropriate skills and who agree to work with her commit themselves to do the required tasks. In return, Z gives them a check in mutual dollars which is credited to their account and deducted from hers. She does not pay interest on this issue of credit and the sum only represents her willingness to do some work for other members of the bank at some future date.

The mutual bank does not have to worry about the negative balance, as this does not create a loss within the group as the minuses which have been incurred have already created wealth (pluses) within the system and it stays there. It is likely, of course, that the mutual bank would agree an upper limit on negative balances and require some form of collateral for credit greater than this limit, but for most exchanges this would be unlikely to be relevant.

It is important to remember that mutual money has no **intrinsic** value, since they cannot be redeemed (at the mutual bank) in gold or anything else. All they are promises of future labour. They are a mere medium for the facilitation of exchange used to facilitate the increase production of goods and services (as discussed in section G.3.6, it is this increase which ensures that mutual credit is not inflationary). This also ensures enough work for all and, ultimately, the end of exploitation as working people can buy their own means of production and so end wage-labour by self-employment and co-operation.

For more information on how mutual banking is seen to work see the collection of Proudhon's works collected in **Proudhon's Solution to the Social Problem**. William B. Greene's **Mutual Baking** and Benjamin Tucker's **Instead of a Book** should also be consulted.

J.5.10 Why do anarchists support co-operatives?

Support for co-operatives is a common feature in anarchist writings. In fact, support for democratic workplaces is as old as use of the term anarchist to describe our ideas. So why do anarchists support co-operatives? It is because they are the only way to guarantee freedom in production and so *"the co-operative system ... carries within it the germ of the future economic order."* [Bakunin, **The Philosophy of Bakunin**, p. 385]

Anarchists support all kinds of co-operatives: housing, food, consumer, credit and workplace ones. All forms of co-operation are useful as they accustom their members to work together for their common benefit as well as ensuring extensive experience in managing their own affairs. As such, all forms of co-operatives are (to some degree) useful examples of self-management and anarchy in action. Here we will concentrate on producer co-operatives as only these can **replace** the capitalist mode of production. They are examples of a new mode of production, one based upon associated, not wage, labour. As long as wage-labour exists within industry and agriculture then capitalism remains and no amount of other kinds of co-operatives will end it. If wage slavery exists, then so will exploitation and oppression and anarchy will remain but a hope.

Co-operatives are the *"germ of the future"* for two reasons. Firstly, co-operatives are based on one worker, one vote. In other words those who do the work manage the workplace within which they do it (i.e. they are based on workers' self-management). Thus co-operatives are an example of the "horizontal" directly democratic organisation that anarchists support and so are an example of *"anarchy in action"* (even if in an imperfect way) within capitalism. Secondly,

they are an example of working class self-help and self-activity. Instead of relying on others to provide work, co-operatives show that production can be carried on without the existence of a class of masters employing a class of order takers.

Workplace co-operatives also present evidence of the viability of an anarchist economy. It is well established that co-operatives are usually more productive and efficient than their capitalist equivalents. This indicates that hierarchical workplaces are **not** required in order to produce useful goods and indeed can be harmful. It also indicates that the capitalist market does not actually allocate resources efficiently nor has any tendency to do so.

So why should co-operatives be more efficient? Firstly, there are the positive effects of increased liberty. Co-operatives, by abolishing wage slavery, obviously increase the liberty of those who work in them. Members take an active part in the management of their working lives and so authoritarian social relations are replaced by libertarian ones. Unsurprisingly, this liberty also leads to an increase in productivity – just as wage labour is more productive than slavery, so associated labour is more productive than wage slavery. As Kropotkin argued: *"the only guarantee not to be robbed of the fruits of your labour is to possess the instruments of labour ... man really produces most when he works in freedom, when he has a certain choice in his occupations, when he has no overseer to impede him, and lastly, when he sees his work bringing profit to him and to others who work like him, but bringing in little to idlers."* [**The Conquest of Bread**, p. 145]

There are also the positive advantages associated with participation (i.e. self-management, liberty in other words). Within a self-managed, co-operative workplace, workers are directly involved in decision making and so these decisions are enriched by the skills, experiences and ideas of all members of the workplace. In the words of Colin Ward:

> "You can be **in** authority, or you can be **an** authority, or you can **have** authority. The first derives from your rank in some chain of command, the second derives special knowledge, and the third from special wisdom. But knowledge and wisdom are not distributed in order of rank, and they are no one person's monopoly in any undertaking. The fantastic inefficiency of any hierarchical organisation — any factory, office, university, warehouse or hospital — is the outcome of two almost invariable characteristics. One is that the knowledge and wisdom of the people at the bottom of the pyramid finds no place in the decision-making leadership hierarchy of the institution. Frequently it is devoted to making the institution work in spite of the formal leadership structure, or alternatively to sabotaging the ostensible function of the institution, because it is none of their choosing. The other is that they would rather not be there anyway: they are there through economic necessity rather than through identification with a common task which throws up its own shifting and functional leadership.
>
> "Perhaps the greatest crime of the industrial system is the way it systematically thwarts the investing genius of the majority of its workers." [**Anarchy in Action**, p. 41]

Also, as workers also own their place of work, they have an interest in developing the skills and abilities of their members and, obviously, this also means that there are few conflicts within the workplace. Unlike capitalist firms, there is no conflict between bosses and wage slaves over work loads, conditions or the division of value created between them. All these factors will increase

the quality, quantity and efficiency of work, increase efficient utilisation of available resources and aids the introduction of new techniques and technologies.

Secondly, the increased efficiency of co-operatives results from the benefits associated with co-operation itself. Not only does co-operation increase the pool of knowledge and abilities available within the workplace and enriches that source by communication and interaction, it also ensures that the workforce are working together instead of competing and so wasting time and energy. As Alfie Kohn notes (in relation to investigations of in-firm co-operation):

> *"Dean Tjosvold ... conducted [studies] at utility companies, manufacturing plants, engineering firms, and many other kinds of organisations. Over and over again, Tjosvold has found that 'co-operation makes a work force motivated' whereas 'serious competition undermines co-ordination' ... Meanwhile, the management guru ... T. Edwards Demming, has declared that the practice of having employees compete against each other is 'unfair [and] destructive. We cannot afford this nonsense any longer ... [We need to] work together on company problems [but] annual rating of performance, incentive pay, [or] bonuses cannot live with team work ... What takes the joy out of learning ... [or out of] anything? Trying to be number one.'"* [**No Contest**, p. 240]

Thirdly, there are the benefits associated with increased equality. Studies prove that business performance deteriorates when pay differentials become excessive. In a study of over 100 businesses (producing everything from kitchen appliances to truck axles), researchers found that the greater the wage gap between managers and workers, the lower their product's quality. [Douglas Cowherd and David Levine, *"Product Quality and Pay Equity,"* **Administrative Science Quarterly**, No. 37, pp. 302–30] Businesses with the greatest inequality were plagued with a high employee turnover rate. Study author David Levine said: *"These organisations weren't able to sustain a workplace of people with shared goals."* [quoted by John Byrne, *"How high can CEO pay go?"* **Business Week**, April 22, 1996] The negative effects of income inequality can also be seen on a national level as well. Economists Torsten Persson and Guido Tabellini conducted a thorough statistical analysis of historical inequality and growth, and found that nations with more equal incomes generally experience faster productive growth. [*"Is Inequality Harmful for Growth?"*, **American Economic Review** no. 84, pp. 600–21] Numerous other studies have also confirmed their findings (the negative impacts on inequality on all aspects of life are summarised by Richard Wilkinson and Kate Pickett in **The Spirit Level: Why More Equal Societies Almost Always Do Better**). Real life yet again disproves the assumptions of capitalism: inequality harms us all, even the capitalist economy which produces it.

This is to be expected. Workers, seeing an increasing amount of the value they create being monopolised by top managers and a wealthy elite and not re-invested into the company to secure their employment prospects, will hardly be inclined to put in that extra effort or care about the quality of their work. Bosses who use the threat of unemployment to extract more effort from their workforce are creating a false economy. While they will postpone decreasing profits in the short term due to this adaptive strategy (and enrich themselves in the process) the pressures placed upon the system will bring harsh long term effects — both in terms of economic crisis (as income becomes so skewed as to create realisation problems and the limits of adaptation are reached in the face of international competition) and social breakdown.

As would be imagined, co-operative workplaces tend to be more egalitarian than capitalist ones. This is because in capitalist firms, the incomes of top management must be justified (in

practice) to a small number of individuals (namely, those shareholders with sizeable stock in the firm), who are usually quite wealthy and so not only have little to lose in granting huge salaries but are also predisposed to see top managers as being very much like themselves and so are entitled to comparable incomes (and let us not forget that *"corporate boards, largely selected by the CEO, hire compensation experts, almost always chosen by the CEO, to determine how much the CEO is worth."* [Paul Krugman, **The Conscience of a Liberal**, p. 144]). In contrast, the incomes of management in worker controlled firms have to be justified to a workforce whose members experience the relationship between management incomes and their own directly and who, no doubt, are predisposed to see their elected managers as being workers like themselves and accountable to them. Such an egalitarian atmosphere will have a positive impact on production and efficiency as workers will see that the value they create is not being accumulated by others but distributed according to work actually done (and not control over power). In the Mondragon co-operatives, for example, the maximum pay differential is 9 to 1 (increased from 3 to 1 after much debate in a response to outside pressures from capitalist firms hiring away workers) while (in the USA) the average CEO is paid well over 100 times the average worker (up from 41 times in 1960).

Therefore, we see that co-operatives prove the advantages of (and the inter-relationship between) key anarchist principles such as liberty, equality, solidarity and self-management. Their application, whether all together or in part, has a positive impact on efficiency and work — and, as we will discuss in section J.5.12, the capitalist market actively **blocks** the spread of these more egalitarian and efficient productive techniques instead of encouraging them. Even by its own standards, capitalism stands condemned — it does not encourage the efficient use of resources and actively places barriers in their development.

From all this it is clear to see why co-operatives are supported by anarchists. We are *"convinced that the co-operative could, potentially, replace capitalism and carries within it the seeds of economic emancipation ... The workers learn from this precious experience how to organise and themselves conduct the economy without guardian angels, the state or their former employers."* [Bakunin, **Bakunin on Anarchism**, p. 399] Co-operatives give us a useful insight into the possibilities of a free, socialist, economy. Even within the hierarchical capitalist economy, co-operatives show us that a better future is possible and that production can be organised in a co-operative fashion and that by so doing we can reap the individual and social benefits of working together as equals.

However, this does not mean that all aspects of the co-operative movement find favour with anarchists. As Bakunin pointed out, *"there are two kinds of co-operative: bourgeois co-operation, which tends to create a privileged class, a sort of new collective bourgeoisie organised into a stockholding society: and truly Socialist co-operation, the co-operation of the future which for this very reason is virtually impossible of realisation at present."* [**Op. Cit.**, p. 385] In other words, while co-operatives are the germ of the future, in the present they are often limited by the capitalist environment they find themselves, narrow their vision to just surviving within the current system and so adapt to it.

For most anarchists, the experience of co-operatives has proven without doubt that, however excellent in principle and useful in practice, if they are kept within capitalism they cannot become the dominant mode of production and free the masses (see section J.5.11). In order to fully develop, co-operatives must be part of a wider social movement which includes community and industrial unionism and the creation of a anarchistic social framework which can encourage *"truly Socialist co-operation"* and discourage *"bourgeois co-operation."* As Murray Bookchin cor-

rectly argued: *"Removed from a libertarian municipalist [or other anarchist] context and movement focused on achieving revolutionary municipalist goals as a **dual power** against corporations and the state, food [and other forms of] co-ops are little more than benign enterprises that capitalism and the state can easily tolerate with no fear of challenge."* [**Democracy and Nature**, no. 9, p. 175]

So while co-operatives are an important aspect of anarchist ideas and practice, they are not the be all or end all of our activity. Without a wider social movement which creates all (or at least most) of the future society in the shell of the old, co-operatives will never arrest the growth of capitalism or transcend the narrow horizons of the capitalist economy.

J.5.11 If workers really want self-management then why are there so few co-operatives?

Supporters of capitalism suggest that producer co-operatives would spring up spontaneously if workers really wanted them. To quote leading propertarian Robert Nozick, under capitalism *"it is open to any wealthy radical or group of workers to buy an existing factory or establish a new one, and to ... institute worker-controlled, democratically-run firms."* If *"they are superior, by market standards, to their more orthodox competitors"* then *"there should be little difficulty in establishing successful factories of this sort."* Thus there is *"a means of realising the worker-control scheme that can be brought about by the voluntary actions of people in a free [sic!] society."* [**Anarchy, State, and Utopia**, pp. 250–2] So if such co-operatives were really economically viable and desired by workers, they would spread until eventually they undermined capitalism. Propertarians conclude that since this is not happening, it must be because workers' self-management is either economically inefficient or is not really attractive to workers, or both.

David Schweickart has decisively answered this argument by showing that the reason there are not more producer co-operatives is structural:

> *"A worker-managed firm lacks an expansionary dynamic. When a capitalist enterprise is successful, the owner can increase her profits by reproducing her organisation on a larger scale. She lacks neither the means nor the motivation to expand. Not so with a worker-managed firm. Even if the workers have the means, they lack the incentive, because enterprise growth would bring in new workers with whom the increased proceeds would have to be shared. Co-operatives, even when prosperous, do not spontaneously grow. But if this is so, then each new co-operative venture (in a capitalist society) requires a new wealthy radical or a new group of affluent radical workers willing to experiment. Because such people doubtless are in short supply, it follows that the absence of a large and growing co-operative movement proves nothing about the viability of worker self-management, nor about the preferences of workers."* [**Against Capitalism**, p. 239]

This means that in, say, a mutualist economy there would be more firms of a smaller size supplying a given market compared to capitalism. So a free economy, with the appropriate institutional framework, need not worry about unemployment for while individual co-operatives may not expand as fast as capitalist firms, more co-operatives would be set up (see section I.3.1 for why the neo-classical analysis of co-operatives which Nozick implicitly invokes is false). In

short, the environment within which a specific workplace operates is just as important as its efficiency.

This is important, as the empirical evidence is strong that self-management **is** more efficient than wage-slavery. As economist Geoffrey M. Hodgson summarises, support for *"the proposition that participatory and co-operatives firms enjoy greater productivity and longevity comes from a large amount of ... case study and econometric evidence"* and *"the weight of testimony"* is *"in favour or [indicates] a positive correlation between participation and productivity."* [*"Organizational Form and Economic Evolution: A critique of the Williamsonian hypothesis"*, pp. 98–115, **Democracy and Efficiency in Economic Enterprises**, U. Pagano and R. E. Rowthorn (eds.), p. 100] This is ignored by the likes of Nozick in favour of thought-experiments rooted in the dubious assumptions of bourgeois economics. He implicitly assumed that because most firms are hierarchical today then they must be more efficient. In short, Nozick abused economic selection arguments by simply assuming, without evidence, that the dominant form of organisation is, *ipso facto*, more efficient. In reality, this is not the case.

The question now becomes one of explaining why, if co-operation is more efficient than wage-slavery, does economic liberty not displace capitalism? The awkward fact is that individual efficiency is not the key to survival as such an argument *"ignores the important point that the selection of the 'fitter' in evolution is not simply relative to the less successful but is dependent upon the general circumstances and environment in which selection takes place."* Moreover, an organism survives because it birth rate exceeds its death rate. If more capitalist firms secure funding from capitalist banks then, obviously, it is more likely for them to secure dominance in the economy simply because there are more of them rather than because they are more efficient. As such, large numbers do not imply greater efficiency as the *"rapid flow of new entrants of hierarchical form"* may *"swamp the less hierarchical firms even if other selection processes are working in favour of the latter."* [Hodgson, **Op. Cit.**, p. 100 and p. 103] Thus:

> *"The degree of fitness of any organism can only be meaningfully considered in relation to its environment ... the market may help to select firms that are fit for the market, but these surviving firms needn't be the most 'efficient' in some absolute sense. In fact, the specification of 'the market' as a selection process is incomplete because the market is only one institution of many needed to specify an environment."* [Michael J. Everett and Alanson P. Minkler, *"Evolution and organisational choice in nineteenth-century Britain"*, pp. 51–62, **Cambridge Journal of Economics** vol. 17, No. 1, p. 53]

As an obvious example there are the difficulties co-operatives can face in finding access to credit facilities required by them from capitalist banks and investors. As Tom Cahill notes, co-operatives in the nineteenth century *"had the specific problem of ... **giving credit**"* while *"**competition with price cutting capitalist** firms . .. highlighting the inadequate reservoirs of the under-financed co-ops."* [*"Co-operatives and Anarchism: A contemporary Perspective"*, pp 235–58, **For Anarchism**, Paul Goodway (ed.), p. 239] This points to a general issue, namely that there are often difficulties for co-operatives in raising money:

> *"Co-operatives in a capitalist environment are likely to have more difficulty in raising capital. Quite apart from ideological hostility (which may be significant), external investors will be reluctant to put their money into concerns over which they will have little*

> *or no control – which tends to be the case with a co-operative. Because co-operatives in a capitalist environment face special difficulties, and because they lack the inherent expansionary dynamic of a capitalist firm, it is hardy surprising that they are far from dominant.*" [Schweickart, **Op. Cit.**, p 240]

In addition, the *"return on capital is limited"* in co-operatives. [Tom Cahill, **Op. Cit.**, p. 247] This means that investors are less-likely to invest in co-operatives, and so co-operatives will tend to suffer from a lack of investment. So despite *"the potential efficiency of such [self-managed] workplaces"*, capitalism *"may be systematically biased against participatory workplaces"* and as *"a result the economy can be trapped in a socially suboptimal position."* Capital market issues, amongst others, help explain this as such firms *"face higher transaction costs for raising equity and loans."* [David I. Levine and Laura D'Andrea Tyson, *"Participation, Productivity, and the Firm's Environment"*, pp. 183–237, **Paying for Productivity**, Alan S. Blinder (ed.), pp. 235–6 and p. 221]

Tom Cahill outlines the investment problem when he writes that the *"financial problem"* is a major reason why co-operatives failed in the past, for *"basically the unusual structure and aims of co-operatives have always caused problems for the dominant sources of capital. In general, the finance environment has been hostile to the emergence of the co-operative spirit."* He also notes that they were *"unable to devise structuring to* ***maintain a boundary*** *between those who work and those who own or control ... It is understood that when outside investors were allowed to have power within the co-op structure, co-ops lost their distinctive qualities."* [**Op. Cit.**, pp. 238–239] So even **if** co-operative do attract investors, the cost of so doing may be to transform the co-operatives into capitalist firms. So while all investors experience risk, this *"is even more acute"* in co-operatives *"because investors must simultaneously cede control* ***and*** *risk their entire wealth. Under an unlimited liability rule, investors will rationally demand some control over the firm's operations to protect their wealth. Since [co-operatives] cannot cede control without violating one of the organisation's defining tenets, investors will demand an investment premium, a premium not required from equity investments."* [Everett and Minkler, **Op. Cit.**, p. 52] Needless to say, such a premium is a strain on a co-operative and makes it harder to survive simply because it has higher costs for debt repayment. If such external investment is not forthcoming, then the co-operative is dependent on retained earnings and its members' savings which, unsurprisingly, are often insufficient.

All of which suggests that Nozick's assertion that *"don't say that its against the class interest of investors to support the growth of some enterprise that if successful would end or diminish the investment system. Investors are not so altruistic. They act in personal and not their class interests"* is false. [**Op. Cit.**, pp. 252–3] Nozick is correct, to a degree, but he forgets that class interest is a fusion of individual interests. Given a choice between returns from investments in capitalist firms because a management elite has similar interests in maximising unpaid labour and workers in a co-operative which controls any surplus, the investor will select the former. Moreover, lack of control by investors plays its role as they cannot simply replace the management in a co-operative — that power lies in the hands of the workforce. The higher premiums required by investors to forsake such privileges place a burden on the co-operative, so reducing their likelihood of getting funds in the first place or surviving and, needless to say, increasing the risk that investors face. Thus the personal and class interest of investors merge, with the personal desire to make money ensuring that the class position of the individual is secured. This does not reflect the productivity

or efficiency of the investment — quite the reverse! — it reflects the social function of wage labour in maximising profits and returns on capital (see next section for more on this). In other words, the personal interests of investors will generally support their class interests (unsurprisingly, as class interests are not independent of personal interests and will tend to reflect them!).

There are other structural problems as well. Co-operatives face the negative externalities generated by the capitalist economy they operate within. For one thing, since their pay levels are set by members' democratic vote, co-operatives tend to be more egalitarian in their income structure. This means that in a capitalist environment, co-operatives are in constant danger of having their most skilled members hired away by capitalist firms who can, due to their resources, out-bid the co-operative. While this may result in exploitation of the worker, the capitalist firm has the resources to pay higher wages and so it makes sense for them to leave (*"As to the employer who pays an engineer twenty times more than a labourer, it is simply due to personal interest; if the engineer can economise $4000 a year on the cost of production; the employer pays him $800 ... He parts with an extra $40 when he expects to gain $400 by it; and this is the essence of the Capitalist system."* [Kropotkin, **The Conquest of Bread**, p. 165]). However, in a co-operative system there would not be the inequalities of economic wealth (created by capitalist firms and finance structures) which allows such poaching to happen.

There are cultural issues as well. As Jon Elster points out, it is a *"truism, but an important one, that workers' preferences are to a large extent shaped by their economic environment. Specifically, there is a tendency to adaptive preference formation, by which the actual mode of economic organisation comes to be perceived as superior to all others."* [*"From Here to There"*, pp. 93–111, **Socialism**, Paul, Miller Jr., Paul, and Greenberg (eds.), p. 110] In other words, people view "what is" as given and feel no urge to change to "what could be." In the context of creating alternatives within capitalism, this can have serious effects on the spread of alternatives and indicates the importance of anarchists encouraging the spirit of revolt to break down this mental apathy.

This acceptance of "what is" can be seen, to some degree, by some companies which meet the formal conditions for co-operatives, for example ESOP owned firms in the USA, but lack effective workers' control. ESOP (Employee Stock Ownership Plans) enable a firm's workforce to gain the majority of a company's shares but the unequal distribution of shares amongst employees prevents the great majority of workers from having any effective control or influence on decisions. Unlike real co-operatives (based on "one worker, one vote") these firms are based on "one share, one vote" and so have more in common with capitalist firms than co-operatives.

Finally, there is the question of history, of path dependency. Path dependency is the term used to describe when the set of decisions one faces for any given circumstance is limited by the decisions made in the past, even though past circumstances may no longer be relevant. This is often associated with the economics of technological change in a society which depends quantitatively and/or qualitatively on its own past (the most noted example this is the QWERTY keyboard, which would not be in use today except that it happened to be chosen in the nineteenth century). Evolutionary systems are path dependent, with historical events pushing development in specific directions. Thus, if there were barriers against or encouragement for certain forms of organisational structure in the past then the legacy of this will continue to dominate due to the weight of history rather than automatically being replaced by new, more efficient, forms.

This can be seen from co-operatives, as *"labour managed firms were originally at a substantial disadvantage compared to their capitalist counterparts"* as the law *"imposed additional risks and costs"* on them while *"early financial instruments were ill-suited to the establishment and con-*

tinuation of worker co-operatives. The subsequent coevolution of firms and supporting institutions involved a path-dependent process where labour-managed firms were at a continual disadvantage, even after many of the earlier impediments were removed." [Hodgson, **Op. Cit.**, p. 103] *"Historically,"* argue Everett and Minkler *"both company and co-operative law were incompatible with democratic decision-making by workers."* The law ensured that the *"burden was more costly"* to labour-managed firms and these *"obstacles led to an environment dominated by investor-controlled firms (capitalist firms) in which informal constraints (behaviours and routines) emerged to reinforce the existing institutions. A path-dependent process incorporating these informal constraints continued to exclude [their] widespread formation."* When the formal constraints which prevented the formation of co-operatives were finally removed, the *"informal constraints"* produced as a result of these *"continued to prevent the widespread formation"* of co-operatives. So the lack of co-operatives *"can thus be explained quite independently of any of the usual efficiency criteria."* [**Op. Cit.**, p. 58 and p. 60] Nor should we forget that the early industrial system was influenced by the state, particularly by rewarding war related contracts to hierarchical firms modelled on the military and that the state rewarded contracts to run various state services and industries to capitalist firms rather than, as Proudhon urged, to workers associations.

However, *"there are several good reasons why more efficient firms need not always be selected in a competitive and 'evolutionary' process."* [Hodgson, **Op. Cit.**, p. 99] So it is not efficiency as such which explains the domination of capitalist firms for *"empirical studies suggest that co-operatives are at least as productive as their capitalist counterparts,"* with many having *"an excellent record, superior to conventionally organised firms over a long period."* [Jon Elster, **Op. Cit.**, p. 96] So all things being equal, co-operatives are more efficient than their capitalist counterparts — but when co-operatives compete in a capitalist economy, all things are **not** equal. As David Schweickart argues:

> *"Even if worker-managed firms are preferred by the vast majority, and even if they are more productive, a market initially dominated by capitalist firms may not select for them. The common-sense neo-classical dictum that only those things that best accord with people's desires will survive the struggle of free competition has never been the whole truth with respect to anything; with respect to workplace organisation it is barely a half-truth."* [**Op. Cit.**, p. 240]

It is illuminating, though, to consider why Nozick ignored the substantial empirical evidence that participation **is** more efficient than hierarchy and, as a result, why *"market criteria"* does not result in the more productive and efficient co-operative production displacing the authoritarian workplace. Far better, it must be supposed, to just assume that the dominant form of workplace is more "efficient" and implicitly invoke a quasi-Darwinian individualistic selection mechanism in an ahistorical and institution-less framework. So people like Nozick who suggest that because worker co-operatives are few in number that this means they are forced out by competition because they are inefficient miss the point. A key reason for this lack of co-operative firms, argues Hodgson, *"is that competitive selection depends on the economic context, and while the institutional context of a capitalist system may be more conducive for the capitalist firm, a different context may favour the co-operative firm."* [**Economics and Utopia**, p. 288]

As discussed in section I.3.5, Proudhon was well aware that for mutualism to prosper and survive an appropriate institutional framework was required (the *"agro-industrial federation"* and

mutual banking). So an organisation's survival also depends on the co-evolution of supporting informal constraints. If a co-operative is isolated within a capitalist economy, without co-operative institutions around it, it comes as no great surprise to discover that they find it difficult to survive never mind displace its (usually larger and well-established) capitalist competitors.

Yet in spite of these structural problems and the impact of previous state interventions, co-operatives do exist under capitalism but just because they can survive in such a harsh environment it does not automatically mean that they shall **replace** that economy. Co-operatives face pressures to adjust to the dominant mode of production. The presence of wage labour and investment capital in the wider economy will tempt successful co-operatives to hire workers or issue shares to attract new investment. In so doing, however, they may end up losing their identities as co-operatives by diluting ownership (and so re-introducing exploitation by having to pay non-workers interest) or by making the co-operative someone's boss (which creates *"a new class of workers who exploit and profit from the labour of their employees. And all this fosters a bourgeois mentality."* [Bakunin, **Bakunin on Anarchism**, p. 399]).

Hence the pressures of working in a capitalist market may result in co-operatives pursuing activities which may result in short term gain or survival, but are sure to result in harm in the long run. Far from co-operatives slowly expanding within and changing a capitalist environment it is more likely that capitalist logic will expand into and change the co-operatives that work in it (this can be seen from the Mondragon co-operatives, where there has been a slight rise in the size of wage labour being used and the fact that the credit union has, since 1992, invested in non-co-operative firms). These externalities imposed upon isolated co-operatives within capitalism (which would not arise within a fully co-operative context) block local moves towards anarchism. The idea that co-operation will simply win out in competition within well developed capitalist economic systems is just wishful thinking. Just because a system is more liberatory, just and efficient does not mean it will survive or prosper in an authoritarian economic and social environment.

So both theory and history suggests that isolated co-operatives will more likely adapt to capitalist realities than remain completely true to their co-operative promise. For most anarchists, therefore, co-operatives can reach their full potential only as part of a social movement aiming to change society. Only as part of a wider movement of community and workplace unionism, with mutualist banks to provide long terms financial support and commitment, can co-operatives be communalised into a network of solidarity and support that will reduce the problems of isolation and adaptation. Hence Bakunin:

> *"We want co-operation too ... But at the same time, we know that it prosper, developing itself fully and freely, embracing all human industry, only when it is based on equality, when all capital and every instrument of labour, including the soil, belong to the people by right of collective property ... Once this is acknowledged we hardly oppose the creation of co-operative associations; we find them necessary in many respects ... they accustom the workers to organise, pursue, and manage their interests themselves, without interference either by bourgeois capital or by bourgeois control ... [they must be] founded on the principle of solidarity and collectivity rather than on bourgeois exclusivity, then society will pass from its present situation to one of equality and justice without too many great upheavals."* [**The Basic Bakunin**, p. 153]

Until then, co-operatives will exist within capitalism but not replace it by market forces — only a **social** movement and collective action can fully secure their full development. This means that while anarchists support, create and encourage co-operatives within capitalism, we understand *"the impossibility of putting into practice the co-operative system under the existing conditions of the predominance of bourgeois capital in the process of production and distribution of wealth."* Because of this, most anarchists stress the need for more combative organisations such as industrial and community unions and other bodies *"formed,"* to use Bakunin's words, *"for the organisation of toilers against the privileged world"* in order to help bring about a free society. [**The Political Philosophy of Bakunin**, p. 385]

Finally, we must note an irony with Nozick's argument, namely the notion that capitalism (his *"free society"*) allows a *"voluntary"* path to economic liberty. The irony is two-fold. First, the creation of capitalism was the result of state action (see section F.8). While working class people are expected to play by the rules decreed by capitalism, capitalists have never felt the urge to do so. It is this state coercion which helped create the path-dependency which stops *"the market"* selecting more efficient and productive ways of production. Secondly, Nozick's own theory of (property) rights denies that stolen wealth can be legitimately transferred. In other words, expecting workers to meekly accept previous coercion by seeking investors to fund their attempts at economic liberty, as Nozick did, is implicitly accepting that theft is property. While such intellectual incoherence is to be expected from defenders of capitalism, it does mean that propertarians really have no ground to oppose working class people following the advice of libertarians and expropriating their workplaces. In other words, transforming the environment and breaking the path-dependency which stops economic liberty from flowering to its full potential.

J.5.12 If self-management were more efficient then surely the market would force capitalists to introduce it?

Some supporters of capitalism argue that if self-management really were more efficient than hierarchy, then capitalists would be forced to introduce it by the market. As propertarian Robert Nozick argued, if workers' control meant that *"the productivity of the workers in a factory **rises** ... then the individual owners pursuing profits will reorganise the productive process. If the productivity of workers **remains the same** ... then in the process of competing for labourers firms will alter their internal work organisation."* This meant that *"individual owners pursuing profits ... will reorganise the productive process."* [**Anarchy, State, and Utopia**, p. 248] As this has not happened then self-management cannot be more efficient.

While such a notion seems plausible in theory, in practice it is flawed as *"there is a vast quantity of empirical evidence demonstrating that participatory workplaces tend to be places of higher morale and greater productivity than authoritarian workplaces."* [David Schweickart , **Against Capitalism**, p. 228] So Nozick's thought experiment is contradicted by reality. Capitalism places innumerable barriers to the spread of worker empowering structures within production, in spite (perhaps, as we will see, **because**) of their (well-documented) higher efficiency and productivity. This can be seen from the fact that while the increased efficiency associated with workers' participation and self-management has attracted the attention of many capitalist firms, the few experiments conducted have failed to spread even though they were extremely successful. This is due to the nature of capitalist production and the social relationships it produces.

As we noted in section D.10, capitalist firms (particularly in the west) made a point of introducing technologies and management structures that aimed to deskill and disempower workers. In this way, it was hoped to make the worker increasingly subject to "market discipline" (i.e. easier to train, so increasing the pool of workers available to replace any specific worker and so reducing workers power by increasing management's power to fire them). Of course, what actually happens is that after a short period of time while management gained the upper hand, the workforce found newer and more effective ways to fight back and assert their productive power again. While for a short time the technological change worked, over the longer period the balance of forces changed, so forcing management to continually try to empower themselves at the expense of the workforce.

It is unsurprising that such attempts to reduce workers to order-takers fail. Workers' experiences and help are required to ensure production actually happens at all. When workers carry out their orders strictly and faithfully (i.e. when they "work to rule") production stops. So most capitalists are aware of the need to get workers to "co-operate" within the workplace to some degree. A few capitalist companies have gone further. Seeing the advantages of fully exploiting (and we do mean exploiting) the experience, skills, abilities and thoughts of their employers which the traditional authoritarian capitalist workplace denies them, some have introduced various schemes to "enrich" and "enlarge" work, increase "co-operation" between workers and their bosses, to encourage workers to "participate" in their own exploitation by introducing *"a modicum of influence, a strictly limited area of decision-making power, a voice — at best secondary — in the control of conditions of the workplace."* [Sam Dolgoff, **The Anarchist Collectives**, p. 81] The management and owners still have the power and still reap unpaid labour from the productive activity of the workforce.

David Noble provides a good summary of the problems associated with experiments in workers' self-management within capitalist firms:

> *"Participation in such programs can indeed be a liberating and exhilarating experience, awakening people to their own untapped potential and also to the real possibilities of collective worker control of production. As one manager described the former pilots [workers in a General Electric program]: 'These people will never be the same again. They have seen that things can be different.' But the excitement and enthusiasm engendered by such programs, as well as the heightened sense of commitment to a common purpose, can easily be used against the interests of the work force. First, that purpose is not really 'common' but is still determined by management alone, which continues to decide what will be produced, when, and where. Participation in production does not include participation in decisions on investment, which remains the prerogative of ownership. Thus participation is, in reality, just a variation of business as usual — taking orders — but one which encourages obedience in the name of co-operation.*
>
> *"Second, participation programs can contribute to the creation of an elite, and reduced, work force, with special privileges and more 'co-operative' attitudes toward management — thus at once undermining the adversary stance of unions and reducing membership ...*
>
> *"Third, such programs enable management to learn from workers — who are now encouraged by their co-operative spirit to share what they know – and, then, in Taylorist*

> *tradition, to use this knowledge against the workers. As one former pilot reflected, 'They learned from the guys on the floor, got their knowledge about how to optimise the technology and then, once they had it, they eliminated the Pilot Program, put that knowledge into the machines, and got people without any knowledge to run them — on the Company's terms and without adequate compensation. They kept all the gains for themselves.' ...*
>
> *"Fourth, such programs could provide management with a way to circumvent union rules and grievance procedures or eliminate unions altogether."* [**Forces of Production**, pp. 318–9]

Capitalist introduced and supported "workers' control" is very like the situation when a worker receives stock in the company they work for. If it goes a little way toward redressing the gap between the value produced by that person's labour and the wage they receive for it, that in itself cannot be a totally bad thing (although this does not address the issue of workplace hierarchy and its social relations). The real downside of this is the "carrot on a stick" enticement to work harder — if you work extra hard for the company, your stock will be worth more. Obviously, though, the bosses get rich off you, so the more you work, the richer they get, the more you are getting ripped off. It is a choice that anarchists feel many workers cannot afford to make — they need or at least want the money — but we believe that it does not work as workers simply end up working harder, for less. After all, stocks do not represent all profits (large amounts of which end up in the hands of top management) nor are they divided just among those who labour. Moreover, workers may be less inclined to take direct action, for fear that they will damage the value of "their" company's stock, and so they may find themselves putting up with longer, more intense work in worse conditions.

Be that as it may, the results of such capitalist experiments in "workers' control" are interesting and show **why** self-management will not spread by market forces. According to one expert: *"There is scarcely a study in the entire literature which fails to demonstrate that satisfaction in work is enhanced or ...productivity increases occur from a genuine increase in worker's decision-making power. Findings of such consistency ... are rare in social research."* [Paul B. Lumberg, quoted by Herbert Gintis, *"The nature of Labour Exchange and the Theory of Capitalist Production"*, **Radical Political Economy**, vol. 1, Samuel Bowles and Richard Edwards (eds.), p. 252] In spite of these findings, a *"shift toward participatory relationships is scarcely apparent in capitalist production"* and this is *"not compatible with the neo-classical assertion as to the efficiency of the internal organisation of capitalist production."* [Gintz, **Op. Cit.**, p. 252] Economist William Lazonick indicates the reason when he writes that *"[m]any attempts at job enrichment and job enlargement in the first half of the 1970s resulted in the supply of more and better effort by workers. Yet many 'successful' experiments were cut short when the workers whose work had been enriched and enlarged began questioning traditional management prerogatives inherent in the existing hierarchical structure of the enterprise."* [**Competitive Advantage on the Shop Floor**, p. 282]

This is an important result, as it indicates that the ruling sections within capitalist firms have a vested interest in **not** introducing such schemes, even though they are more efficient methods of production. As can easily be imagined, managers have a clear incentive to resist participatory schemes (as David Schweickart notes, such resistance, *"often bordering on sabotage, is well known and widely documented"* [**Op. Cit.**, p. 229]). As an example of this David Noble discusses a scheme ran by General Electric in the late 1960s:

> *"After considerable conflict, GE introduced a quality of work life program ... which gave workers much more control over the machines and the production process and eliminated foremen. Before long, by all indicators, the program was succeeding — machine use, output and product quality went up; scrap rate, machine downtime, worker absenteeism and turnover when down, and conflict on the floor dropped off considerably. Yet, little more than a year into the program — following a union demand that it be extended throughout the shop and into other GE locations — top management abolished the program out of fear of losing control over the workforce. Clearly, the company was willing to sacrifice gains in technical and economic efficiency in order to regain and insure management control."* [**Progress Without People**, p. 65f]

Simply put, managers and capitalists can see that workers' control experiments expose the awkward fact that they are not needed, that their role is not related to organising production but exploiting workers. They have no urge to introduce reforms which will ultimately make themselves redundant. Moreover, most enjoy the power that comes with their position and have no desire to see it ended. This also places a large barrier in the way of workers' control. Interestingly, this same mentality explains why capitalists often support fascist regimes: *"The anarchist Luigi Fabbri termed fascism a* ***preventative counter-revolution****; but in his essay he makes the important point that the employers, particularly in agriculture, were not so much moved by fear of a general revolution as by the erosion of their own authority and property rights which had already taken place locally: 'The bosses felt they were no longer bosses.'"* [Adrian Lyttelton, *"Italian Fascism"*, pp. 81–114, **Fascism: a Reader's Guide**, p. 91]

However, it could be claimed that owners of stock, being concerned by the bottom-line of profits, could **force** management to introduce participation. By this method, competitive market forces would ultimately prevail as individual owners, pursuing profits, reorganise production and participation spreads across the economy. Indeed, there are a few firms that **have** introduced such schemes but there has been no tendency for them to spread. This contradicts "free market" capitalist economic theory which states that those firms which introduce more efficient techniques will prosper and competitive market forces will ensure that other firms will introduce the technique.

This has not happened for three reasons.

Firstly, the fact is that within "free market" capitalism **keeping** (indeed strengthening) skills and power in the hands of the workers makes it harder for a capitalist firm to maximise profits (i.e. unpaid labour). It strengthens the power of workers, who can use that power to gain increased wages (i.e. reduce the amount of surplus value they produce for their bosses). Workers' control also leads to a usurpation of capitalist prerogatives — including their share of revenues and their ability to extract more unpaid labour during the working day. While in the short run workers' control may lead to higher productivity (and so may be toyed with), in the long run, it leads to difficulties for capitalists to maximise their profits:

> *"given that profits depend on the integrity of the labour exchange, a strongly centralised structure of control not only serves the interests of the employer, but dictates a minute division of labour irrespective of considerations of productivity. For this reason, the evidence for the superior productivity of 'workers control' represents the most dramatic of anomalies to the neo-classical theory of the firm: worker control increases the effective*

amount of work elicited from each worker and improves the co-ordination of work activities, while increasing the solidarity and delegitimising the hierarchical structure of ultimate authority at its root; hence it threatens to increase the power of workers in the struggle over the share of total value." [Gintz, **Op. Cit.**, p. 264]

A workplace which had extensive workers participation would hardly see the workers agreeing to reduce their skill levels, take a pay cut or increase their pace of work simply to enhance the profits of capitalists. Simply put, profit maximisation is not equivalent to efficiency. Getting workers to work longer, more intensely or in more unpleasant conditions can increase profits but it does not yield more output for the **same** inputs. Workers' control would curtail capitalist means of enhancing profits by changing the quality and quantity of work. It is **this** requirement which also aids in understanding why capitalists will not support workers' control — even though it is more efficient, it reduces capitalist power in production. Moreover, demands to change the nature of workers' inputs into the production process in order to maximise profits for capitalists would provoke a struggle over the intensity of work, working hours, and over the share of value added going to workers, management and owners and so destroy the benefits of participation.

Thus power within the workplace plays a key role in explaining why workers' control does not spread — it reduces the ability of bosses to extract more unpaid labour from workers.

The second reason is related to the first. It too is based on the power structure within the company but the power is related to control over the surplus produced by the workers rather than the ability to control how much surplus is produced in the first place (i.e. power over workers). Hierarchical management is the way to ensure that profits are channelled into the hands of a few. By centralising power, the surplus value produced by workers can be distributed in a way which benefits those at the top (i.e. management and capitalists). This explains the strange paradox of workers' control experiments being successful but being cancelled by management. This is easily explained once the hierarchical nature of capitalist production (i.e. of wage labour) is acknowledged. Workers' control, by placing (some) power in the hands of workers, undermines the authority of management and, ultimately, their power to control the surplus produced by workers and allocate it as they see fit. Thus, while workers' control does reduce costs, increase efficiency and productivity (i.e. maximise the difference between prices and costs) it (potentially) reduces the power of management and owners to allocate that surplus as they see fit. Indeed, it can be argued that hierarchical control of production exists solely to provide for the accumulation of capital in a few hands, **not** for efficiency or productivity (see Stephan A. Margin, *"What do Bosses do? The Origins and Functions of Hierarchy in Capitalist Production"*, **Op. Cit.**, pp. 178–248).

As David Noble argues, power is the key to understanding capitalism, **not** the drive for profits as such:

"In opting for control [over the increased efficiency of workers' control] ... management ... knowingly and, it must be assumed, willingly, sacrificed profitable production... . [This] illustrates not only the ultimate management priority of power over both production and profit within the firm, but also the larger contradiction between the preservation of private power and prerogatives, on the one hand, and the social goals of efficient, quality, and useful production, on the other ...

"It is a common confusion, especially on the part of those trained in or unduly influenced by formal economics (liberal and Marxist alike), that capitalism is a system of profit-

motivated, efficient production. This is not true, nor has it ever been. If the drive to maximise profits, through private ownership and control over the process of production, has served historically as the primary means of capitalist development, it has never been the end of that development. The goal has always been domination (and the power and privileges that go with it) and the preservation of domination. There is little historical evidence to support the view that, in the final analysis, capitalists play by the rules of the economic game imagined by theorists. There is ample evidence to suggest, on the other hand, that when the goals of profit-making and efficient production fail to coincide with the requirements of continued dominance, capital will resort to more ancient means: legal, political, and, if need be, military. Always, behind all the careful accounting, lies the threat of force. This system of domination has been legitimated in the past by the ideological invention that private ownership of the means of production and the pursuit of profit via production are always ultimately beneficial to society. Capitalism delivers the goods, it is argued, better, more cheaply, and in larger quantity, and in so doing, fosters economic growth ... The story of the Pilot Program — and it is but one among thousands like it in U.S. industry — raises troublesome questions about the adequacy of this mythology as a description of reality." [**Forces of Production**, pp. 321–2]

Hierarchical organisation (domination) is essential to ensure that profits are controlled by a few and can, therefore, be allocated by them in such a way to ensure their power and privileges. By undermining such authority, workers' control also undermines that power to maximise profits in a certain direction even though it increases "profits" (the difference between prices and costs) in the abstract. As workers' control starts to extend (or management sees its potential to spread) into wider areas such as investment decisions, how to allocate the surplus (i.e. profits) between wages, investment, dividends, management pay and so on, then they will seek to end the project in order to ensure their power over both the workers and the surplus they, the workers, produce (this is, of course, related to the issue of lack of control by investors in co-operatives raised in the last section).

As such, the opposition by managers to workers' control will be reflected by those who actually own the company who obviously would not support a regime which will not ensure the maximum return on their investment. This would be endangered by workers' control, even though it is more efficient and productive, as control over the surplus rests with the workers and not a management elite with similar interests and aims as the owners — an egalitarian workplace would produce an egalitarian distribution of surplus, in other words (as proven by the experience of workers' co-operatives). In the words of one participant of the GE workers' control project: *"If we're all one, for manufacturing reasons, we must share in the fruits equitably, just like a co-op business."* [quoted by Noble, **Op. Cit.**, p. 295] Such a possibility is one few owners would agree to.

Thirdly, to survive within the "free" market means to concentrate on the short term. Long terms benefits, although greater, are irrelevant. A free market requires profits **now** and so a firm is under considerable pressure to maximise short-term profits by market forces. Participation requires trust, investment in people and technology and a willingness to share the increased value added that result from workers' participation with the workers who made it possible. All these factors would eat into short term profits in order to return richer rewards in the future. Encouraging participation thus tends to increase long term gains at the expense of short-term ones (to

ensure that workers do not consider participation as a con, they must experience **real** benefits in terms of power, conditions and wage rises). For firms within a free market environment, they are under pressure from share-holders and their financiers for high returns as soon as possible. If a company does not produce high dividends then it will see its stock fall as shareholders move to those companies that do. Thus the market **forces** companies to act in such ways as to maximise short term profits.

If faced with a competitor which is not making such investments (and which is investing directly into deskilling technology or intensifying work loads which lowers their costs) and so wins them market share, or a downturn in the business cycle which shrinks their profit margins and makes it difficult for the firm to meet its commitments to its financiers and workers, a company that intends to invest in people and trust will usually be rendered unable to do so. Faced with the option of empowering people in work or deskilling them and/or using the fear of unemployment to get workers to work harder and follow orders, capitalist firms have consistently chosen (and probably preferred) the latter option (as occurred in the 1970s).

Thus, workers' control is unlikely to spread through capitalism because it entails a level of working class consciousness and power that is incompatible with capitalist control: *"If the hierarchical division of labour is necessary for the extraction of surplus value, then worker preferences for jobs threatening capitalist control will not be implemented."* [Gintis, **Op. Cit.**, p. 253] The reason why it is more efficient, ironically, ensures that a capitalist economy will not select it. The "free market" will discourage empowerment and democratic workplaces, at best reducing "co-operation" and "participation" to marginal issues (and management will still have the power of veto).

The failure of moves towards democratic workplaces within capitalism are an example of that system in conflict with itself — pursuing its objectives by methods which constantly defeat those same objectives. As Paul Carden argued, the *"capitalist system can only maintain itself by trying to reduce workers into mere order-takers ... At the same time the system can only function as long as this reduction is never achieved ... [for] the system would soon grind to a halt ... [However] capitalism constantly has to **limit** this **participation** (if it didn't the workers would soon start deciding themselves and would show in practice now superfluous the ruling class really is)."* [**Modern Capitalism and Revolution**, pp. 45–46] Thus "workers' control" within a capitalist firm is a contradictory thing — too little power and it is meaningless, too much and workplace authority structures and capitalist share of, and control over, value added can be harmed. Attempts to make oppressed, exploited and alienated workers work if they were neither oppressed, exploited nor alienated will always fail.

For a firm to establish committed and participatory relations internally, it must have external supports — particularly with providers of finance (which is why co-operatives benefit from credit unions and co-operating together). The price mechanism proves self-defeating to create such supports and that is why we see "participation" more fully developed within Japanese and German firms (although it is still along way from fully democratic workplaces), who have strong, long term relationships with local banks and the state which provides them with the support required for such activities. As William Lazonick notes, Japanese industry had benefited from the state ensuring *"access to inexpensive long-term finance, the sine qua non of innovating investment strategies"* along with a host of other supports, such as protecting Japanese industry within their home markets so they could *"develop and utilise their productive resources to the point where they*

could attain competitive advantage in international competition." [**Op. Cit.**, p. 305] The German state provides its industry with much of the same support.

Therefore, "participation" within capitalist firms will have little or no tendency to spread due to the actions of market forces. In spite of such schemes almost always being more efficient, capitalism will not select them because they empower workers and make it hard for capitalists to generate and control their profits. Hence capitalism, by itself, will have no tendency to produce more libertarian organisational forms within industry. Those firms that do introduce such schemes will be the exception rather than the rule (and the schemes themselves will be marginal in most respects and subject to veto from above). For such schemes to spread, collective action is required (such as state intervention to create the right environment and support network or — from an anarchist point of view — union and community direct action).

Such schemes, as noted above, are just forms of self-exploitation, getting workers to help their robbers and so **not** a development anarchists seek to encourage. We have discussed this here just to be clear that, firstly, such forms of structural reforms are **not** self-management, as managers and owners still have the real power, and, secondly, even if such forms are somewhat liberatory and more efficient, market forces will not select them precisely **because** the latter is dependent on the former. Thirdly, they would still be organised for exploitation as workers would not be controlling all the goods they produced. As with an existing capitalist firm, part of their product would be used to pay interest, rent and profit. For anarchists *"self-management is not a new form of mediation between workers and their bosses ... [it] refers to the very process by which the workers themselves **overthrow** their managers and take on their own management and the management of production in their own workplace."* [Dolgoff, **Op. Cit.**, p. 81] Hence our support for co-operatives, unions and other self-managed structures created and organised from below by and for working class people by their own collective action.

J.5.13 What are Modern Schools?

Modern schools are alternative schools, self-managed by students, teachers and parents which reject the authoritarian schooling methods of the modern "education" system. Such schools have been a feature of the anarchist movement since the turn of the 20th century while interest in libertarian forms of education has existed in anarchist theory from the beginning. All the major anarchist thinkers, from Godwin through Proudhon, Bakunin and Kropotkin to modern activists like Colin Ward, have stressed the importance of libertarian (or rational) education, education that develops all aspects of the student (mental and physical – and so termed integral education) as well as encouraging critical thought and mental freedom. The aim of such education is ensure that the *"industrial worker, the man [sic!] of action and the intellectual would all be rolled into one."* [Proudhon, quoted by Steward Edward, **The Paris Commune**, p. 274]

Anyone involved in radical politics, constantly and consistently challenges the role of the state's institutions and their representatives within our lives. The role of bosses, the police, social workers, the secret service, managers, doctors and priests are all seen as part of a hierarchy which exists to keep us, the working class, subdued. It is relatively rare, though, for the left-wing to call into question the role of teachers. Most left wing activists and a large number of libertarians believe that education is always good.

Those involved in libertarian education believe the contrary. They believe that national education systems exist only to produce citizens who will be blindly obedient to the dictates of the state, citizens who will uphold the authority of government even when it runs counter to personal interest and reason, wage slaves who will obey the orders of their boss most of the time and consider being able to change bosses as freedom. They agree with William Godwin (one of the earliest critics of national education systems) when he wrote that *"the project of a national education ought to be discouraged on account of its obvious alliance with national government ... Government will not fail to employ it to strengthen its hand and perpetuate its institutions ... Their views as instigator of a system will not fail to be analogous to their views in their political capacity."* [quoted by Colin Ward, **Anarchy in Action**, p. 81]

With the growth of industrialism in the 19th century state schools triumphed, not through a desire to reform but as an economic necessity. Industry did not want free thinking individuals, it wanted workers, instruments of labour, and it wanted them punctual, obedient, passive and willing to accept their disadvantaged position. According to Nigel Thrift, many employers and social reformers became convinced that the earliest generations of workers were almost impossible to discipline (i.e. to get accustomed to wage labour and workplace authority). They looked to children, hoping that *"the elementary school could be used to break the labouring classes into those habits of work discipline now necessary for factory production ... Putting little children to work at school for very long hours at very dull subjects was seen as a positive virtue, for it made them habituated, not to say naturalised, to labour and fatigue."* [quoted by Juliet B. Schor, **The Overworked American**, p. 61]

Thus supporters of Modern Schools recognise that the role of education is an important one in maintaining hierarchical society — for government and other forms of hierarchy (such as wage labour) must always depend on the opinion of the governed. Francisco Ferrer (the most famous libertarian educator) argued that:

> *"Rulers have always taken care to control the education of the people. They know their power is based almost entirely on the school and they insist on retaining their monopoly. The school is an instrument of domination in the hands of the ruling class."* [quoted by Clifford Harper, **Anarchy: A Graphic Guide**, p. 100]

Little wonder, then, that Emma Goldman argued that *"modern methods of education"* have *"little regard for personal liberty and originality of thought. Uniformity and imitation is [its] motto."* The school *"is for the child what the prison is for the convict and the barracks for the solder — a place where everything is being used to break the will of the child, and then to pound, knead, and shape it into a being utterly foreign to itself."* Hence the importance of Modern Schools. It is a means of spreading libertarian education within a hierarchical society and undercut one of the key supports for that society — the education system. Instead of hierarchical education, Modern schools exist to *"develop the individual through knowledge and the free play of characteristic traits, so that [the child] may become a social being, because he had learned to know himself, to know his relation to his fellow[s]."* [**Red Emma Speaks**, pp. 141–2, p. 140 and p. 145] It would be an education for freedom, not for subservience:

> *"Should the notion of freedom but awaken in man, free men dream only of freeing themselves now and for all time: but instead, all we do is churn out learned men who*

> *adapt in the most refined manner to every circumstance and fall to the level of slavish, submissive souls. For the most part, what are our fine gentlemen brimful of intellect and culture? Sneering slavers and slaves themselves."* [Max Stirner, **No Gods, No Masters**, vol. 1, p. 12]

The Modern School Movement (also known as the Free School Movement) over the past century has been an attempt to represent part of this concern about the dangers of state and church schools and the need for libertarian education. The idea of libertarian education is that knowledge and learning should be linked to real life processes as well as personal usefulness and should not be the preserve of a special institution. Thus Modern Schools are an attempt to establish an environment for self development in an overly structured and rationalised world. An oasis from authoritarian control and as a means of passing on the knowledge to be free:

> *"The underlying principle of the Modern School is this: education is a process of drawing out, not driving in; it aims at the possibility that the child should be left free to develop spontaneously, directing his own efforts and choosing the branches of knowledge which he desires to study ... the teacher ... should be a sensitive instrument responding to the needs of the child ... a channel through which the child may attain so much of the ordered knowledge of the world as he shows himself ready to receive and assimilate."* [Goldman, **Op. Cit.**, p. 146]

The Modern School bases itself on libertarian education techniques. Libertarian education, very broadly, seeks to produce children who will demand greater personal control and choice, who think for themselves and question all forms of authority:

> *"We don't hesitate to say we want people who will continue to develop. People constantly capable of destroying and renewing their surroundings and themselves: whose intellectual independence is their supreme power, which they will yield to none; always disposed for better things, eager for the triumph of new ideas, anxious to crowd many lives into the life they have. It must be the aim of the school to show the children that there will be tyranny as long as one person depends on another."* [Ferrer, quoted by Harper, **Op. Cit.**, p. 100]

Thus the Modern School insists that the child is the centre of gravity in the education process — and that education is just that, **not** indoctrination:

> *"I want to form a school of emancipation, concerned with banning from the mind whatever divides people, the false concepts of property, country and family so as to attain the liberty and well-being which all desire. I will teach only simple truth. I will not ram dogma into their heads. I will not conceal one iota of fact. I will teach not what to think but how to think."* [Ferrer, quoted by Harper, **Op. Cit.**, pp. 99–100]

The Modern School has no rewards or punishments, exams or mark — the everyday tortures of conventional schooling. And because practical knowledge is more useful than theory, lessons were often held in factories, museums or the countryside. The school was also used by parents, and Ferrer planned a Popular University.

> *"Higher education, for the privileged few, should be for the general public, as every human has a right to know; and science, which is produced by observers and workers of all countries and ages, ought not be restricted to class."* [Ferrer, quoted by Harper, **Op. Cit.**, p. 100]

Thus Modern Schools are based on encouraging self-education in a co-operative, egalitarian and libertarian atmosphere in which the pupil (regardless of age) can develop themselves and their interests to the fullest of their abilities. In this way Modern Schools seek to create anarchists by a process of education which respects the individual and gets them to develop their own abilities in a conducive setting.

Modern Schools have been a constant aspect of the anarchist movement since the late 1890s. The movement was started in France by Louise Michel and Sebastien Faure, where Francisco Ferrer became acquainted with them. He founded his Modern School in Barcelona in 1901, and by 1905 there were 50 similar schools in Spain (many of them funded by anarchist groups and trade unions and, from 1919 onward, by the C.N.T. – in all cases the autonomy of the schools was respected). In 1909, Ferrer was falsely accused by the Spanish government of leading an insurrection and executed in spite of world-wide protest and overwhelming proof of his innocence. His execution, however, gained him and his educational ideas international recognition and inspired a Modern School progressive education movement across the globe.

However, for most anarchists, Modern Schools are not enough in themselves to produce a libertarian society. They agree with Bakunin:

> *"For individuals to be moralised and become fully human ... three things are necessary: a hygienic birth, all-round education, accompanied by an upbringing based on respect for labour, reason, equality, and freedom and a social environment wherein each human individual will enjoy full freedom and really by, **de jure** and **de facto**, the equal of every other.*
>
> *"Does this environment exist? No. Then it must be established... [otherwise] in the existing social environment ... on leaving [libertarian] schools they [the student] would enter a society governed by totally opposite principles, and, because society is always stronger than individuals, it would prevail over them ... [and] demoralise them."* [**The Basic Bakunin**, p, 174]

Because of this, Modern Schools must be part of a mass working class revolutionary movement which aims to build as many aspects of the new world as possible in the old one before, ultimately, replacing it. Otherwise they are just useful as social experiments and their impact on society marginal. Thus, for anarchists, this process of education is **part of** the class struggle, not in place of it and so *"the workers [must] do everything possible to obtain all the education they can in the material circumstances in which they currently find themselves ... [while] concentrat[ing] their efforts on the great question of their economic emancipation, the mother of all other emancipations."* [Bakunin, **Op. Cit.**, p. 175]

Before finishing, we must stress that hierarchical education (like the media), cannot remove the effects of actual life and activity in shaping/changing people and their ideas, opinions and attitudes. While education is an essential part of maintaining the status quo and accustoming people to accept hierarchy, the state and wage slavery, it cannot stop individuals from learning

from their experiences, ignoring their sense of right and wrong, recognising the injustices of the current system and the ideas that it is based upon. This means that even the best state (or private) education system will still produce rebels – for the **experience** of wage slavery and state oppression (and, most importantly, **struggle**) is shattering to the **ideology** spoon-fed children during their "education" and reinforced by the media.

For more information on Modern Schools see Paul Avrich's **The Modern School Movement: Anarchism and education in the United States**, Emma Goldman's essays *"Francisco Ferrer and the Modern School"* (in **Anarchism and Other Essays**) and *"The Social Importance of the Modern School"* (in **Red Emma Speaks**) as well as A.S Neil's **Summerhill**. For a good introduction to anarchist viewpoints on education see *"Kropotkin and technical education: an anarchist voice"* by Michael Smith (in **For Anarchism**, David Goodway (ed.),) and Michael Bakunin's *"All-Round Education"* (in **The Basic Bakunin**). For an excellent summary of the advantages and benefits of co-operative learning, see Alfie Kohn's **No Contest**.

J.5.14 What is Libertarian Municipalism?

As we noted in section J.2, most anarchists reject participating in electoral politics. A notable exception was Murray Bookchin who not only proposed voting but also a non-parliamentary electoral strategy for anarchists. He repeated this proposal in many of his later works, such as **From Urbanisation to Cities**, and has made it — at least in the USA — one of the many alternatives anarchists are involved in.

According to Bookchin, *"the proletariat, as do all oppressed sectors of society, comes to life when it sheds its industrial habits in the free and spontaneous activity of* ***communising,*** *or taking part in the political life of the community."* In other words, Bookchin thought that democratisation of local communities may be as strategically important, or perhaps more important, to anarchists than workplace struggles. Since local politics is humanly scaled, Bookchin argued that it can be participatory rather than parliamentary. Or, as he put it, the *"anarchic ideal of decentralised, stateless, collectively managed, and directly democratic communities — of confederated municipalities or 'communes' — speaks almost intuitively, and in the best works of Proudhon and Kropotkin, consciously, to the transforming role of libertarian municipalism as the framework of a liberatory society." "Theses on Libertarian Municipalism"*, pp. 9–22, **The Anarchist Papers**, Dimitrios I. Roussopoulos (ed.),p. 10] He also pointed out that, historically, the city has been the principle countervailing force to imperial and national states, haunting them as a potential challenge to centralised power and continuing to do so today, as can be seen in the conflicts between national government and municipalities in many countries.

Despite the libertarian potential of urban politics, "urbanisation" — the growth of the modern megalopolis as a vast wasteland of suburbs, shopping malls, industrial parks, and slums that foster political apathy and isolation in realms of alienated production and private consumption – is antithetical to the continued existence of those aspects of the city that might serve as the framework for a libertarian municipalism: *"When urbanisation will have effaced city life so completely that the city no longer has its own identity, culture, and spaces for consociation, the bases for democracy — in whatever way the word in defined — will have disappeared and the question of revolutionary forms will be a shadow game of abstractions."* Despite this danger Bookchin argued that a libertarian politics of local government is still possible, provided anarchists get our

act together: *"The Commune still lies buried in the city council; the sections still lie buried in the neighbourhood; the town meeting still lies buried in the township; confederal forms of municipal association still lie buried in regional networks of towns and cities."* [**Op. Cit.**, p. 16 and p. 21]

What would anarchists do electorally at the local level? Bookchin proposed that libertarians stand in local elections in order to change city and town charters to make them participatory: *"An organic politics based on such radical participatory forms of civic association does not exclude the right of anarchists to alter city and town charters such that they validate the existence of directly democratic institutions. And if this kind of activity brings anarchists into city councils, there is no reason why such a politics should be construed as parliamentary, particularly if it is confined to the civic level and is consciously posed against the state."* [**Op. Cit.**, p. 21]

In short, Libertarian Muncipalism *"depends upon libertarian leftists running candidates at the local level, calling for the division of municipalities into wards, where popular assemblies can be created that bring people into full and direct participation in political life ... municipalities would [then] confederate into a dual power to oppose the nation-state and ultimately dispense with it and with the economic forces that underpin statism as such."* [**Democracy and Nature** no. 9, p. 158] This would be part of a social wide transformation, whose *"[m]inimal steps ... include initiating Left Green municipalist movements that propose neighbourhood and town assemblies — even if they have only moral functions at first — and electing town and city councillors that advance the cause of these assemblies and other popular institutions. These minimal steps can lead step-by-step to the formation of confederal bodies ... Civic banks to fund municipal enterprises and land purchases; the fostering of new ecologically-orientated enterprises that are owned by the community."* Thus Bookchin saw Libertarian Muncipalism as a process by which the state can be undermined by using elections as the means of creating popular assemblies. Part of this would be the *"municipalisation of property"* which would *"bring the economy **as a whole** into the orbit of the public sphere, where economic policy could be formulated by the **entire** community."* [**From Urbanisation to Cities**, p. 266 and p. 235]

In evaluating Bookchin's proposal, several points come to mind.

Firstly, it is clear that Libertarian Muncipalism's arguments in favour of community assemblies is important and cannot be ignored. Bookchin was right to note that, in the past, many anarchists placed far too much stress on workplace struggles and workers' councils as the framework of a free society. Many of the really important issues that affect us cannot be reduced to workplace organisations, which by their very nature disenfranchise those who do not work in industry (such as housewives, the old, and so on). And, of course, there is far more to life than work and so any future society organised purely around workplace organisations is reproducing capitalism's insane glorification of economic activity, at least to some degree. So, in this sense, Libertarian Muncipalism has a very valid point — a free society will be created and maintained within the community as well as in the workplace. However, this perspective was hardly alien to such anarchist thinkers as Proudhon, Bakunin and Kropotkin who all placed communes at the centre of their vision of a free society.

Secondly, Bookchin and other Libertarian Muncipalists are correct to argue that anarchists should work in their local communities. Many anarchists are doing just that and are being very successful as well. However, most anarchists reject the idea of a *"confederal muncipalist movement run[ning] candidates for municipal councils with demands for the institution of public assemblies"* as viable means of *"struggle toward creating new civic institutions out of old ones (or replacing the old ones altogether)."* [Bookchin, **Op. Cit.**, p. 229 and p. 267]

The most serious objection to this has to do with whether politics in most cities has already become too centralised, bureaucratic, inhumanly scaled, and dominated by capitalist interests to have any possibility of being taken over by anarchists running on platforms of participatory democratisation. Merely to pose the question seems enough to answer it. There is no such possibility in the vast majority of cities, and hence it would be a waste of time and energy for anarchists to support libertarian municipalist candidates in local elections — time and energy that could be more profitably spent in direct action. If the central governments are too bureaucratic and unresponsive to be used by Libertarian Municipalists, the same can be said of local ones too — particularly as the local state has become increasingly controlled by the central authorities (in the UK, for example, the Conservative government of the 1980s successfully centralised power away from local councils to undercut their ability to resist the imposition of its neo-liberal policies).

The counter-argument to this is that even if there is no chance of such candidates being elected, their standing for elections would serve a valuable educational function. The answer to this is: perhaps, but would it be more valuable than direct action? Would its educational value, if any, outweigh the disadvantages of electioneering discussed in section J.2? Given the ability of major media to marginalise alternative candidates, we doubt that such campaigns would have enough educational value to outweigh these disadvantages. Moreover, being an anarchist does not make one immune to the corrupting effects of electioneering. History is littered with radical, politically aware movements using elections and ending up becoming part of the system they aimed to transform. Most anarchists doubt that Libertarian Muncipalism will be any different — after all, it is the circumstances the parties find themselves in which are decisive, not the theory they hold. Why would libertarians be immune to this but not Marxists or Greens?

Lastly, most anarchists question the whole process on which Libertarian Muncipalism bases itself on. The idea of communes is a key one of anarchism and so strategies to create them in the here and now are important. However, to think that using alienated, representative institutions to abolish these institutions is wrong. As Italian activists who organised a neighbourhood assembly by non-electoral means argue *"[t]o accept power and to say that the others were acting in bad faith and that we would be better, would **force** non-anarchists towards direct democracy. We reject this logic and believe that organisations must come from the grassroots."* [*"Community Organising in Southern Italy"*, pp. 16–19, **Black Flag** no. 210, p. 18]

Thus Libertarian Municipalism reverses the process by which community assemblies will be created. Instead of anarchists using elections to build such bodies, they must work in their communities directly to create them (see section J.5.1 for more details). Using the catalyst of specific issues of local interest, anarchists could propose the creation of a community assembly to discuss the issues in question and organise action to solve them. Rather than stand in local elections, anarchists should encourage people to create these institutions themselves and empower themselves by collective self-activity. As Kropotkin argued, *"Laws can only **follow** the accomplished facts; and even if they do honestly follow them — which is usually **not** the case — a law remains a dead letter so long as there are not on the spot the living forces required for making the **tendencies** expressed in the law an accomplished **fact**."* [**Anarchism**, p. 171] Most anarchists, therefore, think it is far more important to create the *"living forces"* within our communities directly than waste energy in electioneering and the passing of laws creating or "legalising" community assemblies. In other words, community assemblies can only be created from the bottom up, by non-electoral means, a process which Libertarian Muncipalism confuses with electioneering.

So, while Libertarian Muncipalism **does** raise many important issues and correctly stresses the importance of community activity and self-management, its emphasis on electoral activity undercuts its liberatory promise. For most anarchists, community assemblies can only be created from below, by direct action, and (because of its electoral strategy) a Libertarian Municipalist movement will end up being transformed into a copy of the system it aims to abolish.

J.5.15 What attitude do anarchists take to the welfare state?

The period of neo-liberalism since the 1980s has seen a rollback of the state within society by the right-wing in the name of "freedom," "individual responsibility" and "efficiency." The position of anarchists to this process is mixed. On the one hand, we are all in favour of reducing the size of the state and increasing individual responsibility and freedom but, on the other, we are well aware that this rollback is part of an attack on the working class and tends to increase the power of the capitalists over us as the state's (direct) influence is reduced. Thus anarchists appear to be on the horns of a dilemma — or, at least, apparently.

So what attitude **do** anarchists take to the welfare state and attacks on it?

First we must note that this attack on "welfare" is somewhat selective. While using the rhetoric of "self-reliance" and "individualism," the practitioners of these "tough love" programmes have made sure that the major corporations continue to get state hand-outs and aid while attacking social welfare. In other words, the current attack on the welfare state is an attempt to impose market discipline on the working class while increasing state protection for the ruling class. Therefore, most anarchists have no problem defending social welfare programmes as these can be considered as only fair considering the aid the capitalist class has always received from the state (both direct subsidies and protection and indirect support via laws that protect property and so on). And, for all their talk of increasing individual choice, the right-wing remain silent about the lack of choice and individual freedom during working hours within capitalism.

Secondly, most of the right-wing inspired attacks on the welfare state are inaccurate. For example, Noam Chomsky notes that the *"correlation between welfare payments and family life is real, though it is the reverse of what is claimed [by the right]. As support for the poor has declined, unwed birth-rates, which had risen steadily from the 1940s through the mid-1970s, markedly increased. 'Over the last three decades, the rate of poverty among children almost perfectly correlates with the birth-rates among teenage mothers a decade later,' Mike Males points out: 'That is, child poverty seems to lead to teenage childbearing, not the other way around.'"* [*"Rollback III"*, **Z Magazine**, April, 1995] The same charge of inaccurate scare-mongering can be laid at the claims about the evil effects of welfare which the rich and large corporations wish to save others (but not themselves) from. Such altruism is truly heart warming. For those in the United States or familiar with it, the same can be said of the hysterical attacks on "socialised medicine" and health-care reform funded by insurance companies and parroted by right-wing ideologues and politicians.

Thirdly, anarchists are just as opposed to capitalism as they are the state. This means that privatising state functions is no more libertarian than nationalising them. In fact, less so as such a process **reduces** the limited public say state control implies in favour of more private tyranny and wage-labour. As such, attempts to erode the welfare state without other, pro-working class, social reforms violates the anti-capitalist part of anarchism. Similarly, the introduction of a state supported welfare system rather than a for-profit capitalist run system (as in America) would

hardly be considered any more a violation of libertarian principles as the reverse happening. In terms of reducing human suffering, though, most anarchists would oppose the latter and be in favour of the former while aiming to create a third (self-managed) alternative.

Fourthly, we must note that while most anarchists **are** in favour of collective self-help and welfare, we are opposed to the state. Part of the alternatives anarchists try and create are self-managed and community welfare projects (see next section). Moreover, in the past, anarchists and syndicalists were at the forefront in opposing state welfare schemes. This was because they were introduced **not** by socialists but by liberals and other supporters of capitalism to undercut support for radical alternatives and to aid long term economic development by creating the educated and healthy population required to use advanced technology and fight wars. Thus we find that:

> *"Liberal social welfare legislation ... were seen by many [British syndicalists] not as genuine welfare reforms, but as mechanisms of social control. Syndicalists took a leading part in resisting such legislation on the grounds that it would increase capitalist discipline over labour, thereby undermining working class independence and self-reliance."* [Bob Holton, **British Syndicalism: 1900–1914**, p. 137]

Anarchists view the welfare state much as some feminists do. While they note, to quote Carole Pateman, the *"patriarchal structure of the welfare state"* they are also aware that it has *"also brought challenges to patriarchal power and helped provide a basis for women's autonomous citizenship."* She goes on to note that *"for women to look at the welfare state is merely to exchange dependence on individual men for dependence on the state. The power and capriciousness of husbands is replaced by the arbitrariness, bureaucracy and power of the state, the very state that has upheld patriarchal power."* This *"will not in itself do anything to challenge patriarchal power relations."* [**The Disorder of Women**, p. 195 and p. 200]

Thus while the welfare state does give working people more options than having to take **any** job or put up with **any** conditions, this relative independence from the market and individual capitalists has came at the price of dependence on the state — the very institution that protects and supports capitalism in the first place. And has we have became painfully aware in recent years, it is the ruling class who has most influence in the state — and so, when it comes to deciding what state budgets to cut, social welfare ones are first in line. Given that such programmes are controlled by the state, **not** working class people, such an outcome is hardly surprising. Not only this, we also find that state control reproduces the same hierarchical structures that the capitalist firm creates.

Unsurprisingly, anarchists have no great love of such state welfare schemes and desire their replacement by self-managed alternatives. For example, taking municipal housing, Colin Ward writes:

> *"The municipal tenant is trapped in a syndrome of dependence and resentment, which is an accurate reflection of his housing situation. People care about what is theirs, what they can modify, alter, adapt to changing needs and improve themselves. They must have a direct responsibility for it ... The tenant take-over of the municipal estate is one of those obviously sensible ideas which is dormant because our approach to municipal affairs is still stuck in the groves of nineteenth-century paternalism."* [**Anarchy in Action**, p. 73]

Looking at state supported education, Ward argues that the *"universal education system turns out to be yet another way in which the poor subsidise the rich."* Which is the least of its problems, for *"it is in the **nature** of public authorities to run coercive and hierarchical institutions whose ultimate function is to perpetuate social inequality and to brainwash the young into the acceptance of their particular slot in the organised system."* [**Op. Cit.**, p. 83 and p. 81] The role of state education as a means of systematically indoctrinating the working class is reflected in William Lazonick words:

> *"The Education Act of 1870 ... [gave the] state ... the facilities ... to make education compulsory for all children from the age of five to the age of ten. It had also erected a powerful system of ideological control over the next generation of workers ... [It] was to function as a prime ideological mechanism in the attempt by the capitalist class through the medium of the state, to continually **reproduce** a labour force which would passively accept [the] subjection [of labour to the domination of capital]. At the same time it had set up a public institution which could potentially be used by the working class for just the contrary purpose."* [*"The Subjection of Labour to Capital: The rise of the Capitalist System"*, **Radical Political Economy** Vol. 2, p. 363]

Lazonick, as did Pateman, indicates the contradictory nature of welfare provisions within capitalism. On the one hand, they are introduced to help control the working class (and to improve long term economic development). On the other hand, these provisions can be used by working class people as weapons against capitalism and give themselves more options than "work or starve" (the fact that the attacks on welfare in the UK during the 1990s — called, ironically enough, **welfare to work** — involves losing benefits if you refuse a job is not a surprising development). Thus we find that welfare acts as a kind of floor under wages. In the US, the two have followed a common trajectory (rising together and falling together). And it is **this**, the potential benefits welfare can have for working people, that is the **real** cause for the current capitalist attacks upon it. As Noam Chomsky summarises:

> *"State authority is now under severe attack in the more democratic societies, but not because it conflicts with the libertarian vision. Rather the opposite: because it offers (weak) protection to some aspects of that vision. Governments have a fatal flaw: unlike the private tyrannies, the institutions of state power and authority offer to the public an opportunity to play some role, however limited, in managing their own affairs."* [**Chomsky on Anarchism**, p. 193]

Because of this contradictory nature of welfare, we find anarchists like Noam Chomsky arguing that (using an expression popularised by South American rural workers unions) *"we should 'expand the floor of the cage.' We know we're in a cage. We know we're trapped. We're going to expand the floor, meaning we will extend to the limits what the cage will allow. And we intend to destroy the cage. But not by attacking the cage when we're vulnerable, so they'll murder us ... You have to protect the cage when it's under attack from even worse predators from outside, like private power. And you have to expand the floor of the cage, recognising that it's a cage. These are all preliminaries to dismantling it. Unless people are willing to tolerate that level of complexity, they're going to be of no use to people who are suffering and who need help, or, for that matter, to themselves."* [**Expanding the Floor of the Cage**]

Thus, even though we know the welfare state is a cage and part of an instrument of class power, we have to defend it from a worse possibility – namely, the state as "pure" defender of capitalism with working people with few or no rights. At least the welfare state does have a contradictory nature, the tensions of which can be used to increase our options. And one of these options is its abolition **from below**!

For example, with regards to municipal housing, anarchists will be the first to agree that it is paternalistic, bureaucratic and hardly a wonderful living experience. However, in stark contrast with the right who desire to privatise such estates, anarchists think that *"tenants control"* is the best solution as it gives us the benefits of individual ownership **along with** community (and so without the negative points of property, such as social atomisation). The demand for *"tenant control"* must come from below, by the *"collective resistance"* of the tenants themselves, perhaps as a result of struggles against *"continuous rent increases"* leading to *"the demand ... for a change in the status of the tenant."* Such a *"tenant take-over of the municipal estate is one of those sensible ideas which is dormant because our approach to municipal affairs is still stuck in the grooves of nineteenth century paternalism."* [Ward, **Op. Cit.**, p. 73]

And it is here that we find the ultimate irony of the right-wing, "free market" attempts to abolish the welfare state — neo-liberalism wants to end welfare **from above,** by means of the state (which is the instigator of this individualistic "reform"). It does not seek the end of dependency by self-liberation, but the shifting of dependency from state to charity and the market. In contrast, anarchists desire to abolish welfare from **below**. This the libertarian attitude to those government policies which actually do help people. While anarchists would *"hesitate to condemn those measures taken by governments which obviously benefited the people, unless we saw the immediate possibility of people carrying them out for themselves. This would not inhibit us from declaring at the same time that what initiatives governments take would be more successfully taken by the people themselves if they put their minds to the same problems ... to build up a hospital service or a transport system, for instance, from local needs into a national organisation, by agreement and consent at all levels is surely more economical as well as efficient than one which is conceived at top level [by the state] ... where Treasury, political and other pressures, not necessarily connected with what we would describe as **needs**, influence the shaping of policies."* So *"as long as we have capitalism and government the job of anarchists is to fight both, and at the same time encourage people to take what steps they can to run their own lives."* [*"Anarchists and Voting"*, pp. 176–87, **The Raven**, No. 14, p. 179]

Ultimately, unlike the state socialist/liberal left, anarchists reject the idea that the cause of socialism, of a free society, can be helped by using the state. Like the right, the left see political action in terms of the state. All its favourite policies have been statist — state intervention in the economy, nationalisation, state welfare, state education and so on. Whatever the problem, the left see the solution as lying in the extension of the power of the state. They continually push people in relying on **others** to solve their problems for them. Moreover, such state-based "aid" does not get to the core of the problem. All it does is fight the symptoms of capitalism and statism without attacking their root causes — the system itself.

Invariably, this support for the state is a move away from working class people, from trusting and empowering them to sort out their own problems. Indeed, the left seem to forget that the state exists to defend the collective interests of the ruling class and so could hardly be considered a neutral body. And, worst of all, they have presented the right with the opportunity of stating that freedom from the state means the same thing as the freedom of the market (so ignoring

the awkward fact that capitalism is based upon domination — wage labour — and needs many repressive measures in order to exist and survive). Anarchists are of the opinion that changing the boss for the state (or vice versa) is only a step sideways, **not** forward! After all, it is **not** working people who control how the welfare state is run, it is politicians, "experts", bureaucrats and managers who do so (*"Welfare is administered by a top-heavy governmental machine which ensures that when economies in public expenditure are imposed by its political masters, they are made in reducing the service to the public, not by reducing the cost of administration."* [Ward, **Op. Cit.** p. 10]). Little wonder we have seen elements of the welfare state used as a weapon in the class war **against** those in struggle (for example, in Britain during the miners strike in 1980s the Conservative Government made it illegal to claim benefits while on strike, so reducing the funds available to workers in struggle and helping bosses force strikers back to work faster).

Anarchists consider it far better to encourage those who suffer injustice to organise themselves and in that way they can change what **they** think is actually wrong, as opposed to what politicians and "experts" claim is wrong. If sometimes part of this struggle involves protecting aspects of the welfare state (*"expanding the floor of the cage"*) so be it — but we will never stop there and will use such struggles as a stepping stone in abolishing the welfare state **from below** by creating self-managed, working class, alternatives. As part of this process anarchists also seek to **transform** those aspects of the welfare state they may be trying to "protect". They do not defend an institution which **is** paternalistic, bureaucratic and unresponsive. For example, if we are involved in trying to stop a local state-run hospital or school from closing, anarchists would try to raise the issue of self-management and local community control into the struggle in the hope of going beyond the status quo.

In this, we follow the suggestion made by Proudhon that rather than *"fatten certain contractors,"* libertarians should be aiming to create *"a new kind of property"* by *"granting the privilege of running"* public utilities, industries and services, *"under fixed conditions, to responsible companies, not of capitalists, but of workmen."* Municipalities would take the initiative in setting up public works but actual control would rest with workers' co-operatives for *"it becomes necessary for the workers to form themselves into democratic societies, with equal conditions for all members, on pain of a relapse into feudalism."* [**General Idea of the Revolution**, p. 151 and p. 276–7] Thus, for example, rather than nationalise or privatise railways, they should be handed over workers' co-operatives to run. The same with welfare services and such like: *"the abolition of the State is the last term of a series, which consists of an incessant diminution, by political and administrative simplification the number of public functionaries and to put into the care of responsible workers societies the works and services confided to the state."* [Proudhon, **Carnets**, vol. 3, p. 293]

Not only does this mean that we can get accustomed to managing our own affairs collectively, it also means that we can ensure that whatever "safety-nets" we have do what we want and not what capital wants. In the end, what we create and run by ourselves will be more responsive to our needs, and the needs of the class struggle, than reformist aspects of the capitalist state. This much, we think, is obvious. And it is ironic to see elements of the "radical" and "revolutionary" left argue against this working class self-help (and so ignore the **long** tradition of such activity in working class movements) and instead select for the agent of their protection a state run by and for capitalists!

There are two traditions of welfare within society, one of *"fraternal and autonomous associations springing from below, the other that of authoritarian institutions directed from above."* [Ward, **Op. Cit.**, p. 123] While sometimes anarchists are forced to defend the latter against the greater

evil of "free market" capitalism, we never forget the importance of creating and strengthening the former. As Chomsky suggests, libertarians have to *"defend some state institutions from the attack against them [by private power], while trying at the same time to pry them open to meaningful public participation — and ultimately, to dismantle them in a much more free society, if the appropriate circumstances can be achieved."* [**Chomsky on Anarchism**, p. 194] A point we will discuss more in the next section when we highlight the historical examples of self-managed communal welfare and self-help organisations.

J.5.16 Are there any historical examples of collective self-help?

Yes, in all societies we see working class people joining together to practice mutual aid and solidarity. This takes many forms, such as trade and industrial unions, credit unions and friendly societies, co-operatives and so on, but the natural response of working class people to the injustices of capitalism was to practice collective "self-help" in order to improve their lives and protect their friends, communities and fellow workers.

There are, as Colin Ward stresses, *"in fact several quite separate traditions of social welfare: the product of totally different attitudes to social needs ... One of these traditions is that of a service given grudgingly and punitively by authority, another is the expression of social responsibility, or of mutual aid and self-help. One is embodied in **institutions**, the other in **associations**."* [**Anarchy in Action**, p. 112] Anarchists, needless to say, favour the latter. Unfortunately, this *"great tradition of working class self-help and mutual aid was written off, not just as irrelevant, but as an actual impediment, by the political and professional architects of the welfare state ... The contribution that the recipients had to make to all this theoretical bounty was ignored as a mere embarrassment — apart, of course, for paying for it ... The socialist ideal was rewritten as a world in which everyone was entitled to everything, but where nobody except the providers had any actual say about anything. We have been learning for years, in the anti-welfare backlash, what a vulnerable utopia that was."* This self-managed working class self-help was the *"welfare road we failed to take."* [Ward, **Social Policy: an anarchist response**, p. 11–2 and p. 9]

Anarchists would argue that self-help is the natural side effect of freedom. There is no possibility of radical social change unless people are free to decide for themselves what their problems are, where their interests lie and are free to organise for themselves what they want to do about them. Self-help is a natural expression of people taking control of their own lives and acting for themselves. Anyone who urges state action on behalf of people is no socialist and any one arguing against self-help as "bourgeois" is no anti-capitalist. It is somewhat ironic that it is the right who have monopolised the rhetoric of "self-help" and turned it into yet another ideological weapon against working class direct action and self-liberation (although, saying that, the right generally likes individualised self-help — given a strike, squatting or any other form of **collective** self-help movement they will be the first to denounce it):

> *"The political Left has, over the years, committed an enormous psychological error in allowing this kind of language ["self-help", "mutual aid", "standing on your own two feet" and so on] to be appropriated by the political Right. If you look at the exhibitions of trade union banners from the last century, you will see slogans like Self Help embroidered all over them. It was those clever Fabians and academic Marxists who ridiculed out of existence the values by which ordinary citizens govern their own lives*

> *in favour of bureaucratic paternalising, leaving those values around to be picked up by their political opponents."* [Ward, **Talking Houses**, p. 58]

We cannot be expected to provide an extensive list of working class collective self-help and social welfare activity here, all we can do is present an overview of collective welfare in action (for a discussion of working class self-help and co-operation through the centuries we can suggest no better source than Kropotkin's **Mutual Aid**). In the case of Britain, we find that the *"newly created working class built up from nothing a vast network of social and economic initiatives based on self-help and mutual aid. The list is endless: friendly societies, building societies, sick clubs, coffin clubs, clothing clubs, up to enormous federated enterprises like the trade union movement and the Co-operative movement."* [Ward, **Social Policy**, pp. 10–1] The historian E.P. Thompson confirmed this picture of a wide network of working class self-help organisations. *"Small tradesmen, artisans, labourers"* he summarised, *"all sought to insure themselves against sickness, unemployment, or funeral expenses through membership of ... friendly societies."* These were *"authentic evidence of independent working-class culture and institutions ... out of which ... trade unions grew, and in which trade union officers were trained."* Friendly societies *"did not 'proceed from' an idea: both the ideas and institutions arose from a certain common experience ... In the simple cellular structure of the friendly society, with its workaday ethos of mutual aid, we see many features which were reproduced in more sophisticated and complex form in trade unions, co-operatives, Hampden clubs, Political Unions, and Chartist lodges ... Every kind of witness in the first half of the nineteenth century — clergymen, factory inspectors, Radical publicists — remarked upon the extent of mutual aid in the poorest districts. In times of emergency, unemployment, strikes, sickness, childbirth, then it was the poor who 'helped every one his neighbour.'"* [**The Making of the English Working Class**, p. 458, pp. 460–1 and p. 462] Sam Dolgoff gave an excellent summary of similar self-help activities by the American working class:

> *"Long before the labour movement got corrupted and the state stepped in, the workers organised a network of co-operative institutions of all kinds: schools, summer camps for children and adults, homes for the aged, health and cultural centres, credit associations, fire, life, and health insurance, technical education, housing, etc."* [**The American Labour Movement: A New Beginning**, p. 74]

Dolgoff, like all anarchists, urged workers to *"finance the establishment of independent co-operative societies of all types, which will respond adequately to their needs"* and that such a movement *"could constitute a realistic alternative to the horrendous abuses of the 'establishment' at a fraction of the cost."* [**Op. Cit.**, p. 74 and pp. 74–75] In this way a network of self-managed, communal, welfare associations and co-operatives could be built — paid for, run by and run for working class people. Such a system *"would not ... become a plaything of central government financial policy."* [Ward, **Op. Cit.**, p. 16] Such a network could be initially build upon, and be an aspect of, the struggles of both workers in and claimants, patients, tenants, and other users of the current welfare state. So a *"multiplicity of mutual aid organisations among claimants, patients, victims, represents the most potent lever for change in transforming the welfare state into a genuine welfare society, in turning community care into a caring community."* [Ward, **Anarchy in Action**, p. 125]

The creation of such a co-operative, community-based, welfare system will not occur over night, nor will it be easy. But it **is** possible, as history shows. It will, of course, have its problems,

but as Colin Ward notes, *"the standard argument against a localist and decentralised point of view, is that of universalism: an equal service to all citizens, which it is thought that central control achieves. The short answer to this is that it doesn't!"* [Colin Ward, **Social Policy**, p. 16] He notes that richer areas generally get a better service from the welfare state than poorer ones, thus violating the claims of equal service. A centralised system (be it state or private) will most likely allocate resources which reflect the interests and (lack of) knowledge of bureaucrats and experts, **not** on where they are best used or the needs of the users.

Anarchists are sure that a **confederal** network of mutual aid organisations and co-operatives, based upon local input and control, can overcome problems of localism far better than a centralised one — which, due to its lack of local input and participation will more likely **encourage** parochialism and indifference than a wider vision and solidarity. If you have no real say in what affects you, why should you be concerned with what affects others? This is unsurprising, for what else is global action other than the product of thousands of local actions? Solidarity within our class is the flower that grows from the soil of our local self-activity, direct action and self-organisation. Unless we act and organise locally, any wider organisation and action will be hollow. Thus **local** organisation and empowerment is essential to create and maintain wider organisations and mutual aid.

To take another example of the benefits of a self-managed welfare system, we find that it *"was a continual complaint of the authorities"* in the late eighteenth and early nineteenth century *"that friendly societies allowed members to withdraw funds when on strike."* [Thompson, **Op. Cit.**, p. 461f] The same complaints were voiced in Britain about the welfare state allowing strikers to claim benefit will on strike. The Conservative Government of the 1980s changed that by passing a law barring those in industrial dispute to claim benefits — and so removing a potential support for those in struggle. Such a restriction would have been far harder (if not impossible) to impose on a network of self-managed mutual aid co-operatives. Such institutions would have not become the plaything of central government financial policy as the welfare state and the taxes working class people have to pay have become.

All this means that anarchists reject the phoney choice between private and state capitalism we are usually offered. We reject both privatisation **and** nationalisation, both right and left wings (of capitalism). Neither state nor private health care are user-controlled – one is subject to the requirements of politics and the other places profits before people. As we have discussed the welfare state in the last section, it is worthwhile to quickly discuss privatised welfare and why anarchists reject this option even more than state welfare.

Firstly, all forms of private healthcare/welfare have to pay dividends to capitalists, fund advertising, reduce costs to maximise profits by standardising the "caring" process — i.e. McDonaldisation — and so on, all of which inflates prices and produces substandard service across the industry as a whole. According to Alfie Kohn, *"[m]ore hospitals and clinics are being run by for-profit corporations; many institutions, forced to battle for 'customers,' seem to value a skilled director of marketing more highly than a skilled caregiver. As in any other economic sector, the race for profits translates into pressure to reduce costs, and the easiest way to do it here is to cut back on services to unprofitable patients, that is, those who are more sick than rich ... The result: hospital costs are actually **higher** in areas where there is more competition for patients."* [**No Contest**, p. 240] In the UK, attempts to introduce "market forces" into the National Health Service has also lead to increased costs as well as inflating the size and cost of its bureaucracy.

Looking at Chile, hyped by those who desire to privatise Social Security, we find similar disappointing results (well, disappointing for the working class at least, as we will see). Seemingly, Chile's private system has achieved impressive average returns on investment. However, once commissions are factored in, the real return for individual workers is considerably lower. For example, although the average rate of return on funds from 1982 through 1986 was 15.9 percent, the real return after commissions was a mere 0.3 percent! Between 1991 and 1995, the pre-commission return was 12.9 percent, but with commissions it fell to 2.1 percent. According to Doug Henwood, the *"competing mutual funds have vast sales forces, and the portfolio managers all have their vast fees. All in all, administrative costs ... are almost 30% of revenues, compared to well under 1% for the U.S. Social Security system."* [**Wall Street**, p. 305] In addition, the private pension fund market is dominated by a handful of companies.

Even if commission costs were lowered (by regulation), the impressive returns on capital seen between 1982 and 1995 (when the real annual return on investment averaged 12.7 percent) are likely not to be sustained. These average returns coincided with boom years in Chile, complemented by government's high borrowing costs. Because of the debt crisis of the 1980s, Latin governments were paying double-digit real interest rates on their bonds — the main investment vehicle of social security funds. In effect, government was subsidising the "private" system by paying astronomical rates on government bonds. Another failing of the system is that only a little over half of Chilean workers make regular social security contributions. While many believe that a private system would reduce evasion because workers have a greater incentive to contribute to their own personal retirement accounts, 43.4 percent of those affiliated with the new system in June of 1995 did not contribute regularly. [Stephen J. Kay, *"The Chile Con: Privatizing Social Security in South America,"* **The American Prospect** no. 33, pp. 48–52] All in all, privatisation seems to be beneficial only to middle-men and capitalists, if Chile is anything to go by. As Henwood argues, while the *"infusion of money"* resulting from privatising social security *"has done wonders for the Chilean stock market" "projections are that as many as half of future retirees will draw a poverty-level pension."* [Henwood, **Op. Cit.**, pp. 304–5]

Suffice to say, all you really need to know about privatisation of pensions and healthcare in Chile is that the military dictatorship which imposed it excluded the military from its dubious benefits. Such altruism is truly touching.

So, anarchists reject private welfare as a con (and an even bigger one than state welfare). As Colin Ward suggests, it *"is the question of how we get back on the mutual aid road **instead of** commercial health insurance and private pension schemes."* [**Social Policy**, p. 17] As anarchists are both anti-state and anti-capitalist, swapping private power for the state power is, at best, a step sideways. Usually, it is worse for capitalist companies are accountable only to their owners and the profit criteria. This means, as Chomsky suggests, *"protecting the state sector today is a step towards abolishing the state because it maintains a public arena in which people can participate and organise, and affect policy, and so on, though in limited ways. If that's removed, we'd go back to a ... private dictatorship, but that's hardly a step towards liberation."* [**Chomsky on Anarchism**, p. 213] Instead anarchists try to create **real** alternatives to hierarchy, be it state or capitalist, in the here and now which reflect our ideas of a free and just society. For, when it boils down to it, freedom cannot be given, only taken and this process of **self**-liberation is reflected in the alternatives we build to help win the class war.

The struggle **against** capitalism and statism requires that we build **for** the future and, moreover, we should remember that *"he who has no confidence in the creative capacity of the masses*

and in their capability to revolt doesn't belong in the revolutionary movement. He should go to a monastery and get on his knees and start praying. Because he is no revolutionist. He is a son of a bitch." [Sam Dolgoff, quoted by Ulrike Heider, **Anarchism: left, right, and green**, p. 12]

J.6 What methods of child rearing do anarchists advocate?

Anarchists have long been aware of the importance of child rearing and education. We are aware that child rearing should aim to develop *"a well-rounded individuality"* and not *"a patient work slave, professional automaton, tax-paying citizen, or righteous moralist."* In this section of the FAQ we will discuss anarchist approaches to child rearing bearing in mind *"that it is through the channel of the child that the development of the mature man [or woman] must go, and that the present ideas of ... educating or training ... are such as to stifle the natural growth of the child."* [Emma Goldman, **Red Emma Speaks**, p. 131 and p. 130]

If one accepts the thesis that the authoritarian family is the breeding ground for both individual psychological problems and political reaction, it follows that anarchists should try to develop ways of raising children that will not psychologically cripple them but instead enable them to accept freedom and responsibility while developing natural self-regulation. We will refer to children raised in such a way as ***"free children."***

Work in this field is still in its infancy (no pun intended). Wilhelm Reich was the main pioneer in this field (an excellent, short introduction to his ideas can be found in Maurice Brinton's **The Irrational in Politics**). In **Children of the Future**, Reich made numerous suggestions, based on his research and clinical experience, for parents, psychologists, and educators striving to develop libertarian methods of child rearing (although he did not use the term "libertarian").

In this and the following sections we will summarise Reich's main ideas as well as those of other libertarian psychologists and educators who have been influenced by him, such as A.S. Neill and Alexander Lowen. We will examine the theoretical principles involved in raising free children and will illustrate their practical application with concrete examples. Finally, we will examine the anarchist approach to the problems of adolescence.

Such an approach to child rearing is based upon the insight that children *"do not constitute anyone's property: they are neither the property of the parents nor even of society. They belong only to their own future freedom."* [Michael Bakunin, **The Political Philosophy of Bakunin**, p. 327] As such, what happens to a child when they are growing up **shapes** the person they become and the society they live in. The key question for people interested in freedom is whether *"the child [is] to be considered as an individuality, or as an object to be moulded according to the whims and fancies of those about it?"* [Emma Goldman, **Op. Cit.**, p. 130] Libertarian child rearing is the means by which the individuality of the child is respected and developed.

This is in stark contrast to standard capitalist claim that children are the **property** of their parents. If we accept that children **are** the property of their parents then we are implicitly stating that a child's formative years are spent in slavery, hardly a relationship which will promote the individuality and freedom of the child or the wider society. Little wonder that most anarchists reject such assertions. Instead we argue that the *"rights of the parents shall be confined to loving their children and exercising over them ... authority [that] does not run counter to their morality,*

their mental development, or their future freedom." Being someone's property (i.e. slave) runs counter to all these and *"it follows that society, the whole future of which depends upon adequate education and upbringing of children ... has not only the right but also the duty to watch over them."* Hence child rearing should be **part** of society, a communal process by which children learn what it means to be an individual by being respected as one by others: *"real freedom — that is, the full awareness and the realisation thereof in every individual, pre-eminently based upon a feeling of one's dignity and upon the genuine respect for someone else's freedom and dignity, i.e. upon justice — such freedom can develop in children only through the rational development of their minds, character and will."* [Bakunin, **Op. Cit.**, p. 327]

We wish to re-iterate again that a great deal of work remains to be done in this field. Therefore our comments should be regarded merely as tentative bases for further reflection and research by those involved with raising and educating children. There is, and cannot be, any "rule book" for raising free children, because to follow an inflexible rule book is to ignore the fact that each child and their environment is unique and therefore demands unique responses from their parents. Hence the principles of libertarian child rearing to which we will refer should not be thought of as rules, but rather, as experimental hypotheses to be tested by parents within their own situation by applying their intelligence and deriving their own individual conclusions.

Bringing up children must be like education, and based on similar principles, namely *"upon the free growth and development of the innate forces and tendencies of the child. In this way alone can we hope for the free individual and eventually also for a free community, which shall make interference and coercion of human growth impossible."* [Goldman, **Op. Cit.**, p. 139] Indeed, child rearing and education **cannot** be separated as life itself is an education and so must share the same principles and be viewed as a process of *"development and exploration, rather than as one of repressing a child's instincts and inculcating obedience and discipline."* [Martha A. Ackelsberg, **Free Women of Spain**, p. 166]

Moreover, the role of parental example is very important to raising free children. Children often learn by mimicking their parents — children do what their parents do, not as they say. If their mother and father lie to each other, scream, fight and so on, then the child will probably do so as well. Children's behaviour does not come out thin air, they are a product of the environment they are brought up in. Children can only be encouraged by example, not by threats and commands. So how parents act can be an obstacle to the development of a free child. Parents must do more than just **say** the right things, but also act as anarchists in order to produce free children.

The sad fact is that most modern people have lost the ability to raise free children, and regaining this ability will be a long process of trial and error as well as **parent** education in which it is to be hoped that each succeeding generation will learn from the failures and successes of their predecessors and so improve. In the best-case scenario, over the course of a few generations the number of progressive parents will continue to grow and raise ever freer children, who in turn will become even more progressive parents themselves, thus gradually changing mass psychology in a libertarian direction. Such changes **can** come about very fast, as can be seen from various communes all over the world where society is organised according to libertarian principles. As Reich put it:

> *"We have learned that instead of a jump into the realm of the Children of the Future, we can hope for no more than a steady advance, in which the healthy new overlaps the*

sick old structure, with the new slowly outgrowing the old." [**Children of the Future**, pp. 38–39]

By means of freedom-based child rearing and education, along with other methods of consciousness raising, as well as encouraging resistance to the existing social order anarchists hope to prepare the psychological foundation for a social paradigm shift, from authoritarian to libertarian institutions and values. And indeed, a gradual cultural evolution toward increasing freedom does seem to exist. For example, as A.S. Neill suggested there is *"a slow trend to freedom, sexual and otherwise. In my boyhood, a woman went bathing wearing stockings and a long dress. Today, women show legs and bodies. Children are getting more freedom with every generation. Today, only a few lunatics put cayenne pepper on a baby's thumb to stop sucking. Today, only a few countries beat their children in school."* [**Summerhill**, p. 115]

Most anarchists believe that we must practice what we preach and so the anarchist revolution begins at home. As anarchists raise their own children in capitalist society and/or are involved in the raising and education of the children of other parents, we can practice in part libertarian principles even before the revolution. As such, we think it is important to discuss libertarian child rearing.

J.6.1 What are the main obstacles to raising free children?

The biggest obstacle is the training and character of most parents, physicians, and educators. Individuals within a hierarchical society create psychological walls/defences around themselves and these will obviously have an effect both on the mental and physical state of the individual and so their capacity for living a free life and experiencing pleasure. Such parents then try (often unconsciously) to stifle the life-energy in children. There are, for example, the child's natural vocal expressions (shouting, screaming, bellowing, crying, etc.) and natural body motility. As Reich noted:

> *"Small children go through a phase of development characterised by vigorous activity of the voice musculature. The joy the infant derives from loud noises (crying, shrieking, and forming a variety of sounds) is regarded by many parents as pathological aggressiveness. The children are accordingly admonished not to scream, to be 'still,' etc. The impulses of the voice apparatus are inhibited, its musculature becomes chronically contracted, and the child becomes quiet, 'well-brought-up,' and withdrawn. The effect of such mistreatment is soon manifested in eating disturbances, general apathy, pallor of the face, etc. Speech disturbances and retardation of speech development are presumably caused in this manner. In the adult we see the effects of such mistreatment in the form of spasms of the throat. The automatic constrictions of the glottis and the deep throat musculature, with subsequent inhibition of the aggressive impulses of the head and neck, seems to be particularly characteristic."* [**Children of the Future**, p. 128]

"Clinical experience has taught us," Reich concluded, *"that small children must be allowed to 'shout themselves out' when the shouting is inspired by pleasure. This might be disagreeable to some parents, but questions of education must be decided* ***exclusively in the interests of the child,*** *not in those of the adults."* [**Op. Cit.**, p. 128]

Besides deadening life energy in the body, such stifling also inhibits the anxiety generated by the presence of anti-social, cruel, and perverse impulses within the psyche — for example, destructiveness, sadism, greed, power hunger, brutality, etc. (impulses referred to by Reich as *"secondary"* drives). In other words, this reduces our ability to empathise with others and so the internal ethical guidelines we all develop are blunted, making us more likely tp express such secondary, anti-social, drives. So, ironically, these secondary drives result from the **suppression of the primary drives** and the sensations of pleasure associated with them. These secondary drives develop because the only emotional expressions that can get through a person's defences are distorted, harsh, and/or mechanical. In other words, compulsive morality (i.e. acting according to externally imposed rules) becomes necessary to control the secondary drives **which compulsion itself creates.** By such processes, authoritarian child-rearing becomes self-justifying:

> *"Psychoanalysts have failed to distinguish between primary natural and secondary perverse, cruel drives, and they are continuously killing nature in the new-born while they try to extinguish the 'brutish little animal.' They are completely ignorant of the fact that it is* ***exactly this killing of the natural principle which creates the secondary perverse and cruel nature,*** *human nature so called, and that these artificial cultural creations in turn make compulsive moralism and brutal laws necessary."* [Reich, **Op. Cit.**, p. 17–18]

Moralism, however, can never get at the root of the problem of secondary drives, but in fact only increases the pressure of crime and guilt. The real solution is to let children develop what Reich calls **natural self-regulation.** This can be done only by not subjecting them to punishment, coercion, threats, moralistic lectures and admonitions, withdrawal of love, etc. in an attempt to inhibit their spontaneous expression of natural life-impulses. The systematic development of the emphatic tendencies of the young infant is the best way to "socialise" and restrict activities that are harmful to the others. As A.S. Neill pointed out *"self-regulation implies a belief in the goodness of human nature; a belief that there is not, and never was, original sin."* [**Summerhill**, p. 103]

According to Neill, children who are given freedom from birth and not forced to conform to parental expectations spontaneously learn how to keep themselves clean and develop social qualities like courtesy, common sense, an interest in learning, respect for the rights of others, and so forth. However, once the child has been armoured through authoritarian methods intended to **force** it to develop such qualities, it becomes out of touch with its living core and therefore no longer able to develop self-regulation. In this stage it becomes harder and harder for the prosocial emotions to shape the developing mode of life of the new member of society. At that point, when the secondary drives develop, parental authoritarianism becomes a **necessity.**

This oppression produces an inability to tolerate freedom. The vast majority of people develop this **automatically** from the way they are raised and is what makes the whole subject of bringing up children of crucial importance to anarchists. Reich concluded that if parents do not suppress nature in the first place, then no anti-social drives will be created and no authoritarianism will be required to suppress them: *"**What you so desperately and vainly try to achieve by way of compulsion and admonition is there in the new-born infant ready to live and function. Let it grow as nature requires, and change our institutions accordingly.**"* [**Op. Cit.**, p. 47] So in order to raise psychologically healthy children, parents need to acquire self-knowledge, particularly of how internal conflicts develop in family relationships, and to free themselves as

much as possible from neurotic forms of behaviour. The difficulty of parents acquiring such self-knowledge and sufficiently de-conditioning themselves is obviously another obstacle to raising self-regulated children.

However, the greatest obstacle is the fact that twisting mechanisms set in so very early in life, i.e. soon after birth. Hence it is important for parents to obtain a thorough knowledge of what rigid suppressions are and how they function, so that from the beginning they can prevent (or at least decrease) them from forming in their children. Finally, Reich cautioned that it is crucial to avoid any mixing of concepts: *"One cannot mix a bit of self-regulation with a bit of moral demand. Either we trust nature as basically decent and self-regulatory or we do not, and then there is only one way, that of training by compulsion. It is essential to grasp the fact that the two ways of upbringing do not go together."* [**Op. Cit.**, p. 46]

J.6.2. What are some examples of libertarian child-rearing methods?

According to Reich, the problems of parenting a free child actually begin before conception, with the need for a prospective mother to free herself as much as possible from chronic muscular tensions. It has been found in many studies that not only the physical health of the mother can influence the foetus. Various psychological stresses influence the chemical and hormonal environment, affecting the foetus.

Immediately after birth it is important for the mother to establish contact with her child. This means, basically, constant loving attention to the baby, expressed by plenty of holding, cuddling, playing, etc., and especially by breast feeding. By such *"orgonotic"* contact (to use Reich's term), the mother is able to establish the initial emotional bonding with the new born, and a non-verbal understanding of the child's needs. This is only possible, however, if she is in touch with her own emotional and cognitive internal processes: *"**Orgonotic contact is the most essential experiential and emotional element in the interrelationship between mother and child,** particularly prenatally and during the first days and weeks of life. The future fate of the child depends on it. It seems to be the core of the new-born infant's emotional development."* [**Children of the Future**, p. 99] It is important for the father to establish orgonotic contact as well.

Reich amaintained that the practice of bottle feeding is harmful, particularly if it completely replaces breast feeding from the day of birth, because it eliminates one of the most important forms of establishing physical and emotional contact between mother and child. This lack of contact can then contribute in later life to *"oral"* forms of neurotic character structure or traits (see Chapter 9 of Alexander Lowen's **Physical Dynamics of Character Structure**). Another harmful practice in infant care is the compulsive-neurotic method of feeding children on schedule, invented by Pirquet in Vienna, which was devastatingly wrong and harmful to countless children. Frustration of oral needs through this practice (which is fortunately less in vogue now than it was fifty years ago), is guaranteed to produce neurotic armouring in infants. As Reich put it: *"As long as parents, doctors, and educators approach infants with false, unbending behaviour, inflexible opinions, condescension, and officiousness, instead of with orgonotic contact, infants will continue to be quiet, withdrawn, apathetic, 'autistic,' 'peculiar,' and, later, 'little wild animals,' whom the cultivated feel they have to 'tame.'"* [**Op. Cit.** p. 124]

Another harmful practice is allowing the baby to "cry itself out." Thus: *"Parking a baby in a baby carriage in the garden, perhaps for hours at a time, is a dangerous practice. No one can know what agonising feelings of fear and loneliness a baby can experience on waking up suddenly to find himself alone in a strange place. Those who have heard a baby's screams on such occasions have some idea of the cruelty of this stupid custom."* [Neill, **Summerhill**, p. 336] Indeed, in **The Physical Dynamics of Character Structure**, Alexander Lowen has traced specific neuroses, particularly depression, to this practice. Hospitals also have been guilty of psychologically damaging sick infants by isolating them from their mothers, a practice that has undoubtedly produced untold numbers of neurotics and psychopaths.

Neill summed up the libertarian attitude toward the care of infants as follows: *"**Self-regulation means the right of a baby to live freely without outside authority in things psychic and somatic**. It means that the baby feeds when it is hungry; that it becomes clean in habits only when it wants to; that it is never stormed at nor spanked; that it is always loved and protected."* Obviously self-regulation does not mean leaving the baby alone when it heads toward a cliff or starts playing with an electrical socket. Libertarians do not advocate a lack of common sense. We recognise that adults must override an infant's will when it is a question of protecting their physical safety: *"Only a fool in charge of young children would allow unbarred bedroom windows or an unprotected fire in the nursery. Yet, too often, young enthusiasts for self-regulation come to my school as visitors, and exclaim at our lack of freedom in locking poison in a lab closet, or our prohibition about playing on the fire escape. The whole freedom movement is marred and despised because so many advocates of freedom have not got their feet on the ground."* [**Op. Cit.**, p. 105 and p. 106]

Nevertheless, the libertarian position does not imply that a child should be **punished** for getting into a dangerous situation. Nor is the best thing to do in such a case to shout in alarm (unless that is the only way to warn the child before it is too late), but simply to remove the danger without any fuss: *"Unless a child is mentally defective, he will soon discover what interests him. Left free from excited cries and angry voices, he will be unbelievably sensible in his dealing with material of all kinds."* [Neil, **Op. Cit.**, p. 108] Provided, of course, that he or she has been allowed self-regulation from the beginning, and thus has not developed any irrational, secondary drives.

The way to raise a free child becomes clear when one considers how an **un**free child is raised. Thus imagine the typical infant whose upbringing A.S. Neill described:

> *"His natural functions were left alone during the diaper period. But when he began to crawl and perform on the floor, words like **naughty** and **dirty** began to float about the house, and a grim beginning was made in teaching him to be clean.*
>
> *"Before this, his hand had been taken away every time it touched his genitals; and he soon came to associate the genital prohibition with the acquired disgust about faeces. Thus, years later, when he became a travelling salesman, his story repertoire consisted of a balanced number of sex and toilet jokes.*
>
> *"Much of his training was conditioned by relatives and neighbours. Mother and father were most anxious to be correct — to do the proper thing — so that when relatives or next-door neighbours came, John had to show himself as a well-trained child. He had to say **Thank you** when Auntie gave him a piece of chocolate; and he had to be most*

> *careful about his table manners; and especially, he had to refrain from speaking when adults were speaking ...*
>
> *"All his curiosity about the origins of life were met with clumsy lies, lies so effective that his curiosity about life and birth disappeared. The lies about life became combined with fears when at the age of five his mother found him having genital play with his sister of four and the girl next door. The severe spanking that followed (Father added to it when he came home from work) forever conveyed to John the lesson that sex is filthy and sinful, something one must not even think of."* [**Op. Cit.**, p. 96–7]

Of course, parents' ways of imparting negative messages about sex are not necessarily this severe, especially in our allegedly enlightened age. However, it is not necessary for a child to be spanked or even scolded or lectured in order to acquire a sex-negative attitude. Children are very intuitive and will receive the message "sex is bad" from subtle parental cues like facial expressions, tone of voice, embarrassed silence, avoidance of certain topics, etc. Mere "toleration" of sexual curiosity and play is far different in its psychological effects from positive affirmation.

Along the same lines, to prevent the formation of sex-negative attitudes means that nakedness should never be discouraged: *"The baby should see its parents naked from the beginning. However, the child should be told when he is ready to understand that some people don't like to see children naked and that, in the presence of such people, he should wear clothes."* Neill maintains that not only should parents never spank or punish a child for genital play, but that spanking and other forms of punishment should never be used in **any** circumstances, because they instil fear, turning children into cowards and often leading to phobias. *"Fear must be entirely eliminated — fear of adults, fear of punishment, fear of disapproval, fear of God. Only hate can flourish in an atmosphere of fear."* Punishment also turns children into sadists: *"The cruelty of many children springs from the cruelty that has been practised on them by adults. You cannot be beaten without wishing to beat someone else."* (*"Every beating makes a child sadistic in desire or practice."* [Neil **Op. Cit.**, p. 229, p. 124, p. 269 and p. 271] This is obviously an important consideration to anarchists, as sadistic drives provide the psychological ground for militarism, war, police brutality, and so on. Such drives are undoubtedly also part of the desire to exercise hierarchical authority, with its possibilities for using negative sanctions against subordinates as an outlet for sadistic impulses.

Child beating is particularly cowardly because it is a way for adults to vent their hatred, frustration, and sadism on those who are unable to defend themselves. Such cruelty is, of course, always rationalised with excuse like "it hurts me more than it does you," etc., or explained in moral terms, like "I don't want my boy to be soft" or "I want him to prepare him for a harsh world" or "I spank my children because my parents spanked me, and it did me a hell of a lot of good." But despite such rationalisations, the fact remains that punishment is always an act of hate. To this hate the child responds in kind by hating the parents, followed by fantasy, guilt, and repression. For example, the child may fantasise the father's death, which immediately causes guilt, and so is repressed. Often the hatred induced by punishment emerges in fantasies that are seemingly remote from the parents, such as stories of giant killing — always popular with children because the giant represents the father. Obviously, the sense of guilt produced by such fantasies is very advantageous to organised religions that promise redemption from "sin." It is surely no coincidence that such religions are enthusiastic promoters of the sex-negative morality and disciplinarian child rearing practices that keep supplying them with recruits.

What is worse, however, is that punishment actually **creates** "problem children." This is so because the parent arouses more and more hatred (and diminishing trust in other human beings) in the child with each spanking, which is expressed in still worse behaviour, calling for more spankings, and so on, in a vicious circle. In contrast, the *"self-regulated child does not need any punishment,"* Neill argued, *"and he does not go through this hate cycle. He is never punished and he does not need to behave badly. He has no use for lying and for breaking things. His body has never been called filthy or wicked. He has not needed to rebel against authority or to fear his parents. Tantrums he will usually have, but they will be short-lived and not tend toward neurosis."* [**Op. Cit.**, p. 166]

We could cite many further examples of how libertarian principles of child-rearing can be applied in practice, but we must limit ourselves to these few. The basic principles can be summed up as follows: Get rid of authority, moralising, and the desire to "improve" and "civilise" children. Allow them to be themselves, without pushing them around, bribing, threatening, admonishing, lecturing, or otherwise forcing them to do anything. Refrain from action unless the child, by expressing their "freedom" restricts the freedom of others and **explain** what is wrong about such actions and never mechanically punish.

This is, of course, a radical philosophy, which few parents are willing to follow. It is quite amazing how people who call themselves libertarians in political and economic matters draw the line when it comes to their behaviour within the family — as if such behaviour had no wider social consequences!

J.6.3 If children have nothing to fear, how can they be good?

Obedience that is based on fear of punishment, this-worldly or other-worldly, is not really goodness, it is merely cowardice. True morality (i.e. respect for others and one-self) comes from inner conviction based on experience, it cannot be imposed from without by fear. Nor can it be inspired by hope of reward, such as praise or the promise of heaven, which is simply bribery. If children are given as much freedom as possible from the day of birth, if parents respect them as individuals and give a positive example as well as not being forced to conform to parental expectations, they will spontaneously learn the basic principles of social behaviour, such as cleanliness, courtesy, and so forth. But they must be allowed to develop them **at their own speed,** at the natural stage of their growth, not when parents think they should develop them. What is "natural" timing must be discovered by observation, not by defining it a priori based on one's own expectations.

Can a child really be taught to keep themselves clean without being punished for getting dirty? According to many psychologists, it is not only possible but **vitally important** for the child's mental health to do so, since punishment will give the child a fixed and repressed interest in their bodily functions. As Reich and Lowen have shown various forms of compulsive and obsessive neuroses can be traced back to the punishments used in toilet training. As Neill observed: *"When the mother says **naughty** or **dirty** or even **tut tut**, the element of right and wrong arises. The question becomes a **moral** one — when it should remain a **physical** one."* He suggested that the **wrong** way to deal with a child who likes to play with faeces is to tell him he is being dirty. The right way *"is to allow him to live out his interest in excrement by providing him with mud or clay.*

In this way, he will sublimate his interest without repression. He will live through his interest; and in doing so, kill it." [**Summerhill**, p. 174]

Similarly, sceptics will probably question how children can be induced to eat a healthy diet without threats of punishment. The answer can be discovered by a simple experiment: set out on the table all kinds of foods, from sweets and ice cream to whole wheat bread, lettuce, sprouts, and so on, and allow the child complete freedom to choose what is desired or to eat nothing at all if he or she is not hungry. Parents will find that the average child will begin choosing a balanced diet after about a week, after the desire for prohibited or restricted foods has been satisfied. This is an example of what can be called "trusting nature." That the question of how to "train" a child to eat properly should even be an issue says volumes about how little the concept of freedom for children is accepted or even understood, in our society. Unfortunately, the concept of "training" still holds the field in this and most other areas.

The disciplinarian argument that that children must be **forced** to respect possessions is also defective, because it always requires some sacrifice of a child's play life (and childhood should be devoted to play, not to "preparing for adulthood," because playing is what children spontaneously do). The libertarian view is that a child should arrive at a sense of value out of his or her own free choice. This means not scolding or punishing them for breaking or damaging things. As they grow out of the stage of preadolescent indifference to possessions, they learn to respect it naturally.

"But shouldn't a child at least be punished for stealing?" it will be asked. Once again, the answer lies in the idea of trusting nature. The concept of "mine" and "yours" is adult, and children naturally develop it as they become mature, but not before. This means that normal children will "steal" — though that is not how they regard it. They are simply trying to satisfy their acquisitive impulses; or, if they are with friends, their desire for adventure. In a society so thoroughly steeping in the idea of respect for property as ours, it is no doubt difficult for parents to resist societal pressure to punish children for "stealing." The reward for such trust, however, will be a child who grows into a healthy adolescent who respects the possessions of others, not out of a cowardly fear of punishment but from his or her own self-nature.

Most parents believe that, besides taking care of their child's physical needs, the teaching of ethical/moral values is their main responsibility and that without such teaching the child will grow up to be a "little wild animal" who acts on every whim, with no consideration for others. This idea arises mainly from the fact that most people in our society believe, at least passively, that human beings are naturally bad and that unless they are "trained" to be good they will be lazy, mean, violent, or even murderous. This, of course, is essentially the idea of "original sin" and because of its widespread acceptance, nearly all adults believe that it is their job to "improve" children. Yet according to libertarian psychologists there is no original sin. In fact, it would be more accurate to say that there is "original virtue." Wilhelm Reich found that externally imposed, compulsive morality actually **causes** immoral behaviour by creating cruel and perverse *"secondary drives."* Neill put it this way: *"I find that when I smash the moral instruction a bad boy has received, he becomes a good boy."* [, p. 250]

Unconscious acceptance of some form of the idea of original sin is the main recruiting tool of organised religions, as people who believe they are born "sinners" feel a strong sense of guilt and need for redemption. Parents to should eliminate any need for redemption, by telling the child that he is born good, not born bad. This will help keep them from falling under the influence of

life-denying religions, which are inimical to the growth of a healthy character structure. Citing ethnological studies, Reich argued the following:

> *"Among those primitive peoples who lead satisfactory, unimpaired sexual lives, there is no sexual crime, no sexual perversion, no sexual brutality between man and woman; rape is unthinkable because it is unnecessary in their society. Their sexual activity flows in normal, well-ordered channels which would fill any cleric with indignation and fear … They love the human body and take pleasure in their sexuality. They do not understand why young men and women should not enjoy their sexuality. But when their lives are invaded by the ascetic, hypocritical morass and by the Church, which bring them 'culture' along with exploitation, alcohol, and syphilis, they begin to suffer the same wretchedness as ourselves. They begin to lead 'moral' lives, i.e. to suppress their sexuality, and from then on they decline more and more into a state of sexual distress, which is the result of sexual suppression. At the same time, they become sexually dangerous; murders of spouses, sexual diseases, and crimes of all sorts start to appear."* [**Children of the Future**, p. 193]

Such crimes in our society would be greatly reduced if libertarian child rearing practices were widely followed. These are obviously important considerations for anarchists, who are frequently asked to explain how crime can be prevented in an anarchist society. The answer is that if people are not suppressed during childhood there will be far less anti-social behaviour, because the secondary-drive structure that leads to it will not be created in the first place. In other words, the solution to the so-called crime problem is not more police, more laws, or a return to the disciplinarianism of "traditional family values," as conservatives claim, but depends mainly on **getting rid** of such values.

There are other problems as well with the moralism taught by organised religions. One danger is making the child a hater: *"If a child is taught that certain things are sinful, his love of life must be changed to hate. When children are free, they never think of another child as being a sinner."* [Neill, **Op. Cit.**, p. 245] From the idea that certain people are sinners, it is a short step to the idea that certain classes or races of people are more "sinful" than others, leading to prejudice, discrimination, and persecution of minorities as an outlet for repressed anger and sadistic drives — drives that are created in the first place by moralistic training during early childhood. Once again, the relevance for anarchism is obvious.

A further danger of religious instruction is the development of a fear of life: *"Religion to a child most always means only fear. God is a mighty man with holes in his eyelids: He can see you wherever you are. To a child, this often means that God can see what is being done under the bedclothes. And to introduce fear into a child's life is the worst of all crimes. Forever the child says nay to life; forever he is an inferior; forever a coward."* [Neill, **Op. Cit.**, p. 246] People who have been threatened with fear of an afterlife in hell can never be entirely free of neurotic anxiety about security in **this** life. In turn, such people become easy targets of ruling-class propaganda that plays upon their material and emotional insecurity, e.g. the rationalisation of imperialist wars, the Military-Industrial Complex, increased state powers, and so on as necessary to "preserve jobs", for security against external threats and so forth.

J.6.3 But how will a free child ever learn unselfishness?

Another common objection to self-regulation is that children can only be taught to be **"unselfish"** through punishment and admonition. Again, however, such a view comes from a distrust of nature and is part of the common attitude that nature is mere "raw material" to be shaped by human beings according to their own wishes. The libertarian attitude is that empathy for others develops at the proper time:

> *"To ask a child to be unselfish is wrong. Every child is an egoist and the world belongs to him. When he has an apple, his one wish is to eat that apple. The chief result of mother's encouraging him to share it with his little brother is to make him hate the little brother. Altruism comes later — comes naturally —* ***if the child is not taught to be unselfish.*** *It probably never comes at all if the child has been forced to be unselfish. By suppressing the child's selfishness, the mother is fixing that selfishness forever."* [Neill, **Summerhill**, pp. 250–251]

Unfulfilled wishes live on in the unconscious so children who are pressured too hard — "taught" — to be unselfish will, while conforming outwardly with parental demands, unconsciously repress part of their real, selfish wishes, and these repressed infantile desires will make the person selfish (and possibly neurotic) throughout life. Moreover, telling children that what they want to do is "wrong" or "bad" is equivalent to teaching them to hate themselves, and it is a well-known principle of psychology that people who do not love themselves cannot love others. Thus moral instruction, although it aims to develop altruism and love for others, is actually self-defeating, having just the opposite result. Moreover, such attempts to produce "unselfish" children (and so adults) actually works **against** developing the individuality of the child and they developing their own abilities (in particular their ability of critical thought). As Erich Fromm put it:

> *"Not to be selfish implies not to do what one wishes, to give up one's own wishes for the sake of those in authority ... Aside from its obvious implication, it means 'don't love yourself,' 'don't be yourself', but submit yourself to something more important than yourself, to an outside power or its internalisation, 'duty.' 'Don't be selfish' becomes one of the most powerful ideological tools in suppressing spontaneity and the free development of personality. Under the pressure of this slogan one is asked for every sacrifice and for complete submission: only those acts are 'unselfish' which do not serve the individual but somebody or something outside himself."* [**Man for Himself**, p. 127]

While such "unselfishness" is ideal for creating "model citizens" and willing wage slaves, it is not conducive for creating anarchists or even developing individuality. Little wonder Bakunin celebrated the urge to rebel and saw it as the key to human progress! Fromm goes on to note that selfishness and self-love, *"far from being identical, are actually opposites"* and that *"selfish persons are incapable of loving others . .. [or] loving themselves."* [**Op. Cit.**, p. 131] Individuals who do not love themselves, and so others, will be more willing to submit themselves to hierarchy than those who do love themselves and are concerned for their own, and others, welfare. Thus the contradictory nature of capitalism, with its contradictory appeals to selfish and unselfish behaviour, can be understood as being based upon lack of self-love, a lack which is promoted in childhood and one which libertarians should be aware of and combat.

Indeed, much of the urge to "teach children unselfishness" is actually an expression of adults' will to power. Whenever parents feel the urge to impose directives on their children, they would be wise to ask themselves whether the impulse comes from their own power drive or their own selfishness. For, since our culture strongly conditions us to seek power over others, what could be more convenient than having a small, weak person at hand who cannot resist one's will to power? Instead of issuing directives, libertarians believe in letting social behaviour develop naturally, which it will do after other people's opinions becomes important **to the child.** As Neill pointed out:

> *"Everyone seeks the good opinion of his neighbours. Unless other forces push him into unsocial behaviour, a child will naturally want to do that which will cause him to be well-regarded, but this desire to please others develops at a certain stage in his growth. The attempt by parents and teachers to artificially accelerate this stage does the child irreparable damage."* [**Op. Cit.**, p. 256]

Therefore, parents should allow children to be "selfish" and "ungiving", free to follow their own childish interests throughout their childhood. Every interpersonal conflict of interest should be grounds for a lesson in dignity on one side and consideration on the other. Only by this process can a child develop their individuality. By so doing they will come to recognise the individuality of others and this is the first step in developing ethical concepts (which rest upon mutual respect for others and their individuality).

J.6.4 Isn't "libertarian child-rearing" just another name for spoiling the child?

No. This objection confuses the distinction between freedom and license. To raise a child in freedom does not mean letting him or her walk all over you or others; it does not mean never saying "no." It is true that free children are not subjected to punishment, irrational authority, or moralistic admonitions, but they are not "free" to violate the rights of others. As Neill put it: *"in the disciplined home, the children have **no** rights. In the spoiled home, they have **all** the rights. The proper home is one in which children and adults have equal rights."* Or again: *"To let a child have his own way, or do what he wants to **at another's expense,** is bad for the child. It creates a spoiled child, and the spoiled child is a bad citizen."* [**Summerhill**, p. 107 and 167]

There will inevitably be conflicts of will between parents and children, and the healthy way to resolve them is discussion and coming to an agreement. The unhealthy ways are either to resort to authoritarian discipline or to spoil the child by allowing them to have all the social rights. Libertarian psychologists argue that no harm is done to children by insisting on one's individual rights, but that the harm comes from moralism, i.e. when one introduces the concepts of right and wrong or words like "naughty," "bad," or "dirty," which produce guilt.

Therefore it should not be thought that free children are free to "do as they please." Freedom means doing what one likes so long as it does not infringe on the freedom of others. Thus there is a big difference between compelling a child to stop throwing stones at others and compelling him or her to learn geometry. Throwing stones infringes on others' rights, but learning geometry involves only the child. The same goes for forcing children to eat with a fork instead of their

fingers; to say "please" and "thank you"; to tidy up their rooms, and so on. Bad manners and untidiness may be annoying to adults, but they are not a violation of adults' rights. One could, of course, define an adult "right" to be free of annoyance from **anything** one's child does, but this would simply be a license for authoritarianism, emptying the concept of children's rights of all content.

As mentioned, giving children freedom does not mean allowing them to endanger themselves physically. For example, a sick child should not be asked to decide whether he wants to go outdoors or take his prescribed medicine, nor a run-down and overtired child whether she wants to go to bed. But the imposition of such forms of necessary authority is compatible with the idea that children should be given as much responsibility as they can handle at their particular age. Only in this way can they develop self-assurance. And, again, it is important for parents to examine their own motives when deciding how much responsibility to give their child. Parents who insist on choosing their children's clothes for them, for example, are generally worried that the child might select clothes that would reflect badly on their parents' social standing.

As for those who equate "discipline" in the home with "obedience," the latter is usually required of a child to satisfy the adults' desire for power. Self-regulation means that there are no power games being played with children, no loud voice saying "You'll do it because I say so, or else!" But, although this irrational, power-seeking kind of authority is absent in the libertarian home, there still remains what can be called a kind of "authority," namely adult protection, care, and responsibility, as well as the insistence on one's own rights. As Neill observed: *"Such authority sometimes demands obedience but at other times gives obedience. Thus I can say to my daughter, 'You can't bring that mud and water into our parlour.' That's no more than her saying to me, 'Get out of my room, Daddy. I don't want you here now,' a wish that I, of course, obey without a word."* [**Op. Cit.**, p. 156]. So there will still be "discipline" in the libertarian home, but it will be of the kind that protects the individual rights of each family member.

Raising children in freedom also does not imply giving them a lot of toys, money, and so on. Reich's followers have argued that children should not be given everything they ask for and that it is better to give them too little than too much. Under constant bombardment by commercial advertising campaigns, parents today generally tend to give their children far too much, with the result that the children stop appreciating gifts and rarely value any of their possessions. This same applies to money, which, if given in excess, can be detrimental to children's' creativity and play life. If children are not given too many toys, they will derive creative joy out of making their own toys out of whatever free materials are at hand — a joy of which they are robbed by overindulgence. Psychologists point out that parents who give too many presents are often trying to compensate for giving too little love.

There is less danger in rewarding children than there is in punishing them, but rewards can still undermine a child's morale. This is because, firstly, rewards are superfluous and in fact often **decrease** motivation and creativity, as several psychological studies have shown (see section I.4.11). Creative people work for the pleasure of creating; monetary interests are not central (or necessary) to the creative process. Secondly, rewards send the wrong message, namely, that doing the deed for which the reward is offered is not worth doing for its own sake and the pleasure associated with productive, creative activity. Thirdly, rewards tend to reinforce the worst aspects of the competitive system, leading to the attitude that money is the only thing which can motivate people to do the work that needs doing in society.

These are just a few of the considerations that enter into the distinction between spoiling children and raising them in freedom. In reality, it is the punishment and fear of a disciplinarian home that **spoils** children in the most literal sense, by destroying their childhood happiness and creating warped personalities. As adults, the victims of disciplinarianism will generally be burdened with one or more anti-social secondary drives such as sadism, destructive urges, greed, sexual perversions, etc., as well as repressed rage and fear. The presence of such impulses just below the surface of consciousness causes anxiety, which is automatically defended against by psychological walls which leave the person stiff, frustrated, bitter and burdened with feelings of inner emptiness. In such a condition people easily fall victim to the capitalist gospel of super-consumption, which promises that money will enable them to fill the inner void by purchasing commodities — a promise that, of course, is hollow.

The neurotically enclosed person also tends to look for scapegoats on whom to blame his or her frustration and anxiety and against whom repressed rage can be vented. Reactionary politicians know very well how to direct such impulses against minorities or "hostile nations" with propaganda designed to serve the interests of the ruling elite. Most importantly, however, the respect for authority combined with sadistic impulses which is acquired from a disciplinarian upbringing typically produces a submissive/authoritarian personality — a man or woman who blindly follows the orders of "superiors" while at the same time desiring to exercise authority on "subordinates," whether in the family, the state bureaucracy, or the company. Ervin Staub's **Roots of Evil** includes interviews of imprisoned SS men, who, in the course of extensive interviews (meant to determine how ostensibly "normal" people could perform acts of untold ruthlessness and violence) revealed that they overwhelmingly came from authoritarian, disciplinarian homes.

In this way, the "traditional" (e.g., authoritarian, disciplinarian, patriarchal) family is the necessary foundation for authoritarian civilisation, reproducing it and its attendant social evils from generation to generation.

J.6.5 What is the anarchist position on teenage sexual liberation?

One of the biggest problems of adolescence is sexual suppression by parents and society in general. The teenage years are the time when sexual energy is at its height. Why, then, the absurd demand that teenagers "wait until marriage," or at least until leaving home, before becoming sexually active? Why are there laws in "advanced" countries like the United States that allow a 19-year-old "boy" who makes love with his 17-year-old girlfriend, with her full consent, to be **arrested** by the girl's parents (!) for "statutory rape"?

To answer such questions, let us recall that the ruling class is not interested in encouraging mass tendencies toward liberty, independence and pleasure not derived from commodities but instead supports whatever contributes to mass submissiveness, docility, dependence, helplessness, and respect for authority — traits that perpetuate the hierarchies on which ruling-class power and privileges depend.

As sex is one of the most intense forms of pleasure and one of the most prominent contributors for intimacy and bonding with people emotionally, repression of sexuality is the most powerful means of psychologically crippling people and giving them a submissive/authoritarian character structure (as well as alienating people from each other). As Reich observed, such a character is composed of a mixture of *"sexual impotence, helplessness, a need for attachments, a nostalgia*

for a leader, fear of authority, timidity, and mysticism" and *"people structured in this manner are incapable of democracy. All attempts to build up or maintain genuine democratically directed organisations come to grief when they encounter these character structures. They form the psychological soil of the masses in which dictatorial strivings and bureaucratic tendencies of democratically elected leaders can develop."* Sexual suppression *"produces the authority-fearing, life-fearing vassal, and thus constantly creates new possibilities whereby a handful of men in power can rule the masses."* [**The Sexual Revolution**, p. 82]

No doubt most members of the ruling elite are not fully conscious that their own power and privileges depend on the mass perpetuation of sex-negative attitudes. Nevertheless, they unconsciously sense it. Sexual freedom is the most basic and powerful kind, and every conservative or reactionary instinctively shudders at the thought of the "social chaos" it would unleash — that is, the rebellious, authority-defying type of character it would nourish. This is why "family values," and "religion" (i.e. discipline and compulsive sexual morality) are the mainstays of the conservative/reactionary agenda. Thus it is crucially important for anarchists to address every aspect of sexual suppression in society. This means affirming the right of adolescents to an unrestricted sex life.

There are numerous arguments for teenage sexual liberation. For example, many teen suicides could be prevented by removing the restrictions on adolescent sexuality. This becomes clear from ethnological studies of sexually unrepressive tribal peoples:

> *"All reports, whether by missionaries or scholars, with or without the proper indignation about the 'moral depravity' of 'savages,' state that the puberty rites of adolescents lead them immediately into a sexual life; that some of these primitive societies lay great emphasis on sexual pleasure; that the puberty rite is an important social event; that some primitive peoples not only do not hinder the sexual life of adolescents but encourage it is every way, as, for instance, by arranging for community houses in which the adolescents settle at the start of puberty in order to be able to enjoy sexual intercourse. Even in those primitive societies in which the institution of strict monogamous marriage exists, adolescents are given complete freedom to enjoy sexual intercourse from the beginning of puberty to marriage. None of these reports contains any indication of sexual misery or suicide by adolescents suffering from unrequited love (although the latter does of course occur). The contradiction between sexual maturity and the absence of genital sexual gratification is non-existent."* [Reich, **Op. Cit.**, p. 85]

Teenage sexual repression is also closely connected with crime. If there are teenagers in a neighbourhood who have no place to pursue intimate sexual relationships, they will do it in dark corners, in cars or vans, etc., always on the alert and anxious lest someone discover them. Under such conditions, full gratification is impossible, leading to a build-up of tension and frustration. Thus they feel unsatisfied, disturb each other, become jealous and angry, get into fights, turn to drugs as a substitute for a satisfying sex life, vandalise property to let off "steam" (repressed rage), or even murder someone. As Reich noted, *"juvenile delinquency is the visible expression of the subterranean sexual crisis in the lives of children and adolescents. And it may be predicted that no society will ever succeed in solving this problem, the problem of juvenile psychopathology, unless that society can muster the courage and acquire the knowledge to regulate the sexual life of its children and adolescents in a sex-affirmative manner."* [**Op. Cit.**, p. 271]

For these reasons, it is clear that a solution to the "gang problem" also depends on adolescent sexual liberation. We are not suggesting, of course, that gangs themselves suppress sexual activity. Indeed, one of their main attractions to teens is undoubtedly the hope of more opportunities for sex as a gang member. However, gangs' typical obsessiveness with the promiscuous, pornographic, sadistic, and other "dark" aspects of sex shows that by the time children reach gang age they have already developed unhealthy secondary drives due to the generally sex-negative and repressive environment in which they have grown up. The expression of such drives is **not** what anarchists mean by "sexual freedom." Rather, anarchist proposals for teenage liberation are based on the premise that a libertarian childhood is the necessary condition for a **healthy** sexual freedom in adolescence.

Applying these insights to our own society, it is clear that teenagers should have ample access to a private room where they can be undisturbed with their sexual partners. Parents should also encourage the knowledge and use of contraceptives and safe sex in general as well as respect for the other person involved in the relationship. This does not mean encouraging promiscuity or sex for the sake of it. Rather, it means encouraging teenagers to know their own minds and desires, refusing to be pressured by anyone into anything. As can be seen from experience of this anarchist activist during the 1930s:

> *"One time, a companero from the Juventudes [libertarian youth organisation] came over to me and said, 'You, who say you're so liberated. You're not so liberated.' (I'm telling you this so you'll see the mentality of these men.) 'Because if I ask you to give me a kiss, you wouldn't.*
>
> *"I just stood there staring at him, and thinking to myself, 'How do I get out of this one?" And then I said to him, 'Listen, when I want to go to bed with a guy, I'm the one that has to choose him. I don't go to bed with just anyone. You don't interest me as a man. I don't feel anything for you... Why should you want me to 'liberate myself,' as you put it, by going to bed with you? That's no liberation for me. That's just making love simply for the sake of making love.' 'No,' I said to him, 'love is something that has to be like eating: if you're hungry, you eat, and if you want to go to bed with a guy, then... Besides, I'm going to tell you something else ... Your mouth doesn't appeal to me... And I don't like to make love with a guy without kissing him.'*
>
> *"He was left speechless! But I did it with a dual purpose in mind... because I wanted to show him that that's not the way to educate companeros... That's what the struggle of women was like in Spain — even with men from our own group — and I'm not even talking about what it was like with other guys."* [quoted by Martha A. Ackelsberg, **Free Women of Spain**, pp. 116–7]

So respecting yourself and others, it must be stressed, is essential. As Maurice Brinton pointed out, attempts at sexual liberation will encounter two kinds of responses from established society — direct opposition and attempts at recuperation. The second response takes the form of *"first alienating and reifying sexuality, and then of frenetically exploiting this empty shell for commercial ends. As modern youth breaks out of the dual stranglehold of repressive traditional morality and of the authoritarian patriarchal family it encounters a projected image of free sexuality which is in fact a manipulatory distortion of it."* This can be seen from the use of sex in advertising to the successful development of sex into a major consumer industry. However, such a development

is the opposite of the healthy sexuality desired by anarchists. This is because *"sex is presented as something to be consumed. But the sexual instinct differs from certain other instincts"* as it can be satisfied only by *"another human being, capable of thinking, acting, suffering. The alienation of sexuality under the conditions of modern capitalism is very much part of the general alienating process, in which people are converted into objects (in this case, objects of sexual consumption) and relationships are drained of human content. Undiscriminating, compulsive sexual activity, is not sexual freedom — although it may sometimes be a preparation for it (which repressive morality can never be). The illusion that alienated sex is sexual freedom constitutes yet another obstacle on the road to total emancipation. Sexual freedom implies a realisation and understanding of the autonomy of others."* [*"The Irrational in Politics"*, pp. 257–92, **For Workers' Power**, p. 277]

Therefore, anarchists see teenage sexual liberation as a means of developing free individuals **as well as** reducing the evil effects of sexual repression (which, we must note, also helps dehumanise individuals by encouraging the objectification of others, and in a patriarchal society particularly of women).

J.6.6 But isn't this concern with sexual liberation just a distraction from revolution?

It would be insulting to teenagers to suggest that sexual freedom is, or should be, their **only** concern. Many teens have a well-developed social conscience and are keenly interested in problems of economic exploitation, poverty, social breakdown, environmental degradation, and the like. The same can be said of people of any age!

It is essential for anarchists to guard against the attitude typically found in Marxist-Leninist parties that spontaneous discussions about sexual problems are a "diversion from the class struggle." Such an attitude is economistic (not to mention covertly ascetic), because it is based on the premise that economic class must be the focus of all revolutionary efforts toward social change. No doubt transforming the economy is important, but without mass sexual liberation no working class revolution be complete as there will not be enough people around with the character structures necessary to create a **lasting** self-managed society and economy (i.e., people who are capable of accepting freedom with responsibility). Instead, the attempt to force the creation of such a system without preparing the necessary psychological soil for its growth will lead to a reversion to some new form of hierarchy and exploitation. Equally, society would be "free" in name only if repressive social morals existed and people were not able to express themselves as they so desire.

Moreover, for many people breaking free from the sexual suppression that threatens to cripple them psychologically is a major issue in their lives. For this reason, few of them are likely to be attracted to the anarchist "freedom" movement if its exponents limit themselves to dry discussions of surplus value, alienated labour, and so forth. Instead, addressing sexual questions and problems must be integrated into a multi-faceted attack on the total system of domination. People should feel confident that anarchists are on the side of sexual pleasure and are not revolutionary ascetics demanding self-denial for the "sake of the revolution." Rather, it should be stressed that the capacity for full sexual enjoyment is the an essential part of the revolution. Indeed, *"incessant questioning and challenge to authority on the subject of sex and of the compulsive family can only complement the questioning and challenge to authority in other areas (for instance on the subject*

of who is to dominate the work process — or the purpose of work itself). Both challenges stress the autonomy of individuals and their domination over important aspects of their lives. Both expose the alienated concepts which pass for rationality and which govern so much of our thinking and behaviour. The task of the conscious revolutionary is to make both challenges explicit, to point out their deeply subversive content, and to explain their inter-relation." [Maurice Brinton, *"The Irrational in Politics"*, pp. 257–92, **For Workers' Power**, p. 278]

We noted previously that in pre-patriarchal society, which rests on a communistic/communal social order, children have complete sexual freedom and that the idea of childhood asceticism develops as such societies turn toward patriarchy in the economic and social structure (see section B.1.5). This sea-change in social attitudes toward sexuality allows the authority-oriented character structure to develop instead of the formerly non-authoritarian ones. Ethnological research has shown that in pre-patriarchal societies the general nature of work life in the community corresponds with the free development of children and adolescents — that is, there are no rules coercing children and adolescents into specific forms of sexual life, and this creates the psychological basis for voluntary integration into the community and voluntary discipline in all forms of collective activity. This supports the premise that widespread sex-positive attitudes are a necessary condition of a viable libertarian socialism.

Psychology also clearly shows that every impediment to free expression of children by parents, teachers, or administrative authorities must be stopped. As anarchists, our preferred way of doing so is by direct action. Thus we should encourage all to feel that they have every chance of building their own personal lives. This will certainly not be an obstacle to or a distraction from their involvement in the anarchist movement. On the contrary, if they can gradually solve the problems facing their private lives, they will work on other social projects with greatly increased pleasure and concentration.

Besides engaging in direct action, anarchists can also support legal protection free expression and sexuality (repeal of the insane statutory rape laws and equal rights for gays, for example), just as they support legislation that protects workers' right to strike, family leave, and so forth. However, as Reich observed, *"under no circumstances will the new order of sexual life be established by the decree of a central authority."* [**The Sexual Revolution**, p. 279] That was a Leninist illusion. Rather, it will be established from the bottom up, by the gradual process of ever more widespread dissemination of knowledge about the adverse personal and social effects of sexual repression, and the benefits of libertarian child-rearing and educational methods.

A society in which people are capable of sexual happiness will be one where they prefer to *"make love, not war,"* and so will provide the best guarantee for the general security. Then the anarchist project of restructuring the economic and political systems will proceed spontaneously, based on a spirit of joy rather than hatred and revenge. Only then can it be defended against reactionary threats, because the majority will be on the side of freedom and capable of using it responsibly, rather than unconsciously longing for an authoritarian father-figure to tell them what to do.

Therefore, concern and action upon sexual liberation, libertarian child rearing and libertarian education are **key** parts of social struggle and change. In no way can they be considered as "distractions" from "important" political and economic issues as some "serious" revolutionaries like to claim. As Martha A. Ackelsberg notes in relation to the practical work done by the ***Mujeres Libres*** group during the Spanish Revolution:

> *"Respecting children and educating them well was vitally important to the process of revolutionary change. Ignorance made people particularly vulnerable to oppression and suffering. More importantly, education prepared people for social life. Authoritarian schools (or families), based upon fear, prepared people to be submissive to an authoritarian government [or within a capitalist workplace]. Different schools and families would be necessary to prepare people to live in a society without domination."* [**Free Women of Spain**, p. 133]

The personal **is** political and there is little point in producing a free economy if the people in it are not free to lead a full and pleasurable life! As such, the issue of sexual freedom is as important as economic and social freedom for anarchists. This can be seen when Emma Goldman recounted meeting Kropotkin who praised a paper she was involved with but proclaimed *"it would do more if it would not waste so much space discussing sex."* She disagreed and a heated argument ensured about *"the place of the sex problem in anarchist propaganda."* Finally, she remarked *"All right, dear comrade, when I have reached your age, the sex question may no longer be of importance to me. But it is now, and it is a tremendous factor for thousands, millions even, of young people."* This, Goldman recalled, made Kropotkin stop short with *"an amused smile lighting up his kindly face. 'Fancy, I didn't think of that,' he replied. 'Perhaps you are right, after all.' He beamed affectionately upon me, with a humorous twinkle in his eye."* [**Living My Life**, vol. 1, p. 253]

J.7 What do anarchists mean by social revolution?

In anarchist theory, ***social revolution*** means far more than just revolution. For anarchists, a true revolution is far more than just a change in the political makeup, structure or form of a society. It must transform all aspects of a society — political, economic, social, interpersonal relationships, and so on — and the individuals who comprise it. Indeed, these two transformations go hand in hand, complementing each other and supporting each other. People, while transforming society, transform themselves. As Alexander Berkman put it:

> *"there are revolutions and revolutions. Some revolutions change only the governmental form by putting a new set of rulers in place of the old. These are political revolutions, and as such they are often meet with little resistance. But a revolution that aims to abolish the entire system of wage slavery must also do away with the power of one class to oppress another. That is, it is not any more a mere change of rulers, of government, not a political revolution, but one that seeks to alter the whole character of society. That would be a* ***social*** *revolution."* [**What is Anarchism?**, p. 176]

It means two related things. First, it means transforming all parts of society and not just tinkering with certain aspects of the current system. Where political revolution means, in essence, changing bosses, social revolution means changing society, a transformation in the way society is organised and run. Social revolution, in other words, does not aim to change one form of subjection for another, but to do away with everything that can enslave and oppress the individual. Second, it means bringing about this fundamental change **directly** by the mass of people in society, rather than relying on political means of achieving this end, in the style of Marxist-Leninists and other authoritarian socialists. For anarchists, such an approach is a political revolution only and doomed to failure. The *"actual, positive work of the social revolution must ... be carried out by the toilers themselves, by the labouring people"* as *"the worse victims of present institutions, it is to their own interest to abolish them."* [Berkman, **Op. Cit.**, p. 189 and p. 187]

That is not to say that an anarchist social revolution is not political in content — far from it; it should be obvious to anyone familiar with anarchist theory that there are political theories and goals at work within anarchism. With an analysis of the state which proclaims it to be an instrument of minority class rule, designed to exclude participation by the many, it should be obvious that we aim to abolish it. What we **are** saying, however, is that anarchists do not seek to seize power and attempt, through control of law enforcement and the military (in the style of governments) to bring change about from the top-down. Rather, we seek to bring change upward from below, and in so doing, make such a revolution inevitable and not contingent on the machinations of a political vanguard (unsurprisingly, as we noted in section H.3.3, Lenin dismissed talk of change exclusively from below as anarchist and saw the need for change from above by government). As Durruti argued: *"We never believed that the revolution consisted of*

the seizure of power by a minority which would impose a dictatorship on the people ... We want a revolution by and for the people. Without this no revolution is possible. It would be a Coup d'Etat, nothing more." [quoted by Abel Paz, **Durruti: The People Armed**, pp. 135–7]

For anarchists, a social revolution is a movement from below, of the oppressed and exploited struggling for their own freedom. Moreover, such a revolution does not appear as if by magic. Rather, it is the case that revolutions *"are not improvised. They are not made at will by individuals nor even by the most powerful associations. They come independently of all will and all conspiracies, and are always brought on by the natural force of circumstance."* [Bakunin, **The Political Philosophy of Bakunin**, p. 323] Revolutions break-out when the conditions are ripe and cannot be artificially produced (by, say, a union leadership proclaiming out of the blue such-and-such a day for a general strike). However, the actions of individuals and associations can make revolution more likely by their propaganda, struggles and organising so that when the circumstances change, people are able and willing to act in a revolutionary manner (by, say, spontaneously going on strike and their unions expanding the struggle into a general strike). This means that there is no mechanical, objective, process at work but rather something which we can influence but not command. Revolutions are a product of social evolution and of the social struggle which is an inevitable part of it:

> *"the oppressed masses ... have never completely resigned themselves to oppression and poverty, and who today more than ever show themselves thirsting for justice, freedom and wellbeing, are beginning to understand that they will not be able to achieve their emancipation except by union and solidarity with all the oppressed, with the exploited everywhere in the world. And they also understand that the indispensable condition for their emancipation which cannot be neglected is the possession of the means of production, of the land and of the instruments of labour."* [Malatesta, **Anarchy**, p. 33]

Thus any social revolution proceeds from the daily struggles of working class people (just as anarchism does). It is not an event, rather it is a **process** — a process which is occurring at this moment. So a social revolution is not something in the future which we wait for but an process which is occurring in the here and now which we influence along side other tendencies as well as objective factors. This means that *"evolution and revolution are not two separate and different things. Still less are they opposites ... Revolution is merely the boiling point of evolution."* [Berkman, **Op. Cit.**, p. 179] This means how we act **now** matters as we shape the future by our struggles today. As German Anarchist Gustav Landauer put it:

> *"The State is not something that can be destroyed by a revolution, but it is a condition, a certain relationship between human beings, a mode of human behaviour; we destroy it by contracting other relationships, by behaving differently."* [quoted by George Woodcock, **Anarchism**, p. 421]

This does not mean that anarchists do not recognise that a revolution will be marked by, say, specific events (such as a general strike, wide scale occupations of land, housing, workplaces, actual insurrections and so on). Of course not. It means that we place these events in a process, within social movements recognising that they do not occur in isolation from history nor the evolution of ideas and movements within society.

Berkman echoed this point when he argued that while *"a social revolution is one that entirely changes the foundation of society, its political, economic and social character"* such a change *"must **first** take place in the ideas and opinions of the people, in the minds of men [and women]."* This means that *"the social revolution must be prepared. Prepared in these sense of furthering evolutionary process, of enlightening the people about the evils of present-day society and convincing them of the desirability and possibility, of the justice and practicability of a social life based on liberty."* [**Op. Cit.**, p. 180–1] Such preparation would be the result of social struggle in the here and now, social struggle based on direct action, solidarity and self-managed organisations. While Berkman concentrated on the labour movement, his comments are applicable to all social movements:

> *"In the daily struggle of the proletariat such an organisation [a syndicalist union] would be able to achieve victories about which the conservative union, as at present built, cannot even dream ... Such a union would soon become something more than a mere defender and protector of the worker. It would gain a vital realisation of the meaning of unity and consequent power, of labour solidarity. The factory and shop would serve as a training camp to develop the worker's understanding of his [or her] proper role in life, to cultivate his [or her] self-reliance and independence, teach him [or her] mutual help and co-operation, and make him [or her] conscious of his [or her] responsibility. He [or she] will learn to decide and act on his [or her] own judgement, not leaving it to leaders or politicians to attend to his [or her] affairs and look out for his [or her] welfare ... He [or she] will grow to understand that present economic and social arrangements are wrong and criminal, and he [or she] will determine to change them. The shop committee and union will become the field of preparation for a new economic system, for a new social life."* [**Op. Cit.**, pp. 206–7]

In other words, the struggle against authority, exploitation, oppression and domination in the here and now is the start of the social revolution. It is this daily struggle, Bakunin stressed, which creates free people and the organisations it generates *"bear ... the living seed of the new society which is to replace the old one. They are creating not only the ideas, but also the facts of the future itself."* Therefore (libertarian) socialism will be attained only *"through the development and organisation of the non-political or anti-political social power of the working classes in city and country."* [**Bakunin On Anarchism**, p. 255 and p. 263] Such social power is expressed in economic and community organisations such as self-managed unions and workplace/community assemblies (see section J.5) and these form the organisational framework of a free society (see section I.2.3).

Anarchists try and follow the example of our Spanish comrades in the C.N.T. and F.A.I. who, when *"faced with the conventional opposition between reformism and revolution, they appear, in effect, to have put forward a third alternative, seeking to obtain immediate practical improvements through the actual development, in practice, of autonomous, libertarian forms of self-organisation."* [Nick Rider, *"The Practice of Direct Action: The Barcelona Rent Strike of 1931"*, pp. 79–105, **For Anarchism**, David Goodway (ed.), p. 99] While doing this, anarchists must also *"beware of ourselves becoming less anarchist because the masses are not ready for anarchy."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 162]

So revolution and anarchism is the product of struggle, a social process in which anarchist ideas spread and develop. *"This does not mean,"* argued Malatesta, *"that to achieve anarchy we*

*must wait till **everyone** becomes an anarchist. On the contrary ... under present conditions only a small minority, favoured by specific circumstances, can manage to conceive what anarchy is. It would be wishful thinking to hope for a general conversion before a change actually took place in the kind of environment in which authoritarianism and privilege now flourish. It is precisely for this reason that [we] ... need to organise for the bringing about of anarchy, or at any rate that degree of anarchy which could become gradually feasible, as soon as a sufficient amount of freedom has been won and a nucleus of anarchists somewhere exists that is both numerically strong enough and able to be self-sufficient and to spread its influence locally."* [**The Anarchist Revolution**, pp. 83–4]

Thus anarchists influence social struggle, the revolutionary process, by encouraging anarchistic tendencies within those who are not yet anarchists but are instinctively acting in a libertarian manner. Anarchists spread our message to those in struggle and support libertarian tendencies in it as far as we can. In this way, more and more people will become anarchists and anarchy will become increasingly possible (we discuss the role of anarchists in a social revolution in section J.7.4). For anarchists, a social revolution is the end product of years of struggle. It is marked by the transformation of a given society, the breaking down of all forms of oppression and the creation of new ways of living, new forms of self-managed organisation, a new attitude to life itself. Moreover, we do not wait for the future to introduce such transformations in our daily life. Rather, we try and create as many anarchistic tendencies in today's society as possible in the firm belief that in so doing we are pushing the creation of a free society nearer.

So anarchists, including revolutionary ones, try to make the world today more libertarian and so bring us closer to freedom. Few anarchists think of anarchy as something in (or for) the distant future, rather it is something we try and create in the here and now by living and struggling in a libertarian manner. Once enough people do this, then a more extensive change towards anarchy (i.e. a revolution) is possible.

J.7.1 Why are most anarchists revolutionaries?

While most anarchists do believe that a social revolution is required to create a free society, some reject the idea. This is because they think that revolutions are by their very nature coercive and so are against anarchist principles. In the words of Proudhon (in reply to Marx):

> *"Perhaps you still hold the opinion that no reform is possible without a helping **coup de main,** without what used to be called a revolution but which is quite simply a jolt. I confess that my most recent studies have led me to abandon this view, which I understand and would willingly discuss, since for a long time I held it myself. I do not think that this is what we need in order to succeed, and consequently we must not suggest **revolutionary** action as the means of social reform because this supposed means would simply be an appeal to force and to arbitrariness. In brief, it would be a contradiction."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 151]

Also they point to the fact that the state is far better armed than the general population, better trained and (as history proves) more than willing to slaughter as many people as required to restore "order." In face of this power, they argue, revolution is doomed to failure.

Those opposed to revolution come from all tendencies of the movement. Traditionally, Individualist anarchists are usually against the idea of revolution, as was Proudhon. However, with the

failure of the Russian Revolution and the defeat of the CNT-FAI in Spain, some social anarchists have rethought support for revolution. Rather than seeing revolution as the key way of creating a free society they consider it doomed to failure as the state is too strong a force to be overcome by insurrection. Instead of revolution, such anarchists support the creation of alternatives, such as co-operatives, mutual banks and so on, which will help transform capitalism into libertarian socialism by *"burn[ing] Property little by little"* via *"some system of economics"* which will *"put back into society ... the wealth which has been taken out of society by another system of economics."* [Proudhon, **Op. Cit.**, p. 151] Such alternative building, combined with pressurising the state to, say, use co-operatives to run public services and industries as well as civil disobedience and non-payment of taxes, is seen as the best way to creating anarchy. This may take time, they argue, but such gradual change will be more successful in the long run.

Most revolutionary anarchists agree on the importance of building libertarian alternatives in the here and now. They would agree with Bakunin when he argued that such organisations as libertarian unions, co-operatives and so on are essential *"so that when the Revolution, brought about by the natural force of circumstances, breaks out, there will be a real force at hand which knows what to do and by virtue thereof is capable of taking the Revolution into its own hands and imparting to it a direction salutary for the people: a serious, international organisation of worker's organisations of all countries, capable of replacing the departing political world of the States and the bourgeoisie."* [**The Political Philosophy of Bakunin**, p. 323] Thus, for most anarchists, the difference of evolution and revolution is one of little import — anarchists should support libertarian tendencies within society as they support revolutionary situations when they occur.

However, revolutionary anarchists argue that, ultimately, capitalism cannot be reformed away nor will the state wither away under the onslaught of libertarian institutions and attitudes. Neither mutual banking (see section J.5.7) nor co-operatives (see section J.5.11) can out-compete capitalist institutions. This means that these alternatives, will important, are insufficient to the task of creating a free society. This suggests that while libertarian tendencies within capitalism may make life better under that system, they cannot get rid of it. This requires a social revolution, they argue. Such anarchists agree with Alexander Berkman that there *"is no record of any government or authority, of any group or class in power having given up its mastery voluntarily. In every instance it required the use of force, or at least the threat of it."* [**What is Anarchism?**, p. 174] Even the end of State capitalism ("Communism") in Eastern Europe did not contradict this argument. Without the mass action of the population, the regime would have continued. Faced with a massive popular revolt, the Commissars realised that it was better to renounce (some) power than have it all taken from them (and they were right, as this allowed many of them to become part of the new, private capitalist, ruling class). Thus mass rebellion, the start of any true revolution, was required.

The argument that the state is too powerful to be defeated has been proven wrong time and time again. Every revolution has defeated a military machine which previously had been proclaimed to be unbeatable (most obviously, the people armed in Spain defeated the military in two-thirds of the country). Ultimately, the power of the state rests on its troops following orders. If those troops rebel, then the state is powerless. That is why anarchists have always produced anti-militarist propaganda urging troops to join strikers and other people in revolt. Revolutionary anarchists argue that any state can be defeated, if the circumstances are right and the work of anarchists is to encourage those circumstances.

In addition, revolutionary anarchists argue that even if anarchists did not support revolutionary change, this would not stop such events happening. Revolutions are the product of developments in human society and occur whether we desire them or not. They start with small rebellions, small acts of refusal by individuals, groups, workplaces and communities, then grow. These acts of rebellion are inevitable in any hierarchical society, as is their spreading wider and wider. Revolutionary anarchists argue that anarchists must, by the nature of our politics and our desire for freedom, support such acts of rebellion and, ultimately, social revolution. Not to do so means ignoring people in struggle against our common enemy and ignoring the means by which anarchists ideas and attitudes will grow within existing society. Thus Alexander Berkman was right when he wrote:

> *"That is why it is no prophecy to foresee that some day it must come to decisive struggle between the masters of life and the dispossessed masses.*
>
> *"As a matter if fact, that struggle is going on all the time.*
>
> *"There is a continuous warfare between capital and labour. That warfare generally proceeds within so-called legal forms. But even these erupt now and then in violence, as during strikes and lockouts, because the armed fist of government is always at the service of the masters, and that fist gets into action the moment capital feels its profits threatened: then it drops the mask of 'mutual interests' and 'partnership' with labour and resorts to the final argument of every master, to coercion and force.*
>
> *"It is therefore certain that government and capital will not allow themselves to be quietly abolished if they can help it; nor will they miraculously 'disappear' of themselves, as some people pretend to believe. It will require a revolution to get rid of them."* [**Op. Cit.**, p. 174]

However, all anarchists are agreed that any revolution should be as non-violent as possible. Violence is the tool of oppression and, for anarchists, violence is only legitimate as a means of self-defence against authority. Therefore revolutionary anarchists do not seek "violent revolution" — they are just aware that when people refuse to kow-tow to authority then that authority will use violence against them. This use of violence has been directed against non-violent forms of direct action and so those anarchists who reject revolution will not avoid state violence directed against them unless they renounce **all** forms of resistance to state and capitalist authority. So when it comes to effective action by the subjects of an authority, the relevant question quickly becomes how much does our freedom depend on us **not** exercising it?

Nor do revolutionary anarchists think that revolution is in contradiction to the principles of anarchism. As Malatesta put it, *"[f]or two people to live in peace they must both want peace; if one insists on using force to oblige the other to work for him and serve him, then the other, if he wishes to retain his dignity as a man and not be reduced to abject slavery, will be obliged, in spite of his love of peace, to resist force with adequate means."* [**Errico Malatesta: His Life and Ideas**, p. 54] Under any hierarchical system, those in authority do not leave those subject to them in peace. The boss does not treat his/her workers as equals, working together by free agreement without differences in power. Rather, the boss orders the worker about and uses the threat of sanctions to get compliance. Similarly with the state. Under these conditions, revolution cannot be authoritarian — for it is not authoritarian to destroy authority! To quote Rudolf Rocker:

> *"We ... know that a revolution cannot be made with rosewater. And we know, too, that the owning classes will never yield up their privileges spontaneously. On the day of victorious revolution the workers will have to impose their will on the present owners of the soil, of the subsoil and of the means of production, which cannot be done — let us be clear on this — without the workers taking the capital of society into their own hands, and, above all, without their having demolished the authoritarian structure which is, and will continue to be, the fortress keeping the masses of the people under dominion. Such an action is, without doubt, an act of liberation; a proclamation of social justice; the very essence of social revolution, which has nothing in common with the utterly bourgeois principle of dictatorship."* [*"Anarchism and Sovietism"*, pp. 53–74, **The Poverty of Statism**, Albert Meltzer (ed.), p. 73]

It should also be noted that those who proclaim that a revolution is inherently authoritarian like, say, Engels (see section H.4.7) are confused. They fail to see that it is hardly "authoritarian" to stop someone ruling you! It is an act of liberation to free oneself from those oppressing you. Malatesta comments reflect well the position of revolutionary anarchists with regards to the use of force:

> *"We neither seek to impose anything by force nor do we wish to submit to a violent imposition.*
>
> *"We intend to use force against government, because it is by force that we are kept in subjection by government.*
>
> *"We intend to expropriate the owners of property because it is by force that they withhold the raw materials and wealth, which is the fruit of human labour, and use it to oblige others to work in their interest.*
>
> *"We shall resist with force whoever would wish by force, to retain or regain the means to impose his will and exploit the labour of others .. .*
>
> *"With the exception of these cases, in which the use of violence is justified as a defence against force, we are always against violence, and for self-determination."* [**Op. Cit.**, p. 56]

This is the reason why most anarchists are revolutionaries. They do not think it against the principles of anarchism and consider it the only real means of creating a free society — a society in which the far greater, and permanent, violence which keeps the majority of humanity in servitude can be ended once and for all.

J.7.2 Is social revolution possible?

One objection to the possibility of social revolution is based on what we might call "the paradox of social change." This argument goes as follows: authoritarian institutions reward and select people with an authoritarian type of personality for the most influential positions in society; such types of people have both (a) an interest in perpetuating authoritarian institutions (from which they benefit) and (b) the power to perpetuate them; hence they create a self-sustaining and tightly closed system which is virtually impervious to the influence of non-authoritarian types.

Therefore, institutional change presupposes individual change, which presupposes institutional change, and so on. Unless it can be shown, then, that institutions and human psychology can both be changed **at the same time**, hope for a genuine social revolution (instead of just another rotation of elites) appears to be unrealistic.

Connected with this problem is the fact that the psychological root of the hierarchical society is addiction to power — over other people, over nature, over the body and human emotions — and that this addiction is highly contagious. That is, as soon as any group of people anywhere in the world becomes addicted to power, those within range of their aggression also feel compelled to embrace the structures of power, including centralised control over the use of deadly force, in order to protect themselves from their neighbours. Once these structures of power are adopted, authoritarian institutions become self-perpetuating.

In this situation, fear becomes the underlying emotion behind the conservatism, conformity, and mental inertia of the majority, who in that state become vulnerable to the self-serving propaganda of authoritarian elites alleging the necessity of the state, strong leaders, militarism, "law and order," capitalists, rulers, etc. The simultaneous transformation of institutions and individual psychology becomes even more difficult to imagine.

Serious as these obstacles may be, they do not warrant despair. To see why, let us note first that "paradigm shifts" in science have not generally derived from new developments in one field alone but from a convergence of cumulative developments in several different fields at once. For example, the Einsteinian revolution which resulted in the overthrow of the Newtonian paradigm was due to simultaneous progress in mathematics, physics, astronomy and other sciences that all influenced, reacted on, and cross-fertilised each other (see Thomas Kuhn's **The Structure of Scientific Revolutions**). Similarly, if there is going to be a "paradigm shift" in the social realm, i.e. from hierarchical to non-hierarchical institutions, it is likely to emerge from the convergence of a number of different socio-economic and political developments at the same time. In a hierarchical society, the oppression authority produces also generates resistance, and so hope. The *"instinct for freedom"* cannot be repressed forever.

That is why anarchists stress the importance of direct action (section J.2) and self-help (section J.5). By the very process of struggle, by practising self-management, direct action and solidarity, people create the necessary "paradigm shift" in both themselves and society as a whole. Thus the struggle against authority is the school of anarchy — it encourages libertarian tendencies in society and the transformation of individuals into anarchists (*"Only freedom or the struggle for freedom can be the school for freedom."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 59]). In a revolutionary situation, this process is accelerated. It is worth quoting Murray Bookchin at length on this subject:

> *"Revolutions are profoundly educational processes, indeed veritable cauldrons in which all kinds of conflicting ideas and tendencies are sifted out in the minds of a revolutionary people ...*
>
> *"Individuals who enter into a revolutionary process are by no means the same after the revolution as they were before it began. Those who encounter a modicum of success in revolutionary times learn more within a span of a few weeks or months than they might have learned over their lifetime in non-revolutionary times. Conventional ideas fall away with extraordinary rapidity; values and prejudices that were centuries in the making disappear almost overnight. Strikingly innovative ideas are quickly adopted,*

tested, and, where necessary, discarded. Even newer ideas, often flagrantly radical in character, are adopted with an elan that frightens ruling elites — however radical the latter may profess to be — and they soon become deeply rooted in the popular consciousness. Authorities hallowed by age-old tradition are suddenly divested of their prestige, legitimacy, and power to govern ...

*"So tumultuous socially and psychologically are revolutions in general that they constitute a standing challenge to ideologues, including sociobiologists, who assert that human behaviour is fixed and human nature predetermined. Revolutionary changes reveal a remarkable flexibility in 'human nature,' yet few psychologists have elected to study the social and psychological tumult of revolution as well as the institutional changes it so often produces. Thus much must be said with fervent emphasis: **to continue to judge the behaviour of a people during and after a revolution by the same standards one judged them by beforehand is completely myopic.***

"I wish to argue that the capacity of a revolution to produce far-reaching ideological and moral changes in a people stems primarily from the opportunity it affords ordinary, indeed oppressed, people to exercise popular self-management — to enter directly, rapidly, and exhilaratingly into control over most aspects of their social and personal lives. To the extent that an insurrectionary people takes over the reins of power from the formerly hallowed elites who oppressed them and begins to restructure society along radically populist lines, individuals grow aware of latent powers within themselves that nourish their previously suppressed creativity, sense of self-worth, and solidarity. They learn that society is neither immutable nor sanctified, as inflexible custom had previously taught them; rather, it is malleable and subject, within certain limits, to change according to human will and desire." [**The Third Revolution**, vol. 1, pp. 6–7]

In short, *"it is only through th[e] struggle for freedom, equality and solidarity that you will reach an understanding of anarchism."* [Nestor Makhno, **The Struggle Against the State and Other Essays**, p. 71]

So, social revolutions are possible. Anarchists anticipate successful revolts within certain circumstance. People who are in the habit of taking orders from bosses are not capable of creating a new society. Tendencies towards freedom, self-management, co-operation and solidarity are not simply an act of ethical will which overcomes the competitive and hierarchical behaviour capitalism generates within those who live in it. Capitalism is, as Malatesta noted, based on competition — and this includes **within** the working class. However,

co-operation is stimulated within our class by our struggles to survive in and resist the system. This tendency for co-operation generated by struggle against capitalism also produces the habits required for a free society — by struggling to change the world (even a small part of it), people also change themselves. Direct action produces empowered and self-reliant people who can manage their own affairs themselves. It is on the liberating effects of struggle, the tendencies towards individual and collective self-management and direct action it generates, the needs and feelings for solidarity and creative solutions to pressing problems it produces that anarchists base their positive answer on whether social revolution is possible. History has shown that we are right. It will do so again.

J.7.3 Doesn't revolution mean violence?

While many try and paint revolutions (and anarchists) as being violent by their very nature, the social revolution desired by anarchists is essentially non-violent. This is because, to quote Bakunin, *"[i]n order to launch a radical revolution, it is ... necessary to attack positions and things and to destroy property and the State, but there will be no need to destroy men and to condemn ourselves to the inevitable reaction which is unfailingly produced in every society by the slaughter of men."* [**Michael Bakunin: Selected Writings**, pp. 168–9] Equally, to destroy the institution of private property there is no need to destroy the actual useful things monopolised by the few:

> *"How to smash the tyranny of capital? Destroy capital? But that would be to destroy all the riches accumulated on earth, all primary materials, all the instruments of labour, all the means of labour ... Thus capital cannot and must not be destroyed. It must be preserved .. . there is but a single solution — **the intimate and complete union of capital and labour** ... the workers must obtain not individual but **collective** property in capital ... the collective property of capital ... [is] the absolutely necessary conditions of the emancipation **of labour and of the workers.**"* [**The Basic Bakunin**, pp. 90–1]

The essentially non-violent nature of anarchist ideas of social revolution can be seen from the Seattle General Strike of 1919. Here is a quote from the Mayor of Seattle (we do not think we need to say that he was not on the side of the strikers):

> *"The so-called sympathetic Seattle strike was an attempted revolution. That there was no violence does not alter the fact ... The intent, openly and covertly announced, was for the overthrow of the industrial system; here first, then everywhere ... True, there were no flashing guns, no bombs, no killings. Revolution, I repeat, doesn't need violence. The general strike, as practised in Seattle, is of itself the weapon of revolution, all the more dangerous because quiet. To succeed, it must suspend everything; stop the entire life stream of a community . .. That is to say, it puts the government out of operation. And that is all there is to revolt — no matter how achieved."* [quoted by Howard Zinn, **A People's History of the United States**, pp. 370–1]

If the strikers had occupied their workplaces and local communities had created popular assemblies then the attempted revolution would have become an actual one without any use of violence at all. In Italy, a year later, the occupations of the factories and land started. As Malatesta pointed out, *"in **Umanita Nova** [the daily anarchist newspaper] we ... said that if the movement spread to all sectors of industry, that is workers and peasants followed the example of the metallurgists, of getting rid of the bosses and taking over the means of production, the revolution would succeed without shedding a single drop of blood."* Thus the *"occupation of the factories and the land suited perfectly our programme of action."* [**Errico Malatesta: His Life and Ideas**, p. 135] Sadly the workers followed their socialist trade union leaders and stopped the occupations rather than spreading them.

These events indicate the strength of ordinary people and the relative weakness of government and capitalism — they only work when they can force people to respect them. After all, a government is *"only a handful of men"* and is strong *"when the people are with it. Then they supply the government with money, with an army and navy, obey it, and enable it to function."* Remove

that support and *"no government can accomplish anything."* The same can be said of capitalists, whose wealth *"would do them no good but for the willingness of the people to work for them and pay tribute to them."* Both would *"find out that all their boasted power and strength disappear when the people refuse to acknowledge them as masters, refuse to let them lord it over them."* In contrast, *"the people's power"* is *"**actual**: it cannot be taken away ... It cannot be taken away because it does not consist of possessions but in ability. It is the ability to create, to produce."* To achieve a free society we need to *"be conscious of its tremendous power."* [Alexander Berkman, **What is Anarchism?**, p. 84, p. 86, p. 87 and p. 83]

Therefore the notion that a social revolution is necessarily violent is a false one. For anarchists, social revolution is essentially an act of self-liberation (of both the individuals involved and society as a whole). It has nothing to do with violence, quite the reverse, as anarchists see it as the means to end the rule and use of violence in society. Anarchists hope that any revolution is essentially non-violent, with any violence being defensive in nature. As Malatesta stressed, *"Anarchists are opposed to violence"* and it *"is justifiable only when it is necessary to defend oneself and others from violence."* [**Errico Malatesta: His Life and Ideas**, p. 53]

Of course, many revolutions are marked by violence. It has two sources. First, and most obviously, the violent resistance of those protecting their power and wealth against those seeking liberty. Unsurprisingly, this violence is usually downplayed in history books and the media. Second, acts of revenge resulting from the the domination and repression of the system the revolution seeks to end. Such violence is not desired nor the aim of anarchism nor of the revolution. As Berkman argued:

> *"We know that revolution begins with street disturbances and outbreaks; it is the initial phase which involves force and violence. But that is merely the spectacular prologue of the real revolution. The age long misery and indignity suffered by the masses burst into disorder and tumult, the humiliation and injustice meekly borne for decades find vents in acts of fury and destruction. That is inevitable, and it is solely the master class which is responsible for this preliminary character of revolution. For it is even more true socially than individually that 'whoever sows the wind will reap the whirlwind'; the greater the oppression and wretchedness to which the masses had been made to submit, the fiercer will rage the social storm. All history proves it, but the lords of life have never harkened to its warning voice."* [**Op. Cit.**, p. 195]

"Most people have very confused notions about revolution," Berkman suggested. *"To them it means just fighting, smashing things, destroying. It is the same as if rolling up your sleeves for work should be considered the work itself that you have to do. The fighting bit of the revolution is merely the rolling up of your sleeves."* The task of the revolution is the *"destruction of the existing conditions"* and *"**conditions** are not destroyed [by] breaking and smashing things. You can't destroy wage slavery by wrecking the machinery in the mills and factories ... You won't destroy government by setting fire to the White House."* To think of revolution *"in terms of violence and destruction is to misinterpret and falsify the whole idea of it. In practical application such a conception is bound to lead to disastrous results."* For what is there to destroy? *"The wealth of the rich? Nay, that is something we want the whole of society to enjoy."* The means of production are to be made *"useful to the entire people"* and *"serve the needs of all."* Thus the aim of revolution is *"to **take over** things for the general benefit, not to destroy them. It is to reorganise conditions for public welfare ... to reconstruct and rebuild."* [**Op. Cit.**, pp. 183–4]

Thus when anarchists like Bakunin speak of revolution as "destruction" they mean that the idea of authority and obedience must be destroyed, along with the institutions that are based on such ideas. We do not mean, as can be clearly seen, the destruction of people or wealth. Nor do we imply the glorification of violence — quite the reserve, as anarchists seek to limit violence to that required for self-defence against oppression and authority.

Therefore a social revolution **may** involve some violence. It may also mean no violence at all. It depends on the revolution and how widely anarchist ideas are spread. One thing is sure, for anarchists social revolution is **not** synonymous violence. Indeed, violence usually occurs when the ruling class resists the action of the oppressed — that is, when those in authority act to protect their social position.

The wealthy and their state will do anything in their power to prevent having a large enough percentage of anarchists in the population to simply "ignore" the government and property out of existence. If things got that far, the government would suspend the legal rights, elections and round up influential subversives. The question is, what do anarchists do in response to these actions? If anarchists are in the majority or near it, then defensive violence would likely succeed. For example, *"the people armed"* crushed the fascist coup of July 19th, 1936 in Spain and resulted in one of the most important experiments in anarchism the world has ever seen (see section A.5.6). This should be contrasted with the aftermath of the factory occupations in Italy in 1920 and the fascist terror which crushed the labour movement (see section A.5.5). In other words, you cannot just ignore the state even if the majority are acting, you need to abolish it and organise self-defence against attempts to re-impose it or capitalism.

We discuss the question of self-defence and the protection of the revolution in section J.7.6.

J.7.4 What would a social revolution involve?

Social revolution necessitates putting anarchist ideas into daily practice. Therefore it implies that direct action, solidarity and self-management become increasingly the dominant form of living in a society. It implies the transformation of society from top to bottom. We can do no better than quote Errico Malatesta on what revolution means:

> *"The Revolution is the creation of new living institutions, new groupings, new social relationships; it is the destruction of privileges and monopolies; it is the new spirit of justice, of brotherhood, of freedom which must renew the whole of social life, raise the moral level and the material conditions of the masses by calling on them to provide, through their direct and conscious action, for their own futures. Revolution is the organisation of all public services by those who work in them in their own interest as well as the public's; Revolution is the destruction of all of coercive ties; it is the autonomy of groups, of communes, of regions; Revolution is the free federation brought about by a desire for brotherhood, by individual and collective interests, by the needs of production and defence; Revolution is the constitution of innumerable free groupings based on ideas, wishes, and tastes of all kinds that exist among the people; Revolution is the forming and disbanding of thousands of representative, district, communal, regional, national bodies which, without having any legislative power, serve to make known and to co-ordinate the desires and interests of people near and far and which act through*

information, advice and example. Revolution is freedom proved in the crucible of facts — and lasts so long as freedom lasts." [**Errico Malatesta: His Life and Ideas**, p. 153]

This, of course, presents a somewhat wide vision of the revolutionary process. We will need to give some more concrete examples of what a social revolution would involve. However, before so doing, we stress that these are purely examples drawn from previous revolutions and are not written in stone. Every revolution creates its own forms of organisation and struggle. The next one will be no different. As we argued in section I.2, an anarchist revolution will create its own forms of freedom, forms which will share features with organisations generated in previous revolutions, but which are unique to this one. Thus the Paris Commune of 1871 had mandated and recallable delegates as did the Russian soviets of 1905 and 1917, but the first was based on geographical delegation and the later on workplaces. All we do here is give a rough overview of what we expect (based on previous revolutions) to see occur in a future social revolution. We are not predicting the future. As Kropotkin put it:

"A question which we are often asked is: 'How will you organise the future society on Anarchist principles?' If the question were put to .. . someone who fancies that a group of men [or women] is able to organise society as they like, it would seem natural. But in the ears of an Anarchist, it sounds very strangely, and the only answer we can give to it is: 'We cannot organise you. It will depend upon ***you*** *what sort of organisation you choose.'"* [**Act for Yourselves**, p. 32]

And organise themselves they have. In every social revolution, the oppressed have created many different self-managed organisations. These bodies include the directly democratic neighbourhood Sections of the Great French Revolution, the neighbourhood clubs of the 1848 French Revolution and the Paris Commune, the workers councils and factory committees of the Russian and German revolutions, the industrial and rural collectives of the Spanish Revolution, the workers councils of the Hungarian revolution of 1956, assemblies and action committees of the 1968 revolt in France, the neighbourhood assemblies and occupied workplaces of the 2001 revolt in Argentina, and so on. These bodies were hardly uniform in structure and some were more anarchistic than others, but the tendency towards self-management and federation existed in them all. This tendency towards anarchistic solutions and organisation is not unsurprising, for, as Nestor Makhno argued, *"[i]n carrying through the revolution, under the impulsion of the anarchism that is innate in them, the masses of humanity search for free associations. Free assemblies always command their sympathy. The revolutionary anarchist must help them to formulate this approach as best they can."* [**The Struggle Against the State and Other Essays**, p. 85]

In addition, we must stress that we are discussing an **anarchist** social revolution in this section. As we noted in section I.2.2, anarchists recognise that any revolution will take on different forms in different areas and develop in different ways and at different speeds. We leave it up to others to describe their vision of revolution (for Marxists, the creation of a "workers' state" and the seizure of power by the "proletarian" vanguard or party, and so on).

So what would a libertarian revolution involve?

Firstly, a revolution *"is not the work of one day. It means a whole period, mostly lasting for several years, during which the country is in a state of effervescence; when thousands of formerly indifferent spectators take a lively part in public affairs."* It *"criticises and repudiates the institutions which are*

a hindrance to free development . .. it boldly enters upon problems which formerly seemed insoluble." [Kropotkin, **Op. Cit.**, pp. 25–6] Thus, it would be a **process** in which revolutionary attitudes, ideas, actions and organisations spread in society until the existing system is overthrown and a new one takes its place. It does not come overnight. Rather it is an accumulative development, marked by specific events of course, but fundamentally it goes on in the fabric of society.

So the **real** Russian revolution occurred during the period between the 1917 February and October insurrections when workers took over their workplaces, peasants seized their land, new forms of social life (soviets, factory committees, co-operatives, etc.) were formed and people lost their previous submissive attitudes to authority by using direct action to change their lives for the better (see section A.5.4). Similarly, the Spanish Revolution occurred after the 19th of July, 1936, when workers again took over their workplaces, peasants formed collectives and militias were organised to fight fascism (see section A.5.6)

Secondly, *"there **must** be a rapid modification of outgrown economical and political institutions, an overthrow of the injustices accumulated by centuries past, a displacement of wealth and political power."* [Kropotkin, **Op. Cit.**, p. 25] This aspect is the key one. Without the abolition of the state and capitalism, no real revolution has taken place. As Bakunin argued, *"the program of social revolution"* is *"the abolition of all exploitation and all political or juridical as well as governmental and bureaucratic oppression, in other words, to the abolition of all classes through the equalisation of economic conditions, and the abolition of their last buttress, the state."* That is, *"the total and definitive liberation of the proletariat from economic exploitation and state oppression."* [**Statism and Anarchy**, pp. 48–9]

We should stress here that, regardless of what Marxists may say, anarchists see the destruction of capitalism occurring **at the same time as** the destruction of the state. We do not aim to abolish the state first, then capitalism as Engels asserted we did (see section H.2.4). This perspective of a simultaneous political and economic revolution is clearly seen when Bakunin wrote that a city in revolt would *"naturally make haste to organise itself as best it can, in revolutionary style, after the workers have joined into associations and made a clean sweep of all the instruments of labour and every kind of capital and building; armed and organised by streets and **quartiers,** they will form the revolutionary federation of all the **quartiers,** the federative commune"* All *"the revolutionary communes will then send representatives to organise the necessary services and arrangements for production and exchange ... and to organise common defence against the enemies of the Revolution."* [**Michael Bakunin: Selected Writings**, p. 179]

As can be seen, an essential part of a social revolution is the *"expropriation of landowners and capitalists for the benefit of all."* [Malatesta, **Op. Cit.**, p. 198] This would be done by workers occupying their workplaces and placing them under workers' self-management. As Voltairine de Cleyre argued in 1910 *"the weapon of the future will be the general strike"* and its it not clear that *"it must be the strike which will **stay in** the factory, not **go out**? which will guard the machines and allow no scab to touch them? which will organise, not to inflict deprivation on itself, but on the enemy? which will take over industry and operate it for the workers, not for franchise holder, stockholders, and officeholders?"* [*"A Study of the General Strike in Philadelphia"*, pp. 307–14, **Anarchy! An Anthology of Emma Goldman's Mother Earth**, Peter Glassgold (ed.), p. 311] Individual self-managed workplaces would then federate on a local and industrial basis into workers' councils to co-ordinate joint activity, discuss common interests and issues as well as ensuring common ownership and universalising self-management: *"We must push the workers to take possession of the factories, to federate among themselves and work for the community, and*

similarly the peasants should take over the land and the produce usurped by the landlords, and come to an agreement with the industrial workers on the necessary exchange of goods." [Malatesta, **Op. Cit.**, p. 165]

In this way capitalism is replaced by new economic system based the end of hierarchy, on self-managed work. These workplace assemblies and local, regional, etc., federations would start to organise production to meet human needs rather than capitalist profit. While most anarchists would like to see the introduction of communistic relations begin as quickly as possible in such an economy, most are realistic enough to recognise that tendencies towards libertarian communism will be depend on local conditions. As Malatesta argued:

> *"It is then that graduation really comes into operation. We shall have to study all the practical problems of life: production, exchange, the means of communication, relations between anarchist groupings and those living under some kind of authority, between communist collectives and those living in an individualistic way; relations between town and country, the utilisation for the benefit of everyone of all natural resources of the different regions [and so on] ... And in every problem [anarchists] should prefer the solutions which not only are economically superior but which satisfy the need for justice and freedom and leave the way open for future improvements, which other solutions might not."* [**Op. Cit.**, p. 173]

No central government could organise such a transformation. No centralised body could comprehend the changes required and decide between the possibilities available to those involved. Hence the very complexity of life, and the needs of social living, will push a social revolution towards anarchism. *"Unavoidably,"* argued Kropotkin, *"the Anarchist system of organisation — free local action and free grouping – will come into play."* [**Op. Cit.**, p. 72] Unless the economy is transformed from the bottom up by those who work within it, socialism is impossible. If it is re-organised from the top-down by a centralised body all that will be achieved is state capitalism and rule by bureaucrats instead of capitalists. Without local action and free agreement between local groups to co-ordinate activity, a revolution would be dead in the water and fit only to produce a new bureaucratic class structure, as the experience of the Russian Revolution proves (see section H.6).

Therefore, the key economic aspect of a social revolution is the end of capitalist oppression by the direct action of the workers themselves and their re-organisation of their work and the economy by their own actions, organisations and initiative from the bottom-up:

> *"To destroy radically this oppression without any danger of it re-emerging, all people must be convinced of their right to the means of production, and be prepared to exercise this basic right by expropriating the landowners, the industrialists and financiers, and putting all social wealth at the disposal of the people."* [Malatesta, **Op. Cit.**, p. 167]

However, the economic transformation is but part of the picture. As Kropotkin argued, *"throughout history we see that each change in the economic relations of a community is accompanied by a corresponding change in what may be called political organisation ... Thus, too, it will be with Socialism. If it contemplates a new departure in economics it **must** be prepared for a new departure in what is called political organisation."* [**Op. Cit.**, p. 39] Thus the anarchist social

revolution also aims to abolish the state and create a confederation of self-governing communes to ensure its final elimination. This destruction of the state is essential as *"those workers who want to free themselves, or even only to effectively improve their conditions, will be forced to defend themselves from the government ... which by legalising the right to property and protecting it with brute force, constitutes a barrier to human progress, which must be beaten down ... if one does not wish to remain indefinitely under present conditions or even worse."* Therefore, *"[f]rom the economic struggle one must pass to the political struggle, that is to the struggle against government."* [Malatesta, **Op. Cit.**, p. 195]

Thus a social revolution will have to destroy the state bureaucracy and its forces of violence and coercion (the police, armed forces, intelligence agencies, and so on). If this is not done then the state will come back and crush the revolution. As the CNT newspaper put it in the 1930s, the *"first step in the social revolution is to take control of Town Hall and proclaim the free commune. Once this occurs, self-management spreads to all areas of life and the people exercise their sovereign executive power through the popular assembly."* This free commune *"is the basic unit of libertarian communism ... and, federated, it provides the basic structure of the new society in all its aspects: administrative, economic and political."* [quoted by Abel Paz, **Durrutu in the Spanish Revolution**, p. 312]

Such a destruction of the state does not involve violence against individuals, but rather the end of hierarchical organisations, positions and institutions. It would involve, for example, the disbanding of the police, army, navy, state officialdom, etc. It would mean the transformation of police stations, military bases, the offices used by the bureaucracy into something more useful (or, as in the case of prisons, their destruction). Town halls would be occupied and used by community and industrial groups, for example. Offices of the mayor could be turned into crèches. Police stations, if they have not been destroyed, could be turned into storage centres for goods (William Morris, in his utopian novel **News from Nowhere**, imagined the Houses of Parliament being turned into a manure storage facility). And so on. Those who used to work in such occupations would be asked to pursue a more fruitful way of life or leave the community. In this manner, all harmful and useless institutions would be destroyed or transformed into something of benefit to society.

In addition, as well as the transformation/destruction of the buildings associated with the old state, the decision making process for the community previously usurped by the state would come back into the hands of the people. Alternative, self-managed organisations would be created in every community to manage community affairs. From these community assemblies, confederations would spring up to co-ordinate joint activities and interests. These neighbourhood assemblies and confederations would be means by which power would be dissolved in society and government finally eliminated in favour of freedom (both individual and collective).

Ultimately, anarchism means creating positive alternatives to those existing institutions which provide some useful function. For example, we propose self-management as an alternative to capitalist production. We propose self-governing communes to organise social life instead of the state. *"One only destroys, and effectively and permanently,"* argued Malatesta, *"that which one replaces by something else; and to put off to a later date the solution of problems which present themselves with the urgency of necessity, would be to give time to the institutions one is intending to abolish to recover from the shock and reassert themselves, perhaps under other names, but certainly with the same structure."* [**Op. Cit.**, p. 159] This was the failure of the Spanish Revolution, which

ignored the state rather than abolish it via new, self-managed organisations (see section I.8.13). It must be stressed that this was not due to anarchist theory (see section I.8.11).

Hence a social revolution would see the *"[o]rganisation of social life by means of free association and federations of producers and consumers, created and modified according to the wishes of their members, guided by science and experience, and free from any kind of imposition which does not spring from natural needs, to which everyone, convinced by a feeling of overriding necessity, voluntarily submits."* [Malatesta, **Op. Cit.**, p. 184] A revolution organises itself from the bottom up, in a self-managed way. As Bakunin summarised:

> *"the federative Alliance of all working men's associations ... will constitute the Commune ... The Commune will be organised by the standing federation of the Barricades and by the creation of a Revolutionary Communal Council composed of one or two delegates from each barricade ... vested with plenary but accountable and removable mandates ... all provinces, communes and associations ... **reorganising** on revolutionary lines ... [would send] their representatives to an agreed meeting place ... vested with similar mandates to constitute the federation of insurgent associations, communes and provinces in the name of the same principles and to organise a revolutionary force capable of defeating reaction ... it is the very fact of the expansion and organisation of the revolution for the purpose of self-defence among the insurgent areas that will bring about the triumph of the revolution ... There can no longer be any successful revolution unless the political revolution is transformed into social revolution ... Since revolution everywhere must be created by the people, and supreme control must always belong to the people organised in a free federation of agricultural and industrial associations ... organised from the bottom upwards by means of revolutionary delegation."* [**Michael Bakunin: Selected Writings**, pp. 170–2]

Thus we have a dual framework of revolution, the federation of self-managed workplace and community assemblies based on mandated and recallable delegates. *"Through its class organisations,"* Makhno argued, *"the people yearned to lay the foundations of a new, free society intended, as it develops without interference, to eliminate from the body of society all the parasites and all the power exercised by some over others, these being deemed by the toilers to be stupid and harmful."* [**Op. Cit.**, p. 79] These organisations, as we stressed in section I.2.3, are the products of the social struggle and revolution themselves:

> *"Assembly and community must arise from within the revolutionary process itself; indeed, the revolutionary process must **be** the formation of assembly and community, and with it, the destruction of power. Assembly and community must become 'fighting words,' not distinct panaceas. They must be created as **modes of struggle** against existing society ... The future assemblies of people in the block, the neighbourhood or the district — the revolutionary sections to come — will stand on a higher social level than all the present-day committees, syndicates, parties and clubs adorned by the most resounding 'revolutionary' titles. They will be the living nuclei of utopia in the decomposing body of bourgeois society ... The specific gravity of society ... must be shifted to its base — the armed people in permanent assembly."* [Murray Bookchin, **Post-Scarcity Anarchism**, pp. 104–5]

Such organisations are required because *"[f]reedom has its forms ... a liberatory revolution always poses the question of what social forms will replace existing ones. At one point or another, a revolutionary people must deal with how it will manage the land and the factories from which it requires the means of life. It must deal with the manner in which it will arrive at decisions that affect the community as a whole. Thus if revolutionary thought is to be taken at all seriously, it must speak directly to the problems and forms of social management."* [Bookchin, **Op. Cit.**, p. 86] If this is not done, capitalism and the state will not be destroyed and the social revolution will fail. Only by destroying hierarchical power, by abolishing state and capitalism by self-managed organisations, can individuals free themselves and society.

As well as these economic and political changes, there would be other changes as well — far too many to chronicle here. For example: *"We will see to it that all empty and under-occupied houses are used so that no one will be without a roof over his [or her] head. We will hasten to abolish banks and title deeds and all that represents and guarantees the power of the State and capitalist privilege. And we will try to reorganise things in such a way that it will be impossible for bourgeois society to be reconstituted."* [Malatesta, **Op. Cit.**, p. 165] Similarly, free associations will spring up on a whole range of issues, interests and needs. Social life will become transformed, as will many aspects of personal life and personal relationships. We cannot say in which way, bar there will be a general libertarian movement in all aspects of life as women resist and overcome sexism, gays resist and end homophobia, the young will expect to be treated as individuals, not property, and so on.

Society will become more diverse, open, free and libertarian in nature. And, hopefully, it and the struggle that creates it will be **fun** — anarchism is about making life worth living and so any struggle must reflect that. The use of fun in the struggle is important. There is no incongruity in conducting serious business and having fun. We are sure this will piss off the "serious" Left no end. The aim of revolution is to emancipate **individuals** not abstractions like "the proletariat," "society," "history" and so on. Having fun is part and parcel of that liberation. As Emma Goldman argued (and was paraphrased in the 1970s to *"If I cannot dance, it is not my revolution!"*), anarchism stands for *"release and freedom from conventions and prejudice"* and so she could *"not believe"* that it *"should demand the denial of life and joy"* (*"If it meant that, I did not want it"*): *"I want freedom, the right to self-expression, everybody's right to beautiful, radiant things."* [**Living My Life**, vol. 1, p. 56] As Bookchin suggested: *"Can we resolve the anarchic, intoxicating phase that opens all the great revolutions of history merely into an expression of class interest and the opportunity to redistribute social wealth?"* [Bookchin, **Op. Cit.**, p. 189f]

Therefore a social revolution involves a transformation of society from the bottom up by the creative action of working class people. This transformation would be conducted through self-managed organisations which will be the basis for abolishing hierarchy, state and capitalism: *"There can be no separation of the revolutionary process from the revolutionary goal. **A society based on self-administration must be achieved by means of self-administration** ... If we define 'power' as the power of man over man, power can only be destroyed by the very process in which man acquires power over his own life and in which he not only 'discovers' himself, but, more meaningfully, formulates his selfhood in all its social dimensions."* [Bookchin, **Op. Cit.**, p. 104]

J.7.5 What is the role of anarchists in a social revolution?

All the great social revolutions have been spontaneous. Indeed, it is cliché that the revolutionaries are usually the most surprised when a revolution breaks out. Nor do anarchists assume that a revolution will initially be totally libertarian in nature. All we assume is that there will be libertarian tendencies which anarchists work within to try and strengthen. Therefore the role of anarchists and anarchist organisations is to push a revolution towards a social revolution by encouraging the tendencies we discussed in the last section and by arguing for anarchist ideas and solutions. In the words of Vernon Richards:

> *"We do not for one moment assume that all social revolutions are necessarily anarchist. But whatever form the revolution against authority takes, the role of anarchists is clear: that of inciting the people to abolish capitalistic property and the institutions through which it exercises its power for the exploitation of the majority by a minority."* [**Lessons of the Spanish Revolution**, p. 44]

For anarchists, our role in a social revolution is clear — we try to spread anarchist ideas and encourage autonomous organisation and activity by the oppressed. For example, during the Russian Revolution anarchists and anarcho-syndicalists played a key role in the factory committee movement for workers' self-management. They combated Bolshevik attempts to substitute state control for workers' self-management and encouraged workplace occupations and federations of factory committees (see Maurice Brinton's **The Bolsheviks and Workers' Control** for a good introduction to this movement and Bolshevik hostility to it). Similarly, they supported the soviets (councils elected by workers in their workplaces) but opposed their transformation from revolutionary bodies into state organs (and so little more than organs of the Communist Party, rubber-stamping the decisions of the party leadership). The anarchists tried to *"work for their conversion from centres of authority and decrees into non-authoritarian centres, regulating and keeping things in order but not suppressing the freedom and independence of local workers' organisations. They must become centres which link together these autonomous organisations."* [G. P. Maksimov, **The Anarchists in the Russian Revolution**, p. 105]

Therefore, the role of anarchists, as Murray Bookchin put it, is to *"**preserve and extend the anarchic phase that opens all the great social revolutions**"* by working *"**within the framework of the forms created by the revolution,** not within the forms created by the party. What this means is that their commitment is to the revolutionary organs of self-management ... to the **social** forms, not the **political** forms."* Revolutionary anarchists *"seek to persuade the factory committees, assemblies or soviets to make themselves into **genuine organs of popular self-management,** not to dominate them, manipulate them, or hitch them to an all-knowing political party,"* to organise to *"propagate ideas systematically ... **ideas which promote the concept of self-management**."* The revolutionary organisation *"presents the most advanced demands"* and *"formulate[s] — in the most concrete fashion — the immediate task that should be performed to advance the revolutionary process. It provides the boldest elements in action and in the decision-making organs of the revolution."* [**Post-Scarcity Anarchism**, pp. 139–140]

Equally as important, *"is that the people, all people, should lose their sheep-like instincts and habits with which their minds have been inculcated by an age-long slavery, and that they should learn to think and act freely. It is to this great task of spiritual liberation that anarchists must especially devote their attention."* Unless people think and act for themselves, no social revolution

is possible and anarchy will remain just an opposition tendency within authoritarian societies. Practically, this means the encouragement of self-management and direct action. Anarchists thus *"push the people to expropriate the bosses and put all goods in common and organise their daily lives themselves, through freely constituted associations, without waiting for orders from outside and refusing to nominate or recognise any government or constituted body in whatever guise ... even in a provisional capacity, which ascribes to itself the right to lay down the law and impose with force its will on others."* [Malatesta, **Errico Malatesta: His Life and Ideas**, pp. 160–1 and p. 197] This is because, to quote Bakunin, anarchists do *"not accept, even in the process of revolutionary transition, either constituent assemblies, provisional governments or so-called revolutionary dictatorships; because we are convinced that revolution is only sincere, honest and real in the hands of the masses, and that when it is concentrated in those of a few ruling individuals it inevitably and immediately becomes reaction."* [**Michael Bakunin: Selected Writings**, p. 237]

The history of every revolution confirms Kropotkin (who echoed Proudhon) that *"revolutionary government"* is a contradiction in terms. Government bodies mean *"the transferring of initiative from the armed workers to a central body with executive powers. By removing the initiative from the workers, the responsibility for the conduct of the struggle and its objectives [are] also transferred to a governing hierarchy, and this could have no other than an adverse effect on the morale of the revolutionary fighters."* [Richards, **Op. Cit.**, pp. 42–3] Such a centralisation of power means the suppression of local initiatives, the replacing of self-management with bureaucracy and the creation of a new, exploitative and oppressive class of officials and party hacks. Only when power rests in the hands of everyone can a social revolution exist and a free society created. If this is not done, if the state replaces the self-managed associations of a free people, all that happens is the replacement of one class system by another. This is because the state is an instrument of minority rule — it can never become an instrument of majority empowerment as its centralised, hierarchical and authoritarian nature excludes such a possibility (see section H.3.7 for more discussion on this issue).

Therefore an important role of anarchists is to undermine hierarchical organisation by creating self-managed ones, by keeping the management and direction of a struggle or revolution in the hands of those actually conducting it. It is **their** revolution, **not** a party's and so they should control and manage it. They are the ones who have to live with the consequences of it. As Bakunin argued, social revolution *"should not only be made for the people's sake; it should also be made by the people."* [**No Gods, No Masters**, vol. 1, p. 141] *"The revolution is safe, it grows and becomes strong,"* correctly argued Alexander Berkman, *"as long as the masses feel that they are direct participants in it, that they are fashioning their own lives, that **they** are making the revolution, that they **are** the revolution. But the moment that their activities are usurped by a political party or are centred in some special organisation, revolutionary effort becomes limited to a comparatively small circle from which the large masses are practically excluded. The natural result is that popular enthusiasm is dampened, interest gradually weakens, initiative languishes, creativeness wanes, and the revolution becomes the monopoly of a clique which presently turns dictator."* [**What is Anarchism?**, p. 213] The history of every revolution proves this point, we feel, and so the role of anarchists is clear — to keep a revolution revolutionary by encouraging libertarian ideas, organisation, tactics and activity.

Anarchists, therefore, organise to influence social struggle in a libertarian manner and our role in any social revolution is to combat authoritarian tendencies and parties while encouraging working class self-organisation, self-activity and self-management (how we organise to achieve

this is described in section J.3). Only by the spreading of libertarian ideas and values within society, encouraging libertarian forms of social organisation (i.e., self-management, decentralisation, federalism, etc.) and continually warning against centralising power into a few hands can a revolution become more than a change of masters.

J.7.6 How could an anarchist revolution defend itself?

To some, particularly Marxists, this section may seem in contradiction with anarchist ideas. As we discussed in section H.2.1, Marxists tend to assume, incorrectly, that anarchists are either against defending a revolution or see no need to. However, as will become very clear, nothing could be further from the truth. Anarchists have always argued for defending a revolution — by force, if necessary. Anarchists argue that Marx (and Marxists) confuse self-defence by *"the people armed"* with the state, a confusion which has horrific implications (as the history of the Russian Revolution shows).

So how would an anarchist revolution (and by implication, society) defend itself? Firstly, we should note that it will **not** defend itself by creating a centralised body, a new state. If it did this then the revolution will have failed and a new class society would have been created (a society based on state bureaucrats and oppressed workers as in the Soviet Union). Thus we reject the Marxist notion of a so-called "workers" or "revolutionary" state as confused in the extreme (as should be obvious from our analysis in section H). Rather, we seek libertarian means to defend a libertarian revolution. What would these libertarian means be?

In short, this would involve the *"creation of a voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention by countries as yet not in a state of revolution."* The creation of a free militia would be part of the general social transformation as the *"most powerful means for defending the revolution remains always that of taking away from the bourgeois the economic means on which their power rests, and of arming everybody (until such time as one will have managed to persuade everybody to throw away their arms as useless and dangerous toys), and of interesting the mass of the population in the victory of the revolution."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 166 and p. 173] As Bakunin stressed:

> *"let us suppose ... it is Paris that starts [the revolution] ... Paris will naturally make haste to organise itself as best it can, in revolutionary style, after the workers have joined into associations and made a clean sweep of all the instruments of labour, every kind of capital and building; armed and organised by streets and **quartiers**, they will form the revolutionary federation of all the **quartiers**, the federative commune ... All the French and foreign revolutionary communes will then send representatives to organise the necessary common services ... and to organise common defence against the enemies of the Revolution, together with propaganda, the weapon of revolution, and practical revolutionary solidarity with friends in all countries against enemies in all countries."* [**Michael Bakunin: Selected Writings**, pp. 178–9]

So anarchists have always seen the necessity to defend a revolution. There is no theoretical contradiction implied by this for while anarchism *"is opposed to any interference with your liberty"* and *"against all invasion and violence"*, it recognises that when *"any one attacks **you**, then it is*

he *who is invading you, he who is employing violence against you. You have a right to defend yourself. More than that, it is your duty, as an anarchist to protect your liberty, to resist coercion and compulsion ... In other words, the social revolution will attack no one, but it will defend itself against invasion from any quarter."* [Alexander Berkman, **What is Anarchism?**, p. 231] These militias, in other words, do not seek to impose a revolution, for you cannot impose freedom or force people to be free against their will: *"The power of the people in arms can only be used in the defence of the revolution and the freedoms won by their militancy and their sacrifices."* [Vernon Richards, **Lessons of the Spanish Revolution**, p. 44]

Such activity, Berkman stressed, *"must be in consonance with th[e] spirit [of anarchism]. Self-defence excludes all acts of coercion, of persecution or revenge. It is concerned only with repelling attack and depriving the enemy of opportunity to invade you."* Any defence would be based on *"the strength of the revolution ... First and foremost, in the support of the people ... If they feel that they themselves are making the revolution, that they have become masters of their lives, that they have gained freedom and are building up their welfare, then in that very sentiment you have the greatest strength of the revolution .. . Let them believe in the revolution, and they will defend it to the death."* Thus the *"armed workers and peasants are the only effective defence of the revolution."* [**Op. Cit.**, pp. 231–2] Malatesta stressed that a government is not required to defend freedom:

> *"But, by all means, let us admit that the governments of the still unemancipated countries were to want to, and could, attempt to reduce free people to a state of slavery once again. Would this people require a government to defend itself? To wage war men are needed who have all the necessary geographical and mechanical knowledge, and above all large masses of the population willing to go and fight. A government can neither increase the abilities of the former nor the will and courage of the latter. And the experience of history teaches us that a people who really want to defend their own country are invincible: and in Italy everyone knows that before the corps of volunteers (anarchist formations) thrones topple, and regular armies composed of conscripts or mercenaries disappear."* [**Anarchy**, p. 42]

As can be seen, anarchist theory has always addressed the necessity of defending a social revolution and proposed a solution — the voluntary, self-managed militia organised by the free communes and federations of workers' associations. The militias would be unified and co-ordinated by federations of communes while delegates from each militia unit would co-ordinate the actual fighting. In times of peace the militia members would be living and working among the rest of the populace, and, thus, they would tend to have the same outlook and interests as their fellows. Moreover, in the case of foreign intervention, the importance of international solidarity is important (*"a social revolution cannot be a revolution in one nation alone. It is by nature an international revolution."* [Bakunin, **Op. Cit.**, p. 49]). Thus any foreign intervention would face the problems of solidarity actions and revolts on its own doorstep and not dare send its troops abroad for long, if at all. Ultimately, the only way to support a revolution is to make your own.

Within the revolutionary area, it is the actions of liberated people than will defend it. Firstly, the population would be armed and so counter-revolutionaries would face stiff opposition to their attempts to recreate authority. Secondly, they would face liberated individuals who would reject and resist their attempts Thus, as we discuss in section I.5.11, any authoritarian would face the direct action of a free people, of free individuals, who would refuse to co-operate with the

would-be authorities and join in solidarity with their friends and fellow workers to resist them. The only way a counter-revolution could spread internally is if the mass of the population had become alienated from the revolution and this is impossible in an anarchist revolution as power remains in their hands. A free society need not fear internal counter-revolutionaries gaining support.

History, as well as theory, points to such libertarian forms of self-defence. In all the major revolutions which anarchists took part in they formed militias to defend freedom. For example, anarchists in many Russian cities formed *"Black Guards"* to defend their expropriated houses and revolutionary freedoms. In the Ukraine, Nestor Makhno helped organise a peasant-worker army to defend the social revolution against authoritarians of right and left. In the Spanish Revolution, the CNT organised militias to free those parts of Spain under fascist rule after the military coup in 1936.

These anarchist militias were as self-managed as possible, with any "officers" elected and accountable to the troops and having the same pay and living conditions as them. Nor did they impose their ideas on others. When a militia liberated a village, town or city they called upon the population to organise their own affairs, as they saw fit. All the militia did was present suggestions and ideas to the population. For example, when the Makhnovists passed through a district they would put on posters announcing:

> *"The freedom of the workers and the peasants is their own, and not subject to any restriction. It is up to the workers and peasants to act, to organise themselves, to agree among themselves in all aspects of their lives, as they themselves see fit and desire ... The Makhnovists can do no more than give aid and counsel ... In no circumstances can they, nor do they wish to, govern."* [quoted by Peter Marshall, **Demanding the Impossible**, p. 473]

Needless to say, the Makhnovists counselled the workers and peasants *"to set up free peasants' and workers' councils"* as well as to expropriate the land and means of production. They argued that *"[f]reedom of speech, of the press and of assembly is the right of every toiler and any gesture contrary to that freedom constitutes an act of counter-revolution."* [**No Gods, No Masters**, vol. 2, pp. 157–8] The Makhnovists also organised regional congresses of peasants and workers to discuss revolutionary and social issues. The army's declared principles were voluntary enlistment, the election of officers and self-discipline according to the rules adopted by each unit themselves. Remarkably effective, the Makhnovists were the force that defeated Denikin's army and helped defeat Wrangel. After the Whites were defeated, the Bolsheviks turned against the Makhnovists and betrayed them. However, while they existed the Makhnovists defended the freedom of the working class to organise themselves against both right and left statists (see Voline's **The Unknown Revolution**, Peter Arshinov's **History of the Makhnovist Movement** or Alexandre Skirda's **Nestor Makhno Anarchy's Cossack** for more information).

A similar situation developed in Spain. After defeating the fascist military coup on 19th of July, 1936, the anarchists organised self-managed militias to liberate those parts of Spain under Franco. These groups were organised in a libertarian fashion from the bottom up:

> *"The establishment of war committees is acceptable to all confederal militias. We start from the individual and form groups of ten, which come to accommodations among*

> *themselves for small-scale operations. Ten such groups together make up one* ***centuria,*** *which appoints a delegate to represent it. Thirty* ***centurias*** *make up one column, which is directed by a war committee, on which the delegates from the* ***centurias*** *have their say … although every column retains its freedom of action, we arrive at co-ordination of forces, which is not the same thing as unity of command."* [**Op. Cit.**, pp. 256–7]

Like the Makhnovists, the anarchist militias in Spain were not only fighting against reaction, they were fighting for a better world. As Durruti argued: *"Our comrades on the front know for whom and for what they fight. They feel themselves revolutionaries and they fight, not in defence of more or less promised new laws, but for the conquest of the world, of the factories, the workshops, the means of transportation, their bread and the new culture."* [**Op. Cit.**, p. 248] When they liberated towns and villages, the militia columns urged workers and peasants to collectivise the land and means of production, to re-organise life in a libertarian fashion. All across anti-Fascist Spain workers and peasants did exactly that. The militias only defended the workers' and peasants' freedom to organise their own lives as they saw fit and did not force them to create collectives or dictate their form.

In this, the CNT was not only following the suggestions of the likes of Bakunin and Malatesta, it was implementing its own stated policies. Thus before the revolution we find leading FAI member D. A. Santillan arguing that the *"local Council of Economy will assume the mission of defence and raise voluntary corps for guard duty and if need be, for combat"* in the *"cases of emergency or danger of a counter-revolution."* These Local Councils would be a federation of workplace councils and would be members of the Regional Council of the Economy which, like the Local Council, would be *"constitute[d] by delegations or through assemblies."* [**After the Revolution**, p. 80 and pp. 82–83] Thus defence of a free society is based on the federation of workers' councils and so directly controlled by the revolutionary population. This can also be seen in the Spanish CNT's 1936 resolution on Libertarian Communism in the section entitled ***"Defence of the Revolution"***:

> *"We acknowledge the necessity to defend the advances made through the revolution … So … the necessary steps will be taken to defend the new regime, whether against the perils of a foreign capitalist invasion … or against counter-revolution at home. It must be remembered that a standing army constitutes the greatest danger for the revolution, since its influence could lead to dictatorship, which would necessarily kill off the revolution … The people armed will be the best assurance against any attempt to restore the system destroyed from either within or without … Let each Commune have its weapons and means of defence … the people will mobilise rapidly to stand up to the enemy, returning to their workplaces as soon as they may have accomplished their mission of defence… .*
>
> *"1. The disarming of capitalism implies the surrender of weaponry to the communes which be responsible for ensuring defensive means are effectively organised nationwide.*
>
> *"2. In the international context, we shall have to mount an intensive propaganda drive among the proletariat of every country so that it may take an energetic protest, calling for sympathetic action against any attempted invasion by its respective government. At the same time, our Iberian Confederation of Autonomous Libertarian Communes will render material and moral assistance to all the world's exploited so that these may free*

themselves forever from the monstrous control of capitalism and the State." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 110]

Which was precisely what the CNT did do in July 1936 when faced with the fascist coup. Unfortunately, like the Makhnovists, the CNT militias were betrayed by their so-called allies on the left. The anarchist troops were not given enough arms and were left on the front to rot in inaction. The "unified" command by the Republican State preferred not to arm libertarian troops as they would use these arms to defend themselves and their fellow workers against the Republican and Communist led counter-revolution. Ultimately, the *"people in arms"* won the revolution and the *"People's Army"* which replaced it lost the war (see Jose Peirats' **The CNT in the Spanish Revolution**, Abel Paz's **Durruti in the Spanish Revolution**, Vernon Richard's **Lessons of the Spanish Revolution** or Noam Chomsky's **Objectivity and Liberal Scholarship**).

While the cynic may point out that, in the end, these revolutions and militias were defeated, it does not mean that their struggle was in vain or a future revolution will not succeed. That would be like arguing in 1940 that democracy is inferior to fascism because most democratic states had been (temporarily) defeated by the Axis powers. It does not mean that these methods will fail in the future or that we should embrace apparently more "successful" approaches which end in the creation of a society the total opposite of what we desire (means determine ends, after all, and statist means will create statist ends and apparent "successes" — like Bolshevism — are the greatest of failures in terms of our ideas and ideals). All we are doing here is pointing how anarchists have defended revolutions in the past and that these methods were successful for a long time in face of tremendous opposition forces.

Thus, in practice, anarchists have followed libertarian theory and created self-managed forms of self-defence against attempts to re-enslave a free people. In the end, an anarchist revolution can be defended only by applying its ideas as widely as possible. Its defence rests in those who make it. If the revolution is an expression of their needs, desires and hopes then it will be defended with the full passion of a free people. Such a revolution **may** be defeated by superior force, who can tell? But the possibility is that it will not and that is what makes it worth trying. To not act because of the possibility of failure is to live half a life.

Anarchism calls upon everyone to live the kind of life they deserve as unique individuals and desire as human beings. Individually we can make a difference, together we can change the world.

Bibliography for FAQ

This bibliography lists all the books quoted in the FAQ. However, details for some of these books is missing. This information will also be added to over time. Some books are listed in more than one edition. This is due to the process of revising the FAQ for publication and using the most recent versions of books quoted. Once the revision is complete, the old details will be removed.

The bibliography is split into four sections: Anthologies of Anarchist authors; books by anarchists and other libertarians; books about anarchism, anarchists and anarchist history by non-libertarians; and books by non-anarchists/libertarians.

Anarchist Anthologies

Avrich, Paul (ed.), **The Anarchists in the Russian Revolution**, Thames and Hudson Ltd, London, 1973.

Brook, Frank H. (ed.), **The Individualist Anarchists: An Anthology of Liberty (1881–1908)**, Transaction Publishers, New Brunswick, 1994.

Dawn Collective (eds.), **Under the Yoke of the State: Selected Anarchist Responses to Prisons and Crime vol. 1, 1886–1929**, Dawn Collective/Kate Sharpley Library/PMB, Oakland/London/Berkeley, 2003.

Dark Star (ed.), **Quiet Rumours: An Anarcha-Feminist Reader**, AK Press/Dark Star, Edinburgh/San Francisco, 2002.

> **Beneath the Paving Stones: Situationists and the beach, May 1968**, AK Press/Dark Star, Edinburgh/San Francisco, 2001.

Dolgoff, Sam (ed.), **The Anarchist Collectives: self-management in the Spanish revolution, 1936–1939**, Black Rose Books, Montreal, 1974.

Ehrlich, Howard J, Carol Ehrlich, David De Leon, Glenda Morris (eds.), **Reinventing Anarchy: What are Anarchists thinking these days?**, Routledge & Kegan Paul, London, 1979.

Ehrlich, Howard J. (ed.), **Reinventing Anarchy, Again**, AK Press, Edinburgh/San Francisco, 1996.

Friends of Aron Baron (ed.), **Bloodstained: One Hundred Years of Leninist Counterrevolution**, AK Press, Edinburgh/Chico, 2017.

Glassgold, Peter (ed.), **Anarchy! An Anthology of Emma Goldman's Mother Earth**, Counterpoint, Washington D.C., 2001.

Graham, M. (ed.), **Man! An Anthology of Anarchist Ideas, Essays, Poetry and Commentaries**, Cienfuegos Press, London, 1974.

Graham, Robert (ed.), **Anarchism: A Documentary History of Libertarian Ideas — Volume 1: From Anarchy to Anarchism (300CE to 1939)**, Black Rose Books, Montreal/New York/London, 2005.

Guerin, Daniel (ed.), **No Gods, No Masters: An Anthology of Anarchism** (in two volumes), AK Press, Edinburgh/San Francisco, 1998.

Krimerman, Leonard I. and Perry, Lewis, **Patterns of Anarchy: A Collection of Writings on the Anarchist Tradition**, Anchor Books, New York, 1966.

Woodcock, George (ed.), **The Anarchist Reader**, Fontana, Glasgow, 1987.

Anarchist and Libertarian Works

Aberdeen Solidarity, **Spartakism to National Bolshevism: The K.P.D. 1918–1924**, Solidarity, Aberdeen, 1970.

ACF, **Marxism and Its Failures**, ACE Editions, London, 1990.

Supplementary Material

These appendices contain material which build upon the main text but which are not essential to it. Some reflect the origins of *An Anarchist FAQ* as a rebuttal of claims that "anarcho"-capitalism is a form of anarchism (section F). Others, material which was originally to be included in section H but which space precluded or replies to Marxist articles on anarchism. The latter aimed to refute articles as they appeared, but there is only so many times the same nonsense can be addressed.

Appendix: Anarchism and Marxism

This appendix exists to refute some of the many anti-anarchist diatribes produced by Marxists. While we have covered why anarchists oppose Marxism in section H, we thought it would be useful to reply to Marxist webpages and books whose content is not explicitly covered in that section. In this way we hope to indicate that Marxism is a flawed theory, flawed even to the extent of not being able to present a honest critique of anarchism. This consistent attempt to smear anarchism and distort its history and ideas is no co-incidence — rather it is required in order to present Marxism as the only viable form of socialism and, more importantly, to hide the fact that much of the populist Marxist rhetoric was, in fact, said by anarchists first and latter stolen by Marxists to hide the authoritarian basis of their politics.

One last point. We are aware that we repeat many of our arguments in these appendices. That, unfortunately, is avoidable for two reasons. Firstly, Marxists usually repeat the same false assertions against anarchism and so we have to answer them each time they appear. Marxists seem to subscribe to the point of view that repeating an error often enough makes it true. Secondly, we have tried to make each appendix as self-contained as possible and that meant repeating certain material and arguments to achieve this. We hope the reader understands.

Reply to errors and distortions in David McNally's pamphlet *"Socialism from Below"*

In chapter three of his pamphlet *Socialism from Below*, David McNally decides to expose (what he calls) *"The Myth Of Anarchist Libertarianism."* In reality, his account is so distorted and, indeed, dishonest that all it proves is that Marxists will go to extreme lengths to attack anarchist ideas. As Brain Morris points out, defending the Leninist tradition and ideology *"implies .. . . a compulsive need to rubbish anarchism."* [**Ecology & Anarchism**, p. 128] McNally's pamphlet is a classic example of this. As we will prove, his "case" is a mishmash of illogical assertions, lies and, when facts do appear, their use is almost always a means of painting a false picture of reality.

It must be stressed that there is nothing new or original in McNally's pamphlet. It is simply an unthinking repetition of previous Marxists attacks on anarchism, starting with Marx's dishonest diatribe against Proudhon **The Poverty of Philosophy**, and is mostly based on Hal Draper's **The Two Souls of Socialism** (McNally states he *"should also record here a debt of inspriation of [this] now-out-of-print pamphlet by Draper"*). While McNally's errors are commonplace within what passes for Marxist scholarship, this does not excuse his repeating of them without first checking their accuracy (or, more correctly, their inaccuracy). If more Marxists took the time to validate their prejudices and assumptions against what Proudhon, Bakunin and other anarchists wrote then it would be possible to have a real discussion on what **genuine** socialism (one, as Proudhon and Bakunin stressed long before Marxists appropriated the term, *"from below"*) entails.

It must be noted that since this appendix was first written in 2000, David McNally has distanced himself from his pamphlet's critique of anarchism. In an end-note in a book written in 2006 he described this welcome rethink:

> *"I dissent from Draper's one-sided critique of anarchism ... Draper is not fair to some of the currents within social anarchism. I also reject my own restatement of Draper's interpretation in the first edition of my booklet* ***Socialism from Below****"* [**Another World Is Possible: Globalization & Anti-Capitalism**, p. 393]

While it seems unlikely this was in response to reading our critique, it does show that it was correct. Unfortunately it took McNally over 20 years to acknowledge that his essay from 1984 gave a distinctly distorted account of anarchism (a distortion originally circulated in Marxist circles in the 1960s with Draper's pamphlet). Perhaps significantly, McNally no longer seems to be associated with the sister organisations of the British **Socialist Workers Party** (a group whose distortions of anarchism are many and infamous). Sadly, the damage has been done and his and Draper's flawed account of anarchism (and Marxism) has become all-too-commonplace within radical circles — even in libertarian circles, some take these assertions on Proudhon and Bakunin at face value and do not seek to verify the claims made. This is unfortunate for, as we will see, while sometimes correct (for example, Proudhon's disgusting anti-feminism) most of the claims are false or, at best, half-truths turned into full-lies by ignoring context or other relevant facts.

We hope that this reply will ensure today's radicals will gain a fuller understanding of the ideas — and limitations! — of Proudhon and Bakunin and, more importantly, how they influenced subsequent anarchists and the development of libertarian ideas. It will also allow an informed discussion between Marxists and Anarchists on their areas of agreement and disagreement. McNally now argues that *"it may be more helpful to try and defend a common political vision — such as socialism from below or libertarian socialism — as a point of reference"* rather than fixate over labels like "Marxism" or "anarchism." [**Op. Cit.**, p. 347] As we noted in our critique of his pamphlet, the term *"socialism from below"* has a distinctly anarchist feel to it, a feel distinctly at odds with Leninist ideology and practice. Moreover, as shown below, Lenin explicitly denounced *"from below"* as an anarchist idea — and his practice once in power showed that *"from above"* is part and parcel of Leninism in action. Sadly, most Leninists are unaware of this.

Finally, many Marxists reject Leninism: some for the original ideas of Marxism, such as the **Socialist Party of Great Britain** and its sister parties and some, like the council communists, for extension of them in the direction of revolutionary anarchist conclusions. As such, this critique should not be taken for a blanket rejection of all Marxists but rather a specific form of it, namely Leninism. Nor should it be taken for a blanket rejection of everything Marx or Marxists have argued. There any many forms of anarchism and many forms of Marxism, some of which are closer than others.

Many of the issues discussed in this appendix are also explored in section H of the FAQ and that should also be consulted.

1. Introduction

McNally begins by noting that *"Anarchism is often considered to represent [a] current of radical thought that is truly democratic and libertarian. It is hailed in some quarters as the only true*

political philosophy [of] freedom." Needless to say, he thinks that the *"reality is quite different"* and argues that *"[f]rom its inception anarchism has been a profoundly anti-democratic doctrine. Indeed the two most important founders of anarchism, Pierre-Joseph Proudhon and Michael Bakunin, developed theories that were elitist and authoritarian to the core."* We will discover the truth of this assertion later.

First we must note that McNally uses the typical Marxist approach to attacking anarchism — namely to attack anarchists rather than anarchism as such. British Anarchist Albert Meltzer summarised the flaws in this perspective well:

> *"Marxist-Leninists, faced with Anarchism, find that by its nature it undermines all the suppositions basic to Marxism. Marxism was held out to be the basic working class philosophy (a belief which has utterly ruined the working class movement everywhere). It holds that the industrial proletariat cannot owe its emancipation to anyone but themselves alone. It is hard to go back on that and say that the working class is not yet ready to dispense with authority placed over it ... Marxism normally tries to refrain from criticising anarchism as such — unless driven to doing so, when it exposes its own authoritarianism .. . and concentrates its attacks not on Anarchism, but on Anarchists."* [**Anarchism: Arguments for and Against**, p. 62]

So when reading this or any critique of anarchism always remember that few people are completely consistent libertarians and determine whether the words written reflect a flaw in anarchism **as such** or whether they reflect a personal flaw of the thinker in question. Once this common-sense position is taken it quickly becomes clear that anything valid in McNally's critique highlights the flaws of individuals who did not consistently rise to the levels implied by their ideas. This, most obviously, is the case with Proudhon's sexism which is in contradiction with his support for liberty, equality and federalism. Unsurprisingly, his contemporary Joseph D'jacque wrote a critique of Proudhon's sexist views in 1857, urging him to renounce *"this gender aristocracy that would bind us to the old regime"* and *"speak out against man's exploitation of woman."*: *"Do not describe yourself as an anarchist, or be an anarchist through and through"* [*"On Being Human"*, pp. 68–71, **Anarchism: A Documentary History of Libertarian Ideas**, Vol. 1, Robert Graham (ed.), p. 71] Later anarchists like Bakunin and Kropotkin likewise applied anarchist principles consistently on this issue, a fact McNally cannot bring himself to admit.

Second, McNally lamely notes that *"[w]hile later anarchists may have abandoned some of the excesses of their founding fathers their philosophy remains hostile to ideas of mass democracy and workers' power."* Thus, we have the acknowledgement that not all anarchists share the same ideas and that anarchist theory has developed since 1876 (the year of Bakunin's death). This is to be expected as anarchists are not Proudhonists or Bakuninists — we do not name ourselves after one person, rather we take what is useful from libertarian writers and ignore the rubbish. Malatesta's words are applicable here: *"We follow ideas and not men, and rebel against this habit of embodying a principle in a man."* [**Errico Malatesta: His Life and Ideas**, p. 199] However, this is beside the point as McNally's account of the ideas of Proudhon and Bakunin is simply false — indeed, so false as to make you wonder if he is simply incompetent as a scholar or seeks to present a patchwork of lies as fact and "theory."

Third, McNally's approach rests on selective quoting, lack of context and an unwillingness to research the assertions he is making. This is important as we are discussing thinkers who wrote

over a period of many decades and whose works and letters reflected the highs and lows of a person's life as well as the social movement they were part of. This means that in the depths of personal crisis or the repression of popular movements even the most consistent thinker can write passages which are in contradiction to the thrust of the works they are best known for. To quote such words from, say, private letters and ignore the books and articles which reflect a thinker's ideas best and which influenced others presents a false picture, particularly if the context within which the letters were written are unmentioned. So it would be a distortion of the ideas of Marx and Engels to quote the numerous anti-Semitic insults against specific individuals from their private letters. As would be expected, they were men of their age and expressed themselves in ways which today are, rightly, considered unacceptable (for those interested in such matters, Peter Fryer's essay *"Engels: A Man of his Time"* should be consulted [John Lea and Geoff Pilling (eds.), **The condition of Britain: Essays on Frederick Engels**]). However, their few **public** racist comments could be considered worthy of note — although, if so, then they should, like those of Proudhon and Bakunin, be placed in the context of their other ideas and the culture they lived in rather than being used as an excuse to ignore their contributions to socialism. Sadly, McNally — like many Marxists — fails to do this, preferring dismissive finger-pointing instead.

Lastly, McNally ignores the anti-democratic, authoritarian and elitist aspects of his own political tradition. Given that leading Bolsheviks like Lenin, Trotsky and Zinoviev publicly advocated party dictatorship and one-man management of production, it is a distortion to ignore this when discussing *"Socialism from Below"*. Simply put, while anarchists have consistently advocated communal and industrial self-management since 1840 to today, the Marxist tradition has not.

McNally's pamphlet, as will become clear, does not present anything new. It simply repeats what is sadly all-to-often the received wisdom about anarchists and anarchism in Marxist circles. As such, it is worth the time and effort to reply to. Not only will it show the limitations of the Marxist position on anarchism, it will also afford us the opportunity to show that not only is anarchism a more genuine *"Socialism from Below"* than Leninism but also that many of the ideas Marxists consider as their own were first argued by Proudhon and Bakunin.

In short, we will show why *"Anarchism is often considered to represent current of radical thought that is truly democratic and libertarian"* by contrasting what McNally asserts about it and what anarchist thinkers actually advocated. This will, unfortunately, produce a reply longer than the initial claims but this is unavoidable. We need to provide extensive quotes and arguments simply in order to show the weakness of McNally's assertions and to indicate where his own tradition advocated notions he — inaccurately — attacks anarchism for.

2. Is anarchism the politics of the *"small property owner"*?

McNally does start out by acknowledging that *"anarchism developed in opposition to the growth of capitalist society. What's more, anarchist hostility to capitalism centred on defence of the liberty of the individual."* However, he then distorts this actual historical development by arguing that *"the liberty defended by the anarchists was not the freedom of the working class to make collectively a new society. Rather, anarchism defended the freedom of the small property owner — the shopkeeper, artisan and tradesman — against the encroachments of large-scale capitalist enterprise."*

Such a statement is, to say the least, a total distortion of the facts of the situation. Nor is it original. McNally is simply repeating Marx's assertions against Proudhon who, Marx claimed,

"wants to soar as the man of science above the bourgeois and the proletarians" but *"is merely the petty bourgeois, continually tossed back and forth between capital and labour, political economy and communism."* [**Collected Works**, vol. 6, p. 178] It should be noted that Marx had not always thought this of the Frenchman:

> *"Not only does Proudhon write in the interest of the proletarians he is himself a proletarian, an* ***ouvrier*** *[worker]. His work [****What is Property?****] is a scientific manifesto of the French proletariat."* [**Op. Cit.**, vol. 4, p. 41]

The change in perspective is unsurprising given that Marx thought his own ideology was that of the proletariat (whether the proletariat knew it or not) and, given his disagreements with Proudhon, the Frenchman had to represent some other class. However, if we reject the assumption that classes only have one theory associated with them, then the weakness of the Marxist assertion becomes clear — particularly given that today there are no mass Marxist parties in spite of the fact that now, unlike in Marx's day, the proletariat is the majority of the working class in most of the world's countries.

It is important to remember that at the end of the 1840s over 80% of the population of France and Germany were peasants or artisans — what Marxists term the "petit-bourgeois". As Marx and Engels admitted in **The Communist Manifesto**, in *"countries like France"* the peasants *"constitute far more than half of the population."* This remained the case well after Proudhon's death in 1865, with Marx commenting in the early 1870s that *"the peasant ... forms a more of less considerable majority ... in the countries of the West European continent."* [**The Marx-Engels Reader**, p. 493 and p. 543] As Proudhon himself noted in 1851, in *"a population of 36 millions, there are 24 millions occupied with agriculture"* and of the remaining 12 million there where only 6 million *"composing in part the wage-working class"* [**Property is Theft!**, p. 558]

This social context is important and it is difficult to understand the positions thinkers took unless it taken into account. In the words of anarchist Gustav Landauer, Proudhon's socialism *"of the years 1848 to 1851 was the socialism of the French people in the years 1848 to 1851. It was the socialism that was possible and necessary at that moment. Proudhon was not a Utopian and a prophet; not a Fourier and not a Marx. He was a man of action and realisation."* [**For Socialism**, p. 108] Historian K. Steven Vincent makes the same point, arguing that Proudhon's *"social theories may not be reduced to a socialism for only the peasant class, nor was it a socialism only for the petite bourgeois; it was a socialism of and for French workers. And in the mid-nineteenth century ... most French workers were still artisans... French labour ideology largely resulted from the real social experiences and aspirations of skilled workers ... Proudhon's thought was rooted in the same fundamental reality, and therefore understandably shared many of the same hopes and ideals."* [**Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, pp. 5–6] It is no coincidence, therefore, that when he was elected to the French Parliament in 1848 most of the votes cast for him were from *"working class districts of Paris — a fact which stands in contrast to the claims of some Marxists, who have said he was representative only of the petite bourgeoisie."* [Robert L. Hoffman, **Revolutionary Justice**, p. 136]

Proudhon's position was a distinctly sensible and radical position to take:

> *"While Marx was correct in predicting the eventual predominance of the industrial proletariat vis-\E0-vis skilled workers, such predominance was neither obvious nor a fore-*

> *gone conclusion in France during the nineteenth century. The absolute number of small industries even increased during most of the century...*
>
> *"Nor does Marx seem to have been correct concerning the revolutionary nature of the industrial proletariat. It has become a clich' of French labour history that during the nineteenth century artisans were much oftener radical than industrial workers. Some of the most militant action of workers in late nineteenth century France seems to have emerged from the co-operation of skilled, urbanised artisanal workers with less highly skilled and less urbanised industrial workers."* [Vincent, **Op. Cit.**, pp. 282–3]

The fruits of this union included the Paris Commune, an event in which the followers of Proudhon played an important role and which both McNally and Marx praise (see section 12 for more discussion on this).

In short, Marx's earlier summation of Proudhon was correct — his ideas reflected the ideas and interests of the French working class. Proudhon addressed himself to both the peasant/artisan and the proletariat. This is to be expected from a **libertarian** form of socialism as, at the time of his writing, the majority of working people **were** peasants and artisans and, as noted above, this predominance of artisan/peasant workers in the French economy lasted well after his (and Marx's) death. Not to take into account the artisan/peasant would have meant the dictatorship of a minority of working people over the rest of them (as we discuss in section H.1.1 this was also a key reason for Bakunin's rejection of Marx's *"dictatorship of the proletariat"*). Given that in chapter 4 of his pamphlet McNally states that Marxism aims for a *"democratic and collective society ... based upon the fullest possible political democracy"* his attack on Proudhon's concern for the artisan and peasant is doubly strange. Either you support the *"fullest possible political democracy"* and so your theory must take into account artisans and peasants or you restrict political democracy and replace it with rule by the few.

Unsurprisingly, then, Proudhon argued in 1841 that he *"preach[ed] emancipation to the proletarians; association to the workers."* [**Op. Cit.**, p. 157] However, as McNally notes, he *"oppose[d] trade unions."* and did not see them as the means of achieving this for it was *"not by such methods that the workingmen will attain to wealth and — what is a thousand times more precious than wealth — liberty."* [Proudhon, **System of Economical Contradictions**, p. 150] However, this did not mean that he was rejected the idea that the working class (in its three sections of wage-workers, artisan and peasants) would liberate itself. While fundamentally a reformist, Proudhon recognised that self-liberation was only genuine form of liberation and so had *"always thought that the proletariat must emancipate itself without the help of the government."* [**Property is Theft!**, 306] Given this, it is unsurprising that Proudhon saw social change as coming from *"below"* by the collective action of the working class:

> *"If you possess social science, you know that the problem of association consists in organising ... the producers, and by this organisation subjecting capital and subordinating power. Such is the war that you have to sustain: a war of labour against capital; a war of liberty against authority; a war of the producer against the non-producer; a war of equality against privilege ... to conduct the war to a successful conclusion ... it is of no use to change the holders of power or introduce some variation into its workings: an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave."* [**Op. Cit.**, p. 225]

During the 1848 revolution he urged *"a provisional committee be set up to orchestrate exchange, credit and commerce between workers"* which would *"liaise with similar committees set up in the main cities of France"* and *"under the aegis of these committees, a body representative of the proletariat be formed in Paris ... in opposition to the bourgeoisie's representation."* This ensured that *"a new society be founded in the heart of the old society"*. He later stressed the *"organisation of popular societies was the pivot of democracy, the cornerstone of republican order"* and these *"clubs ... assemblies, popular societies"* would ensure *"the organisation of universal suffrage in all its forms, of the very structure of Democracy itself."* [**Op. Cit.**, p. 321, p. 407 and p. 461] As Daniel Gu'rin summarised, *"in the midst of the 1848 Revolution,"* Proudhon *"sketched out a minimum libertarian program: progressive reduction in the power of the State, parallel development of the power of the people from below, through what he called clubs"* which today we *"would call councils."* [**Anarchism**, pp. 152–3]

Clearly, even if he (wrongly) rejected trade unionism Proudhon **did** support, to quote McNally, the *"the freedom of the working class to make collectively a new society."* Indeed, as one historian notes, there was *"close similarity between the associational ideal of Proudhon ... and the program of the Lyon Mutualists"* and that there was *"a remarkable convergence [between these ideas], and it is likely that Proudhon was able to articulate his positive program more coherently because of the example of the silk workers of Lyon. The socialist ideal that he championed was already being realised, to a certain extent, by such workers."* [Vincent, **Op. Cit.**, p. 164] Proudhon simply rejected revolution, trade unions or state-backed reforms as the means of achieving socialism and instead argued for a reformist strategy based primarily on the creation of co-operative workplaces and banks. He linked his politics to workers self-activity and argued that *"the proof"* of his mutualist ideas was shown in the *"current practice, revolutionary practice"* of *"those labour associations ... which have spontaneously ... been formed in Paris and Lyon"* during the 1848 revolution which show that the *"organisation of credit and organisation of labour amount to one and the same."* If all workers *"organise themselves along similar lines, it is obvious that, as masters of labour, constantly generating fresh capital through work, they would soon have wrested alienated capital back again, through their organisation and competition."* This would apply to *"small-scale"* as well as *"large-scale property and large industries"*. [**Op. Cit.**, pp. 374–5] Thus Proudhon places his ideas firmly in the actions of working people resisting wage slavery (i.e. the proletariat) and **not** exclusively in the *"small property owner"* (i.e., artisans and peasants).

So regardless of McNally's claims, Proudhon was not fixated upon *"small property"*. As we discuss in section 4, Proudhon's recognition of differences in the working class was reflected in his position on property. His proposals for a libertarian society included social ownership, workers' self-management of large scale workplaces as well as artisan and peasant production and **explicitly** and **repeatedly** argued for *"the complete emancipation of the worker ... the abolition of the wage worker."* [quoted by Vincent, **Op. Cit.**, p. 222] Rather than being backward looking and aiming exclusively at the artisan/peasant, Proudhon's ideas looked to the present and the future by looking at both the artisan/peasant **and** proletariat (i.e. to the **whole** of the working class in France at the time). As Daniel Gu'rin summarised:

> *"Proudhon really moved with the times and realised that it is impossible to turn back the clock. He was realistic enough to understand that 'small industry is as stupid as petty culture" ... With regard to large-scale modern industry requiring a large workforce, he was resolutely collectivist: 'In future, large-scale industry and wide culture*

> *must be the fruit of association.' 'We have no choice in the matter,' he concluded, and waxed indignant that anyone had dared to suggest that he was opposed to technical progress ... Property must be abolished ... The means of production and exchange must be controlled neither by capitalist companies nor by the State ... they must be managed by associations of workers"* [**Anarchism**, p. 45]

The notion that anarchism is the politics of the *"small property owner"* is even harder to maintain when we move from Proudhon's reformist anarchism to the revolutionary anarchism of Bakunin and Kropotkin. While there is a similar commitment to a decentralised, federal socialism *"from below"* rooted in social and economic self-management, the means are different: revolution is embraced, along with labour unions and direct action. Where Proudhon differs from later anarchists like Bakunin, Kropotkin, Malatesta and Goldman is that this working class self-activity is reformist in nature, that is seeking alternatives to capitalism which can reform it away rather than alternatives that can fight and destroy it. However, this embrace of social revolution and class struggle by anarchists like Bakunin rests on the same principle of working class self-emancipation.

Hence we find Bakunin arguing that *"revolution is only sincere, honest and real in the hands of the masses"* and so socialism can be achieved *"by the development and organisation, not of the political but of the social (and, by consequence, anti-political) power of the working masses"* who must *"organise and federate spontaneously, freely, from the bottom up, by their own momentum according to their real interest, but never according to any plan laid down in advance and imposed upon the* ***ignorant masses*** *by some superior intellects."* Social change would be achieved only by *"the complete solidarity of individuals, sections and federations in the economic struggle of the workers of all countries against their exploiters."* [**Michael Bakunin: Selected Writings**, p. 237, pp. 197–8 and p. 177] Unlike Proudhon, he saw the means for achieving the social revolution in the labour movement as trade unions (organised from the bottom up, of course) were *"the natural organisation of the masses"* as *"workers' solidarity in their struggle against the bosses"* was the means by which workers could emancipate itself *"**through practical action.**"* Thus the key to working-class self-liberation was *"**trades-unions, organisation, and the federation of resistance funds**"* [**The Basic Bakunin**, p. 139 and p. 103] In short, what became known as a syndicalist position (see section 9 for a discussion of McNally's false counterpoising of anarchism and syndicalism) as the *"organisation of the trade sections and their representation by the Chambers of Labour . .. bear in themselves the living seeds of the new society which is to replace the old world. They are creating not only the ideas, but also the facts of the future itself."* [**Bakunin on Anarchism**, p. 255] Moreover, as we show in the next section, like Proudhon, Bakunin argued that an anarchist society would be based on *"the collective ownership of producers' associations, freely organised and federated in the communes, and by the equally spontaneous federation of these communes."* [**Michael Bakunin: Selected Writings**, p. 197] As Kropotkin summarised:

> *"the chief aim of Anarchism is to awaken those constructive powers of the labouring masses ... since the times of the International Working Men\92s Association, the Anarchists have always advised taking an active part in those workers\92 organisations which carry on the* ***direct*** *struggle of Labour against Capital and its protector, — the State*

> *"Such a struggle ... better than any other indirect means, permits the worker to obtain some temporary improvements in the present conditions of work, while it opens his eyes to the evil that is done by Capitalism and the State that supports it, and wakes up his thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State."* [**Direct Struggle Against Capital**, p. 189]

And McNally asserts that *"the liberty defended by the anarchists was not the freedom of the working class to make collectively a new society"*! Only someone ignorant of anarchist theory or with a desire to deceive could make such an assertion. Needless to say, McNally's claim that anarchism is the politics of the *"small property owner"* would be even harder to justify if he mentioned Kropotkin's **communist** anarchism. However, like Proudhon's and Bakunin's support for collective ownership by workers associations it goes unmentioned — for obvious reasons.

3. Does anarchism *"glorify values from the past"*?

McNally asserts, regardless of the facts, that anarchism *"represented the anguished cry of the small property owner against the inevitable advance of capitalism. For that reason, it glorified values from the past: individual property, the patriarchal family, racism."* The reality is very different. We will take each issue in turn.

First, we should note that unlike Marx, anarchists did not think that capitalism was inevitable or an essential phase society had to go through before we could reach a free society. Neither Proudhon nor Bakunin shared Marx's viewpoint that socialism (and the struggle for socialism) had to be postponed until capitalism had developed sufficiently so that the *"centralisation of the means of production and the socialisation [sic!] of labour reach a point at which they become incompatible with their capitalist integument."* [**Capital**, vol. 1, p. 929] As McNally states, socialism was once the *"banner under which millions of working people resisted the horrors of the factory system and demanded a new society of equality, justice, freedom and prosperity."* Unfortunately, the Marxist tradition viewed such horrors as essential, unavoidable and inevitable and any form of working class struggle — such as the Luddites — which resisted the development of capitalism was denounced. So much for Marxism being in favour of working class *"self-emancipation"* — if working class resistance to oppression and exploitation which does not fit into its scheme for "working class self-emancipation" then it is the product of ignorance or non-working class influences. This can be seen from McNally's position on anarchism.

Thus, rather than representing *"the anguished cry of the small property owner against the inevitable advance of capitalism"* anarchism is rather the cry of the oppressed against capitalism and the desire to create a free society in the here and now and not some time in the future once "the proletariat" was the majority of the working classes. To quote German Anarchist Gustav Landauer:

> *"Karl Marx and his successors thought they could make no worse accusation against the greatest of all socialists, Proudhon, than to call him a petit-bourgeois and petit-peasant socialist, which was neither incorrect nor insulting, since Proudhon showed splendidly to the people of his nation and his time, predominately small farmers and craftsmen,*

how they could achieve socialism immediately without waiting for the tidy process of big capitalism." [**For Socialism**, p. 61]

As noted in the previous section, Proudhon's theory reflected both artisan/peasant interests and those of wage workers — as would be expected from a socialist aiming to transform his society to a free one. The disastrous results of Bolshevik rule in Russia should indicate the dangers of ignoring the vast bulk of a nation (i.e. the peasants) when trying to create a revolutionary change in society. McNally confuses a desire to achieve socialism **now** with backward looking opposition to capitalism. Proudhon looked at the current state of society, not backwards, as McNally suggests. Indeed, he lambasted those radicals during the 1848 who sought to repeat the glories of the Great French Revolution rather than look to the future:

> *"It is by '93 and all of its discord that we are being ruled ... The democrats of '93, conjuring up a republic with their high school memories [of Ancient Rome], after devouring one another, set the revolution back by half a century ... The democrats of 1848, building the republic on their parliamentary memories, have also set the revolution back by half a century ... they are only imitators; they thought themselves statesmen because they were following the old models!*
>
> *"So what is this queer preoccupation which, in time of revolution, bedazzles the most steadfast minds, and, when their burning aspirations carry them forward into the future, has them constantly harking back the past? How does it come about that the People, just when it is making the break with established institutions, takes another plunge and gets further immersed in tradition? Society does not repeat itself: but one would have thought it was walking backwards ... Could it not turn its gaze in the direction in which it is going?*
>
> *"[...]*
>
> *"In order to organise the future, a general rule confirmed by experience, the reformers always start out with their gaze fixed upon the past. Hence the contradiction forever discovered in their actions: hence also the immeasurable danger of revolutions."* [**Property is Theft!**, p. 308]

Secondly, it is not true that Proudhon or Bakunin *"glorified"* individual property. Proudhon, as is well know, argued that *"property is theft"* and that *"property is despotism."* He was well aware of the negative side effects of individual property and sought to end it: *"instead of inferring ... that property should be shared by all, I demand, in the name of general security, its entire abolition."* However, just as he was against capitalism, Proudhon was also against state socialism: *"Either competition, — that is, monopoly and what follows; or exploitation by the State, — that is, dearness of labour and continuous impoverishment; or else, in short, a solution based upon equality, — in other words, the organisation of labour, which involves the negation of political economy and the end of property."* [**Property is Theft!**, p. 87, p. 133, p. 91 and p. 202]

He was well aware that replacing private property by state property would not liberate the working class for what he termed *"Community"* (usually, if not accurately, translated as "communism"), would enserf the worker to the state. Instead, Proudhon wanted to abolish property and replace it with possession. As he put it in 1840's **What is Property?**, while property had

to be *"collective and undivided"* its use could be divided by means of *"possession"*. [**Op. Cit.**, p. 137] Thus workers would control the means of production they used as well as the goods they created:

> *"property in product ... does not carry with it property in the means of production; that seems to me to need no further demonstration. There is no difference between the soldier who possesses his arms, the mason who possesses the materials committed to his care, the fisherman who possesses the water, the hunter who possesses the fields and forests, and the cultivator who possesses the lands: all, if you say so, are proprietors of their products — not one is proprietor of the means of production. The right to product is exclusive ... the right to means is common"*. [**Op. Cit.**, p. 112]

As we discuss in the section 4, Proudhon repeatedly noted his position and refuted those who claimed he supported individual property. He also recognised that private property was not completely without merit as it gave its holder a measure of autonomy and protection against the state and other social forces. It was precisely this autonomy which he wished all to share rather than under capitalism where workers *"sold their arms and parted with their liberty"* to the capitalist or landlord. [**Op. Cit.**, p. 212] However, recognising this – and the dangers of state socialism — hardly equates to glorification of private property.

It is true that Proudhon did oppose the forced socialisation of artisan workplaces and peasant land. He considered having control over the means of production, housing, etc. by those who use it as a key means of maintaining freedom and independence. Thus we find him arguing in 1851 that *"it is evident that if the peasants think well to associate, they will associate"*. [**Op. Cit.**, p. 584] However, the issue was different for modern industry:

> *"In such cases, it is one of two things; either the worker, necessarily a piece-worker, will be simply the employee of the proprietor-capitalist-entrepreneur; or he will participate in the chances of loss or gain of the establishment, he will have a voice in the council, in a word, he will become an associate.*
>
> *"In the first case the worker is subordinated, exploited: his permanent condition is one of obedience and poverty. In the second case he resumes his dignity as a man and citizen, he may aspire to comfort, he forms a part of the producing organisation, of which he was before but the slave; as, in the town, he forms a part of the sovereign power, of which he was before but the subject."* [**Op. Cit.**, p. 583]

Thus capitalism had to be replaced with associations *"due to the immorality, tyranny and theft suffered"*. [**Op. Cit.**, p. 584] This aspect of his ideas is continual throughout his political works and played a central role in his social theory. Thus to say that Proudhon *"glorified"* individual property distorts his position. As he argued in 1848:

> *"under universal association, ownership of the land and of the instruments of labour is **social** ownership ... We want the mines, canals, railways handed over to democratically organised workers' associations ... We want these associations to be models for agriculture, industry and trade, the pioneering core of that vast federation of companies and societies woven into the common cloth of the democratic and social Republic."* [**Op. Cit.**, pp. 377–8]

As the experience of workers under Lenin indicates (see section H.3.13), collective ownership by the state does **not** end wage labour, exploitation and oppression and so Proudhon's arguments in favour of socialisation and possession and against capitalist **and** state ownership were proven right. As the forced collectivisation of the peasantry under Stalin shows, Proudhon's respect for artisan/peasant possessions was a very sensible and humane position to take. Unless McNally supports the forced collectivisation of peasants and artisans, Proudhon's solution is the only position a socialist can take.

We doubt that McNally wants to socialise **all** *"property"* (including individual possessions and such like). We are sure that he, like Marx and Engels, wants to retain individual possessions in a socialist society. Thus they stated that the *"distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property"* and that *"Communism deprives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation."* Later Marx argued that the Paris Commune *"wanted to make individual property a truth by transforming the means of production, land and capital ... into mere instruments of free and associated labour."* [**Selected Writings**, p. 47, p. 49 and pp. 290–1] This echoes Proudhon's position that property *"changed its nature"* when it *"the usufructuary converted his right to personally use the thing into the right to use it by his neighbour's labour"*. Thus support for *"individual property"* is not confined to Proudhon and, as noted, he desired to turn capital over to associated labour as well and this association he considered *"the annihilation of property"*. [**Op. Cit.**, p. 155 and p. 148] It should also be stressed, as we note in section A.5.1, the followers of Proudhon played a key role in the Paris Commune and its attempts to create co-operatives reflected his ideas. Moreover, initially Marx had nothing but praise for Proudhon's critique of property contained in his classic work **What is Property?**:

> *"Proudhon makes a critical investigation — the first resolute, ruthless, and at the same time scientific investigation — of the basis of political economy,* ***private property****. This is the great scientific advance he made, an advance which revolutionises political economy and for the first time makes a real science of political economy possible. Proudhon's treatise* ***Qu'est-ce que la propri't'?*** *is as important for modern political economy as Siey\EAs' work* ***Qu'est-ce que le tiers 'tat?*** *for modern politics."* [**Collected Works**, vol. 4, p. 32]

As Rocker argued, Marx changed his tune to *"conceal from everyone just what he owed to Proudhon and any means to that end was admissible."* [**Marx and Anarchism**] This can be seen from the comments we quote above which clearly show a Proudhonian influence in their recognition that possession replaces property in a socialist society and that associated labour is its economic basis. However, it is still significant that Proudhon's analysis initially provoked such praise by Marx — an analysis which McNally obviously does not understand.

Moving on from Proudhon, we discover Bakunin also opposing individual property and arguing that *"the land, the instruments of work and all other capital [will] become the collective property of society and by utilised only by the workers, in other words by the agricultural and industrial associations."* [**Michael Bakunin: Selected Writings**, p. 174] With regards to peasants and artisans Bakunin also desired **voluntary** collectivisation. *"In a free community,"* he argued, *"collectivism can only come about through the pressure of circumstances, not by imposition from above but by a*

free spontaneous movement from below." Rather than being a defender of "individual property" as McNally implies, Bakunin was a clear and consistent supporter of **collective** property (as organised in workers' associations and communes) and supported peasant and artisan property only in the sense of being against forced collectivisation as this would result in *"propelling [the peasants] into the camp of reaction."* [**Bakunin on Anarchism**, p. 200 and p. 197] Expropriation of capital was considered a key aspect of social revolution:

> *"let us suppose ... it is Paris that starts [the revolution] ... Paris will naturally make haste to organise itself as best it can, in revolutionary style, after the workers have joined into associations and made a clean sweep of all the instruments of labour, every kind of capital and building; armed and organised by streets and* ***quartiers****, they will form the revolutionary federation of all the* ***quartiers****, the federative commune ... All the French and foreign revolutionary communes will then send representatives to organise the necessary common services ... and to organise common defence against the enemies of the Revolution, together with propaganda, the weapon of revolution, and practical revolutionary solidarity with friends in all countries against enemies in all countries."* [**Michael Bakunin: Selected Writings**, pp. 178–9]

Given how often Bakunin stressed the need for union struggles and collective labour property, it is easy to conclude that McNally did no research into anarchism before writing about it. So we discover him arguing that *"resistance funds and trade unions"* are *"the only efficacious weapons"* the workers have against the bourgeoisie and this needed *"the organisation of the international strength of the workers of all countries."* This movement aimed for a society *"based on equality"* where *"all capital and every instrument of labour, including the soil, belong to the people, by right of collective property."* States *"must be abolished, for their only mission is to protect individual property, that is, to protect the exploitation by some privileged minority, of the collective labour of the masses of the people"* and a *"just human society"* must be created, one *"free of political domination and economic exploitation, founded only on collective labour which is guaranteed by collective property."* He repeatedly proclaimed his support for *"the great principle of* ***collective property****"* and argued that *"the collective property of capital"* was one of *"the absolutely necessary conditions for the emancipation* ***of labour and of the workers****"*. [**The Basic Bakunin**, p. 153, p. 196 and p. 85] The social revolution would see *"the passing of all the land, capital and means of production into the hands of the international federation of free workers' associations."* Land *"belongs to those who have cultivated it with their own hands — to the rural communes"* while *"capital and all tools of labour belong to the city workers — to the workers' associations."* Anarchism would be *"nothing else but a free federation of workers — agricultural workers as well as factory workers and associations of craftsmen."* [**The Political Philosophy of Bakunin**, p. 344 and p. 410]

Clearly neither Proudhon nor Bakunin *"glorified"* individual property. Hence Daniel Gu'rin's summary:

> *"Proudhon and Bakunin were 'collectivists,' which is to say they declared themselves without equivocation in favour of the common exploitation, not by the State but by associated workers of the large-scale means of production and of the public services. Proudhon has been quite wrongly presented as an exclusive enthusiast of private property ... At the Bale congress [of the First International] in 1869, Bakunin ... all[ied] himself*

> *with the statist Marxists ... to ensure the triumph of the principle of collective property."* [*"From Proudhon to Bakunin"*, **The Radical Papers**, Dimitrios I. Roussopoulos (ed.), p. 32]

Thirdly, while it is true that Proudhon **did** glorify the patriarchal family, the same cannot be said of Bakunin. Unlike Proudhon, he argued that *"[e]qual rights must belong to both men and women,"* that women must *"become independent and free to forge their own way of life"* and that *"[o]nly when private property and the State will have been abolished will the authoritarian juridical family disappear."* He opposed the *"absolute domination of the man"* in marriage, urged *"the full sexual freedom of women"* and argued that the cause of women's liberation was *"indissolubly tied to the common cause of all the exploited workers — men and women."* An anarchist society's organisations would be populated by people elected *"by the universal suffrage of both sexes"* and so it would be based on ***"[e]qual political, social, and economic rights, as well as equal obligations, for women."*** [**Bakunin on Anarchism**, pp. 396–7, p. 78 and p. 93] In short:

> *"Abolition of the patriarchal family law, based exclusively upon the right to inherit property and also upon the equalisation of man and women in point of political, economic, and social rights."* [**The Political Philosophy of Bakunin**, p. 343]

It should be redundant to note that Bakunin's position was shared by the likes of Kropotkin, Malatesta, Berkman, Chomsky and Ward but, clearly, it is not — and best not ponder where such noted anarchists as Emma Goldman, Lucy Parsons, Voltairine de Cleyre and Louise Michel *"glorified ... the patriarchal family"*! Andr' L'o, a feminist libertarian and future Communard, pointed out the obvious contradiction in Proudhon's position in 1869 which these anarchists also saw:

> *"These so-called lovers of liberty, if they are unable to take part in the direction of the state, at least they will be able to have a little monarchy for their personal use, each in his own home ... Order in the family without hierarchy seems impossible to them — well then, what about in the state?"* [quoted by Carolyn J. Eichner, *"'Vive La Commune!' Feminism, Socialism, and Revolutionary Revival in the Aftermath of the 1871 Paris Commune"*, **Journal of Women's History**, vol. 15, No. 2, p. 75]

These anarchists, and many others, extended anarchist ideas to the one area of life where Proudhon excluded liberty: the family. Unsurprisingly, both during and after his lifetime, anarchists subjected it to an immanent critique (i.e., using Proudhon's own concepts against his own position) and so while repulsive, Proudhon's anti-feminism should not be used for a blanket rejection of all his ideas given the otherwise appealing nature of his vision of a federated self-managed society — nor anarchism **as such**. So to state, as McNally does, that "anarchism" glorifies the patriarchal family simply staggers belief. Only someone ignorant of both logic and anarchist theory could make such an assertion.

Finally, we turn to the claim that anarchism *"glorified ... racism"*. While it is undoubtedly true that both Proudhon and Bakunin made a few racist comments, it does not follow that anarchism as a political theory is racist. Few would suggest that because Marx and Engels made racist comments that this makes Marxism inherently racist (see section 6 for a few examples of racist comments by the founders of Marxism). The same with anarchism — particularly given that both

Proudhon and Bakunin made anti-racist statements in their writings. Thus we find Proudhon arguing in 1851 that in an anarchist society there will *"no longer be nationality, no longer fatherland, in the political sense of the words: they will mean only places of birth. Whatever a man's race or colour, he is really a native of the universe; he has citizen's rights everywhere."* [**Property is Theft!**, p. 567] Bakunin echoed this in 1867, arguing that *"all collective and individual morality rests essentially upon* ***respect for humanity****"* and this meant *"the recognition of human right and human dignity in every man, of whatever race, colour, degree of intellectual development, or even morality."* [**Bakunin on Anarchism**, p. 146] That these comments, and others like them, are the ones consistent with Anarchist principles is obvious.

So a few anti-Semitic and anti-German remarks, made in passing, does not equate to people who *"glorified ... racism"* nor a theory which is inherently racist. Rather, it means someone who expressed personal bigotries which failed to live up to their stated ideals. Yet rather than admit the obvious, McNally exaggerates Proudhon's and Bakunin's flaws while remaining silent on similar ones in Marx and Engels as well as the lack of them in the likes of Kropotkin, Malatesta, Rocker, Goldman, and so on. Ultimately, the weakness of McNally's position can be seen from the very large Jewish anarchist movement in both Europe and America which placed Proudhon and Bakunin in their pantheon of influences.

4. Why are McNally's comments on Proudhon a distortion of his ideas?

McNally does attempt to provide some evidence for his remarks. He turns to Pierre-Joseph Proudhon, *"widely proclaimed 'the father of anarchism.'"* As he correctly notes, Proudhon was a *"printer by vocation"* and *"strongly opposed the emergence of capitalism in France."* However, McNally claims that Proudhon's *"opposition to capitalism was largely backward-looking in character"* as he *"did not look forward to a new society founded upon communal property which would utilise the greatest inventions of the industrial revolution. Instead, Proudhon considered small, private property the basis of his utopia. His was a doctrine designed not for the emerging working class, but for the disappearing petit bourgeoisie of craftsmen, small traders and rich peasants."* Unfortunately McNally has got his facts wrong.

To be fair to McNally, he is simply repeating what Marxists have been asserting about Proudhon since Marx wrote **The Poverty of Philosophy**. In that work, Marx claimed to be replying to Proudhon's **System of Economic Contradictions** but, in reality, the bulk of the work is inaccurate diatribe and its few valid points are swamped by selective quoting, false attribution and the repeation of points Proudhon made but in such a way as to suggest he argued the opposite. This last method of distortion can be seen when Marx implies that Proudhon wished to return to a pre-industrial economy based on small-scale private property:

> *"Those who, like Sismondi, wish to return to the correct proportions of production, while preserving the present basis of society, are reactionary, since, to be consistent, they must also wish to bring back all the other conditions of industry of former times."* [**Collected Works**, vol. 6, p. 137]

Compare this to Proudhon's position expounded with similar words in **System of Economic Contradictions**:

> *"M. de Sismondi, like all men of patriarchal ideas, would like the division of labour, with machinery and manufactures, to be abandoned, and each family to return to the system of primitive indivision, — **that is, to each one by himself, each one for himself**, in the most literal meaning of the words. That would be to retrograde; it is impossible."* [**Property is Theft!**, p. 194]

As we will show, this was not an isolated statement: Proudhon consistently supported not only large-scale industry but also socialised ownership. Indeed, the Frenchman was critical of those socialists (whom he rightly labelled "utopian") who replaced analysis of capitalism and its tendencies with visions of an ideal system:

> *"It is important, then, that we should resume the study of economic facts and practices, discover their meaning, and formulate their philosophy. Until this is done, no knowledge of social progress can be acquired, no reform attempted. The error of socialism has consisted hitherto in perpetuating religious reverie by launching forward into a fantastic future instead of seizing the reality which is crushing it; as the wrong of the economists has been in regarding every accomplished fact as an injunction against any proposal of reform.*
>
> *"For my own part, such is not my conception of economic science, the true social science. Instead of offering **a priori** arguments as solutions of the formidable problems of the organisation of labour and the distribution of wealth, I shall interrogate political economy as the depository of the secret thoughts of humanity"* [**System of Economical Contradictions**, p. 128]

It worthwhile noting that the **System of Economic Contradictions** Proudhon was discussing was not some new utopian scheme, as Marx implied, but rather capitalism: *"We will reserve this subject [the future organisation of labour] for the time when, the theory of economic contradictions being finished, we shall have found in their general equation the programme of association, which we shall then publish in contrast with the practice and conceptions of our predecessors"*. This analysis was essential in order to base ideas of social transformation on current tendencies. So rather than abstractly contrast a *"utopia"* to capitalism, Proudhon stressed the need to first analyse and understand the current system and so *"to unfold the system of economical contradictions is to lay the foundations of universal association."* [**Op. Cit.**, p. 311 and p. 132]

While Marx asserted that Proudhon wished *"to take us back to the journeymen or, at most, to the master craftsman of the Middle Ages"* there is nothing in his work to support such claims. Unsurprisingly, then, rather than provide a quote from Proudhon confirming this aspiration Marx makes many an assertion such as that individual exchange *"is consistent only with the small-scale industry of past centuries .. . or else with large-scale industry and all its train of misery and anarchy."* [**Op. Cit.**, p. 190, p. 138] Yet this forgets that under capitalism, workers do not own or control their work but in a mutualist society they would do both. As Proudhon argued, *"the pace of mechanical progress"* under capitalism has *"no other effect"* than to *"make the chains of serfdom heavier, render life more and more expensive, and deepen the abyss which separates the class that commands and enjoys from the class that obeys and suffers."* This was because people *"work under a master"* and so *"[u]nder the regime of property, the surplus of labour, essentially collective, passes*

entirely, like the revenue, to the proprietor". [**Property is Theft!**, p. 195, p. 248, p. 253] Would this *"misery"* happen if workers managed their own work? Of course not.

Marx ignored this, proclaiming that there is *"no individual exchange without the antagonism of classes."* Yet a system of worker-managed workplaces exchanging the product of their labour with peasant farmers would not be marked by classes for these *"relations are not relations between individual and individual, but between worker and capitalist, between farmer and landlord, etc."* Marx ignores the nature of Proudhon's ideas, favouring the assertion he *"borrows from economists the necessity of eternal relations"* and forgets that economic relations *"are **historical and transitory products**."* [**Op. Cit.**, p. 144, p. 159, p. 178 and p. 166] Strangely, Marx forgot to quote Proudhon arguing that the *"present form"* of how labour was organised *"is inadequate and transitory"* and that *"the radical vice of political economy, consists, in general terms, in affirming as a definitive state a transitory condition, — namely, the division of society into patricians and proletarians".* [**Op. Cit.**, p. 170 and p. 174]

So McNally, like Marx, distorts Proudhon's position. While many later anarchists — the communist-anarchists — rejected Proudhon's market socialism in favour of libertarian communism, the notion that his *"opposition to capitalism was largely backward-looking in character"* and that *"small, private property the basis of his utopia"* is just nonsense. To quote Proudhon from 1841: *"We must apply on a large scale the principle of collective production"* [**Op. Cit.**, p. 140] As K. Steven Vincent correctly summarises:

> *"On this issue, it is necessary to emphasise that, contrary to the general image given on the secondary literature, Proudhon was not hostile to large industry. Clearly, he objected to many aspects of what these large enterprises had introduced into society. For example, Proudhon strenuously opposed the degrading character of ... work which required an individual to repeat one minor function continuously. But he was not opposed in principle to large-scale production. What he desired was to humanise such production, to socialise it so that the worker would not be the mere appendage to a machine. Such a humanisation of large industries would result, according to Proudhon, from the introduction of strong workers' associations. These associations would enable the workers to determine jointly by election how the enterprise was to be directed and operated on a day-to-day basis."* [**Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 156]

So if you look at Proudhon's writings rather than what Marx and Engels **claimed** he wrote, it will soon be discovered that Proudhon in fact **favoured** collective ownership and for workers' associations to manage the means of production. Thus we find Proudhon arguing in 1840 that *"the land is indispensable to our existence, — consequently a common thing"* and *"all accumulated capital being social property"* so *"no one can be its exclusive proprietor".* Property becomes *"collective and undivided"* and managers *"must be chosen from the workers by the workers themselves."* [**Property is Theft!**, p. 105, p. 118, p. 137 and p. 119] Interestingly, Marx himself noted how the Frenchman in this work, **What is Property?**, *"abolishes property in order to abolish poverty. Proudhon did even more. He proved in detail **how** the movement of capital produces poverty".* [**Collected Works**, vol. 4, p. 35]

Property would be owned collectively and so access would be free — as we discuss in section I.3.3 there would be no more bosses and wage-workers but simply associates. However, unlike

under Marxism, there would be no central planning and the associates would decide what to produce. So *"the use of [workplaces], like that of the land, may be divided, but which as property remains **undivided**."* This *"non-appropriation of the instruments of production"* would be *"a destruction of property."* Ten years later, in 1851, he argued that *"[e]very industry, operation or enterprise which by its nature requires the employment of a large number of workers of different specialities, is destined to become a society or company of workers."* Thus *"every individual employed in the association ... has an undivided share in the property of the company"* as well as *"the right to fill any position"* for *"all positions are elective, and the by-laws subject to the approval of the members."* This means that *"the collective force, which is a product of the community, ceases to be a source of profit to a small number of managers and speculators: it becomes the property of all the workers."* Thus there would be a new form of economic organisation based on *"the co-operation of all who take part in the collective work"* with *"equal conditions for all members* [**Op. Cit.**, p. 153, p. 149, p. 583, pp. 585–6]

Public utilities would be under the *"initiative of communes and departments"* with *"workers companies ... carrying the works out."* This decentralisation, this *"direct, sovereign initiative of localities, in arranging for public works that belong to them, is a consequence of the democratic principle and the free contract."* Land and housing would see rental payments being *"carried over to the account of the purchase"* of the resource used and once the property *"has been entirely paid for, it shall revert immediately to the commune."* In the case of housing, such payments would result in *"a proportional undivided share in the house [the tenant] lives in, and in all buildings erected for rental, and serving as a habitation for citizens."* The land and housing would become socialised as the property *"thus paid for shall pass under the control of the communal administration"* and for *"repairs, management, and upkeep of buildings, as well as for new constructions, the communes shall deal with bricklayers companies or building workers associations."* In short: *"Capitalist and landlord exploitation stopped everywhere, wage labour abolished, equal and just exchange guaranteed."* [**Op. Cit.**, pp. 594–5, p. 576, p. 578, p. 576 and p. 596]

Proudhon termed this vision of a self-managed economy *"an industrial democracy"* or *"the industrial republic"* and argued that *"Workers' Associations are the locus of a new principle and model of production that must replace present-day corporations"*. When *"in an industry, all the workers, instead of working for an owner who pays them and keeps their product, work for one another and thereby contribute to a common product from which they share the profit"* then, when you *"extend the principle of mutuality that unites the workers of each group to all the Workers' Associations as a unit, and you will have created a form of civilisation that, from all points of view — political, economic, aesthetic — differs completely from previous civilisations"* [**Op. Cit.**, p. 610 and p. 616] Compare this, the anarchist position, on industrial democracy with Lenin's who, in 1921 went so far as to suggest, somewhat disingenuously given the reality of party dictatorship at the time, that *"Democracy is a category proper only to the political sphere"*. [**Collected Works**, vol. 32, p. 26]

As can be seen, rather than base his *"utopia"* on *"small, private property"* Proudhon based it on the actual state of the French economy – one marked by both artisan and large-scale production. The latter he desired to see transformed from the individual property of the few (capitalists) into the collective property of workers' associations and placed under workers' self-management. The former, as it did not involve wage-labour, was non-capitalist and was compatible with a system of undivided (collective) ownership and divided use (possession). While Proudhon's vision may be considered as (in part or in whole) undesirable, contradictory and unstable, it is **not** *"backward-*

looking in character" nor based on *"small, private property"*. That Proudhon himself publicly rejected the assertion he stood for private ownership is of note:

> *"You have me saying, and I really do not know where you could have found this, that* ***ownership of the instruments of labour must forever stay vested in the individual and remain unorganised****. These words are set in italics, as if you had lifted them from somewhere in my books. And then, on the back of this alleged quotation, you set about answering me that society, or the State that stands for it, has the right to* ***buy back*** *all property assets ... But it does not follow at all from my speaking on the basis of socialism in order to reject the buy back of such assets as nonsensical, illegitimate and poisonous that I want to see individual ownership and non-organisation of the instruments of labour endure for all eternity. I have never penned nor uttered any such thing: and have argued the opposite a hundred times over. I make no distinction ... between real ownership and phoney ownership ... I deny all kinds of proprietary domain. I deny it, precisely because I believe in an order wherein the instruments of labour will cease to be appropriated and instead become shared; where the whole earth will be depersonalised ..."*
>
> *"There is a more straightforward, more effective and infinitely less onerous and less risky way of transferring ownership, of achieving Liberty, Equality and Fraternity ...*
>
> *"Capital having been divested of its power of usury, economic solidarity is gradually created, and with it, an equality of wealth.*
>
> *"Next comes the spontaneous, popular formation of groups, workshops or workers\92 associations;*
>
> *"Finally, the last to be conjured and formed is the over-arching group, comprising the nation in its entirety, what you term the State because you invest it in a representative body outside of society, but which, to me, is no longer the State."* [**Property is Theft!**, pp. 498–500]

Clearly McNally distorts Proudhon's ideas on the question of property. That he may have been aware of the actual facts in shown by his qualification that Proudhon's critique of capitalism was *"largely backward-looking in character."* The utility of which qualification is clear — it allows him to ignore the substantial evidence against his assertion by muttering that he never said that Proudhon was **always** *"backward-looking"*...

McNally goes too far when he asserts that Proudhon *"so feared the organised power of the developing working class that he went so far as to oppose trade unions and support police strike-breaking."* There is, of course, a deep irony in McNally attacking Proudhon on this matter given that the Bolshevik regime he supports and considers as a *"workers' state"* repeatedly used not only its political police (the infamous Cheka) but also the Red Army to break strikes (see section H.6.3). This was done to secure Bolshevik power **over** the working class (see section 8).

It must also be stressed that while Proudhon did oppose trade unions (as we noted in section 2 he argued the working class would be better served using other means to liberate itself) it was not the case he supported police strike-breaking. As the editor of a collection of Marx's works had to admit that *"[t]o give Proudhon his due, he was not so much justifying the actions of the French*

authorities as exposing the \91contradictions' he saw as an inevitable evil of the present social order" [quoted by Iain McKay, *"Introduction"*, **Property is Theft!**, p. 65] As Proudhon himself put it:

> *"workers' strikes are ILLEGAL. And it is not only the penal code which says this, but the economic system, the necessity of the established order. As long as labour is not sovereign, it must be a slave; society is possible only on this condition. That each worker individually should have the free disposition of his person and his arms may be tolerated; but that the workers should undertake, by combinations, to do violence to monopoly society cannot permit. Authority, in shooting down the miners, found itself in the position of Brutus placed between his paternal love and his consular duties: he had to sacrifice either his children or the republic. The alternative was horrible, I admit; but such is the spirit and letter of the social compact, such is the tenor of the charter ... the police function, instituted for the defence of the proletariat, is directed entirely against the proletariat."* [**Property is Theft!**, pp. 221–2]

The key words here are *"[a]s long as labour is not sovereign"* and, unsurprisingly, when Marx quoted this passage in **Poverty of Philosophy** he omitted it, so changing Proudhon's meaning completely. So while Proudhon opposed trade unions in favour of other forms of working class self-organisation (co-operatives) it does not follow that he supported the breaking of strikes when he reported when it happened. Rather he was noting that such things were inevitable under capitalism and that this system had to be replaced by one based on workers' self-management of production.

It is significant that the French syndicalists whom McNally is so keen to praise and differentiate from *"classical anarchists"* considered Proudhon (like Bakunin) one of their influences. Similarly, the French trade unionists who joined with their British counterparts to create the International Working Men's Association were followers of the French anarchist. Both groups of trade unionists saw the state repress their strikes so this would be a strange paradox indeed if McNally's account of Proudhon's position on police strike-breaking were correct. As it is not, there is no paradox.

McNally correctly states that Proudhon *"oppose[d] trade unions"* but rather than it being because he *"feared the organised power of the developing working class"* it was for the **opposite** reason: *"As things are at present, which do you think will win [in a strike]? ... [the bosses as] the match is clearly unequal"*. At best strikes would *"lead to a general price increase"*. [**Selected Writings of Pierre-Joseph Proudhon**, p. 182 and p. 181] Worse, as well as distorting Proudhon's position McNally fails to mention that Proudhon opposition to trade unions and strikes as counter-productive was **not** shared by subsequent anarchists like Bakunin, Kropotkin, Malatesta, Goldman, and so on (see section 9). Why should Proudhon (the odd man out in anarchist theory with regards to this issue) be taken as defining that theory? Such an argument is simply dishonest and presents a false picture of the facts.

Next McNally states that Proudhon *"violently opposed democracy"* and presents a series of non-referenced quotes to prove his case. Such a technique is useful for McNally as it allows him quote Proudhon without regard to when and where Proudhon made these comments and so their context. It also makes it difficult, if not impossible, for the reader to discover both. This is a deeply problematic technique, particularly given the seriousness of the charges being made. However, the reasons why he pursued this approach become understandable when the statements **are**

tracked down as it becomes clear that McNally is quoting Proudhon completely out of context and so twisting his words into the opposite of what he meant.

He suggests that Proudhon's *"notes for an ideal society involved the suppression of elections, of a free press, and of public meetings of more than 20 people."* The word *"notes"* gives the game way, as he is not referring to any work produced in Proudhon's lifetime but rather his notebooks which were published a hundred years after his death, in the 1960s, and unknown until then. Private notebooks are hardly the best source for determining a person's ideas as they are the means by which a thinker explores ideas, some of which he may later conclude are deeply flawed. Moreover, as we note in section 6, neither Proudhon nor Bakunin were not anarchists throughout their lives nor consistently libertarian when they were. Nor was anarchism born complete and ready made in 1840 when Proudhon proclaimed himself an anarchist in **What is Property?**. He developed his libertarian ideas over time and, unsurprisingly, we would discover passages in his published works at odds with his subsequent, better developed, ideas. This applies even more to his private notebooks in which we would expect ideas to be sketched which he later rejected — perhaps sketching ideas he disagreed with precisely to clarify his thoughts.

While difficult to be completely sure, it seems likely that McNally is selectively referring Proudhon's Notebooks from 1845 when he was clarifying his ideas on the idea of universal association. As one historian notes, Proudhon did envision some kind of national council at this time and the passages on how it would be selected *"are not consistent. In some sections he suggested that the leaders of the association were to be chosen by the members, presumably by election .. . In yet other passages, Proudhon rather immodestly pictured himself in the director's role. One must be extremely cautious not to draw too many implications from these infrequent references to the council and its method of selection. Proudhon did not ... have any designs for a small dictatorial elite"* as this would *"fly in the face of his sincere concern for individual liberty"*. So it is to his published works we must turn to see how the conclusions of these private notes and speculations. Interestingly, in a book published in 1843 Proudhon *"referred to the important role that government was to perform"* but in the introduction to a later edition he indicated that *"he had changed his mind on this issue on the role of government"* and *"he insisted that reform should not — could not — come 'from above'; rather it could only 'from below, from the spontaneity of the masses, and not from the initiative of the government' ... this change had already occurred by 1846"* when he was *"vehemently attacking other socialists such as Blanc for trumpeting reform initiated 'from above'"*. [Vincent, **Op. Cit.**, p. 146 and pp. 143–4]

The same applies to when McNally suggested that Proudhon *"looked forward to a 'general inquisition' and the condemnation of 'several million people' to forced labour"*. With no means to see whether this is selective quoting or not, McNally disarms his readers. However, we must note a certain irony here as he does not, of course, mention that Marx and Engels advocated *"industrial armies, especially for agriculture"* to ensure the *"[e]qual liability of all to labour"* in the **Communist Manifesto**. [**Selected Writings**, p. 53] Nor does McNally mention the Bolshevik's introduction of the *"militarisation of labour"* in 1919 and 1920 with Trotsky its leading advocate. The *"very principle of compulsory labour service is for the Communist quite unquestionable .. . The only solution of economic difficulties from the point of view of both principle and of practice is to treat the population of the whole country as the reservoir of the necessary labour power ... and to introduce strict order into the work of its registration, mobilisation and utilisation."* The *"introduction of compulsory labour service is unthinkable without the application ... of the methods of militarisation of labour"*. This is the *"State compulsion without which the replacement of capitalist*

economy by the Socialist will for ever remain an empty sound." The *"Labour State considers itself empowered to send every worker to the place his work is necessary"* and had *"the right to lay its hand upon the worker who refuses to execute his labour duty"*. This *"presents the inevitable method of organisation and disciplining of labour-power during the period of transition from capitalism to Socialism."* [Trotsky, **Terrorism and Communism**, p. 135, p. 137, p. 141, p. 142 and p. 143] As can be seen Trotsky did not, as McNally would wish to suggest, think this was a result of the Civil War but rather a matter of principle.

McNally also fails to note that in December 1917 the Bolshevik regime created the Cheka, a political police force, to repress opposition to it from both the left and right as well as from reactionary forces and workers . At its worse, it even utilised torture and the shooting of unarmed prisoners. However, its main task was repression of opposition organisations — including other socialists (the anarchists were its first victims in early 1918) — and breaking strikes and other forms of labour protest in association with the Red Army.

If Proudhon's one-off, never repeated, scribbles in a private notebook mean anarchism is *"elitist and authoritarian to the core"* and *"hostile to ideas of mass democracy and workers' power"* what does it mean for Bolshevism which actually **created** a regime based on party dictatorship, political police and the militarisation of labour which its leading thinkers defended and justified at length in books and articles written to influence the international workers' movement? McNally, of course, does not mention these awkward facts so does not raise, never mind answer, the question.

However, reading the context of quotes McNally provides which **can** be tracked down, it is difficult to take his summary seriously. We turn to this now and will show that his readers would be justified in questioning his claims on Proudhon. Simply put, once the context of the quotes he provides is understood then it becomes clear McNally is quoting selectively in order to attribute ideas to Proudhon he did not, in fact, hold. The dishonesty is shocking.

This can be seen when McNally presents another unattributed quote: *"The masses, he wrote are 'only savages ... whom it is our duty to civilise, and without making them our sovereign.'"* Let us provide both the source and the context McNally is keen to avoid. First, the quote is from a letter written by Proudhon on the 11th of December 1852 and it is quoted by J. Hampden Jackson who also helpfully presents the context which McNally strips, namely a few days after the plebiscite which saw an overwhelming majority of French men vote to end the Second Republic, create the Second Empire and convert the President into an Emperor. This was exactly one year on from the President's military coup which saw him impose a new constitution and extend his tenure by ten years, an act again endorsed by a vast majority in a plebiscite. As Hampden notes: *"The people of France had spoken. It remained for Proudhon to point the moral"*. [**Marx, Proudhon and European Socialism**, p. 103]

This is the context for this quote — a cry of despair at a people which so willingly voted to destroy a republic and their own freedom. These two plebiscites in favour of Louis-Napoleon's coup and autocratic rule resulted in *"Proudhon's faith in the people"* falling *"to its lowest level"* and *"no epithet was too severe for the classes in whom he had seen the great hope of humanity."* [George Woodcock, **Pierre-Joseph Proudhon**, p. 184] This becomes obvious when you read the full context of the words McNally quotes:

> *"You still worship the people ... you should absolutely demolish this false religion. It is necessary to serve freedom and morals for themselves ... without scorning the people,*

> *which is only uncivilised [**sauvage**] and that we have to civilise, do not make it your sovereign. I saw, on December 7th, 1851, when paving stones of the boulevard were still red with blood, these honest people rush to small theatres, content, merry, without regret nor remorse. That once I had surprised it, for five years, in red-handed indifference, immorality, imperialist plot, ingratitude for its initiators! Ah! admittedly, it did not mislead me; but cowardice, even when predicted, is always hideous to see. I will strike these people, I warn you, until I made them embarrassed of the alleged dogma of its sovereignty; because it is not enough for us to re-examine the incompetents of '48, we must re-examine their idol ..."* [**Correspondance de P-J Proudhon**, vol. V, p. 111]

Is McNally really suggesting that Proudhon's position was incorrect and that he should have proclaimed popular support of the military coup and its repression of those defending the Republic as an example of civilised behaviour and the people's sovereignty? As Proudhon lamented, *"the truth"* was that *"**the people have the government which it prefers, and the bourgeoisie the government that it deserves**"* and *"Napoleon III is the legitimate, authentic expression of the middle-class and proletarian masses. If it is not precisely the product of the national **will**, it is undoubtedly that of the national **permission**."* [**Op. Cit.**, p. 110] McNally for all his talk of democracy does not tackle — does not even raise! — the question of what happens if the majority make authoritarian and repressive decisions, as it did in December 1851 and 1852. If, as the Republicans of Proudhon's time argued, the voice of the people is the voice of God did that make Louis-Napoleon's Presidency, coup and then Empire all legitimate? Proudhon argued no and, moreover, placed the underlying principle of democracy — freedom — above its expression within the (bourgeois) state. His writings explored how to secure mass participation in social life while minimising the possibility of tyranny. Thus the *"federative system puts a stop to the agitation of the masses, to all the ambitions and incitements of demagogy"* [**Property is Theft!**, p. 708]

By stripping away the context, McNally turns his lament for the destruction of political freedom into a demand for it. The dishonesty is striking. It also raises some problems for McNally's stated political position of being in favour of *"democracy"* — if anarchists are to be denounced because they *"reject any decision-making process in which the majority of people democratically determine the policies they will support"* then McNally is in a bind. The French people democratically determined to create an Empire and destroy what was left of their Republic. Presumably it would be *"elitism"* for him, like Proudhon, to denounce the decision and despair at those who made it? As we discuss in section 7, the anarchist position on democracy is driven precisely by the obvious fact that majorities can be wrong and oppressive. This does not imply *"elitism"*, quite the reverse.

We should also note that Marx dismissed the peasants as *"a class of barbarians standing half outside of society"* [**Capital**, vol. 3, p. 949] *"In countries like France"* the peasants *"constitute far more than half of the population"* but, he argued, they *"cannot represent themselves, they must be represented. Their representative must at the same time appear as their master, as an authority over them, as an unlimited governmental power"*. Thus *"the Bonaparte who dispersed [the National Assembly in 1851] is the chosen of peasantry."* [**The Marx-Engels Reader**, p. 493, p. 608 and pp. 607–8] Marx does not ponder the implications of these comments nor what they mean for democracy and the so-called *"dictatorship of the proletariat"*.

The second quote McNally provides as evidence for his case is *"All this democracy disgusts me"*. Again, no reference is provided for obvious reasons for when it is tracked down it becomes clear that McNally is again quoting the Frenchman completely out-of-context in order to attribute to him ideas he did not hold, indeed was arguing against. This sentence comes from a private letter written in 1861 bemoaning how others on the left were attacking him as *"a false **democrat**, a false friend of progress, a false republican"* due to his critical position on Polish independence. Unlike most of the rest of the left (including Bakunin, it should be noted), Proudhon opposed the creation of a Polish state as it would be run by the *"nobility [**nobiliarie**], [and so] catholic, aristocratic, [and] divided into castes"*. In other words, **not** a democracy. He then proclaims: *"All this democracy disgusts me"*. [**Correspondance de Pierre-Joseph Proudhon**, vol. XI, p. 196–7] Once this context is provided, it becomes clear that using his justly famous talent for irony against those on the left who violate their own stated democratic principles by supporting the creation of a feudal regime — if **this** is democracy, Proudhon was saying, then it disgusts him (*"All this [so-called] democracy disgusts me"*). By quoting out-of-context McNally turns a letter by Proudhon in which he wished the left would be **consistently** in favour of democracy into an anti-democratic rant. His dishonesty is clear.

This, it must be noted, is also relevant to McNally's politics. While proclaiming that Leninism is the only consistently democratic socialist theory and that to *"talk of a workers' state is necessarily to talk of workers' power and workers' democracy"*, he makes an exception to the party dictatorship ruled by Lenin and Trotsky from 1918 to 1923. Then it becomes the case that socialism no longer *"depends upon the existence of democratic organisation that can control society from below"* nor *"presupposes that workers are running the state."* If, in 1861, Proudhon expressed his frustration at those on the left who made exceptions to democracy for illogical reasons (the creation of a feudal Poland) what would have been his views of socialists who made exceptions for the Bolshevik regime?

Even without the context for the quotes McNally presents, anyone with a basic grasp of anarchist ideas would know that he fails to quote the many statements Proudhon made in favour of democracy. Why should the apparently anti-democratic quotes represent anarchism and not the pro-democratic ones? Which ones are more in line with anarchist theory and practice? Surely the pro-democratic ones. Hence we find Proudhon arguing that *"[i]n democratising us, revolution has launched us on the path of industrial democracy"* and that his People's Bank *"embodies the financial and economic aspects of modern democracy, that is, the sovereignty of the People, and of the republican motto, **Liberty, Equality, Fraternity.**"* We have already mentioned Proudhon's support for workers' self-management of production and his People's Bank was also democratic in nature: *"A committee of thirty representatives shall be set up to see to the management of the Bank ... They will be chosen by the General Meeting ... [which] shall consist of not more than one thousand nominees of the general body of associates and subscribers .. . elected according to industrial categories and in proportion to the number of subscribers and representatives there are in each category."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 63, p. 75 and p. 79] Thus, instead of bourgeois democracy Proudhon proposes industrial and communal democracy:

> *"every industry needs ... leaders, instructors, superintendents, etc. ... they must be chosen from the workers by the workers themselves, and must fulfil the conditions of eligibility. It is the same with all public functions, whether of administration or instruction."* [**Property is Theft!**, p. 118]

"In order that association may be real, he who participates in it must do so ... as an active factor; he must have a deliberative voice in the council ... everything regarding him, in short, should be regulated in accordance with equality. But these conditions are precisely those of the organisation of labour." [**Op. Cit.**, p. 2156]

"In the republic, everyone reigns and governs ... Representatives are plenipotentiaries with the imperative mandate and are recallable at will ... Here is the republic! Here is the People's sovereignty! [**Op. Cit.**, p. 279]

"At present we are a quasi-democratic Republic: all the citizens are permitted, every third or fourth year, to elect, first, the Legislative Power, second, the Executive Power. The duration of this participation in the Government for the popular collectivity is brief; forty-eight hours at the most for each election. For this reason the correlative of the Government remains nearly the same as before, almost the whole Country. The President and the Representatives, once elected, are the masters; all the rest obey. They are ***subjects****, to be* ***governed*** *. .."* [**Op. Cit.**, p. 573]

"In place of laws, we will put contracts [i.e. free agreement]. — No more laws voted by a majority, nor even unanimously; each citizen, each commune or corporation [i.e., self-managed industry], makes its own laws." [**Op. Cit.**, p. 591]

"Unless democracy is a fraud, and the sovereignty of the People a joke, it must be admitted that each citizen in the sphere of his industry, each municipal, district or provincial council within its own territory, is the only natural and legitimate representative of the Sovereign, and that therefore each locality should act directly and by itself in administering the interests which it includes, and should exercise full sovereignty in relation to them." [**Op. Cit.**, p. 595]

"Workers' Associations are the locus of a new principle and model of production that must replace present-day corporations ... The principle that prevailed there, in place of that of employers and employees ... is participation, that is, the MUTUALITY of services supplementing the force of division and the force of collectivity.

"There is mutuality, in fact, when in an industry, all the workers, instead of working for an owner who pays them and keeps their product, work for one another ... extend the principle of mutuality that unites the workers of each group to all the Workers' Associations as a unit, and you will have created a form of civilisation that, from all points of view — political, economic, aesthetic — differs completely from previous civilisations ..." [**Op. Cit.**, p. 616]

"groups that comprise the confederation... would be ... self-governing, self-judging and self-administering in complete sovereignty... universal suffrage form its basis" [**Op. Cit.**, p. 716]

"under the democratic constitution, insofar we can judge from its most salient ideas and most authentic aspirations, the political and the economic are one and the same, a sole and single system based upon a single principle, mutuality ... no longer do we have the abstraction of people's sovereignty as in the '93 [French] Constitution and the others that followed it, and in Rousseau's ***Social Contract****. Instead it becomes an effective sovereignty of the labouring masses ... the labouring masses are actually, positively*

> *and effectively sovereign: how could they not be when the economic organism — labour, capital, property and assets — belongs to them entirely"* [**Op. Cit.**, pp. 760–1]
>
> *"If political right is inherent in man and citizen, consequently if suffrage ought to be direct, the same right is inherent as well, so much the more so, for each corporation [i.e. self-managed industry], for each commune or city, and the suffrage in each of these groups, ought to be equally direct."* [quoted by Vincent, **Op. Cit.**, p. 219]

So, clearly, McNally is hardly presenting a fair summary of either Proudhon's private notebooks, letters or his published works. This can be seen from his justly famous manifesto issued during the 1848 revolution which presents a better notion of his *"ideal society"*. It advocated *"democratically organised workers' associations"* along with *"universal suffrage and as a consequence of universal suffrage, we want implementation of the imperative mandate"* otherwise *"the people, in electing representatives, does not appoint mandatories but rather abjure their sovereignty!"* This *"is assuredly not socialism: it is not even democracy"*. He also demanded: *"Freedom of association"*, *"Freedom of assembly"* and *"Freedom of the press"*. [**Property is Theft!**, p. 377 and p. 379]

Do all these quotes suggest a man who *"violently opposed democracy"*? Of course not. Proudhon opposed certain types of democracy (centralised, hierarchical, top-down, statist democracy) and was in favour of another kind (decentralised, federal, bottom-up, libertarian democracy). So when looking at quotes by Proudhon ripped from their context it is important to ask whether he is attacking the centralised, hierarchical democracy of the state or the decentralised, participatory democracy of federated self-managed workplaces and communes? By taking of "democracy" in the abstract and not indicating that there are different forms of it (reflecting different class interests), McNally is confusing the issue. He fails to inform his readers that while Proudhon repeatedly attacked the former he advocated the latter. To use terms McNally should be familiar with, Proudhon attacked bourgeois democracy in favour of working-class democracy rooted in mandates, recall, decentralisation and federalism — what would be better termed "self-management" but which Proudhon came to call *"labour democracy"* which would be *"the IDEA of the new Democracy."* In the state, *"universal suffrage is the strangulation of the public conscience, the suicide of popular sovereignty, the apostasy of the Revolution"* and to *"make the vote for all intelligent, moral, democratic, it is necessary... to make the citizens vote by categories of functions, in accordance with the principle of the collective force"*. This federative democracy would be applied in the community (communes) and industry (*"the agricultural-industrial federation"*), indeed all areas including the military where it was necessary to *"abolish military conscription, organise a citizens' army"* based on *"the right of the citizens to appoint the hierarchy of their military chiefs, the simple soldiers and national guards appointing the lower ranks of officers, the officers appointing their superiors."* [**Op. Cit.**, pp. 724–5, pp. 676–7, p. 711, p. 407 and p. 443]

As can be seen, Proudhon's position on democracy is not quite what McNally suggests. Under a centralised social system it simply meant the people *"is confined to choosing its bosses and its charlatans every three or four years."* The issue for Proudhon was to create a system which allowed the people to govern itself and not hand power over to a few leaders — particularly when the majority often pass that power to demagogues like Louis-Napoleon. It was the case *"that the only way to organise democratic government is to abolish government"* for the State *"is the external constitution of the social power... the people does not govern itself ... We affirm ... that the people, that society, that the mass, can and ought to govern itself by itself ... We deny government and the*

State, because we affirm that which the founders of States have never believed in, the personality and autonomy of the masses." [**Op. Cit.**, p. 437, p. 485 and pp. 482–483]

Thus McNally presents a distorted picture of Proudhon's ideas and thus leads the reader to conclusions about anarchism violently at odds with its real nature. It is somewhat ironic that McNally attacks Proudhon for being anti-democratic. After all, as we indicate in section 8 below, the Leninist tradition in which he places himself has a distinct contempt for democracy and, in practice, destroyed it in favour of party dictatorship.

There is an addition irony. McNally praises the Paris Commune and states that *"to secure their rule, the Parisian workers took a series of popular democratic measures. They suppressed the standing army and replaced it with a popular militia; they established the right of the people to recall and replace their elected representatives"* and *"universal male suffrage"*. He does not mention that, as can be seen, all these were advocated by Proudhon nor that his followers played a key role in the 1871 revolt. Clearly it is simply **not** the case that Marx's *"work signalled an entirely new direction in socialist thought and socialist politics"* if he *"insisted"* that *"the abolition of the standing army"*, *"universal suffrage"* and *"the right to recall representatives"* were *"all essential elements of any workers' state."* Proudhon advocated all these over a decade before his followers made Marx belatedly see their benefit in 1871. Where Proudhon differed from Marx was his awareness that a federated society organised from the bottom-up was no state and to confuse the two opened the door to centralisation and the creation of a new class system — as happened in Russia under the Bolsheviks.

After distorting Proudhon's ideas on democracy and his desired society, McNally moves onto more secure ground, namely his sexism. He **is** correct to note that Proudhon *"denounced women's liberation"* and so right to quote Lichtheim that Proudhon had *"a firmly patriarchal view of family life"* and *"regarded women as inferior beings."* However, while correct to attack the Frenchman for this, it is incorrect to extend this to a rejection of anarchism **as such** — particularly given the obvious contradiction of this position with the rest of his ideas. As noted in section 3, other anarchists rejected these reactionary ideas and consistently applied libertarian principles to within the family.

Lastly, McNally states that Proudhon *"was a rabid racist reserving his greatest hatred for Jews, whose 'extermination' he advocated. He opposed emancipation for the American blacks and backed the cause of the southern slave owners during the American Civil War."* To support his claims, he quotes George Lichtheim (whom he considers as having *"written quite accurately"*) stating that Proudhon expressed *"tolerance for slavery (he publicly sided with the South during the American civil war)"* and *"he believed in inherent inequalities among the races"*. It will come as no surprise that this is either completely false or not entirely true.

Let us take the question of Proudhon's anti-Semitism. It is true that Proudhon made the occasional anti-Semitic remark in his writings but as Robert Graham correctly summarises *"anti-semitism formed no part of Proudhon's revolutionary programme."* [*"Introduction"*, **General Idea of the Revolution**, p. xxxvi] In terms of the claim that he advocated the *"extermination"* of the Jews what McNally does not mention is that this comes from a single entry in his private Notebooks and was unknown until a hundred years after his death. The intellectual dishonesty of this should be clear and, unsurprisingly, he does not prove that this was anything more than a passing rant nor that Proudhon held this view before 1847 or after, either publicly or privately. In terms of the former, it is the case that Proudhon's anti-Semitism is limited to a few passing Jewish stereotypes (which, sadly, reflected French culture at the time) in a few of his minor arti-

cles and books. A reader consulting his most important works would not come across a single anti-Semitic remark and many proclamations in favour of racial equality.

This does not mean that this private remark should not be condemned — it should — but it does not follow that we reject everything wrote before or after it. That this was a one-off rant suggests that when it was written something caused Proudhon's (culturally reflective, but still inexcusable) anti-Semitic feelings to intensify so resulting in this rant. Significantly, Proudhon's beloved mother died that very month (December 1847) which suggests that it reflected an outlet for the deep despair he must have been feeling. Given that he never expressed this view before 1847 nor afterwards it should be considered as a quickly forgotten aberration produced by the pressures of a family crisis rather than something indicative of his politics.

So quoting a single rant from his private notebook presents a false impression of Proudhon's ideas on race. To imply that a never repeated comment made in a private notebook and completely unknown until over a century later was part of his public work or a central aspect of Proudhon's ideas presents a completely false impression of both them and their influence — particularly given his discussion of race in **The Federative Principle**, to which we now turn.

McNally and Lichtheim proclaim that Proudhon *"publicly"* expressed *"tolerance for slavery"*, *"opposed emancipation for the American blacks and backed the cause of the southern slave owners"* because he was a racist. This is not the case, as can be seen from the extended discussion on slavery in the only major work written during the American Civil War, **The Federative Principle**. First, though, it must be stressed that the American Civil War had very little to do with slavery and far more to do with conflicts within the US ruling class. As Howard Zinn noted, the war *"was not over slavery as a moral institution ... It was not a clash of peoples ... but of elites. The northern elite wanted economic expansion — free land, free labour, a free [national] market, a high protective tariff for manufacturers, a bank of the United States. The slave interests opposed all that"* [**A People's History of the United States**, pp. 188–9] Slavery was never the driver for the war, regardless of how this has retroactively become the main cause (because this fits into the self-image and rhetoric of America far better than the grim reality). Indeed, abolition of slavery was raised as a war aim only in 1862 as a way of boosting the North's chances of winning.

Proudhon recognised this obvious fact, arguing consistently applying the federal principle would mean *"progressively raising the Black peoples' condition to the level of the Whites."* However, the North *"cares no more than the South about a true emancipation, which renders the difficulty insoluble even by war and threatens to destroy the confederation."* Rather than express *"tolerance"* for slavery he wrote *"the enslaving of one part of the nation is the very negation of the federative principle."* [**Property is Theft!**, pp. 698-9f] Both sides were *"fighting only over the type of servitude"* and so both must *"be declared equally guilty blasphemers and betrayers of the federative principle and banned from all nations."* The union could only be saved if the North *"grants the blacks their civil rights"* and pursues radical economic reform by *"providing possessions for the wage-workers and organising, alongside political guarantees, a system of economic guarantees."* This last was key, for the slaves had *"acquired the right of use and habitation on American soil."* Justice demanded that both the freed slaves and wage workers must be given means of production (land, tools, workplaces) and other economic guarantees as *"the conversion of black slaves to the proletariat"* would mean that *"black servitude will only change its form"* rather than ended. Both *"slavery and the proletariat are incompatible with republican values."* [quoted by Iain McKay, *"Neither Washington nor Richmond: Proudhon on Racism & the Civil War"*, **Anarcho-Syndicalist Review**, no. 60, pp. 25–6]

Proudhon stressed *"with regard to **black workers**, that physiologists and ethnographers recognise them as part of the same species as whites; that religion declares them, along with the whites, the children of God and the church, redeemed by the blood of the same Christ and therefore spiritual brothers; that psychology sees no difference between the constitution of the Negro conscience and that of the white, no more than between the comprehension of one and the other."* This meant that blacks should be *"as free as the whites by nature and human dignity."* Therefore *"the principle of equality before the law must have as corollaries: 1) the principle of equality of races, 2) the principle of equal conditions and 3) the principle of increasingly similar, although never completely equal, fortunes."* This meant that *"[i]n a federal republic, the proletariat and slavery both seem unacceptable; the tendency must be to abolish them both"*. So, Proudhon argued, *"grant equal political rights to both the emancipated blacks and those kept in servitude until now"* and proclaim them *"fellow citizens and equals"*. *"The federative principle,"* he summarised, *"here appears closely related to that of the social equality of races and the equilibrium of fortunes. The political problem, the economic problem and the problem of races are one and the same problem, and the same theory and jurisprudence can resolve that problem."* [quoted by McKay, **Op. Cit.**, p. 25]

As can be seen, McNally and Lichtheim completely distort Proudhon's actual position. A more accurate account of this is given by academic Ralph Nelson:

> *"But it would be naive to think that it is just the peculiar institution of slavery that Proudhon detests. He finds in the North also the principle of inequality and class distinction. If he is critical of both sides in the war, it is because the federative principle is incompatible with inequality, whether the agrarian variety of master and slave or the modern version of capital and labour ...*
>
> *"Proudhon didn't really believe that the Union side would emancipate the Negro, but would fix on deportation as the solution to the problem. The union could be saved only by the liberation of the Negroes, granting them full citizenship, and by a determination to stop the growth of the proletariat. For what is gained for the former slaves, if emancipation means that they will become members of the proletariat? He notes that the situation in Russia after the emancipation of the serfs (1861) is analogous. Liberated serfs without land would be helpless. Economic guarantees must be developed alongside political ones. The corollaries of equality before the law are racial equality, equality of condition, and an approach toward equality of fortunes."* [*"The Federal Idea in French Political Thought"*, **Publius**, vol. 5, No. 3, p. 41]

There is an obvious flaw in his position, namely that *"Proudhon suggests that nothing will have been gained if the blacks were freed only to become wage earners, as if the condition of the wage-earner were not closer to the realisation of personal autonomy than the condition of a well-treated slave."* [Nelson, **Op. Cit.**, p. 43] Yet his fears should not be ignored as the Southern states *"enacted 'black codes' which made the freed slaves like serfs"* after the end of the Civil War. [Zinn, **Op. Cit.**, p. 199] As one Black newspaper put it: *"The slaves were made serfs and chained to the soil ... Such was the boasted freedom acquired by the coloured man at the hands of the Yankees."* [quoted by Zinn, **Op. Cit.**, pp. 196–7] However, these reservations about Proudhon's arguments — which did contain relevant concerns — do not make McNally's comments any more accurate. That he repeats someone else's mistakes do not matter as he should have taken the time to verify

the claims by consulting Proudhon's own works — particularly given the serious nature of the assertions being made.

As can be seen, the notion that Proudhon was *"a rabid racist"* cannot be supported. While he undoubted made the occasion racist remark (usually anti-Jewish), this was not reflected in his political ideas. Similarly, if, as Lichtheim suggests *"dislike of Germans, Italians, Poles"* is considered important, then why are similar dislikes of other nationalities by Marx and Engels not worthy of note? Neither was free from anti-Semitic and other racist comments but anarchists consider these as relatively unimportant as they are understandable given the culture they lived in. In other words, Proudhon, Marx and Engels were people of their times and so it is unsurprising that certain of their opinions shock and disgust us. The question is, are these views at the core of their politics or do they reflect personal bigotries in contradiction with them? In all three cases, the answer is obvious and so such attacks on Proudhon fail to convince \96 particularly if they are generalised to all anarchists, as if Proudhon's opposition to strikes or his sexism were remotely applicable to the likes of Bakunin, Kropotkin or Goldman!

Also, it is somewhat ironic that McNally mentions Proudhon's alleged "support" for the South as the Leninist tradition he places his own politics is renown for supporting various dictatorships during wars. For example, during the Vietnam war the various Leninist groups called for victory to North Vietnam, a Stalinist dictatorship while during both Gulf Wars they called for victory to Iraq, another dictatorship. In other words, they "tolerated" and "supported" anti-working class regimes, dictatorships and repression of democracy. They stress that they do not politically support these regimes, rather they wish these states to win in order to defeat the greater evil of imperialism. In practice, of course, such a division is hard to defend — for a state to win a war it must repress its own working class and so, in calling for a victory for a dictatorship, they must support the repression and actions that state requires to win the war (as an explosion of resistance, class struggle and revolt in the "lesser imperialist power" will undermine its war machine and so lead to its defeat). The notion that such calls do not mean support for the regime is false and so McNally's comments against Proudhon as well as being inaccurate also smack of hypocrisy — his political tradition has sided with repressive dictatorships during wars in the name of wider political aims and theory. In contrast, anarchists have consistently raised the idea of

"No war but the class war" in such conflicts (see section A.3.4). Proudhon's position of refusal to side with either the North or the South during the American Civil War is related to the revolutionary anarchist position.

To conclude, with the exception of his sexism McNally's account of Proudhon's ideas is either completely false (on small-scale property, democracy, racial equality) or, at best, half-truths turned into full-lies (his anti-Semitism and position of strikes). The scale of the distortion is simply staggering, suggesting he never consulted a single book by Proudhon. In terms of Proudhon's sexism and anti-Semitism, dismissing a theory based on the personal failings of those who advocate it only convinces the superficial. Proudhon rejected many of the assumptions of his times, yet he did not rise above all of them. As George Lichtheim suggests (in a passage McNally could not bring himself to quote), *"[i]n all these respects Proudhon simply reflected the milieu from which he had sprung. His mental crudities were commonplace and not peculiar to him. Half peasant, half townsman, he was the embodiment of the average French workingman of his day"*. [**The Origins of Socialism**, p. 87] Subsequent anarchists (including Bakunin) overcame the limitations of Proudhon **the man** by using Proudhon **the theorist**. McNally, by personalising the matter,

seeks to deny the significant contributions Proudhon made to socialism (as can be seen by the Paris Commune). If he were more confident in his own political tradition he would not have to do this as Leninism should be able to convince by presenting an accurate account of the ideas of others and showing their weaknesses. That McNally did not do this for Proudhon shows that, for all his flaws, his argument that socialism needs to be decentralised, federal and self-managed still rings true. The failure of the Bolshevik regime confirms this.

5. Why are McNally's comments on Bakunin a distortion of his ideas?

McNally then moves on to Bakunin whom he states *"shared most of Proudhon's views."* The truth is somewhat different. Unlike Proudhon, Bakunin supported trade unions and strikes, equality for women and revolution as well as being far more explicit in support for the collectivisation of property.

This can be seen from Bakunin's last book in which he argued that the International Working Men's Association *"has shown the proletariat the objective it must achieve and at the same time has indicated to it the ways and means of organising a popular force"*, namely *"a voluntary alliance of agricultural and factory worker associations, communes, provinces and nations"* organised *"from below upwards"*. Socialism would be created *"only through concerted action by the proletariat of all countries, whose organisation first on an economic basis is precisely the object of the International"*, by means of *"factory, artisan, and agrarian sections"*. A *"federal organisation, from below upwards, of workers' associations, groups, communes, districts, and, ultimately, regions and nations"* was needed *"for real as opposed to fictitious freedom"*. This *"popular federation"* would be *"based on emancipated labour and collective property"* as the *"mode of future production"* would be *"producers' cooperatives"* and *"all forms of land and capital must become collective property"*. He also *"demand[ed], along with liberty, the equality of rights and obligations for men and women."* [**Statism and Anarchy**, p. 32, p. 33, p. 49, p. 51, p. 13, p. 22, p. 201 and p. 219]
